Address by Hon. Edward Martin, of Pennsylvania, at Annual Washington City Dinner

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 1, 1958

Mr. MARTIN of Pennsylvania. Mr. President, the Pennsylvania State Chamber of Commerce, at its annual Washington City dinner last Tuesday evening, honored me with a citation. I ask unanimous consent that my reply to the remarks by Mr. H. B. Bartlett, vice president of the State chamber, in awarding this citation, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. EDWARD MARTIN, OF PENNSYLVANIA, AT DINNER OF PENNSYLVANIA STATE CHAMBER OF COMMERCE, APRIL 29, 1958

Mr. Chairman and my fellow Americans, I cannot tell you how much I appreciate the honor you have conferred upon me tonight.

I cannot find words adequate to express the feeling in my heart at this moment.

Let me assure you that I feel proud and humble. I am overwhelmed by your kindness and profoundly grateful.

To each of you, thank you so very much.

I want to say, in all sincerity, that the greatest privilege I have enjoyed in a long lifetime has been the opportunity to serve the people of Pennsylvania.

For more than half a century I have been entrusted by my fellow citizens with many responsibilities in military and civilian capacities.

Now that I am approaching the end of my public career I can only hope that in some small way my service has been useful and constructive.

It may be appropriate on this occasion to discuss briefly the philosophy of government which has guided my course through the years.

It is a philosophy of government based on the fundamental principles which made our country great and strong.

I believe that the private enterprise system is the foundation of our economic strength and progress.

It is a system which gives encouragement and incentive to initiative, self-reliance, courage, and personal responsibility.

The philosophy of government in which I believe would strive for a sound currency and would protect the value of the dollar against the destructive force of inflation.

It would operate, as far as possible, on pay-as-you-go basis, avoiding excessive taxation and the crushing burden of an ever-increasing national debt.

It would restrict the activities of the Central Government within the limit of the powers granted by the Constitution.

It would prevent Federal encroachment upon functions which are properly the exclusive responsibility of the State and local levels of government.

It would keep government out of all forms of competition with private enterprise.

It would strike down every attempt to replace Americanism with a socialistic system to direct, control, and regiment the lives of the people.

I believe that many of the dangers that confront the United States today have been brought upon us because we have departed from those fundamental principles of good government.

For nearly a year the Finance Committee of the United States Senate has been conducting an investigation into the fiscal and monetary situation of this Nation.

Extensive hearings have been held, with testimony from the leading authorities on governmental finance.

The preponderance of evidence shows that one of the great dangers is inflation, and the resulting erosion of the dollar.

Another source of danger is the failure of productivity to keep pace with constantly increasing wages.

This has had an inflationary effect on the prices of everything we buy.

It has imposed severe hardship on millions of Americans by cutting in half the value of savings accumulated by years of industry and thrift.

A third danger grows out of the fact that people are demanding more and more from government.

Organized pressure groups demand appropriations for their pet projects, for new and expanded functions of government, for sectional advantage and for every conceivable form of spending.

Some do not hesitate to threaten political reprisals unless their proposals are given immediate and favorable attention.

Let me point out that in this session of Congress bills have been introduced, in the Senate alone, calling for brand new Federal expenditures of about $77 billion over the next 5 fiscal years.

This is in addition to the regular Federal budget, which by itself totals about $74 billion for fiscal 1959.

If any substantial part of these proposals should be enacted it would mean increased taxes or more deficit financing.

The Government has no other way to pay its bills.

The dangers I have outlined assume more alarming proportions in this time of recession and extensive unemployment.

They should serve as a warning against hasty and ill-considered remedies—which may prove more costly in the long run by bringing on more inflation.

They prove conclusively that there is no easy or painless solution to our economic problems.

No action by the Government will bring economic recovery overnight as many seem to think.

Progress in this country depends far more upon what people do for themselves than anything the Government does or can do for them.

The dangers we face today should be the immediate and personal concern of everyone here tonight.

You are the leaders of business and industry in our great Commonwealth.

You are vitally interested in building the economic strength of our State and Nation.

Therefore I urge you to take a more active part in government. I believe no businessman should ignore or neglect that responsibility.

And furthermore, it would avance the cause of good government if more businessmen would interest themselves in politics—not merely from a partisan standpoint, but as a patriotic contribution to the public welfare.

We can curb inflation, we can reduce the excessive cost of government, we can avoid deficit financing, if the determination to do so is strong enough to overcome the pressure for selfish advantage.

The point I want to make most emphatically is that this is no time to abandon sound principles.

In the growth and development of our country there have been many changes. But the principles upon which it was established are fixed and everlasting.

To overcome the dangers which confront us today we must first strive to make every American sturdy, hardy, and self-reliant, with faith in the future of our country, and faith in our form of government.

Water Conservation Is Urgent Problem in Texas

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 1, 1958

Mr. JOHNSON of Texas. Mr. President, the nature of the Texas water problem may be simply stated: The State's demand for water increases while the overall supply of water decreases.

This is a problem demanding—and it is receiving—the best attention of the people of Texas.

It is a problem whose solution depends in part on such water development projects as those included in the rivers and harbors bill that was recently vetoed by the President.

Every possible approach will be needed, as the Dallas Times Herald recently pointed out in a thoughtful editorial, to keep Texas water supplies adequate to the need.

I ask unanimous consent that the text of the Times Herald editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EVERY APPROACH WILL BE NEEDED TO KEEP TEXAS' WATER ADEQUATE

After a memorable drought most of Texas is again well stocked with water. But unless our people and their leaders prove to be diligent and resourceful, this felicity will vanish. So it was wisely recognized by Texans speaking at the American Water Works Association conference in Dallas.

Many signs point to the urgency of pushing water conservation on all fronts. Among the signs:

That Texas must begin to process more of the raw materials it produces, to compensate its economy for the leveling off of its oil industry on which this State's prosperity has been based to large extent. New manufacturing quickly hikes the demand for water.

That Texas' growth in population is among the swiftest in the Nation and that, for various reasons, per capita consumption of water is mounting yearly.

That, as noted by speakers at the AWWA meeting, Texas has long been tapping its underground water stores faster than they have been replenished.

To summarize, as did Marvin C. Nichols of Fort Worth, chairman of the Texas water development board, Texas' demand for water rises while the overall supply drops. This disparity must be corrected, if Texas is to achieve its full economic potential and recurring, painful water crises are to be averted.

Texans should settle for no less than the assumption that there is no need for one drop of the water that falls upon the State, or flows into it, to waste into the Gulf of Mexico.

Texas' water objectives require adequate local, sectional, and statewide planning. They require bold acceptance of new technology for diverting excess stream flow into the aquifers that underlie our State. They entail sound water-pollution laws, well enforced.

Most of all, the adequate water that is vital to Texas' future requires an informed, aggressive public that is willing to work for and invest in our most precious natural resource. Without such a public the wet cycle that Texas is now enjoying will turn out to be a fool's paradise.

Address Delivered by Mrs. Lammot du Pont Copeland Before the 67th Continental Congress, National Society, Daughters of the American Revolution

EXTENSION OF REMARKS
OF

HON. J. ALLEN FREAR, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Thursday, May 1, 1958

Mr. FREAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Mrs. Lammot du Pont Copeland before the 67th Continental Congress, National Society, Daughters of the American Revolution, Constitution Hall, on April 18, 1958. Together with this address, I ask permission to include a brief biography of Mrs. Copeland, the author of these remarks.

There being no objection, the address and biographical sketch were ordered to be printed in the RECORD, as follows:

TALK GIVEN BEFORE THE 67TH CONGRESS OF THE DAR, CONSTITUTION HALL, APRIL 18, 1958, BY MRS. LAMMOT DU PONT COPELAND, FIRST REGENT, GUNSTON HALL, LORTON, VA.

Many of you here this morning may not realize how much George Mason contributed to our heritage of individual freedom.

He was born in Virginia in 1725 and his greatest influence was felt on the eve of our Revolution. Most of the documents he wrote are unsigned, becaues they were written for legislative bodies. He repeatedly turned down public offices that were offered to him; and he died in 1792, just before the Federal period began. But what he left behind him is of vital importance in the everyday lives of all Americans—past, present, and future.

For it was George Mason who first formed, with glowing phrases, the idea that individual men and women have inherent rights and for the first time in history these rights were admitted by a sovereign state and became a part of written constitutional law.

George Mason wrote the Virginia Declaration of Rights, which was adopted by that State on June 12, 1776. Some of the phrases from it will sound familiar to you:

"That all men are, by nature, equally free and independent and have certain inherent rights which they cannot by any compact deprive or divest their posterity: namely the enjoyment of life and liberty with the means of acquiring and possessing property and the pursuing and obtaining of happiness and safety."

And here are others from this document: "That all power is vested in and consequently derived from the people."

"That the freedom of the press is one of the greatest bulwarks of liberty and can never be restrained but by despotic governments."

"That all men are equally entitled to the free exercise of religion."

They sound familiar to you because they were incorporated a month later into the Declaration of Independence and 15 years later in the Federal Bill of Rights on December 15, 1791.

We are apt to give to Thomas Jefferson the credit for these phrases, but listen to this letter written by Thomas Jefferson to Judge Woodward and dated Monticello, ———, and I quote: "The fact is unquestionable that the bill of rights and the constitution of Virginia were drawn originally by George Mason, one of our really great men and of the first order of greatness."

Let me tell you something about George Mason himself.

He was the fourth generation of that name in Virginia. Owner of vast plantations on both sides of the Potomac River and of a handsome house that he called Gunston Hall and that can be visited today. When George Mason came of age he took his expected place in the governing bodies in the town of his Colony. His closest friend and neighbor was George Washington, and this was fortunate for us, because their unusual gifts complimented each other. The man of action and the scholar collaborated in many of the events that stir our memories today.

His lively mind was widely respected and it seemed to his contemporaries that no man possessed more ideas about the functions and obligations of government. So, is was inevitable that George Mason would become involved in the struggle between the English King and his Colonies across the sea.

He protested to Fairfax in a letter to a London newspaper as early as 1766 in these words:

"Three million people driven to desperation are not an object of contempt. Does any sensible man think that three or four millions of people, not naturally defective in genius or courage, who have tasted the sweets of liberty, will long submit to oppression?"

Again, in 1769, when the British Parliament placed taxes on the simple necessities of life, he was the first to advocate a boycott and he wrote the nonimportation resolutions, which Washington introduced into the Virginia House of Burgesses.

The Boston Tea Party followed, resulting in the passage by Parliament of the Boston Port bill that closed that port and crippled the city. Far away in Alexandria, Va., Washington called a protest meeting at which George Mason's famous Fairfax Resolves were presented. The right of independence was here first presented. Taxation and representation were declared inseparable. The importation of slaves must stop. The Colonies had a free and natural right to make their own laws.

It was during the next year, 1775, that the American Revolution broke out in Lexington, Mass. We find George Mason writing a plan for the organization of the Fairfax Independent Militia, the first such company in the Colonies. The document begins:

"We come equals into this world and equal shall we go out of it. All men are by nature born equally free and independent." And it ends with these words: "Let us never lose sight of this fundamental maxim—that all power was originally lodged in and consequently is derived from the people, we should wear it as a breastplate and buckle it on as our armor."

In early June of 1776, drafts of the Virginia Declaration of Rights were published in Virginia, Pennsylvania, and Maryland newspapers. The Declaration of Independence was adopted and seven of the young States incorporated Bills of Rights copied from the Virginia one in the new constitution.

And, meanwhile, the ill-armed and untrained colonists were fighting for existence under George Washington's generalship.

Finally, the war was over and the States turned their thoughts toward founding a government to bind them together.

George Mason was a delegate to the Constitutional Convention in Philadelphia that labored through the long, hot summer months of 1787. But he was not satisfied with the document that was finally agreed upon and he went home to lead the fight against its ratification by the State of Virginia. His strongest criticism was that the proposed Federal Constitution contained no bill of rights which would protect the individual from the tyranny of government. It was a bitter fight between masters of oratory and debate. George Mason, Patrick Henry, James Monroe, and Benjamin Harrison against ratification, while James Madison, "Light Horse" Harry Lee, Edmund Pendleton, and Edmund Randall were in favor of it.

Finally, the price for acceptance was agreed upon. It was a promise that a set of amendments embodying a bill of rights would be introduced into the First Congress of the United States.

In September of 1789, during the first session of that Congress, James Madison instigated recommendations for adoption by the various States of the first 10 amendments that now constitute our Bill of Rights.

Thus, the line of succession from George Mason's early formulation of the principles of the inherent rights of men was finally drawn into the living law of our country. So, that is why, today, we pay tribute to George Mason of Gunston Hall.

It was Mr. Louis Hertle, of Chicago, who deeded the property to the Commonwealth of Virginia to be maintained upon his death as a memorial to George Mason, because Mr. Hertle felt indebted to him for the opportunity he had to enjoy life and liberty and for the means of acquiring and possessing property.

Mr. and Mrs. Louis Hertle acquired the property of Gunston Hall in 1913 and he deeded it to the Commonwealth of Virginia in 1932; and, at that time, named the National Society of the Colonial Dames of America its custodian. This society, through a board of regents, has raised funds to restore it as it was in George Mason's day and has built the administrative buildings necessary to running it as an historic house museum open daily to the public. The gardens, restored by the Garden Club of Virginia, overlooking the Potomac River, con-

tain the 200-foot boxwood walk planted by George Mason in 1758.

His will contained this sacred charge to his sons: "If either their own inclinations or the necessity of the times should engage them in public affairs, I charge them on a father's blessings, never to let the motives of private interests or ambition induce them to betray; nor the terrors of poverty and disgrace; nor the fear of dangers and of death deter them from asserting the liberty of their country and endeavoring to transmit to their posterity those sacred rights to which they themselves were born."

BIOGRAPHICAL SKETCH OF MRS. LAMMOT DU PONT COPELAND, GREENVILLE, DEL.

Mrs. Copeland, a native of Litchfield, Conn., was educated at private schools here and abroad. Presently living in Wilmington, Del., she is a trustee of the Henry Francis du Pont Winterthur Museum; and is chairman of its fellowship committee. She is also a member of the furnishings committee of the Dickinson Mansion, Dover, Del. Besides serving as first regent of the board of regents of Gunston Hall since 1951, Mrs. Copeland is a manager of the Delaware Society of the National Society of the Colonial Dames of America. Mrs. Copeland has served on the exhibition committee of the Wilmington Society of the Fine Arts; and, recently, served as cochairman of the China Trade Show, held in October 1957.

Mrs. Copeland has spoken before several groups in the past few years, including the Antiques Forum, at Williamsburg, in 1956 and 1958; the Present Day Women's Club, of Princeton, N. J., and others.

Virginia M. Wuesthoff, of New Hampshire, Winner of the Elks National Youth Leadership Contest

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Thursday, May 1, 1958

Mr. COTTON. Mr. President, a 17-year-old New Hampshire girl who plans to be a nurse was today named the Nation's outstanding young leader. She shares the honors with an 18-year-old Arizona boy.

Miss Virginia Marie Wuesthoff, of Rochester, N. H., daughter of Mr. and Mrs. Edward N. Wuesthoff, was selected on the basis of her record as a leader in school and community activities, and for her character, good citizenship, perseverance, and resourcefulness. She will receive an award of a $1,000 United States savings bond at the annual convention of the Benevolent and Protective Order of Elks, in New York, in July.

Mr. President, I wish to take this occasion to extend my congratulations to Miss Wuesthoff and to express my pride in the fact that a New Hampshire resident has been chosen to receive this signal honor. Miss Wuesthoff typifies the millions of young people in America whose training and background assure this Nation that its future is bright.

I ask unanimous consent to have printed in the Appendix of the RECORD, a statement by Miss Wuesthoff concerning the honor she has won, and a statement on her background and accomplishments.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATEMENT BY VIRGINIA MARIE WUESTHOFF FROM HER ENTRY IN THE ELKS NATIONAL YOUTH LEADERSHIP CONTEST

The youth of today is a versatile molding substance which is easily shaped by circumstances and environment. Realizing this, I have always strived to follow good example and aimed to reach the top, and thus be in a position to encourage in my classmates a willingness to accept responsibility and a satisfaction in doing things well.

One of my principal objectives in participation in music, art, dramatics, and literature is to arouse interest and appreciation in Rochester of the cultural facets of school life. Being president of the student council has given me the opportunity to further the use of parliamentary procedure in assemblies and inspire additional activities in this governmental group for the good of the student body.

When chosen as 1 of 12 New Hampshire delegates to attend the United Nations Pilgrimage for Youth in 1957, I knew the honor was a chance to observe the workings and accomplishments of this great organization and impart to my associates and various city groups a knowledge of the genuine integrity of the U. N.

It is quite widely known that in this age of missiles, only understanding can insure peace in our turbulent world. Thus through promoting a duty to responsibility in the youth of my community, it is my objective to accelerate, in my own small capacity, the arrival of a universal and eternal peace.

WANTS TO BE A NURSE

Miss Wuesthoff is the daughter of Mr. and Mrs. Edward N. Wuesthoff. She plans a career in nursing and will enter the Mary Hitchcock Memorial Hospital School of Nursing in Hanover, N. H., in the fall, following her graduation from Spaulding High School in June.

A National Honor Society member, Miss Wuesthoff has attained top grades in her school work while pursuing a busy and varied schedule of extra curricular activities. She was her school's delegate to the United Nations Pilgrimage for Youth to New York last year. She is a member of the National Thespian Society, serving as president of her high school chapter in her senior year; and a member of the Future Nurses of America.

An accomplished public speaker, she recorded a speech on the United Nations which has been used in her school's Problems on Democracy classes. She has won numerous awards for participation in music, dramatics, public speaking, science and student government. Long active in community service programs, Miss Wuesthoff is a Junior Red Cross member, has participated in the March of Dimes and other fund drives, and last Christmas directed a CYO choral group caroling at local hospitals and convalescent homes.

Miss Wuesthoff, the youngest of six children and the last remaining at home, lives with her parents on a farm outside Rochester. After school she milks the cows, and lends a hand with the planting, gardening and haying. She has also found time on summer vacations to work as a waitress, and has been employed during after school hours by the New England Telephone & Telegraph Co.

Extension of Unemployment Benefits

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 1, 1958

Mr. MARTIN of Pennsylvania. Mr. President, we are now discussing the extension of unemployment benefits. We want to keep this plan of insurance from becoming a dole. Capt. John M. Cummings, a columnist for the Philadelphia Inquirer, recently had some very fine comments on this subject, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

In his press conference the other day President Eisenhower heatedly denounced as a dole and nothing else a Democratic plan to ease the effects of the recession by extending unemployment benefits to those whose insurance under State laws has expired. The net effect of cash payments out of the Federal Treasury, he argued, would be to destroy the insurance system.

It now develops that Republican opposition has been fortified by Democratic resistance to the plan. At a meeting of the House Ways and Means Committee southern Democrats joined midwestern Republicans in upholding the President's position.

The use of the word "dole" by the President doesn't exactly fit what supporters of the measure have in mind. The word means "to deal out sparingly," and since the plan calls for an initial appropriation of $1,470,000,000, well, it reminds us:

A week or so ago a man we hadn't seen in a full quarter of a century or more dropped into the office for a visit. Although he gave off no impression he had just been turned out by a Bond Street tailor, he was reasonably well dressed. He was clean shaven and he wore a shirt that was no stranger to a laundry. Yet by his own admission he had been on the bum for years.

We knew something of his background. In his younger days he had studied medicine. For a few years he worked in an upstate hospital, but he never advanced far enough to win the privilege of placing M. D. behind his name. His father was an industrious, hard-working man who was busy at his trade until sickness and finally death took him away.

In time he became a drifter, moving along from city to city. His favorite dodge was to live on the missions. We got the impression he was currently putting up at a Philadelphia mission.

He explained, however, that a mission had a limited welcome. After a specified time you had to move on, generally to another mission. He came to us with an argument, you might call it a plea. He wanted us to expound for the benefit of you and your hard-working taxpaying neighbors the principle that every American should be pensioned off at age 55. He himself, of course, had reached this milestone.

He argued that billions in social-security funds were piling up in Washington. This money, he contended, should be doled out and thus placed in circulation. At 55, he insisted, a man was worked out, washed up, and it was up to you and you and you to keep him in funds for the remainder of his

days. He thought a pension of at least $100 a month would meet the needs of most folks.

We asked if the same pension would be paid to bums, drunks, and the like who never held work in high esteem.

"Sure," said he. "What if a man does blow it in on booze. He puts the dough in circulation and that's what counts. Me? Well, I haven't had a drink in several years. Got a heart condition. And I take garlic to help it."

We told him it wasn't necessary to specify the cure. We knew it the minute he entered the room.

Maybe you think this pension to everyone at a fixed age is something peculiar to this self-confessed bum. Don't be fooled. Others are advocating it. And they're not bums, either.

Maxwell M. Rabb, Secretary to the Cabinet

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, May 1, 1958

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two documents which testify to the extraordinarily effective job which Maxwell Rabb of Boston has done as the first secretary to the President's Cabinet. The first of these is an exchange of correspondence between the President and Mr. Rabb. The President's letter reveals the high regard which he has had for Mr. Rabb's work.

The second is a very complimentary editorial from last Saturday's Boston Herald, which makes special note of the anonymity with which Mr. Rabb has performed his duties.

There being no objection, the correspondence and editorial were ordered to be printed in the RECORD, as follows:

The White House today made public the following exchange of letters between the President and the Honorable Maxwell M. Rabb, secretary to the Cabinet.

The President's letter follows:

APRIL 24, 1958.

DEAR MAX: The prospect of your departure from the White House staff in the near future is one which I accept only because I appreciate how unstintingly you have given of your time and energy to your work for more than 5 years. It has been a truly large service that you have rendered—not only to me but to the members of the Cabinet, your other associates, and the Nation. Now that personal reasons require your return to private life, I must comply with your request to terminate your duties in mid-May.

I share your belief that the strengthening of Cabinet procedures in recent years is a significant step to more efficient conduct of the business of government. As you review in years to come the many complex problems that have almost constantly engaged our attention, your awareness of the role of the Cabinet in solving them should give you a very rewarding feeling. Particularly have the guidance and stimulus that you added to the preparation of matters for Cabinet discussion helped to insure a firm foundation for the policies shaped there.

I am grateful also for your tireless devotion to the cause of better understanding of each other among the many individuals and groups comprising our Nation. Through personal example and encouragement to others, you have made a contribution which I regard as being of the highest type any person can make. In this you will, I trust, find a very real and lasting satisfaction.

A letter of resignation and its acceptance customarily has an air of finality that in this instance is unacceptable. Your willingness to be of assistance in the future is something I shall not fail to remember and put to good use.

My thanks and best wishes go to you, along with my complete confidence that the future will be full and satisfying for you and your good family.

With warm regards.

Sincerely,

DWIGHT D. EISENHOWER.

Mr. Rabb's letter follows:

APRIL 23, 1958.

MY DEAR MR. PRESIDENT: It is with deep regret that, because of personal considerations, I must submit my resignation as secretary to the Cabinet, to be effective, if convenient to you, in mid-May.

I shall always be proud to have had the privilege of serving in the Government of the United States under your inspiring leadership. The more than 5 years that I have had the honor to be associated with you have been memorable years, filled with deep personal pleasure and satisfaction.

It has been impressive to observe at close range your quiet and effective resolution of so many challenging problems, your determination to create in this country a moral climate in which discrimination will have no part, and your affirmation of America's traditional humanitarian concern for the refugee who seeks asylum from oppression and persecution.

Particularly am I grateful, as the first secretary to the Cabinet, that there is growing national recognition of the importance of your pioneering contribution in the area of public administration where you have changed the Cabinet from what was a somewhat haphazard, inconclusive conclave into an effective, vital coordinating body.

If, from time to time in the future, I can be of assistance to you, I hope you will call upon me.

Faithfully yours,

MAXWELL M. RABB,
Secretary to the Cabinet.

[From the Boston Herald of April 26, 1958]

NEARLY ANONYMOUS

Maxwell M. Rabb has held one of the most sensitive posts in the Federal Government for half a decade. Yet he has made few headlines. His single envelope in the Herald morgue is a slim one.

This is because Mr. Rabb has wanted it that way. His job has required him to be inconspicuous. He has inherited the mantle of the anonymous assistants whom F. D. R. introduced into the Government and who have become an increasingly vital part of each succeeding administration.

Mr. Rabb's best known service has been as secretary to the Cabinet, a new post created by the Eisenhower administration for the purpose of bringing more organization and direction to cabinet meetings. Under his expert guidance, the cabinet has perhaps become more of an action agency than it has ever been in the past.

The secretary himself has not had Cabinet status. He has headed no great department of Government, has made none of the ultimate decisions. But by operating in the background as an organizer, a smoother-out, a prodder, and a suggester he has helped the cabinet to realize its highest potential as a coordinating agency.

In addition, Rabb has served as the President's principal adviser on minority affairs, working on everything from Negro integration to Hungarian refugee problems, and has been associate counsel to the President on various legal matters. And in these capacities, too, he has remained discreetly in the shadow, producing results but no publicity.

The decision of this anonymous assistant to leave public service, at least for the time being, must be a cause of genuine regret to the President and to the country. Mr. Eisenhower spoke with obvious feeling when he praised the "truly large service" which the quiet Republican from Massachusetts has performed.

The public service can use more like him.

The Present Recession

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, May 1, 1958

Mr. SPARKMAN. Mr. President, in today's Washington Evening Star is a column by Sylvia Porter, one of the best economic writers, dealing with the present recession. There are some interesting and helpful points brought out in her article. I think it makes good sense. I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington (D. C.) Star of May 1, 1958]

YOUR MONEY'S WORTH

(By Sylvia Porter)

WHERE ARE WE HEADING?

It's May 1—the beginning of the 10th month of the 3d business recession since World War II, assuming you accept the birth date of this downturn as July 1957.

Economically speaking, where have we been, where are we now in the business cycle, where do we appear to be heading?

It's no easy job to dig into the baffiegab which has accompanied this most widely publicized and debated downswing in history. But if you do dig carefully, you'll come up with this consensus of expert answers.

We already have gone through the deepest, fastest downturn of the postwar era.

A key measurement of the decline is the Federal Reserve Board's index of industrial production. In neither the 1953–54 recession nor the 1948–49 drop did industrial production fall more than 10½ percent from the very top to the very bottom.

This time, just since last summer, industrial production has fallen almost 12 percent—with the greatest slumps concentrated, as you are fully aware, in heavy manufacturing industries.

STEEL IS YARDSTICK

Steel output is another key yardstick. It's off 42 percent from the 1957 peak against declines of 36 percent in 1953–54 and 32.3 percent in 1948–49.

New orders in manufacturing are a crucial measurement. They're down 22.6 percent from the 1957 top compared with decreases of 16.9 percent in 1953–54, of 18.8 percent in 1948–49.

And if the slumps in autos and housing are measured from their 1955 peaks instead of from their already depressed levels of 1957, the recession in these industries this

time far exceeds the depth of previous postwar auto and housing downturns.

There's no doubt about it: The 1957–58 recession has the dubious distinction of being the deepest since the thirties.

Now, the pace of the downturn has slowed, there are some important signs that we're probing for the bottom of the decline.

Of course, a cynic might retort, "The pace had to slow; this is spring, the season for improvement. Business couldn't continue deteriorating at the rate of this past winter or we'd be in real trouble."

Nevertheless, the slackening of the rate of drop does emphasize that some sizable adjustments are behind us.

Now housing is perking up—reflecting Government stimulants as well as better weather. And if housing starts in May run at an annual rate of a million—as is quite likely—it will mean a pickup in such allied industries as appliances, furniture, rugs, fixtures, etc.

RETAIL SALES RESPOND

Retail sales are responding to spring and to the buy-now campaigns in cities the country over. There are other persuasive signs of leveling out—which is quite a different thing from decline.

We're likely to sit on the business bottom for some time and a slower rate of downturn doesn't automatically mean the start of upturn.

It's imperative that you realize this. Even the optimists admit they can't see any influence which can produce an immediate swing back up. The forces for a smash recovery just aren't present.

A start of upswing well may come in fall, though, and be clearly apparent by the end of 1958.

The shape of this recession is not going to be a "V." Rather, it's likely to be a saucer, an elongated "U." For the first time since the recession began, there is a basis for writing we're approaching the flat part of the saucer, the bottom part of the "U."

You Can Help

EXTENSION OF REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1958

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks in the RECORD, I desire to include an editorial of Thursday, April 24, from the Carmi Times, Carmi, Ill., which shows the commendable efforts the editor of this paper, Mr. Roy Clippinger, is putting forth to maintain prosperity in that area and to prevent any increase in the present recession.

This is the type of call to action that should be ringing out in every community in America, and if it were, the threat of the recession would be abolished, and prosperity would prevail throughout our land.

The subject of this editorial, which I hope all the Members will read, is You Can Help:

On page 3 of this issue is a voluntary contribution to aid the economy and welfare of individuals and business in White County. It is a message that we sincerely believe, if adopted on a national scale, would tend to immediately knock the recession into a cocked hat and return conditions throughout these United States to a state or normal prosperity.

Who or what is responsible for the momentary slump this rich, healthy Nation is going through? We can't lay it in the lap of John Doe. You and I have our individual responsibility to bear in the present situation and only you and I can help snap us out of it.

Speaking solely for this area, we are proud of the fact that we live in the garden spot of the whole world. We are dependent on the good soil and while our oil industry is undergoing a period of readjustment it is a very important factor in our local economy. Our farmers are progressive and industrious and laxity in farm management has gone the way of the one-horse plow. Our oil people are plagued with the shipment of petroleum products from foreign lands, as well as legislative hurdles that will have to be adjusted.

White County is a rich community, comparatively speaking, and the truth of the matter is that we have grown slightly smug in many of our views. We take our community wealth for granted and but few of us are on our toes. We have gone through an era where business and prosperity were taken in stride. We, along with the rest of the Nation, have been content to sit back and beam our satisfaction rather than show an aggressiveness that would have forestalled the present recession.

Especially is that true in business. You go in some business places and owners and clerks sing the blues to the extent that when you leave you have decided the whole country has gone to Hades. If you walk into a competitor's business across the street the owner will probably tell you that business is good and get out his books to prove it. The mental attitude and aggressiveness of business people play a big part in the mental attitude of people whom they serve.

Just as an example of what we mean. Business at the Carmi Times is good and there has never been a day since the newspaper started that the management and employees of the Times could say anything different. The Times is meeting the present situation with a smile. Within the past few months we have spent quite a few thousand dollars on new machinery. We are in a period of completely redecorating our front office. We have faith in this community and in this Nation and will continue to do more than our part both in leadership and cooperation to keep this a happy and prosperous county and our Nation, by long odds, the leading nation of the world.

Won't you please turn right now to the message brought to you on page 3? Try, truthfully and willingly to do your individual part in battling the recession by following the advice this newspaper so gladly brings you. Wake up each morning with a smile, instead of a frown and a grouch, even if you think your affairs are not altogether as you would like to see them, and determine to fight a little harder to better economic conditions that you and your neighbor face.

This community needs you; you need this community, so let's all have a unity of purpose to bring it back on an even keel—let's buy ourselves out of the recession.

The Town That Killed Hay Fever

EXTENSION OF REMARKS

OF

HON. DAVID S. DENNISON, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1958

Mr. DENNISON. Mr. Speaker, my good friend and constituent, Floyd Bixler, of Hiram, Ohio, has called my attention to the following article entitled "The Town That Killed Hay Fever," by Dwight E. Stevenson. This modern parable, which appeared in the Christian Evangelist for April 21, 1958, should be read by everyone. I commend it to the Members of the House.

THE TOWN THAT KILLED HAY FEVER

(By Dwight E. Stevenson, the College of the Bible, Lexington, Ky.)

Once upon a time there was a town in which every inhabitant was afflicted annually with hay fever.

Year after year, generation after generation, during the months of July and August the people went about with watery eyes and running noses and without being able to say their N's, their M's, and their NG's properly.

Then one year a bright high-school senior who had been studying botany after school hours discovered that the hay fever was caused by ragweed growing in Farmer Brown's cow pasture. So the senior told his parents and friends what he had discovered.

"An interesting theory," they said, but they did nothing. After he had told everybody he met and had talked at length with people of watery eyes and running noses—and without being able to articulate his N's, M's, and his NG's properly—the senior became disgusted because nobody would believe him or do anything.

So early one morning while the dew was still heavy, he borrowed his father's scythe and stole quietly out to Farmer Brown's cow pasture. There, with violent sneezes punctuating his labors, he mowed steadly until he had destroyed every ragweed. And then in the late afternoon he made a fire and burned the withering plants which he had slain. Then at sundown, with a throbbing head the size of a rainbarrel, he struggled back to his home and dropped wearily into bed.

The next day all over town eyes stopped watering, noses ceased dripping, and all the people suddenly found that they could say their N's, their M's and their NG's properly. The senior tried to tell his friends that this was because he had destroyed the ragweed.

Most of them laughed in his face and some of them even coined for him the nickname of "Ragweed Willie." But a few believed him and with the help of these few he kept the ragweed down all that summer, and the next, and the next. In fact, the town fathers joined him before many summers passed and the annual slaying of the ragweed was turned into a community festival.

In time Ragweed Willie died, and a grateful community laid him to rest with a huge funeral and even dedicated a school building to his memory. Every year on R-Day the town sallied forth to the old cow pasture which had since become a town park, and slew ragweed to the accompaniment of band music, picnic lunches, and games.

Since by now, three generations had passed and no one living had ever actually seen a ragweed, the ritual of R-Day had become a quaint folk custom, and a sharp divi... arose concerning it. Some defended it stoutly as the most important single day in the whole year, and emphatically affirmed that the rituals of that day had deep cultural—not to say mystical and even religious—significance.

Others disagreed, but in order not to be disagreeable they simply stayed away from the festival; on R-Day they climbed into their automobiles and went to the mountains and the lakes while an ever-diminishing number of their fellow citizens carried on the empty rituals.

Thus it came about that the park grew neglected and R-day was forgotten. Ragweeds, unknown for a generation, began to reappear; and during the months of July and August the people who had known of hay fever only from what they read in their history books began to go around with

watery eyes, running noses, and without being able to say their N's, their M's, and their NG's properly.

Finally, the malady became so bad that the mayor called a public meeting in the assembly hall of the Ragweed Willie High School. The mayor made a speech—without his N's, his M's, and his NG's, and many others—amid the encouraging response of coughs and sniffles—added their contribution to the patriotic occasion. Some said one thing, some another.

"The icecap at the North Pole is melting. That's the cause of it," said one. "Think back and you'll see that the winters are milder than they used to be and the summers are hotter."

But the speech that all of them liked best and the one they applauded the longest went something like this: "Fellow-citizens and proud sons of the Ragweed Willie tradition. This is no ordinary crisis. We have elected representatives in Congress. They are supposed to look out for our interests. But what are they doing for us? I demand that our Government use some of our tax money to look after our interests. I pay my taxes every year, and what do I get for them? Hay fever. Why doesn't somebody in Washington do something?"

After that, somebody made a motion and a petition was drawn up. Everybody signed it. Then they all went home thinking what great things had been accomplished. It was now up to Washington to do something.

On the way home, one sufferer who seemed to be a little worse off than the others, was heard to complain. "Hay fever. What did I ever do to bring this upon me? You know that I never bothered anybody or stuck my nose—achew—into other people's business. What did I ever do to deserve this?" And there were many that spoke the same sentiments.

Meanwhile, outside the town, in the abandoned park that long, long ago had been Farmer Brown's cow pasture, tall ragweed groves flourished and waved gently in the evening breeze.

"All that is necessary for the triumph of evil is that good men do nothing." (Edmund Burke.)

Representative Green of Oregon Reports on Russian Education

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, May 1, 1958

Mr. NEUBERGER. Mr. President, in recent months, many Americans have become very interested in the comparative standing and programs of our schools, particularly in relation to those of Russia and other European countries. The Soviet successes in sending their large satellites into space have had the salutary effect of disturbing our customary complacency and awakening a healthy curiosity about the society that accomplished this technological success, and particularly about its educational system.

As part of the effort to obtain more first-hand information and impressions on these subjects, the able and energetic Representative of the Third Oregon Congressional District, in which I live, Mrs. EDITH GREEN, of Portland, Oreg., visited the Soviet Union during the congressional Easter recess. As a member of the House Committee on Education and Labor, Representative GREEN has a particularly direct and well-qualified concern for the comparative educational progress of their country and ours. The manner in which this visit brought to life for her the statistics and other dry facts about that vast and alien society, with which we must compete, was vividly described in an article reporting her journey, in the Oregonian of April 21, 1958. I ask that this article, reviewing Mrs. GREEN's impressions upon her return from the U. S. S. R., be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MRS. GREEN IMPRESSED BY EXTENT, INTENSITY OF SOVIET EDUCATION

WASHINGTON.—Representative EDITH GREEN Democrat, of Oregon, returned Sunday from a week's inspection of Russian schools favorably impressed with the quality, intensity and extent of the Soviet education program.

"They are making a tremendous investment in education," said Mrs. GREEN, "and it is not all in the sciences, as we sometimes think. There is great stress on music and art."

Mrs. GREEN flew to Moscow for the House Education Committee of which she is a member. The committee is studying various forms of Federal aid to education.

PUPILS SPEAK ENGLISH

Last Monday the former Oregon schoolteacher spent the morning visiting a Moscow school which had grades from 1 to 10. She heard second graders speaking elementary English, and 10th graders stand and speak extemporaneously for 15 minutes in English. A student discussed the writings of Jack London, in terms of "the fight against imperialists—but it was beautiful English."

She said Russia has been experimenting for 9 years with the idea of starting youngsters on French and English in the second grade. The size of the classes in English is limited to 12 to 15 students. Classes in other subjects run from 35 to 45.

"After listening to those Russian students recite in English, I told them if I had closed my eyes I wouldn't have known I wasn't in an American school," she said.

SPECIAL ATTENTION GIVEN

Gifted scholars get special attention in what is called the House of Pioneers.

As for intensity, students attend classes six days a week. They start at 9 in the morning and go until 2:30 in the afternoon, when they have lunch, which costs 15 cents. After that they go into what are called circles, which allow for specialization in fields in which they are gifted.

She said the student who can compete scholastically after 8 grades, continues on to the 10th. Those who can compete at that point, go on to the university. Cost is no factor, only that they qualify scholastically. Those that fail, go into trade schools or the labor force.

BIOLOGY TAUGHT EARLY

As for the science curriculum, Mrs. GREEN said they start biology in 5th grade and take it through the 9th grade. Physics begins in the 6th grade, goes through 10th, chemistry starts in 7th, goes through 10th.

At Moscow University, she found "a magnificent institution" equipped with 22,000 rooms for a total enrollment of 24,000, 6,000 of which were enrolled in the humanities. She said there were 16,000 full-time students, 8,000 part-time and night students.

Total enrollment in Soviet universities and institutes is 2 million, she said.

A 10th grade student takes mathematics, astronomy, physics, chemistry, history of Russia, and possibly the language of one of the provinces. All schools have the same curriculum, she said.

SOVIET SCHOOLS UNIFORM

To get these facts and impressions, Mrs. GREEN visited kindergartens, schools, and universities in Moscow and Kiev. When she realized, after double checking with American officials, that the schools were uniform throughout the Soviet Union, she dropped plans for visiting Siberia and other outlying areas.

Led by a Russian woman guide, she also visited inside the Kremlin, whose red walls were just across the way from her hotel in Moscow. The weather was cloudy but not cold. She said the Russians were getting set for the Communists' traditional May Day celebrations—"rehearsing the civilians for spontaneous demonstrations."

She spent considerable time talking with American correspondents assigned to Moscow. No one prevented her from taking pictures wherever she went, even inside the Kremlin.

Her guide was unhappy only over the fact that Mrs. GREEN wanted to visit so many churches during Easter services. She attended four services in Greek Orthodox, Roman Catholic, and Baptist.

"Every church was packed," declared Mrs. GREEN. "At midnight Easter services at a Greek Orthodox church there were thousands standing in the street outside."

A ballet she found to be excellent artistically but pure Communist propaganda substantively. Originally called the Red Poppy but later changed to the Red Flower at the request of the Chinese, the ballet depicted struggle between the classes.

CLIBURN'S CONCERT HEARD

And it is true what Khrushchev and the others in Moscow were saying about that curly-headed Texas pianist, Van Cliburn, observed Mrs. GREEN. She heard him play at the conservatory in Moscow just before her departure and thought him a great artist. He was also a good showman, which the Russians also appreciated. She also watched him perform on TV from the apartment of an American correspondent.

One thing more which would appeal to the heart of any ex-teacher and parent in this era of the American teen-ager. She said:

"There was no tomfoolery in the Russian schools. No whispering, no giggling, very strict discipline. And when students were called on to recite they stood erect."

Mrs. GREEN said she favors greater exchange of students.

"I don't think any youngster could go over and not come back convinced anew of the superiority of our form of government," she declared.

Describing the old women she saw in the manual labor force, repairing streets and sidewalks, she said:

"Along with their advances in education, there is a grimness of life that is very depressing."

Hon. Thomas J. O'Brien

SPEECH

OF

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1958

Mr. COLLIER. Mr. Speaker, it is a real privilege to join my colleagues in paying tribute today to the distinguished

dean of the Illinois congressional delegation, Hon. THOMAS J. O'BRIEN, on his 80th birthday.

TOM, as he is affectionately known to his multitude of friends—a host of whom live in my district—has served the people of Illinois and particularly Cook County faithfully and with real devotion to duty during his long career of public service. He is truly a great American.

I know that the people of his district join with his many friends in this Congress in wishing him the very best and many years abundant in good health and happiness.

Ideas and Ideals as Weapons

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, May 1, 1958

Mr. JAVITS. Mr. President, one of the prime battles in the struggle between freedom and communism has been termed the "war of words," descriptive of the effort to communicate information, ideas and ideals to the peoples of the world.

I hold in my hand a letter to the editor of the St. Louis Post-Dispatch of Sunday, April 6, 1958, written by Goodhue Livingston, Jr., chairman of the policy committee of the Committee for Collective Security, detailing constructive suggestions as to how we may more effectively act in the war of words. I ask unanimous consent that the letter be printed in the RECORD.

There being no objection, the letter to the editor was ordered to be printed in the RECORD, as follows:

LETTERS FROM THE PEOPLE
TO WIN THE COLD WAR

To the EDITOR OF THE POST-DISPATCH:

Soviet Russia is confident that by mustering overwhelming superiority in the war of words and ideas it can achieve its ultimate aim of world domination without turning the cold war into a hot one.

We therefore must mobilize our political power while we develop military weapons and expand our foreign-aid program. Military might does not provide total defense. We must also develop psychological strength to win the hearts and minds of men to the democratic principle of liberty and justice for all.

Peoples throughout the world want just and lasting peace. We should assume the lead in seeking to secure it to offset the Communist effort to appear the champions of freedom and progress for colonial peoples and underdeveloped lands.

While emphasizing human rights and fundamental freedoms, we must understand that the uncommitted peoples are more interested in the economic and social advantages of democracy than its political aspects and believe colonialism a greater evil than communism.

We must: (1) Emphasize economic and social cooperation as well as military cooperation with the other peoples of the free world and the uncommitted peoples. (2) Make clear that we respect their independence even as we prize our own. (3) Stress that under our democratic form of government living standards have been raised to a greater height than that of any other people and provide us with greater economic security and social equality.

To effectively prosecute the war of words and ideas we urge:

1. Creation of a joint congressional committee on the United States Information Agency to establish and maintain liaison between the executive and the legislative branches.

2. Sustained congressional support for a vastly expanded long-range information program maintained by whatever appropriations are necessary to assure maximum effectiveness.

3. Recognition by both the executive and legislative branches of the vital importance of the war of words and ideas, demanding complete cooperation between them.

Unless we win the war of words, unless we wage peace successfully, we will be compelled to fight a war of weapons which we cannot win, for its only result would be the destruction of civilization.

GOODHUE LIVINGSTON, Jr.,
Chairman, Policy Committee, Committee for Collective Security.
NEW YORK.

Labor's Day

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. BYRNE of Illinois. Mr. Speaker, under unanimous consent, I insert the following article that appeared in the Southtown Economist, an outstanding community newspaper in Chicago, on Sunday, April 27:

LABOR'S DAY

Members of the International Brotherhood of Electrical Workers have just won a pay boost of 25 cents an hour. Starting June 1 they will receive $3.90 an hour.

Older members of the union recall that the new hourly wage was the total daily wage about 30 years ago. Quite obviously, labor has come a long way since.

Factories now find it necessary to provide huge parking lots for the cars of their employees. Until labor came into its own, only the head of the company came to work in an automobile.

Much of the credit for labor's prosperity is due the late Henry Ford. During the days when workingmen were being paid $3 a day, Ford, without any prompting, established a minimum wage of $5 a day for his thousands of mechanics. He proved that high wages is good business, and before long other large employers adopted his philosophy.

As always, however, the so-called white collar worker has been left behind in the current trend toward fatter paychecks. He is unorganized and he has to take what is offered him, or do without.

As I read this, I could not help but marvel at the progress America has made in raising the living standards of labor in the past 50 years. To pinpoint or personalize this a bit, I wish to mention my father who has been dead 25 years. He pioneered the labor movement in Chicago in the days of Samuel Gompers. For 31 years he was an active member of the International Brotherhood of Electrical Workers, Local 9. I remember my father telling me that his first pay check from the city of Chicago was $60. I am proud of my father's contribution to the labor movement. However, I am relieved that he does not know the dangers confronting the rank and file members of organized labor today in light of the recent revelations of the Senate's Subcommittee on Labor Racketeering. The conduct of certain of the unscrupulous leaders coupled with actions exemplifying greed and avarice, most assuredly endanger and jeopardize the many benefits labor has fought for and won during the last few decades.

I have been receiving letters and other communications from my constituents urging that the unworthy labor leaders be penalized and removed from their high positions in the unions. Some letters express concern on the part of the rank and file union members and state that they are embarrassed and humiliated over the leadership in some of the unions. They state that as mere rank and file they can do nothing but look to Congress to act for them by putting across legislation which will clean up certain unions and provide machinery which will deter and prohibit dishonesty and coercion.

It is truly a precipitous period in labor's history. Congress should take positive steps to remove the threat to the some of the millions of labor members whose future and economic welfare are in danger because certain leaders have not kept their faith and confidence but have badly abused and misused their office.

In such dangerous times, it is essential that no legislation is enacted which is going to be detrimental to labor so therefore, very thorough and careful consideration must be given to the needs of labor. The labor movement has contributed a great deal to America's progress, security, and economic welfare. We want to help them, not hurt them. This matter is not one in which hasty action can be taken which will prove unwise and completely detrimental to labor.

Involuntary Reconversion Tax Liabilities

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 1, 1958

Mr. YARBOROUGH. Mr. President, recently I received a resolution adopted by the Board of Aldermen of the City of Wichita Falls, Tex., relating to section 1033 of the 1954 Internal Revenue Code.

The resolution points to the plight of people who are forced to sell property under condemnation proceedings and who subsequently must pay Federal income tax on the amount in excess of the original purchase price or reinvest that amount in other property similar to that taken by condemnation. As is stated in the resolution, Mr. President, there are many cases in which aged

people of relatively small financial resources are forced to sell their homes and then pay this additional tax or seek a home which may be far removed from the area of their friends and relatives and church ties.

Mr. President, I commend this resolution to the attention of my colleagues in the Senate, and ask unanimous consent to have printed in the Appendix of the RECORD the resolution adopted by the Board of Aldermen of the City of Wichita Falls, Tex., and a letter from Mr. H. A. Thomason, city manager of the city of Wichita Falls, Tex.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Resolution 324

Whereas under section 1033 of the United States 1954 Internal Revenue Code, if land is taken under condemnation proceedings by any governmental agency, the taking thereof is held to be an involuntary conversion, and, if the amount received by the landowner exceeds the amount the land costs him, the excess is held to be income; and

Whereas this excess brought about by involuntary conversion is subject to Federal income tax if the landowner does not, within 1 year, invest the proceeds of the forced sale in land of similar or related use; and

Whereas under the present contemplated program of the various governmental agencies, many large reservoirs of water will be created under condemnation proceedings and tens of thousands of acres of land will be flooded and thus taken out of use for agriculture and grazing; and

Whereas also many thousands of acres of land as well as other property will be condemned for highway right-of-way purposes in the consummation of the current Federal interstate highway program; and

Whereas a considerable portion of the land taken by condemnation will be valuable property, including that along river and creek courses, and will generally flood the arable and best grazing land, and leave the ridge land (the least valuable) to the landowners; and in many cases will totally disrupt a practical and profitable business operation; and

Whereas under the section of the income tax law referred to hereinbefore, landowners will have to invest the proceeds of the condemnation sales in other property similar to that taken from them by involuntary conversion, or pay income tax as stated hereinbefore; and

Whereas this condemnation of large acreages of good arable and grazing lands will greatly reduce the amount of such land, and at the same time increase the number of people trying to purchase such lands, and thereby stimulate the operation of the law of supply and demand, thus causing the price asked for such similar land or property to be increased considerably for such land or property as may be offered for sale; and

Whereas in many cases aged people of relatively small financial resources will be forced to pay the income tax or seek a home in distant parts of the State, or other States, where similar property may be for sale, and, if they succeed in finding such property for sale and do purchase same, they will have to leave the communities where their relatives and longtime friends live and where their church and other civic ties have long been established, and begin life among strangers; and

Whereas these landowners annually pay Federal income taxes as other citizens do, and yet by this discriminatory provision of the present Internal Revenue Code, they are unjustly required to pay an additional income tax; now, therefore, be it

Resolved by the Board of Aldermen of the City of Wichita Falls, Tex., That the Congress of the United States be petitioned to amend the Internal Revenue Code so as to repeal the provision requiring the owners of land or property taken by condemnation to pay income tax on the excess of such sales and permit the owners, without paying income tax on same, to invest the proceeds in any kind of property they may desire; and be it further

Resolved, That official copies of this resolution be sent to the 2 United States Senators from Texas, to the Honorable FRANK IKARD, United States Congressman from the 13th Congressional District of Texas, and to Representative WILBER D. MILLS, of California, who is the chairman of the House Ways and Means Committee, as well as the Joint House and Senate Committee on Internal Revenue.

Passed and approved this 14th day of April A. D. 1958.

K. C. SPELL, *Mayor.*

Attest:

GEO. T. HENDERSON,
City Clerk.

The Trinity River Controversy: Straight and to the Point

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 24, 1958

Mr. SCUDDER. Mr. Speaker, a great controversy is raging over the Trinity River project in northwestern California, and how this highly desirable project is to be constructed and operated. My bill providing for the joint development of the waterpower resources of the Trinity River has had lengthy hearings, which were completed nearly 3 months ago by the Subcommittee on Irrigation and Reclamation of the House Committee on Interior and Insular Affairs. No action has been taken yet, although the preponderance of evidence was most convincing in favor of the partnership proposal.

It seems to me to be in the best interests of the Nation to call for speedy action on this matter. In a talk before a recent meeting of California's Commonwealth Club in San Francisco, Secretary of the Interior Fred Seaton gave an excellent summation of the true nature of this controversy over the Trinity River project. Under leave to extend my remarks, I would like to include in the RECORD an editorial from the April 24 issue of the Petaluma Argus-Courier, which discusses this controversy:

STRAIGHT AND TO THE POINT

Secretary of the Interior Fred A. Seaton, in his recent talk before California's Commonwealth Club on the proposed partnership development of the Trinity River project, answered in detail objections raised to the proposal by Congressman CLAIR ENGLE before the same forum. Then he pushed tangled statistics aside to say something that, we feel, has needed saying:

"If the opponents of teamwork are willing to sacrifice $175 million in the Central Valley project account plus $83 million in Federal taxes, plus municipal and State taxes, merely to try to prove that only the Federal Government can do a job right, let them say so plainly.

"If the opponents of teamwork are unalterably opposed to anything but all-Federal development—and its inevitable corollary, Federal monopoly—let them say so and plainly. If the opponents of teamwork believe that now is the time to start California on the road toward a valley authority, let them say so and plainly."

There, through all the theorizing in the foggy pens of socialism, stand clear the plain facts to be considered in the interests of the people of California.

Proposed Railroad Legislation

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, May 1, 1958

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dated April 23, 1958, written to the able junior Senator from Missouri [Mr. SYMINGTON] by the presidents of Wabash Railroad Co., and Missouri Pacific Railroad Co.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

APRIL 23, 1958.

Hon. STUART SYMINGTON,
Senate Office Building,
Washington, D. C.

DEAR SENATOR SYMINGTON: We are disappointed that the program of railroad legislation proposed in behalf of the administration by Secretary Weeks in his letter of April 22, 1958, addressed to Senator SMATHERS, was so limited in its scope.

In our opinion, there is no excuse to withhold approval of repeal of the excise tax to await development of a general tax-revision program. In its conception, this tax on freight and passenger traffic was not primarily a revenue measure. Its revenue potential is not great and it was justified during the war as a deterrent to civilian use of common carrier facilities, badly needed to carry war supplies and personnel. The trouble now is that it continues to deter use of railroad facilities by the public when the industry is in desperate need for freight and passengers. Unlike most other excise taxes, this tax applies to only a small percentage of the Nation's transportation. Much of the water traffic and a major part of highway traffic is either free of the tax or avoids it. It is this fact that makes the issue so serious to the railroads who are taxed on 100 percent of their traffic.

The construction reserve proposal is another important part of the program which would result in substantial improvement to railroad facilities and equipment. It would bring about an early return of many furloughed railroad workers to their jobs. It would use railroad revenues rather than borrowed money to finance the projects and would be a great stimulus to the general economy.

The program developed by the railroads before the Senate subcommittee was a well-rounded one. It was supported by extensive and we believe thoroughly documented testimony by leaders in the industry. It was in

most particulars supported by spokesmen for competing forms of transportation.

A look at the past will show quite clearly how serious it is to let a basic industry like that of the railroads be brought to its knees because it must carry on its operations in a straitjacket of antiquated repressive rules and regulations. Once down, it is hard to get the giant up.

We want to urge you to press upon your associates in the United States Senate the importance of enacting a balanced program now to save our industry. We believe that not only the railroads but our whole economy will get a great lift by such farsighted action.

Sincerely yours,

WABASH RAILROAD CO.,
By A. K. ATKINSON, *President.*
MISSOURI PACIFIC RAILROAD CO.,
By RUSSELL L. DEARMONT,
President.

Surplus Food Stamps

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. HAGEN. Mr. Speaker, the Subcommittee on Consumer Study of the House Committee on Agriculture recently completed public hearings on the feasibility of a surplus food stamp plan to benefit America's needy and unemployed.

As a member of the Agriculture Committee, I have watched these hearings with great interest and am anxious that our food surpluses be used as benficially as possible.

Among the witnesses appearing before Congressman ANFUSO's committee was a fellow Californian, Mr. George McLain, president of the National Institute of Social Welfare.

In order that the views of Mr. McLain may be readily available to Members, I include his statement in the Appendix to the RECORD at this point:

Mr. Chairman and members of the committee, my name is George McLain. I am president of the National Institute of Social Welfare, located at 200 C Street SE., Washington, D. C., with main headquarters at 1031 South Grand Avenue, Los Angeles, Calif.

By way of explanation. The National Institute of Social Welfare is a nonprofit corporation. We are specifically set up to represent the aged, the blind, physically handicapped and dependent children on the local, State, and national level. It has been our job, through the past 17 years, to work in behalf of America's needy citizens, most of whom depend entirely upon the public-assistance program for their existence.

As your committee is limited in time allotted to the hearings on surplus-food stamps, this presentation will be brief. Herewith are major points prepared for inclusion in the record.

First, I want to commend Congressman ANFUSO, chairman of this subcommittee, author of H. R. 11162, and Congressman HAROLD D. COOLEY, chairman of the House Committee on Agriculture, for making these hearings on surplus-food stamps possible. Of course, my deepest appreciation to two gracious ladies, the Honorable LEONOR K. SULLIVAN, and the Honorable MARTHA W. GRIFFITHS, who have worked tirelessly to create surplus-food stamps to benefit America's hungry.

I'm delighted that Congress is giving serious consideration to the distribution of surplus food stamps as embodied in H. R. 11162. However, its effectiveness will be seriously impaired unless certain protections are established. We call your attention particularly to section 2, item 1, in this bill which states:

"In carrying out such program, the Secretary shall distribute surplus food made available by the Secretary for distribution under this program only where requested to do so by a State or political subdivision thereof."

This should be stricken from the bill. A provision should be included requiring States to participate and conform to certain standards established by Congress. Among such provisions should be:

1. That the program be administered uniformly in every political subdivision of the State.

2. No residence requirement shall be imposed on any applicant or recipient of surplus food stamps.

3. Domestic requirements and distribution shall take precedence over any and all foreign allotments and distribution.

4. Provisions be made for emergency cases, where the applicant does not have the means to purchase surplus food stamps.

1. ASSURE DISTRIBUTION

My objection to the permissive legislation under consideration is based on the belief that if it is intended for Congress to make surplus food available to needy people by appropriations, such distribution must be directed by Congress. It is my understanding that under this bill, the Federal Government would bear the entire cost of the program. Therefore, I can see no conflict whatever with States and/or local authority. It would seem grossly unfair that Congress should pass a bill which would assist the needy in some parts of the country, whose local lawmakers may be more humanitarian, while the needy in other sections would be deprived of this Federal program, simply because of an antagonistic or capricious policy of local politicians.

Generally speaking, I understand why certain provisions of H. R. 11162 is limited in scope and why overall discretionary powers are given the Secretary of Agriculture, who is called upon to establish and administer this surplus food-stamp plan. Nevertheless, Congress has its responsibility to the people. It has the power by law to bypass whatever opposition exists against a surplus food-stamp program.

2. RESIDENCE REQUIREMENTS

I strongly recommend that Congress specifically forbid States and local subdivisions from imposing a residence requirement. Most States require a certain length of residence before they will grant any aid to needy citizens under the public-assistance section of our Social Security Act. These requirements vary in length from 1 year to the maximum of 5 years allowable under Federal law, and have created great hardships on many of our aged and needy.

It is the thousands of stateless citizens who desperately need surplus food stamps. I have included in my prepared statement, which you have before you, two examples of the heartlessness inherent in present State residence requirements.

3. DOMESTIC CONSUMPTION

Considerable effort has been expended under Public Law 480 to dispose of our surplus food commodities in foreign countries, either as a gift, sale, or trade. This generosity involves a great loss to the American taxpayer. I am greatly sympathetic to the needs of those abroad. Yet, I firmly believe we cannot successfully help others until we have solved the problem of hunger and need here at home.

4. EMERGENCY CASES

Most of the detailed surplus-food stamp plans or food-allotment proposals which have been offered to Congress are based upon the theory that beneficiaries will purchase a certain number of stamps, representing their average expenditure for food, and will be given an allotment of free stamps as a supplement. I approve of this basic theory to increase consumption without decreasing consumer expenditures. At the same time we will raise the dietary standards of the low-income groups. However, in establishing this purpose, we must be aware that many of our people have no money income at all.

Obviously, if a breadwinner had no money with which to purchase food stamps, he would be unable to receive any free stamps, unless provision is specifically made for emergency aid. We hear daily of cases from all over the country describing that plight of the unemployed who are not covered by unemployment compensation, and who are ineligible under local regulations for any of the public assistance or relief programs. Certainly they, of all people, should not be denied surplus-food stamps because they have no money with which to purchase food in the first place.

ECONOMIC REALITIES

Yes, I could go on and on in moral justification of eradicating hunger and want here amidst us in this land of plenty. Yet I believe we must consider equally important the economic realities involved. Yes, we have definite and indisputable statistics that can well be understood by anyone to support the desperate need for surplus food stamps.

I have included in my prepared statement excerpts from a report by the United States Department of Health, Education and Welfare, startling facts regarding the inadequacy of present public assistance grants. This indicates a very great need for surplus food to supplement the meager allowances. I am extremely pleased that a provision in H. R. 11162 specifically forbids any reduction in public assistance grants through acceptance of surplus food stamps.

EFFECTS OF INFLATION

One of our affiliates, the California Institute of Social Welfare, of which I am chairman, undertook a comprehensive cost-of-living survey last fall. We sought specific information on the effects of inflation on California old-age pensioners, particularly in relation to food and adequate diets. A report on this has just been issued and I should like to ask that it be inserted in the RECORD immediately following my statement, so that the committee may have access to the information compiled.

UNEMPLOYMENT CRISIS

I have already mentioned benefits which would accrue to victims of the current unemployment crisis. Certainly, with 5 million breadwinners unemployed, and the number steadily rising, we must all be concerned with this national emergency. Again, we must look at it from the moral conviction that none of our people should be hungry in the midst of vast food surpluses. Hand in hand with our moral obligation, go the hard, economic facts.

When we consider that 7.3 percent of insured workers were unemployed in mid-February (highest percentage since the system began back in 1938) and that the percentage was much higher in some States, reaching all the way up to the frightening level of 14.4 percent in Montana, we can readily see the absolute necessity of putting into immediate effect a surplus food stamp program.

CONCLUSION

The cold economic facts and figures demand that a surplus food stamp program is vitally necessary. And in the face of moral

justice, I feel certain your decision will be a unanimous approval of these amendments which I propose to H. R. 11162.

In my written presentation I have gone into greater detail of the vital and immediate need for a surplus food stamp program and I will be happy to answer any questions the committee members may have.

Thank you.

REA Interest Rate Raise Unjustified

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, May 1, 1958

Mr. YARBOROUGH. Mr. President, an article by the distinguished newsman, Roscoe Fleming, in the April 22 issue of the Christian Science Monitor, presents interesting information on the two proposals to hike the interest rate on REA loans.

Mr. Fleming's article discusses an analysis of the REA program made for the Illinois REA Association, and in regard to this pertinent study he states:

The rural electrification program was a social one as well as an economic one; and as a condition of getting Federal funds, the REA's had to pledge coverage on an area basis. That is, they had to extend service to every farm in the area for which they were licensed, no matter how remote. This is contrary to the private utilities' custom of picking out clumps of customers so situated that the cost of serving them are greatly lessened.

In other words, the REA service often costs more—it is more expensive to serve a thousand farms scattered over hundreds of square miles, than to serve the same number of suburban or city families within a few square miles, or within a few dozen cities.

Mr. President, the Christian Science Monitor is a newspaper with a well-deserved reputation for factual unsensational reportorial analysis and objectivity. I think that the article by Roscoe Fleming in the April 22 issue discusses, in a most factual and objective manner, the important reasons why an increase in REA interest rates is uncalled for, and I highly recommend this article to my colleagues.

Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the article entitled "REA Hits Loan Bill Due To Boost Costs," by Roscoe Fleming, which appeared in the April 22, 1958, issue of the Christian Science Monitor.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REA HITS LOAN BILLS DUE TO BOOST COSTS

(By Roscoe Fleming)

DENVER.—"They shall not pass," seems to be the sentiments of most officials and members of Rural Electrification Administration cooperatives, as to two bills in Congress favored by the Eisenhower administration.

One would require the cooperatives hereafter to pay whatever rate of interest on their loans the Government has to pay. They now pay a flat 2 percent.

The other bill would set up a system under which the cooperatives under certain circumstances might seek loans from private lenders, rather than from the Government. The latter would insure the loans to reassure the private lenders—the cooperatives would pay the cost of this insurance—and the Government would transfer to the private lender the first lien it now holds on cooperative property.

This bill is the more heartily opposed by the REA's—though both are unpopular—as discussion made clear at the annual meeting of Colorado REA cooperatives here.

The Colorado cooperators follow the pattern of opinion established nationwide, and evidenced at the annual convention of the National Rural Cooperative Electrical Association at Dallas last winter.

VITAL HIRED HAND

Electricity has become the indispensable hired hand on millions of farms. (The REAs call their symbol of service Willy Wired-Hand.) About 95 percent of American farms now have central-station current, compared with 10 percent in 1935, freeing the farm wife from the washboard, and her husband from much of his arduous toil around the barn, increasing the efficiency of the farm simultaneously with providing more leisure for its operators.

About 1,100 separate REA cooperatives were established in the big program that was instituted by Congress in the mid-1930's after private utilities had turned down the Government's offer of low-cost, long-term loans to them if they would extend their lines throughout the countryside. About 80 cooperatives have fully repaid the Government.

Somewhat less than a thousand still owe it money, and have repaid about $500 million plus interest, or some $800 million in all, out of $3.6 billion loaned. They, as a group, are $117 million ahead in paying off their debt, and the delinquency of a few is infinitesimal—about $100,000 in all.

But the program so far has provided only a minimum service by modern standards for most of the 4 million farm families now served. The latter are going to demand more current for heavier jobs. David Hamil of Colorado, REA administrator, told the Colorado group that up to a billion dollars a year in new financing may be needed eventually.

REA PROTEST EXPLAINED

The REA attitude is that while the Government may have to pay more than 2 percent for money from now on, it piled up a surplus of some $50 million "made" from REA loans in earlier years when it wasn't paying that much. So, the REA officials say, if they are going to be charged the full cost of interest from now on, they first should get a credit of this $50 million.

They are much more hostile to the second bill. They say it produces an opportunity for private utilities, or their financiers, to get hold of one REA after another; and they claim that the private utility goal is, as always, to put REA out of business.

The REA administrators say that under either measure they probably would have to increase rates, perhaps to a point where farm families, hit from the other side by diminishing farm income, no longer could afford electricity.

Mr. Hamil, in effect, warned them, however, that the REA's sooner or later would have to provide more of their own financing if not all of it. But he then tempered his warning by saying:

"However, utilities generally figure that they must have a net worth of 45 to 50 percent, to be on a sound basis. The comparative figure for the REA system nationwide is 13 percent. So it cannot, as of today, go on a wholly self-financing basis. The cooperatives are not yet strong enough."

COSTLY OPERATION

This would seem to put off for some years, perhaps many, the day when the cooperatives will feel they are strong enough.

In an analysis presented to the convention and made for the Illinois REA Association, one of the strongest in the Nation, the following points also were made:

The rural electrification program was a social one as well as an economic one; and as a condition of getting Federal funds, the REA's had to pledge coverage on an area basis. That is, they had to extend service to every farm in the area for which they were licensed, no matter how remote. This is contrary to the private utilities' custom of picking out clumps of customers so situated that the costs of serving them are greatly lessened.

In other words, the REA service often costs more—it is more expensive to serve a thousand farms scattered over hundreds of square miles, than to serve the same number of suburban or city families within a few square miles, or within a few dozen city blocks.

CUSTOMERS FAR APART

The Illinois study shows that REA customers average only three to a mile there. In many less closely populated States they are even farther apart.

Secondly, of 151,000 farmsteads originally on Illinois REA lines, 11,000 no longer exist as separate "services." They have been abandoned or consolidated into other farms. The capital cost of building lines to serve those farms was more than $7 million. The remaining 140,000 farmsteads and REA members must now pick up this load.

Thirdly, every item of cost has increased, and wholesale power rates that the cooperatives must pay still are going up. Costs are increasing both because of inflation and because of the need of replacing old facilities with new and sturdier construction to take today's increasing loads. Debt-service payments—which under REA repayment schedules increase year by year—will within a decade reach a statewide maximum of $3,700,000. Net margin of the Illinois cooperatives, corresponding to the net profit of private utilities, was $2,208,000 in 1956, which means they must find $1,500,000 more yearly within the decade, just to service the debt.

The authors of the Illinois study say that any steep increase in interest on new loans, say, from 2 to 4 percent, will be just too much for some of the weaker cooperatives, and they may go to the wall or have to sell out.

Bright Spots in the Recession Picture

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1958

Mr. SCUDDER. Mr. Speaker, during this time of constant talk of depression here in Washington and on the floors of both Houses of Congress regarding the economic condition of the country, it might be well to listen to what is being said regarding the same problem elsewhere in the Nation. Reports from my district in California, as reflected in the newspapers, take a more optimistic view, and from a statistical standpoint give good indication that conditions may not be as bad as the gloom propagandists depict. For instance, earlier this month

the San Rafael Independent Journal in Marin County reported that—

The total value of Marin's agricultural production in 1957 was up a healthy $2 million from 1956, and surpassed all years in the past decade except 1952.

Marin County Agricultural Commissioner Thomas W. Peryam noted this growth was in spite of some unusual weather and market conditions, and concluded that—

Marin agriculture is still in a healthy condition.

A few days later, Carroll Snyker, manager of the Marin Development Foundation, reported that building permits issued during the month of March in the county rose to the highest total value since July 1955. This certainly is healthy, and refutes the claims of the gloom prophets that a horrible drop in construction activity has the entire Nation in its grips.

In a related industry, the Crescent City American, located in the midst of northwestern California's timber region, noted early this month that the plywood market was holding steady, and that a mill employing 140 men was reopening. The mill had closed earlier because of poor market conditions. Several other mills in the Crescent City area, which had been closed because of market conditions, were again in operation and employing several hundred men.

Earlier in the year, reports from many areas in the First District in California showed the number of applications for unemployment insurance benefits on the decline, and retail sales rising again after a period of low turnover. While total unemployment is above the same time last year, the total working force is still close to its all-time high.

In Napa County, the Napa Register reported taxable sales in the last quarter of 1957 were more than 15 percent above the previous year. And the entire year 1957 was 13 percent higher than 1956.

When considering the true impact of the recession on the Nation's economy, it is well to consider the whole picture. I would like to include in the RECORD, with leave to extend my remarks, an editorial from the Novato Advance of April 9, which is indicative of the other side of the gloom picture:

THE BRIGHT SIDE

Things may look gloomy to a lot of people right now—those unemployed, storekeepers who see business down, and others who feel that they might be in line to feel the recession ax knifing their necks by taking away their livelihood or putting them on reduced subsistence.

There is gloom on us right now, for many legitimate reasons; and the gloom talkers are having a real holiday. With gloom around, the gloom talkers are compounding the present situation to the point we not only have gloom surrounding us but a positive nightmare.

Actually things are not so bad. It is only every tenth person that is actually affected by the gloom and recession. And things can be made a lot gloomier by just talking about it and getting steeped mentally and psychologically in the atmosphere.

Actually there is a brighter side to the whole picture. Take present business conditions, for instance. Certainly not the best ever. In fact, every third person you talk to on the street is in agreement that we're in a full-scale recession.

But when every third person tells another person how stinking things are, the more it stinks.

Let's stop worrying long enough to consider what the first two people had to say, before you get to the third guy with consternation written all over his face.

Gloom is darned contagious. But with a little effort you can catch a couple of more pleasant diseases known as optimism and cheer almost as easily.

Let's make the effort of looking on the bright side a community one.

There is more building going on or just about to go on, as soon as the weather clears, than has been exhibited for the past 2 years. At Loma Verde they fully expect 340 homes to go up this year and there are plans for plenty more homes here in Novato.

Despite layoffs, the loss of income has been partially offset, for merchants at least, by an increase of 600 in personnel at Hamilton Air Force Base.

Local bankers tell us that personal savings are at an alltime high.

The local dairy industry at the moment is reportedly prospering better than ever—no recession there.

The new four-lane highway and bridge now going up from 101 to Sears Point will bring income, jobs, residents, and travel convenience to North Marin.

There have been more inquiries by small industrial firms concerning suitable locations in the North Marin area than ever before in the history of the local chamber of commerce here, chamber officials report to us.

A number of small-business concerns, operated part-time from homes, have recently moved into the area, adding potential growth and income to the area.

Public construction continues here with schools and other public projects both in Novato and in the county slated.

We can be more optimistic than ever about this community's chances for the planned 4-year State college with the two Cotati sites being ruled out.

With one golf course now operating, and another million dollar golf course to be ready this year, Novato will become known as the recreational headquarters of the bay area

Actually, a check of retail advertising in the Advance shows it is up 8 percent over last year, a good index as to how merchants feel about the local market.

Also merchants report that business is no worse than last year, admittedly not as good as the two previous years. Some of the stores report an increase over last year.

At Hamilton a 510 housing project is to be built this year which will also help boost the local construction industry out of the doldrums in addition to providing homes for Air Force families.

Meanwhile, let's all try to look on the bright side. Let's help our community in every way possible.

All of us who live in and love the Novato Valley might stop and consider how quickly we could change the local recession by our combined buying power.

The exchange current generated would soon burn out the real and often rumor-made gloom.

Don't let the gloom talkers get you down.

A Bill To Get the Government Out of the Milk Business

EXTENSION OF REMARKS
OF
HON. CHARLES H. BROWN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1958

Mr. BROWN of Missouri. Mr. Speaker, I have today introduced a bill which I sincerely hope will be part of any omnibus farm legislation that might come before the Congress this session.

It is a dairy bill written in fact, if not in words, by the dairy farmers of southwest Missouri, after many give-and-take meetings at the grassroots last fall.

This is a bill to get the Government out of the milk business, to encourage milk producers themselves to formulate their own self-financing programs for dealing with their own problems, and to enable producers to formulate those programs, without interference from Government, processors, or distributors.

This is a dairy program of the dairy farmers, by the dairy farmers, and for the dairy farmers—a bill to restore free enterprise to the enterprisers, subject only to the public interest.

We have had some 20 years experience with Government agricultural programs, written in Washington, administered from Washington, in the name of the Federal Government. In all fairness, much has been accomplished. Farmers have learned to work together for their common good. They've seen what happens when they overproduce an economic market. They've learned the value of stabilization. But changing conditions in agriculture and controversial administrative policies in recent years have either reduced the effectiveness of the Government programs or revealed their inherent weaknesses.

Yet, when the Congress sits down to revise or update the programs, we are beset on all sides with confusing advice from divided and divergent sources. The feuding farm associations seldom, if ever, agree.

One farm group tells us to do one thing, another tells us to do another, and still another group differs with the first two. The food processors have their pet suggestions. The consumer groups want their interests provided for. The Congress becomes a referee, not a policy-making body.

And where is the farmer? He is back home milking cows, trying to make a living.

The political arena in Washington is no place to devise a sound and practical program for dairy farmers. Members of Congress are to represent the public interest—the interest of all the people. We cannot dissolve ourselves into a board of directors to formulate policies and prices for dairy producers. The

dairy producers must do it themselves, outside of Washington.

Let us say to the people who produce the milk for the Nation's ever-increasing population: Milk is your business, not ours. You know more about it than the Congress, the Secretary of Agriculture, and the President of the United States. You are fully capable of handling your own business; and we want you to take full charge of your own destiny. Formulate your own programs. Determine your own prices. All we ask is that you provide us with an adequate, orderly, and stabilized flow of milk and dairy products at fair and equitable prices. Therein lies the public interest. And, just as Government has commissions to doublecheck public utility firms to make sure that they operate in the public interest at fair and reasonable rates, we are creating a Federal Milk Commission to doublecheck milk prices. It will be a quasi-judicial body, as nonpolitical as human beings can be, and certainly free of any obligation to pursue any particular political philosophy of any political party in power.

With these tools, and within this framework, the Congress will be saying to milk producers—write your own program. Put your own price tags on your products, and prove to the Federal Milk Commission that your prices are fair and equitable. Go to it with the blessings and good wishes of the Congress of the United States.

Mr. Speaker, this is what the milk producers of southwest Missouri—speaking through me, their elected Representative—are trying to say in this dairy bill.

We ask the Congress to do these things:

First. Divest the Secretary of Agriculture of any legislative authority to fix prices on milk and dairy products.

Second. Direct the Secretary of Agriculture to hold a national referendum whereby bona fide dairy producers vote on whether or not they want to get together in regional conventions, and subsequently a national convention, to formulate their own programs.

Third. Provide the means by which bona fide dairy producers can elect their own delegates to such conventions and formulate their own programs.

Fourth. Authorize dairy producers, through their own duly elected officials, to impose upon themselves any stabilization fees or assessments or quotas they vote on themselves to assure the success of any program they might devise.

Fifth. Assure them that any accumulated surpluses in the Commodity Credit Corporation will not be dumped on the domestic market to jeopardize the success of their new programs.

Sixth. Loan them enough working capital, during the first 2 years of operation only, to give them a running chance at success.

Seventh. Create a Federal Milk Commission to review any price schedules established by the elected officials of the dairy producers to make sure that such prices are fair and equitable, based on cost of production plus reasonable profit.

The Federal Government, under this bill, is not asked to purchase any temporary surplus production of milk and dairy products. The dairy producers want to handle it themselves. Let us give them a chance to do it.

There is no parity price support program in this bill. Dairy producers feel that they can devise better methods of computing fair and equitable prices. Let us give them a chance to try it.

There is no Government price fixing in this bill. Dairy producers are fed up with having their prices fixed in Washington by the Secretary of Agriculture. They think they will be happier and better off if they determine their own prices, and submit them to a Federal Milk Commission for approval. Let us give them a chance to try it.

This is Government's chance to get out of the milk business; and, if Government inventories of dried milk and butter are the expensive and aggravating problem that the Secretary of Agriculture says they are, we should jump at the chance to give dairy producers the chance they deserve to formulate their own programs, without Government dictation or interference, except in the legitimate public interest.

Mr. Speaker, I ask the Congress to read this bill. It is simple. It is based on historic principles of self-determination by democratic processes. It is a foundation upon which can be built a new, sound, and workable program for 1½ million disillusioned people—the dairy producers of America. I urge each Member to give the bill, its purposes, and its methods thoughtful consideration.

The language of the bill is as follows:

A bill to divest the Secretary of Agriculture of any legisaltive authority to fix prices on milk and dairy products; to direct the Secretary of Agriculture to call a National Dairy Producers' Constitutional Convention whereby bona fide dairy producers may formulate their own self-financing programs for stabilizing milk prices at fair and equitable levels; and to create a regulatory commission to protect the public interest in the production and marketing of milk

Be it enacted, etc.—

SHORT TITLE

SECTION 1. This act may be cited as the "Milk and Dairy Products Act of 1958."

DEFINITIONS

SEC. 2. For the purpose of this act, the term—

(1) "Dairy producer" means a person or corporation who produces milk in a State and makes sales of such milk throughout the year which are sales in interstate or foreign commerce or which directly burden, obstruct, or affect interstate or foreign commerce.

(2) "Milk products" means cheese, butter, and nonfat dry milk.

(3) "Secretary" means the Secretary of Agriculture.

(4) "Commission" means the Federal Milk Commission established by section 9.

NATIONAL REFERENDUM

SEC. 3. (a) The Secretary shall arrange for a referendum in which bona fide dairy producers shall (1) vote on whether they favor or oppose the holding of a national convention of dairy producers as authorized in this act, and (2) vote to determine which of the individuals who have been proposed for consideration as provided in subsection (d) are to be delegates to the regional conventions held preliminary to the national convention. Each county in the United States shall have at least one polling place for the referendum.

(b) Each dairy producer shall be entitled to one vote in the referendum conducted under this section.

(c) There shall be 1 delegate to the regional convention for each 500 dairy producers in a county, except that in any event each county where there are more than 50 dairy producers shall have 1 delegate.

(d) To be eligible for consideration as a delegate to a regional convention a person must be a bona fide dairy producer and must be proposed for consideration by a petition to the Secretary signed by at least 50 dairy producers or by at least one-third of the dairy producers in a county in the case of counties in which there are fewer than 100 dairy producers.

REGIONAL CONVENTIONS

SEC. 4. (a) The Secretary shall divide the United States into 15 regions each of which shall have approximately equal milk productions. The Secretary shall provide for holding a regional convention in each such region. He shall provide that at each such convention the delegates shall—

(1) divide into committees and study groups to formulate resolutions for consideration at the national convention;

(2) adopt such resolutions as they desire to propose before the national convention; and

(3) elect, from among their number, 15 persons to be delegates to the national convention.

(b) The Secretary shall pay the compensation, in accordance with the Classification Act of 1949, of such attorneys, accountants, and other experts as he determines may be necessary at each regional convention. Each delegate to a regional convention shall receive compensation at the rate of $12 per diem for each day they serve at the regional convention and each such delegate shall receive his travel and subsistence pay in conformity with the Standardized Government Travel Regulations.

NATIONAL CONVENTION

SEC. 5. (a) The Secretary shall provide for holding a national convention in the city of Chicago, Ill. The delegates at such convention shall be the persons elected at the regional conventions pursuant to section 4.

(b) At the national convention the delegates shall—

(1) study the various problems confronting the dairy industry in the United States,

(2) formulate and adopt a constitution whereby dairy producers shall elect their own officials and operate their own self-financing stabilization programs to provide the Nation with an adequate, balanced, and orderly flow of milk and dairy products at fair, equitable, and stabilized prices.

(c) The constitution and the program formulated at the national convention shall be submitted to a referendum of dairy producers who voted in the referendum conducted under section 3. If, in such referendum, a majority of the dairy producers voting indicates that they wish the constitution and the program to become effective, such constitution and such program shall become effective.

(d) The Secretary shall pay the compensation, in accordance with the Classification Act of 1949, of such attorneys, accountants, and other experts as he determines may be necessary at the national convention. Each delegate to the national convention shall receive compensation at the rate of $12 per diem for each day they serve at the national convention and each such delegate shall receive his travel and subsistence pay in conformity with the standardized Government travel regulations.

AUTHORITY OF DAIRY PRODUCERS

SEC. 6. (a) If, in carrying out any program which has become effective under section 5, it shall be necessary for dairy producers through their duly elected officials to have

authority to impose on all producers marketing assessments or fees for the purpose of enabling the producers to stabilize prices of milk and milk products, such fees or assessments are hereby authorized and shall be deducted by milk handlers from payments made to the dairy producers.

(b) No program shall become effective which provides for marketing allotments or controls unless and until the terms and conditions of such allotments or controls are explicitly approved by a majority of dairy producers in a national referendum.

COMMODITY CREDIT CORPORATION

SEC. 7. (a) While a program adopted under this act is in effect, the Commodity Credit Corporation, notwithstanding section 201 of the Agricultural Act of 1949, may not support the price of whole milk, butterfat, or the products of such commodities.

(b) During each of the first 2 fiscal years in which a program adopted under this act is in effect, the Commodity Credit Corporation shall loan to the dairy producers such sums, not in excess of $200 million in each year, as the elected officials of the dairy producers estimate will be needed for working capital. The sums so loaned shall be repaid, with interest at a rate to be determined by the Secretary of Agriculture but not less than the cost of money to the Commodity Credit Corporation for a comparable period.

(c) During the time a program adopted under this act is in effect, the Commodity Credit Corporation, notwithstanding section 407 of the Agricultural Act of 1949, may not sell any milk products in its stocks within the United States.

LAWFUL PRICES

SEC. 8. In the event a program adopted under this act provides for establishing price levels paid to dairy producers for their milk, the prices shall be considered lawful if they do not exceed levels which will result in an adequate, balanced, and orderly flow of milk and milk products to the market at fair, equitable, and stabilized prices, determined as provided in section 12.

FEDERAL MILK COMMISSION

SEC. 9. (a) There is hereby established as an independent agency in the executive branch of the Government an agency to be known as the Federal Milk Commission which shall be composed of five members appointed by the President, by and with the advice and consent of the Senate. The President shall designate one of the members to act as chairman. Not more than three members of the Commission shall be members of the same political party.

(b) The terms of office of members of the Commission shall be 5 years, except that—

(1) any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term; and

(2) the terms of office of the members first taking office shall expire, as designated by the President at the time of appointment, one at the end of 1 year, one at the end of 2 years, one at the end of 3 years, and one at the end of 4 years, after the date of their appointment.

Any member of the Commission may be removed by the President for inefficiency, neglect of duty, or malfeasance in office.

(c) Each member of the Commission (other than the chairman) shall receive compensation at the rate of $20,000 per annum; and the chairman shall receive compensation at the rate of $20,500 per annum.

(d) The principal office of the Commission shall be in the District of Columbia, but the Commission or any duly authorized representative may exercise any or all of its powers in any place. The Commission shall hold such meetings, conduct such hearings, and receive such reports as may be necessary to enable it to carry out the provisions of this act. Three members of the Commission shall constitute a quorum thereof.

(e) The Commission shall have authority, subject to the provisions of the civil-service laws and the Classification Act of 1949, to appoint and fix the compensation of such officers and employees as are necessary in the exercise of its functions.

PRICE SCHEDULES

SEC. 10. (a) Under such rules and regulations as the Commission shall prescribe, the elected officials of the dairy producers shall file with the Commission, within such time and in such form as the Commission may designate, and shall keep open for public inspection, schedules showing the lawful prices at which milk and milk products are to be established under the program adopted under this act.

(b) Unless the Commission otherwise orders, no change shall be made by the dairy producers in the level at which the price of milk or any milk product is to be established, except after 30 days' notice to the Commission and to the public. Such notice shall be given by filing with the Commission and keeping open for public inspection new schedules plainly stating such new prices. The Commission, for good cause shown, may allow such changes to take effect without requiring the 30 days' notice herein provided for by an order specifying the changes to be made and the time when they shall take effect.

(c) Whenever any such schedules of new prices is filed, the Commission shall have authority, without formal pleading, but upon reasonable notice, to enter upon a hearing concerning the lawfulness of such prices; and, pending such hearing and decision thereon, the Commission may suspend, but not for a longer period than 5 months beyond the time when the new schedule would otherwise go into effect; and after full hearings, either completed before or after the new price has gone into effect, the Commission may make such orders with reference thereto as would be proper in a proceeding initiated after it had become effective.

(d) At any hearing involving an increase in prices, the burden of proof to show that the higher prices are not unlawful shall be upon the elected officials of the dairy producers.

UNLAWFUL PRICES

SEC. 11. Whenever the Commission, after a hearing had upon its own motion, finds that the price therefore established and in effect is unlawful, the Commission shall determine the highest level of price which would be lawful and shall establish the same by order.

DETERMINATION OF LAWFUL PRICES

SEC. 12. (a) In determining whether a price is lawful, the Commission shall ascertain the price which will return the cost-of-production, determined as provided in subsection (b), plus a reasonable profit.

(b) The cost of production shall be determined on the basis of an audited cost-accounting survey of the actual production costs of at least 100 dairy herds in each region established by the Secretary under section 4, selected according to accepted statistical methods to represent a reasonably adequate sample of class I and non-class I producers. In determining such costs—

(1) all costs of production on the farm shall be considered which are properly assignable to milk production;

(2) farm-grown feed shall be assigned a cost of not less than 85 percent of the wholesale market price of such feed in the area; and

(3) hired and family labor shall be assigned a cost computed on the basis of wage rates for comparable work in milk manufacturing and processing plants in the area.

(c) The reasonable profit referred to in subsection (a) shall be a return to dairy producers on invested capital equal to the average return on the net worth earned by milk manufacturers and handlers during the preceding fiscal year.

(d) The Commission is further authorized to make audited cost-accounting surveys of production costs experienced by colleges and universities in handling test herds in each of the regions established by the Secretary under section 4, such surveys to make due allowances for per-cow production of test herds compared to national per-cow production averages.

INVESTIGATIONS BY COMMISSION

SEC. 13. (a) The Commission may investigate any facts, conditions, practices, or matters which it may find necessary or proper in order to enable it to carry out its duties under this act.

(b) For the purpose of any investigation or any other proceeding under this act, any member of the Commission, or any officer designated by it, is empowered to administer oaths and affirmations, subpena witnesses, compel their attendance, take evidence, and require the production of any books, papers, correspondence, memoranda, contracts, agreements, or other records which the Commission finds relevant or material to the inquiry. Such attendance of witnesses and the production of any such records may be required from any place in the United States or at any designated place of hearing. Witnesses summoned by the Commission to appear before it shall be paid the same fees and mileage that are paid witnesses in the courts of the United States.

(c) In case of contumacy by, or refusal to obey a subpena issued to, any person, the Commission may invoke the aid of any court of the United States within the jurisdiction of which such investigation or proceeding is carried on, or where such person resides or carries on business in requiring the attendance and testimony of witnesses and the production of books, papers, correspondence, memoranda, contracts, agreements, and other records. Such court may issue an order requiring such person to appear before the Commission or member or officer designated by the Commission, there to produce records, if so ordered, or to give testimony touching the matter under investigation or in question; and any failure to obey such order of the court may be punished by such court as a contempt thereof. All process in any such case may be served in the judicial district whereof such person is an inhabitant or wherever he may be found or may be doing business. Any person who willfully shall fail or refuse to attend and testify or to answer any lawful inquiry or to produce books, papers, correspondence, memoranda, contracts, agreements, or other records, if in his or its power so to do, in obedience to the subpena of the Commission, shall be guilty of a misdemeanor and upon conviction shall be subject to a fine of not more than $1,000 or to imprisonment for a term of not more than 1 year, or both.

(d) The testimony of any witness may be taken at the instance of a party, in any proceeding or investigation pending before the Commission, by deposition at any time after the proceeding is at issue. The Commission may also order testimony to be taken by deposition in any proceeding or investigation. Such depositions may be taken before any person authorized to administer oaths not being of counsel or attorney to either of the parties, nor interested in the proceeding or investigation. Any person may be compelled to appear and depose, and to produce documentary evidence, in the same manner as witnesses may be compelled to appear and testify and produce documentary evidence before the Commission, as hereinbefore provided. Such testimony shall be reduced to writing by the person taking deposition, or under his direction, and shall, after it has been reduced to writing, be subscribed by the deponent.

(e) Witnesses whose depositions are taken as authorized by this act, and the person or officer taking the same, shall be entitled to the same fees as are paid for like services in the courts of the United States.

RULES OF PROCEDURE

SEC. 14. All hearings, investigations, and proceedings under this act shall be governed by rules of practice and procedure to be adopted by the Commission, and in the conduct thereof the technical rules of evidence need not be applied. No informality in any hearing, investigation, or proceeding or in the manner of taking testimony shall invalidate any order, decision, rule, or regulation issued under the authority of this act.

JUDICIAL REVIEW

SEC. 15. Any person affected by an order issued by the Commission in a proceeding under this act may obtain a review of such order in the United States Court of Appeals for the District of Columbia by filing in such court, within 60 days after the order of the Commission, a written petition praying that the order of the Commission be modified or set aside in whole or in part. A copy of such petition shall forthwith be served upon any member of the Commission and thereupon the Commission shall certify and file with the court a transcript of the record upon which the order complained of was entered. Upon the filing of such transcript such court shall have exclusive jurisdiction to affirm, modify, or set aside such order in whole or in part. No objection to the order of the Commission shall be considered by the court unless such objection shall have been urged before the Commission in the application for rehearing unless there is reasonable ground for failure so to do. The finding of the Commission as to the facts, if supported by substantial evidence, shall be conclusive. If any party shall apply to the court for leave to adduce additional evidence, and shall show to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceedings before the Commission, the court may order such additional evidence to be taken before the Commission and to be adduced upon the hearing in such manner and upon such terms and conditions as to the court may seem proper. The Commission may modify its findings as to the facts by reason of the additional evidence so taken, and it shall file with the court such modified or new findings, which if supported by substantial evidence, shall be conclusive, and its recommendation, if any, for the modification or setting aside of the original order. The judgment and decree of the court, affirming, modifying, or setting aside, in whole or in part, any such order of the Commission, shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in section 1254 of the United States Code, as amended (U. S. C., title 28, secs. 346 and 347).

SEC. 16. There are hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, such sums as may be necessary to carry out the purposes of this act, not to exceed $5,000,000.

Hawaii Deserves To Go First Class

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Rock Hill Herald, Rock Hill, S. C., of April 28, 1958:

HAWAII DESERVES TO GO FIRST CLASS

Each year the proposition comes up in Congress, and each year it is put aside. The issue is statehood for the Territory of Hawaii.

Many arguments are put forth against granting statehood for this American territory that lies in the Pacific, 2,000 miles off the shores of California.

Most are excuses against action: Hawaii does not actually border on the United States; the number of elected representatives in the United States House and the United States Senate would be affected; the power of one major political party or the other would be reduced; it would be giving the Communists a pipeline into the Federal Government because communism is strong in Hawaii.

This last argument is one of the most distorted and misunderstood reasons against statehood for Hawaii. The people of Hawaii have consistently rejected Communists. The Communist menace has been under more careful study in Hawaii than in any State in the Union. The number and influence of Communist labor leaders has decreased in recent years.

Hawaii has shown itself to be a loyal American territory. On a percentage basis, the Territory of Hawaii lost more than four times as many soldiers in the Korean war as did any State in the Union. And there wasn't a single case of desertion by an Hawaiian serviceman—and not a single case of a prisoner refusing to return to his homeland, as some American servicemen did.

The Territory of Hawaii, growing in economic strength, is proving itself to be a loyal American outpost. It's time the people of Hawaii were given first-class American citizenship.

President's Pentagon Reorganization Plan Gains Popular Support

EXTENSION OF REMARKS

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1958

Mr. SCUDDER. Mr. Speaker, it is interesting to study the nationwide comments regarding President Eisenhower's program for reorganizing the military. Many of the fears expressed in Washington are not found elsewhere in the Nation, and it is my belief that many of these fears are without foundation. Many public-spirited citizens around the Nation have spoken out in favor of the President's plan, and the philosophy behind it. With permission to extend my remarks, I wish to include in the RECORD a sample of this public support for the reorganization plan, in the form of an editorial from the April 18 issue of the Petaluma Argus-Courier:

IKE CONTENDS DEFENSE PLAN PROVIDES SOLVENCY, SAFETY

President Eisenhower opened the fight for his defense reorganization plan yesterday with a nationwide radio and TV talk. "The purpose of the plan," he said, "is clear. It is safety with solvency. The country is entitled to both."

As presented to Congress, the defense reorganization plan largely fulfills the requirements for true reorganization. This was hoped for, but was not achieved, when the Defense Department was created. The plan is designed to assure maximum military efficiency and economy. It provides the means for eliminating rivalry, conflicts, duplication and waste which could cost the Nation its future in an era of missles. It opens the way for the development of coordinated roles and missions adapted to new weapons.

But the plan has also stirred the all-out opposition of the defenders of the status quo. Even before the proposals were known, the plan was greeted with such terms as "blockbuster," and "revolutionary." Since its presentation to Congress it has been denounced as a militaristic proposal that could lead to a Prussian-type supreme high command or a military man on horseback running the country.

The President scoffed at such criticisms, and said that the fears of critics are "at the lease misconceptions and at the most misrepresentations. I repeat, there will be no single chief of staff; no Prussian staff; no czar; no $40 billion blank check; no swallowing up of the traditional services; no undermining of the constitutional powers of Congress."

Here are the major points in the President's program:

Reorganize our combat forces into unified operational commands under the direct control of the Secretary of Defense.

Require that strategic planning be unified and concentrated in the Joint Chiefs of Staff and their immediate staff.

Permit the Joint Chiefs to delegate to their vice chiefs most of their administrative responsibilities as operating heads of the three services.

Continue the three military departments as support agencies for the combat forces.

Place all research and development activities under one man, who would report directly to the Secretary of Defense, and appropriate all funds for such activities to the Secretary of Defense, instead of to the services.

Otherwise strengthen the authority of the Secretary of Defense by giving him greater flexibility in use of appropriated funds; eliminating the requirement that the services be separately administered; eliminating the prohibition on transfer, assignment, abolition, or consolidation of functions; tightening his supervision of public affairs activities of the three services.

The President has spoken out in unmistakable terms. He has put his case on strong grounds. His position is that we are not getting enough return for what we spend in terms of security. He has spoken not only as President, but also as a soldier. And here he is on firm ground. If anyone wants expert testimony on what needs to be done to get a more effective Defense Establishment, here is an expert whose qualifications cannot be challenged.

In taking his case to the people he is not attempting to ride roughshod over Congress. He is not attempting to dictate but to lead. Some reorganization is imperative, and the President is trying to make that reorganization effective. He deserves our support.

Fourscore and a Terrific Score

EXTENSION OF REMARKS

OF

HON. ROLAND V. LIBONATI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1958

Mr. LIBONATI. Mr. Speaker, today, Wednesday, April 30, the sun peeks out of the heavens to wink at us, for there are sweet, soft complimentary murmurings about the halls of the Capitol and

everyone is whispering about the happy event—for this day, Mr. THOMAS O'BRIEN, of Illinois, the dean of the Illinois delegation, and the natural leader, celebrates his 80th birthday.

His colleagues of the House respect and venerate this humble man, gentle by disposition and fiery by nature. In his long career—25 years—in this House, he has never forsaken a friend and always kept his word. The sagacity of his mind being trained by experiences among those men who ever struggled against the raw problems of a tough life, both economically and socially, had prepared him for his important work here. As a true leader, he always gives the other fellow a friendly word of advice, a pat on the back, the strength of his support. Mr. O'BRIEN fights for one out in the open. He is unafraid. He values the rules of friendship. He never lets one down. The many friends here testify to this, indomitable leaders' complete acceptance as a great man, true American and loyal leader. Mr. O'BRIEN champions the cause of the little fellow, the person who needs a friend. He has great love and respect for the distinguished Speaker, SAM RAYBURN, and the versatile, brilliant majority leader, JOHN MCCORMACK. There is not a Member of the House of Representatives that Mr. THOMAS O'BRIEN need ask a second time for anything—for services he has given to others over the years need not be repeated for him.

His early career started 52 years ago, serving in the Illinois Assembly, as Sheriff of Cook County and as a Congressman. His training on the West Side gave him a keen sense of "knowing a man when he saw one"—and to evaluate character. Mr. O'BRIEN never crossed a person in his life. And, further, he has never mislead anyone at any time. He does not mince words about what he thinks, and is forthright about any position that he takes on a question, whether you like it or not. He tells you to your face—you get it straight from him.

He does not hedge or squirm about hurting your feelings if it is the truth you must know. He served under the fine leadership of a great Democrat, Honorable Patrick Nash, and all his life being taught that a man who can give an order can take an order. This philosophy of life is to accord to another the fair treatment that you would expect to receive yourself. His practical knowledge of men and things is tremendous. He is trustworthy and reliable—a man of few words; but when he talks he really says something and means it—no double talk from our friend who is affectionately called the sheriff.

In my personal tribute to him, may I thank him for the many kind acts of friendship shown to me, as well as the invaluable aid, advice and guidance received through his good offices. It is a privilege to have enjoyed this degree of intimacy through years of my life, beginning with our service in the Illinois Assembly in 1931. He has always been at my side, for which I am ever grateful.

Mr. O'BRIEN, on this day sacred to your memory, we, the Members of the House of Representatives salute you and your popular mate, Mrs. O'Brien, who is revered by everyone throughout the Washington area, especially the working girls, clerks, and waitresses for her many kindnesses. It is for your help, patience and powerful leadership that we join you and your wife in this happy celebration, asking God's blessing.

Jefferson and Lincoln Gave Advice Which Might Help With Recession

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. MCGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following editorial, which appeared in the April 24 issue of the Muskingum Valley News-Magazine, a small weekly newspaper in Dresden, Ohio. To my way of thinking, it represents one of the finest pieces of editorial writing that it has been my privilege to read for a long, long time, and I commend it to the attention of every Member of the Congress. It is an incisive commentary on the all-pervading problem of big government, and it expresses in no uncertain terms the fear of a socialized America if present trends continue—a fear which I have shared with the author for a good many years.

As we gather here each day to consider new and even more grandiose Federal spending programs, it might be well if we paused occasionally and gave serious thought to the sentiments expressed in this article. If we do not soon call a halt to the growth of big government, we are in grave danger of forfeiting those precious rights for which the giants of the past—men of great vision and foresight like Lincoln and Jefferson—worked so unceasingly to acquire and preserve for us.

To the editor of this paper, Mr. D. F. Anguish, I wish to publicly express my appreciation for an excellent, thought-provoking piece of journalism. I only hope that, in the noisy din of "spend, spend, spend" which echoes and rechoes through these Halls each day, this voice, from the heartland of America, is not lost.

JEFFERSON AND LINCOLN GAVE ADVICE WHICH MIGHT HELP WITH RECESSION

As we listen to newscasts and watch releases in the daily press it becomes rather evident that we are kicking up an economic storm. The well-bandied-about phrase is recession.

Of course the great minds of all time have bent to this problem—often without too much concrete accomplishment. In the thirties we came up with some grand experimentation which dragged us to the brink of socialism and pretty well sapped our personal liberty. Sad thing is that, despite a change in administration, we're still eddying in the same socialistic direction.

Certainly this country editor doesn't purport to know the answer to the problem, but we can't help thinking. We've come up with a few generations on the subject that are a little alarming.

It won't be popular to point it out, but turning our backs upon the advice of men like Thomas Jefferson and Abraham Lincoln hasn't helped. Jefferson said, "That government which governs least governs best." Lincoln said in essence that no government should be trying to do things for people at the local level which they could do for themselves. For years, it seems to us, our Government has been doing just the opposite.

For example, in 1928 our national budget was less than $4 billion. Today the $275 billion debt ceiling has finally been broken through and we talk in national budget figures up to $85 billion. As we used to say back during World War II, "Is this trip really necessary" Good question.

No nation in history has ever started the black walk down the road to socialism and turned back. It is probably silly to hope we can. Our processes of government have become so complex, and so burdensome, and so costly—bureaucrats by the tens of thousands have so completely honeycombed our society—that the hope of ever unshackling the Nation is remote indeed. People who talk of individual initiative, and Federal economy are now but voices crying in the wilderness.

The Eisenhower administration, before and in the early days of its present term, talked a lot about economy. The overwhelming pressure of the socialistic tidal wave—the back-home pork-barrel projects of Congressmen—and the fact that people have become so accustomed to Federal handouts as to feel they cannot live without them—now seems to have ground-swelled whatever feeble economy effort there may have been.

There are many interesting parallels in this picture. While the Chamber of Commerce on the National and State level issues brochures on Federal spending—points out how millions can be saved—members of this organization at the local level put on the congressional heat for spending on pet local projects. The Dillon Dam in this area is but one prime example.

Jefferson, Lincoln, and a great many of our greatest have pointed the way of dignity, freedom, and individual initiative but there is every indication we have lost this spark which might possibly solve our problem. It seems we must seek surcease in a Federal bureaucracy, which must take away before it can dole it back—and in the process dissipate the lion's share.

Maybe that's why Jefferson warned, as he did, "That government which governs least, governs best."

The Fund for Adult Education, an Adjunct of the Ford Foundation

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I take pleasure including a resolution adopted by the AMVETS Post of Atlantic, Iowa.

The resolution follows:

AMVETS, THE AMERICAN VETERANS OF WORLD WAR II AND KOREA

Subject: The Fund for Adult Education (FAE), an adjunct of the Ford Foundation.

Whereas certain forces dedicated to the overthrow of our form of republican government under the Constitution of the United States of America, are disseminating propaganda to agitate and confuse Americans by obscuring the truths of American history,

American domestic affairs, and international political affairs; and

Whereas the aim of such propaganda is to implant ideas of a collectivistic world government and to incite action leading thereto through biased information contained in political activity known as adult education discussion groups sponsored by the American Library Association (ALA), various universities and colleges through liberal arts discussions released through university extensions, the American Foundation for Political Education (AFPE), and the Foreign Policy Association (FPA); and

Whereas the discussion group activities sponsored by the above listed organizations are supported by funds received from the Fund for Adult Education whose aggregate funds, amounting to many millions of dollars, are exempted from taxation by privilege extended by citizens of the United States of America; and

Whereas at this time there is no need or desirability for politically biased curricula to be implanted in the educational system of the United States of America in the form of prepackaged collectivistic material published by Ford Foundation's FAE, or the latter's subgrantees: Now, therefore, be it

Resolved, in view of the disclosures regarding the FAE, That we, the members of Atlantic AMVETS Post No. 1, meeting in a regular and duly authorized session this 23d day of April 1958, in Atlantic, Iowa, do hereby alert our membership to:

1. Continue followup and study of the ever-changing tactics of the FAE to infiltrate and to propagandize the educational system of the United States of America.

2. Urge the investigating committees of Congress to make thorough investigation and to report to the American public findings concerning FAE activities.

3. Urge that the internal revenue officials make thorough investigation of FAE's propaganda activities which, under the Internal Revenue Code, disqualifies FAE for tax exemption, and, finally, to revoke FAE's tax exemption; be it further

Resolved, That this resolution and this alert be brought before the next meeting of the ninth district AMVETS, and also brought to the attention of the Iowa Department of AMVETS and the National AMVETS headquarters in Washington, D. C., for a complete study and analysis of the Fund for Adult Education (FAE) at the earliest possible time; finally, it is hereby

Resolved, That all elements of AMVETS, the American Veterans of World War II and Korea, at the State and local levels, will have no truck with the Fund for Adult Education (FAE) enterprises. If AMVETS posts and departments (State organizations) are offered financial aid or invitation by the Ford Foundation's FAE adjunct, or its subgrantees, in carrying out the FAE programs, it is sincerely hoped that they will decline.

CARROLL W. HAYES,
Commander, Atlantic, Iowa.
CHARLES V. BLAKE,
Adjutant, Atlantic, Iowa.

APRIL 1958.

Alexander Hamilton Bicentennial Commission

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. REECE of Tennessee. Mr. Speaker, on yesterday Senator KARL MUNDT, Chairman of the Alexander Hamilton Bicentennial Commission, submitteed the final report of the Commission. I feel Senator MUNDT's introductory statement and a part of the report should appear in the RECORD as follows:

INTRODUCTION

There is no question but that the program of the Alexander Hamilton Bicentennial Commission was a success. Quietly and without undo fanfare it succeeded in its prime objective—making the achievements and great contributions of Alexander Hamilton better and more favorably known to all America and at the same time bringing about, in some measure, a reawakening of American belief in and understanding of the sound principles upon which our Nation was established.

From the outset the Commission sought to achieve its aim through lasting accomplishments—the stimulation and publication of new books on Hamilton and his times, the editing and publication of a truly definitive edition of Hamilton's papers and through more complete understanding of Hamilton and the formative period of the Nation in the schools and colleges. As the Commission's report shows, these hopes were turned into realities.

Because of its small staff and limited funds it was clear from the beginning that that Commission's function must be to plan and to stimulate others to carry out the plans. As a result of this decision, successful efforts were made to enlist the active support of men and women in many fields, of whom a considerable number served as members of the Commission's several advisory committees.

The Commission takes special pride in several of its accomplishments. It brought about the publication and subsequent widespread distribution of the Basic Ideas of Alexander Hamilton, edited by Dr. Richard B. Morris of Columbia University and published by Pocket Books, Inc. This 451-page volume, selling at 35 cents, for the first time made available a wide selection of Hamilton's writings at a price within the reach of all Americans.

Establishment of the Commission, without question, had much to do with the decision of the Rockefeller Foundation and Time, Inc., to provide funds for Columbia University to undertake the editing for publication of a definitive edition of Hamilton's papers, a work now in progress. The Commission cooperated in this work to the greatest possible extent, its "Treasure Trove" search for Hamiltonia bringing to light many documents vital to the work.

Another achievement for which the Commission takes modest credit was its Alexander Hamilton Exhibition which was set up, with the cooperation of the Treasury Department, in the Treasury Building in Washington. This exhibition which contained the finest and largest collection of Hamiltonia ever assembled was viewed by more than 70,000 visitors. The Commission is deeply grateful to the many individuals and institutions whose loans of material made the exhibition possible.

The Commission is pleased to report that in spite of the fact that the total of $200,000 it received in appropriated funds during its lifetime was less than was needed to do a complete job that it nevertheless was able to return to the Treasury a part of this sum, even though small, in keeping with its determination to conduct the Hamilton Bicentennial on a strict economy basis as Hamilton would have wished.

It is fair to point out that the Government of the United States actually profited substantially because of the Commission. The Post Office Department has estimated that it earned a net profit of upwards of $800,000 through sales to collectors of the highly successful Alexander Hamilton Bicentennial commemorative 3-cent stamp, sales for which no postal service was rendered. This net profit accrued to the general fund of the Treasury.

The Commission's scholarship program in which more than 200,000 high-school students actively participated did much to refocus attention on Hamilton and his era, the formative period of the Nation. Added to this were the many lectures in colleges on Hamilton and his times inspired by the Commission's activities and the added emphasis given the man and the period in countless courses of instruction.

Special thanks on the part of the Commission are due the Government agencies which cooperated in making the bicentennial year a success, especially to the Department of State, the Treasury Department, the Department of Defense, the Department of the Interior and the United States Information Agency. The Commission also expresses its appreciation for the cooperation of the many governors, mayors, and other public officials who gave assistance to the program and to the thousands of individuals and organizations who took part.

It is the belief of many Americans that a permanent memorial to the work of Alexander Hamilton should be erected in the National Capital. In support of this belief the executive committee of the Alexander Hamilton Bicentennial Commission at its final meeting in Washington on April 24, 1958, adopted unanimously a resolution recommending such a proposal to the Congress. The resolution read:

"*Resolved,* That the Alexander Hamilton Bicentennial Commission recommend to the Congress the design and erection in the District of Columbia of a suitable memorial to the work of Alexander Hamilton in the founding of the United States, the memorial to be in keeping with the weight and measure of his accomplishments, for these reasons among others, that—

"1. No man did more to establish the United States than did Alexander Hamilton in bringing on the Constitutional Convention, in perfecting the Constitution of the United States through clarifying the problem, in obtaining ratification of the Constitution, and in establishing the Federal Government thereunder—and that without Hamilton, had the United States been formed at all, the Union formed would have been considerably different from what it is and might well have fallen apart for the lack of adequate strength in the Federal Government;

"2. The Federalist, by Hamilton, with help from Madison and Jay, is the greatest commentary on the Constitution and its underlying principles, a commentary that articulated and balanced the American political system so well that it became the basis of constitutional interpretation by the Supreme Court for the first century and a half of the Republic;

"3. A fitting physical memorial to the work of this great man would establish a strong and enduring link between the beginning of this Nation and its institutions and its posterity."

I could not bring this personal statement to a close without expressing my warm appreciation to my fellow Commissioners for their contributions toward making the bicentennial a success and to the members of the Commission's staff who worked tirelessly to the same end.

KARL E. MUNDT,
Chairman, United States Senator from South Dakota.

The Alexander Hamilton Bicentennial Commission was established by Senate Joint Resolution 140, passed by the 83d Congress and approved by President Eisenhower on August 20, 1954, as Public Law 601, chapter 770.

The joint resolution, as adopted, read as follows:

"*Resolved, etc.*, That there is hereby established a commission to be known as the "Alexander Hamilton Bicentennial Commission" (hereinafter referred to as the "Commission") which shall be composed of 19 Commissioners as follows: The President of the United States, the President of the Senate, and the Speaker of the House of Representatives, all ex officio; and eight persons to be appointed by the President of the United States, four Senators to be appointed by the President of the Senate, and four Representatives to be appointed by the Speaker of the House of Representatives.

"SEC. 2. It shall be the duty of the Commission to prepare plans and a program for signalizing the 200th anniversary of the birth of Alexander Hamilton. In preparing such plans and program the Commission shall give due consideration to any plan or plans which may be submitted to it, and to take such steps as may be necessary to coordinate and correlate its plans with those prepared by State or civic bodies. If the participation of other nations in the commemoration is deemed advisable, the Commission may communicate to that end with the governments of such nations.

"SEC. 3. The Commission shall select a Chairman and a Vice Chairman from among its members, and may employ, without regard to the civil-service laws or the Classification Act of 1949, such employees as may be necessary in carrying out its functions.

"SEC. 4. The Commissioners shall serve without compensation, but may be reimbursed for expenses incurred by them in carrying out the duties of the Commission.

"SEC. 5. When the Commission has approved a plan of celebration it shall submit it, insofar as it relates to the fine arts, to the Commission of Fine Arts for its approval.

"SEC. 6. The Commission shall, on or before March 1, 1955 make a report to the Congress in order that further enabling legislation may be enacted.

"SEC. 7. There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this joint resolution.

"SEC. 8. The Commission shall expire upon the completion of its duties, but in no event later than January 11, 1958."

In its report to the Senate, filed with the joint resolution, the Senate Judiciary Committee said in part:

"Alexander Hamilton was born on the island of Nevis in the British West Indies on January 11, 1757. It was in the American Revolution that Alexander Hamilton stood with Washington and Franklin in developing the basis of what is today our great Federal Republic. Hamilton was the fertile mind and organizing genius of President Washington's administrations. For this great work he has been described as the architect of the American Union. Hamilton represented the conservative mind in its most brilliant and useful form. His devotion to the free press, to free speech, and to the institutions of freemen is too little appreciated. The finest monument that could be erected to Hamilton would be an adequate edition of his writings. Such an edition would not be merely a monument to Hamilton—it would be a genuine and enduring contribution to the Nation which he labored so ardently to create. The committee is of the opinion that the works of Hamilton would be particularly appropriate in this era of world history, when many countries throughout the world are struggling with the problem of self-government or trying to find a proper formula to use in adopting for themselves the self-government best suited to their environment, capabilities and abilities, and the making available to those people the complete works of Alexander Hamilton will serve not only this Republic, but the world. The committee believes that this resolution is meritorious and therefore recommends favorable consideration of Senate Joint Resolution 140."

Pursuant to the law the Speaker of the House of Representatives, on August 21, 1954, appointed the following Representatives as members of the Commission:

Hon. FREDERIC R. COUDERT, Jr., of New York.

Hon. THOMAS E. MARTIN, of Iowa.

Hon. PETER W. RODINO, Jr., of New Jersey.

Hon. JOHN J. ROONEY, of New York.

Mr. MARTIN was elected to the United States Senate in the November 1954 election. The Honorable CARROLL REECE, of Tennessee, was named to replace him by the Speaker of the House of Representatives early in the first session of the 84th Congress.

The President of the Senate, on November 17, 1954, appointed the following Senators to be members of the Commission:

Hon. HARRY FLOOD BYRD, of Virginia.

Hon. THOMAS C. HENNINGS, of Missouri.

Hon. IRVING M. IVES, of New York.

Hon. KARL E. MUNDT, of South Dakota.

The President of the United States, on January 11, 1955, the 198th anniversary of Hamilton's birth, appointed the following persons as members of the Commission:

Lt. Gen. Milton G. Baker, of Pennsylvania.

Edward R. Burke, of Maryland.

Mrs. Marie Brown Coffin, of the District of Columbia.

George M. Humphrey, Secretary of the Treasury.

Laurens M. Hamilton, of Virginia.

John A. Krout, of New York.

Clark Haynes Minor, of New York.

Mrs. Robert P. Patterson, of New York.

On February 1, 1955, at the call of the Secretary of the Treasury, the Alexander Hamilton Bicentennial Commission met in the Secretary's office in the main Treasury Building in Washington for the purpose of organization. Senator KARL E. MUNDT was elected Chairman, and Representative FREDERIC R. COUDERT, Jr., was elected Vice Chairman pursuant to the terms of the law. Mr. W. Randolph Burgess, Under Secretary of the Treasury, was named Secretary of the Commission, and Mr. Robert A. Dilion, of the Treasury Department, was named Assistant Secretary.

An executive committee of five members was established, consisting of the chairman, the vice chairman, and three to be appointed by the chairman. Mr. Burgess was made an exofficio member. The chairman named Mr. Burke, Mr. Hamilton and Representative Rooney to serve with him and the vice chairman of this committee.

The executive committee of the Commission met on February 7, 1955, in the office of Senator MUNDT and appointed J. Harvie Williams, of the District of Columbia, Director of the Commission, and Dr. Frank Monaghan, also of the District of Columbia, historian of the Commission. They were directed to prepare a report for the Commission on plans and a program for signalizing the bicentennial of Alexander Hamilton in the year starting January 11, 1957, in accordance with the law creating the Commission.

The next few months were devoted to developing and outlining a program for the year-long bicentennary. On September 12, 1955, the Commission formally recommended to the Congress that the 200th anniversary of the birth of Alexander Hamilton be signalized as follows:

A. By memorial meetings and exercises throughout the year 1957, beginning on January 11:

1. A joint session of the Congress.

2. Proclamations by governors and joint sessions of State legislatures.

3. Appropriate public ceremonies in cities and communities especially concerned with the public achievements of Alexander Hamilton and with the important events of his life in the struggle for the establishment of the Republic.

4. Appropriate ceremonies on the anniversaries of particular events such as the Battle of Yorktown; the Annapolis Convention; the Constitutional Convention at Philadelphia; the New York Convention at Poughkeepsie; appointment as Secretary of the Treasury; his reports on the mint on manufacturers, and on the establishment of a Bank of the United States; the Whisky Rebellion; appointment as major general of the Army; the duel with Burr, etc.

B. By publications:

1. An authoritative and comprehensive edition of Hamilton's papers.

2. Stimulate the reissues by publishers of out-of-print works on Hamilton and his contemporaries.

3. Encourage the publication by established publishing houses of a popular biography of Hamilton and of a volume of selected Hamilton writings. These two volumes should be designed for widest possible distribution—both for libraries and schools, and for the general public in a less expensive pocketbook edition.

4. Preparation and stimulation of special articles in historical journals, popular magazines, etc.

C. By activities in the field of education and public affairs:

1. The institution of a national essay contest in the schools, colleges, and universities of the Nation.

2. Oratorical contests in educational institutions and elsewhere.

3. Encourage the adoption of Hamilton as a special topic for nationally established discussion groups.

4. Special lectures on Hamilton and his times in colleges and universities having endowments or available facilities for such lectures.

D. By commemorative exhibitions of Hamilton portraits, manuscrips, documents, and other memorabilia, at the Library of Congress, the National Archives, the Treasury of the United States, public art galleries, museums, public libraries, and elsewhere.

E. By special exhibits and displays under the auspices of local historical societies and other historical, learned, civic, and patriotic societies, and professional and business associations.

F. By stamps and coins: Appropriate special coins, stamps, medals, etc., should be issued on January 11, 1957, and the appropriate other occasions in connection with the Hamilton bicentennial.

This program was in accord with the Commission's decision to devote its efforts to the stimulating of many activities by others, rather than to undertake directly their organization. This policy served to economize funds appropriated by the Congress and was in keeping with the well-known views of Alexander Hamilton.

It is gratifying to report that with few exceptions the Commission's objectives were achieved, as explained elsewhere in this report.

The Commission's small staff worked steadily and effectively to perfect plans for the bicentennial celebration, in close cooperation with the Commission's executive committee.

Advisory committees, 17 in all, were set up to aid the Commission in the many fields in which activities were planned. These advisory committees were: Armed Forces and Coast Guard; Banking and Finance; Commerce and Industry; Constitution and Law; Contests and Awards; Education; Exhibits and Displays; Historians; Libraries and Museums; Medicine and Public Health; Patriotic Societies; Political Economy; Public Relations; Rhetoric and Public Address; Special Events, Symbols, Medals, Stamps, and Coins;

and Veterans Organizations. Leaders in the many fields accepted membership on these advisory committees. A full list of committee members will be found at the end of this section of the report.

In addition, the Commission established a special Committee on Birthplace and Boyhood Home, headed by Commissioner Laurens M. Hamilton, to coordinate bicentennial observances in the Leeward and the Virgin Islands. Other members of this committee were Richard Parkhurst, president, Mystic Terminal Co., Boston, Mass.; Hon. Fred A. Seaton, Secretary of the Interior, and Hon. Walter A. Gordon, Governor of the Virgin Islands, both members ex-officio; Capt. Henry Balsley, USN retired, St. Thomas, V. I.; Mrs. Douglas Armstrong, St. Croix, V. I.; J. Robertson Ward, Antigua, British West Indies; Dorr E. Newton, St. Croix, V. I.; Cyrus F. Judson, Jr., Alcoa Steamship Co., New York, N. Y., (deceased); Mrs. Cyrus F. Judson, Jr., New York, N. Y.; Mrs. Lee Karwick, Caribbean Tourist Association, New York, N. Y.; and Erwin Balluder, Pan American World Airways, New York, N. Y.

One of the first tasks of the Commission staff was to enlist the cooperation of national, State, and local organizations in many fields to assure widespread participation in the bicentennial celebration. Because of the highly economical basis on which the Commission was operated throughout its lifetime, the efforts of its staff were directed toward the stimulation of activities by others rather than actually organizing and sponsoring them itself.

As a result of this necessary policy the Commission was never able to keep an accurate check on the many and varied types of Hamilton observances conducted throughout the United States. However, enough information was obtained to indicate clearly that Hamilton observances, in one form or another, were held in hundreds of communities from coast to coast; that many magazines and newspapers carried special articles on Hamilton and the bicentennial observance; that there were a substantial number of television and radio programs having to do with Hamilton; and that thousands of public schools and several hundred colleges and universities gave special attention to the bicentennial. In addition, exhibitions of Hamiltonia and Americana of the Hamilton period were held in many cities and communities throughout the United States under the auspices of local groups.

A substantial number of these historical exhibitions were stimulated by the Commission through the American Association for State and Local History and the Manuscript Society. These 2 organizations, numbering upward of 3,700 historical societies, museums, libraries, and private collectors of historical material, were among the first to pledge support to the Commission. Each of them set up a special committee to cooperate in the bicentennial.

Columbia University, the successor to Kings College, Hamilton's alma mater, quite naturally took a leading part in bicentennial observances throughout the year. The Association of the Alumni of Columbia College named a special Alexander Hamilton Bicentennial Committee headed by James Madison Blackwell, New York attorney. This committee planned and carried through arrangements for the 11th annual Hamilton dinner held on May 1, 1957. At this dinner Dr. Grayson Kirk, president of the university, received Columbia's Alexander Hamilton Medal for Distinguished Service.

In addition to Mr. Blackwell, the special committee included Elliott V. Bell, Douglas M. Black, Benjamin J. Buttenweiser, Bennett Cerf, Clifton Fadiman, Oscar Hammerstein 2d, Roscoe C. Ingalls, John A. Krout, Ward Melville, Edmund A. Prentis, Arthur Hays Sulzberger, William T. Taylor, and Richmond B. Williams.

Through correspondence and personal visits, the Commission enlisted the support of many National, State, and local organizations in varied fields. Cooperation with the Commission was pledged by such outstanding groups as the American Bankers Association, the American Bar Association, the American Medical Association, the American Dental Association, American Historical Society, Manuscript Society, National Education Association, the League of Business and Professional Women, the American Society for State and Local History, the American Legion, and Veterans of Foreign Wars.

Among others are American Booksellers Association, American Farm Bureau Federation, American Hotel Association, American Institute of Architects, American Library Association, American Municipal Association, American Pharmaceutical Association, American Political Science Association, American Association of University Professors, Boy Scouts of America, the Council of Bishops of the Methodist Church, Kiwanis International, League of Women Voters, Loyal Order of Moose, National Association and Council of Business Schools, National Council of Farmer Cooperatives, National Savings and Loan League, and Rotary International.

Others included the Daughters of the American Revolution, the Society of the Cincinnati, the Sons of the Revolution, the Sons of the American Revolution, the National Federation of Republican Women, the National Newman Club Federation, the American Legion Auxiliary, the National 40 and 8, the Chicago Coin Club, and the Milwaukee Numismatic Society, along with a substantial number of State bankers' associations and State bar associations. In addition, many educational groups cooperated and worked with the Commission.

The national organizations cooperated closely with the Commission in the setting up of the various advisory committees, recommending names of outstanding individuals for appointment.

Letters were sent to each of the 3,700 members of the American Association for State and Local History and the Manuscript Society asking cooperation with all phases of the work of the Commission, including sponsorship of local celebrations and exhibitions—many such were held—and especially in the Commission's treasure trove search for Hamiltonia (described elsewhere in the report). The Commission letters enclosed covering letters from the special committees set up by each organization to work with the Commission.

The Department of State cooperated closely with the Commission both during the planning period and during the year of the bicentennial celebration. At the request of Senator MUNDT, the State Department early advised all embassies and major consulates of the impending celebration and, a short time later, requested them to confer with the governments to which they were accredited in an effort to find in archives and other depositories any Hamilton materials in connection with the Commission's treasure trove search. As a result, a substantial number of documents and other memorabilia were brought to light and forwarded to the Commission. Especially beneficial results were obtained in France, Great Britain, the Netherlands, and Denmark.

Plans for close cooperation between the Department of Defense and the Commission were worked out some months before the bicentennial year began. Members of the Commission staff met at the Pentagon with public relations officials and officers of all branches of the armed services, plus the Coast Guard, and outlined the aims of the Commission. Promises of assistance were given by the Pentagon, promises which were more than carried out in performance during the bicentennial year.

On January 11, 1957, the opening day of the bicentenary, President Eisenhower's proclamation was read at formations in every United States Military Establishment around the world. It was posted on all bulletin boards and was broadcast, along with data on the bicentennial, over the worldwide network of the armed services radio. Throughout the year notable events of the bicentennial were thus brought to the attention of armed services personnel.

In addition, frequent reference to the bicentennial was made in the various publications of the armed services. The United States Army brought D Battery of the 5th Field Artillery, the unit Hamilton organized in 1776, to New York for the opening day ceremonies there. Bands, color guards, and military units were provided at various times throughout the year for ceremonies in Washington, New York, Chicago, Nevis, St. Croix, and other cities and communities where special observances were held.

The stimulation of lectures on Hamilton's contributions to the establishment of the Nation, and suggestions that special library exhibits be set up, that courses of reading be established, and that Hamilton's work be emphasized in classes in history, economics, political science and public speaking were recommended to colleges and universities by the Commission's Advisory Committee on Education. This Committee, which was headed by Dr. Henry M. Wriston, president emeritus of Brown University, included a distinguished group of college and university presidents in its membership.

As its first step in this phase of activity, every college and university in the United States and its Territories and colonial possessions was asked for information as to endowed lectures under its control which might be used for special Hamilton addresses. This inquiry showed that upwards of 900 such lectures were in existence.

Following up on this information, Dr. Wriston wrote all institutions of higher learning with such lectures urging them to arrange for special addresses on Hamilton and his times in the course of the bicentennial year, set up Hamilton exhibits in their libraries, and emphasize Hamilton's work in appropriate classrooms. A large number of these institutions followed these suggestions.

One of the earliest activities to be set in motion by the Commission was preparation for its scholarship program, described in full elsewhere in this report. Outstanding educators, especially in the public speaking field, were enlisted to work out, in cooperation with the Commission staff, detailed plans for this program. Educators in every State took part in this activity, which took substantially more than a year of preparation.

Stimulation of the writing and publication of books and magazine articles, newspaper editorials, etc., called for a substantial amount of effort on the part of the Commission's staff. (These activities are described elsewhere.) In addition, through the cooperation of the Association of Radio and Television Broadcasters, information on the plans for the bicentennial was sent to every television and radio station in the United States. Similar information was sent newspapers and major magazines. Members of the Commission's advisory committee on public relations were most helpful to the staff in carrying out the public relations phase of the preliminary program.

In the course of the period of preparation the Commission built up an extensive mailing list. Most of those on this list, which included all advisory committee members, received copies of the various reports which the Commission submitted to the Congress,

as well as news releases and other material of special interest.

Following is the membership of the Commission's advisory committees:

Advisory Committee on Armed Forces and Coast Guard: Gen. Mark W. Clark, Charleston, S. C.; Gen. J. Lawton Collins, United States of America, retired, Washington, D. C.; Adm. Louis Denfeld, United States Navy, retired, Washington, D. C.; Adm. William F. Halsey, United States Navy, retired, New York, N. Y.; Rear Adm. John B. Heffernan, Washington, D. C.; Gen. George C. Marshall, Leesburg, Va.; Adm. Chester W. Nimitz, United States Navy, retired, Berkeley, Calif.; Adm. Merlin O'Neill, United States Coast Guard, retired, Coster, Md.; Gen. Lemuel Shepherd, United States Marine Corps, retired, Washington, D. C.; Gen. A. C. Wedemeyer, United States Army, Boyds, Md.

Advisory Committee on Banking and Finance: Mr. Claude L. Benner, Wilmington, Del.; Mr. Victor M. Birely, Washington, D. C.; Mr. C. Francis Cocke, Roanoke, Va.; Mr. H. Frederick Hagemann, Jr., Boston, Mass.; Dr. Devereux C. Josephs, New York, N. Y.; Mr. James S. Kemper, Chicago, Ill.; Mr. Laurence F. Lee, Raleigh, N. C.; Mr. William A. McDonnell, St. Louis, Mo.; Mr. F. Raymond Peterson, Paterson, N. J.; Mr. Albert C. Simmonds, Jr., New York, N. Y.; Mr. John J. Sullivan, Denver, Colo.; and Mr. Dean Witter, San Francisco, Calif.

Commerce and Industry: Hiland G. Batcheller, Pittsburgh, Pa.; Fred C. Crawford, Cleveland, Ohio; Stephen M. Dubrul, Detroit, Mich.; Benjamin F. Fairless, New York, N. Y.; Hon. James A. Farley, New York, N. Y.; Robert M. Gaylord, Rockford, Ill.; Hon. Ed Gossett, Dallas, Tex.; Howard Hall, Cedar Rapids, Iowa; F. O. Prior, Chicago, Ill.; Henry G. Riter, III, West Orange, N. J.; Ernest G. Swigert, Portland, Oreg.; Hon. Sinclair Weeks, Secretary of Commerce; and James C. Worthy, Chicago, Ill.

Advisory Committee on Constitution and Law: Hon. Walter M. Bastian, United States Court of Appeals, District of Columbia Circuit; Mr. Thomas M. Burgess, Colorado Springs, Colo.; Mr. George A. Finch (deceased), Washington, D. C.; Mr. E Smythe Gambrell, Atlanta, Ga.; Mr. Allen T. Klots, New York, N. Y.; Mr. Cloyd Laporte, New York, N. Y.; Mr. William Logan Martin, Birmingham, Ala.; Mr. David F. Maxwell, Philadelphia, Pa.; Mr. Herbert G. Nilles, Fargo, N. Dak.; Mr. Alfred J. Schweppe, Seattle, Wash.; Mr. J. Cleo Thompson, Dallas, Tex.; Mr. Charles H. Woods, Tucson, Ariz.; Mr. Lloyd Wright, Los Angeles, Calif.

Contests and Awards: Dr. Bower Aly, chairman, University of Missouri; Prof. A. Craig Baird, State University of Iowa; Dr. F. Kenneth Brasted, president, University of Dallas; Hon. Samuel M. Brownell, superintendent of public schools, Detroit, Mich.; Dr. Thorrel B. Fest, University of Colorado; Prof. Annabel Dunham Hagood, University of Alabama; Prof. Bruno E. Jacob, National Forensic League; Mr. Rodney Kidd, director, the University of Texas; Dr. George McCarty, College of William and Mary; Prof. Richard B. Morris, Columbia University; Prof. Theodore F. Nelson, St. Olaf College; Mr. Robert Schacht, University of Wisconsin; and Dr. Lloyd Schram, University of Washington.

Advisory Committee on Education: Dr. Henry M. Wriston, president emeritus of Brown University; Dr. Margaret Clapp, president, Wellesley College; Dr. Arthur Coons, president, Occidental College; Dr. Donald J. Cowling, president emeritus of Carleton College; Dr. Theodore A. Distler, executive director, Association of American Colleges; Dr. Elmer Ellis, president, University of Missouri; Dr. Daniel Z. Gibson, president, Washington College; Dr. Rufus C. Harris, president, Tulane University; the Reverend Theodore M. Hesburgh, president, University of Notre Dame; Dr. Grayson Kirk, president, Columbia University; Dr. Katherine McBride, President, Bryn Mawr College; The Reverend E. J. O'Donnell, S. J., president, Marquette University; and Dr. J. E. Wallace Sterling, president, Stanford University.

Advisory Committee on Exhibits and Displays: Mr. Herbert J. Sanborn, Library of Congress; Mr. King Rich, Albert Frank-Guenther Law, Inc., New York, N. Y.; and Leonard C. Rennie, Washington, D. C.

Advisory Committee on Historians: Prof. Leland D. Baldwin, University of Pittsburgh; Prof. Gerald Capers, Tulane University; Dr. Thomas C. Cochran, University of Pennsylvania; Prof. Albert B. Corey, State historian, Albany, N. Y.; Prof. Louis Gottschalk, The University of Chicago; Prof. Wood Gray, George Washington University; Dr. Louis M. Hacker, Columbia University; Dr. Bernhard Knollenberg, Chester, Connecticut; Prof. Gilbert L. Lycan, Stetson University; Mr. David Mearns, chief of manuscripts, Library of Congress; Prof. John C. Miller, Stanford University; Prof. Broadus Mitchell, Rutgers University; Prof. Richard B. Morris, Columbia University; Mr. Vrest Orton, Weston, Vermont; Prof. E. P. Panagopoulos, San Jose State College; Dr. Boyd C. Shafer, executive director, American Historical Association; Dr. S. K. Stevens, executive director, Pennsylvania Historical and Museum Commission; and Mr. Milton Halsey Thomas, Columbia University.

Libraries and museums: Mr. Paul M. Angle, Chicago Historical Society; Mr. James T. Babb, librarian, Yale University Library; Dr. Paul H. Buck, director of libraries, Harvard University; Mr. Jack Dalton, librarian, Alderman Library, University of Virginia; Mr. Edward G. Freehafer, director, New York Public Library; Mr. Clifford C. Gregg, director, Chicago Natural History Museum; Mr. Richard Logsdon, director of libraries, Columbia University; Mr. Stewart Mitchell, director, Massachusetts Historical Society; Mr. James J. Rorimer, director, the Metropolitan Museum of Art, New York, N. Y.; Dr. Ralph R. Shaw, Graduate School of Library Service, Rutgers University; Mr. John Walker, director, National Gallery of Art; and Mr. Hermann Warner Williams, Jr., director, the Corcoran Gallery of Art.

Advisory Committee on Medicine and Public Health: Dr. E. Vincent Askey, Los Angeles, Calif.; Dr. Luis H. Bauer, New York, N. Y.; Dr. John W. Cline, San Francisco, Calif.; Dr. Edwin S. Hamilton, Kankakee, Ill.; Dr. Elmer Hess, Erie, Pa.; Dr. George F. Lull, Chicago, Ill.; Dr. Walter B. Martin, Norfolk, Va.; Dr. E. J. McCormick, Toledo, Ohio; Dr. Dwight H. Murray, president, American Medical Association; Dr. Torald Sollman, Cleveland, Ohio.

Advisory Committee on Patriotic Societies: Miss Gertrude S. Carraway, honorary president general, Daughters of the American Revolution; Maj. Gen. U. S. Grant 3d, United States Army, retired, Washington, D. C.; Col. Catesby ap Catesby Jones, Richmond, Va.; Mrs. Carroll D. Kearns, president, National Federation of Republican Women.

Advisory Committee on Political Economy: Dr. James Washington Bell, chairman, secretary of the American Economic Association; Hon. Lewis W. Douglas, New York, N. Y.; Dr. Ferdinand A. Hermens, Notre Dame University; Mr. Evron M. Kirkpatrick, American Political Science Association; Dr. Harold Metz, Washington, D. C.; Dr. Ralph Robey, Dalzell, South Carolina; Dr. O. Glenn Saxon, Yale University; Mr. Lucius Wilmerding, Jr., Princeton, N. J.; Dr. Arnold J. Zurcher, professor of political science, New York University.

Advisory Committee on Public Relations: Mr. Howard W. Calkins, New York, N. Y.; Mr. Julian Goodman, National Broadcasting Co.; Mr. Robert F. Hurleigh, Mutual Broadcasting System; Mr. Garth P. James, Charlotte Amalie, St. Thomas, Virgin Islands; Mr. Edward M. Kirby, Washington, D. C.; Mr. Theodore F. Koop, Columbia Broadcasting System; Miss Llewellyn Miller, New York, N. Y.; Miss Ann Scott Morningstar, New York, N. Y.; Mr. Bryson B. Rash, Washington, D. C.; Mr. Donald Robinson, New York, N. Y.; Mr. G. W. Johnstone, National Association of Manufacturers.

Advisory Committee on Rhetoric and Public Address: Prof. W. Norwood Brigance, chairman, Wabash College; Prof. A. Craig Baird, State University of Iowa; Prof. Donald L. Clark, Columbia University; Prof. Marie K. Hochmuth, University of Illinois; Prof. Wilbur S. Howell, Princeton University.

Advisory Committee on Special Events: Rev. Alexander Van Cortlandt Hamilton, Norwalk, Conn.; Mr. Conrad L. Wirth, Director, National Park Service.

Advisory Committee on Symbols, Medals, Stamps, and Coins—Philatelic Matters: Mr. H. L. Lindquist, chairman, National Federation of Stamp Clubs; Mr. Richard S. Bohn, president, Association for Stamp Exhibitions, Inc., New York, N. Y.; Mr. Claude Cartier, New York, N. Y.; Mrs. Louise Boyd Dale, chairman, the Philatelic Foundation; Mr. Jules Glaenzer, New York, N. Y.; Mr. Robert L. Graham, Jr., attorney, Philatelic Congress; Mr. Peter G. Keller, executive secretary, American Stamp Dealer's Association; Mr. John Steinway, New York, N. Y.; Lt. Gen. Cornelius W. Wickersham, governor, Collector's Club, New York, N. Y.

Advisory Committee on Symbols, Medals, Stamps and Coins—Numismatic Matters: Mr. Harold S. Bareford, New York, N. Y.; Mr. Earl B. Barnes, president of the Society of Medallists, Indianapolis, Ind.; Mr. Vernon L. Brown, the Chase Manhattan Bank; Mr. Louis Eliasberg, Baltimore, Md.; Mr. Sawyer McA. Mosser, secretary, the American Numismatic Society; Mr. Leonel C. Panosh, president, American Numismatic Association; Dr. Louis C. West, president, the American Numismatic Society.

Advisory Committee on Veterans Organizations: Mr. Clyde A. Lewis, Plattsburgh, N. Y.; Mr. Lyall T. Beggs, Madison, Wis.; Hon. Louis A. Johnson, Washington, D. C.; Hon. Raymond J. Kelly, Chicago, Ill.; Mr. John R. Quinn, Los Angeles, Calif.; Mrs. Laurence J. Murphy, Union, N. J.; Mr. Louis E. Starr, Portland, Oreg.

Khrushchev Utterances Serve To Spur Rise in Anti-Jewish Tendencies in Soviet Union

---

EXTENSION OF REMARKS

OF

HON. ISIDORE DOLLINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1958

Mr. DOLLINGER. Mr. Speaker, I should like to bring to the attention of Members of Congress the important information contained in a release sent me by the Institute for the Study of the U. S. S. R., New York office.

This shows us what the Jews in the Soviet Union and its satellites are suffering, the state of terror in which they exist, their privations, and the denials of religious liberty inflicted upon them. This is another striking example of the failure of the Soviet Union to grant that very equality of freedom and opportunity upon which the Communist ideology is based, to a large segment of its own population, as well as in its satellite countries. The article follows:

(By Nadezhda Teodorovich, of the Institute for the Study of the U. S. S. R., a body of former Soviet scholars with headquarters in Munich, whose aim is to furnish reliable information on trends and developments inside the Soviet Union)

MUNICH.—Nikita Khrushchev's chronic bitterness toward Soviet Jewry was made dramatically clear by the recent publication in a leading Paris newspaper of an interview in which the Soviet dictator confirmed reports that the Kremlin's 30-year effort to build an autonomous Jewish Republic in the Far East as a buffer to Chinese expansion had failed.

Le Figaro had quoted Khrushchev as having stated that the Soviet's nationality policy was correct and magnanimous. The U. S. S. R., he declared, was the first state to decide to aid the Jews as a people by a decision to resettle them in Birobidzhan, an autonomous region in eastern Siberia. But, he added, this wonderful gift had been rejected by the Jews, who refused to resettle there and only a very small number of Jews remained in Birobidzhan at present.

Khrushchev placed the entire blame for the Birobidzhan failure on the Jews themselves. "Jews," he explained, "prefer to be artisans: you do not often find them working on building sites or in metallurgical plants. Jews do not like collective work and collective discipline. They prefer to be scattered. They are individualists."

In this description of Jewish characteristics, Khrushchev drew attention to those qualtities in the Jews returning from Birobidzhan which were not in accord with the traditional Marxist-Leninist concept of class. His statement was clearly aimed at stamping Jews as inferior in the eyes of the Communist leadership.

During the last decade, there has been a considerable increase in anti-Semitism in the Soviet Union. A number of measures, all supported by the Central Committee of the Communist Party, have been taken to prejudice the interests of the Jewish people.

Such measures become more understandable when it is recalled that the Communist Party has frequently declared that it does not recognize the Jews as a nation; that it refuses to acknowledge the community of interest of the Jewish race; that it does not consider it a compact ethnic unit despite the existence of the State of Israel; that it regards the Jewish people as the remnants of an ancient people which has slowly been assimilated by various societies and that it denies the viability of Hebrew as a separate language.

According to V. I. Lenin, "Jewish national culture is nothing more than the slogan of rabbis and the bourgeosie, the slogan of our enemies." In accordance with this view, the Communist Party has attempted to encourage the assimilation of Jews into Soviet society and, while condemning expressions of Jewish separatism, has brutally uprooted the national and particularly the religious traditions of the Jewish people.

In the years 1920, 1930, 1936, and 1939–40, Zionist organizations were dissolved in the Soviet Union and Jewish rabbis, teachers, writers, artists, and actors were killed or sent to labor camps. Synagogues and other religious schools, including secular cultural institutions, were closed and the study of Hebrew was forbidden. These measures were in retaliation for the fact that the Jews had shown evidence of disagreement with Communist ideals and had striven to maintain their patriarchal, religious way of life as well as their aspirations for political independence in Palestine.

During World War II, the Soviet high command did not bother to organize in time the evacuation of Jews from frontline districts, and as a result they were massacred by the Nazis. The Soviet lists of victims of the Nazis during World War II do not contain the names of Jews. Further details of this Soviet perfidy can be found in Solomon Schwarz' authoritative study: Jews in the Soviet Union.

The establishment of the tiny State of Israel in 1948 stimulated the desire of many Soviet Jews to emigrate. In order to discourage such a move, the Soviet Government made accusations against Israel and its policies and against international Zionism. This was done at the show trial in Prague of Rudolf Slansky. This trial and the ensuing sentence terrorized Jews not only in the Soviet Union but throughout the satellites.

Since that time Jews have been gradually removed from responsible positions in the Soviet Union. Jewish students at Soviet universities have been subjected to persecution. In 1953 the trial of Jewish doctors took place and many Jewish cultural leaders were deported. Of the 15 synagogues formerly in Moscow, only 1 remains. On important holidays it is overflowed with thousands of worshippers. Here they have been able to share their feeling of community, praying in the same synagogue together with members of the Israeli diplomatic mission. For propaganda purposes, in 1957 the Soviets opened a religious school in Moscow which has, however, only 12 students. It is known that there is a synagogue in Kiev, but no information is available on other centers of Jewish religious life. As with all other religious communities, the Soviets demand that party policy be supported publicly my members of the Jewish community as reported by Radio Moscow on November 24, 1956.

In 1957 Communist leaders stated that the lack of national cultural life among the Jews could be explained by the Jewish striving for complete assimilation. According to the Communists, the Jews were not interested in speaking their own language or having their own schools and theaters. Yet in 1956, when the American Jewish opera singer, Jan Peerce, sang in the Moscow synagogue in ancient Hebrew, his appearance touched off a remarkable demonstration by Moscow's Jews.

The police regime in the Soviet Union, the imprisonment of the Jewish people within the ideological and political frontiers of a country where they are not at home; the complete lack of any prospects for improvement in their life in the Soviet Union and their constant fears for the future have produced among Jews in the Soviet Union a state of mental depression which robs them of initiative and the will to work.

Khrushchev would have been more correct if, in trying to explain the reason for the failures of Birobidzhan and comparing them with the successes of the young Jewish State of Israel, he had sought out these failures in the very nature of the political system and philosophy imposed by force in the U. S. S. R.

Address of Hon. Oren Harris, Chairman, House Committee on Interstate and Foreign Commerce

---

EXTENSION OF REMARKS

OF

HON. JOHN J. FLYNT, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1958

Mr. FLYNT. Mr. Speaker, on yesterday, the chairman of the House Committee on Interstate and Foreign Commerce, our colleague, Hon. OREN HARRIS, of Arkansas, delivered the principal address to the annual meeting of the administrative law section of the Bar Association of the District of Columbia.

His remarks were well received by those in attendance who comprised one of the largest groups to attend an annual meeting of the administrative law section.

It gives me a special pleasure to include his address in the CONGRESSIONAL RECORD today, under leave to extend:

It is a pleasure to be here this evening at the invitation of the administrative law section of the Bar Association of the District of Columbia to meet with you who are practitioners in the field of administrative law.

As chairman of the House Committee on Interstate and Foreign Commerce, which has initiated the legislation creating a majority of the independent regulatory agencies as well as other agencies having delegated legislative powers to promulgate rules and judicial powers to determine rights or privileges of persons under law, I, naturally, have an equal interest in the administrative processes.

Further, as chairman of this committee's Special Subcommittee on Legislative Oversight, I, obviously, during the past year more specifically have been seeking, as you have been, to arrive at a fair judgment evaluation of these administrative processes and of the execution of laws by these administrative agencies. In such connection I am aware of the various proposals which have emanated from the administrative-law sections of the different bar associations to meet some of the problems with which our Legislative Oversight Subcommittee has been concerned, and, indeed, am appreciative of the helpful comments and suggestions which have been made to us by such of your officers as Chairman Valentine Deale and past chairmen Smith Brookhart and Donald Beelar.

It is in view of your interest in the subject, and more particularly in view of my strong belief that you who practice before these administrative agencies have responsibility, as do those of us who created them, to see that they faithfully execute the law, that I am prompted to say some things to you tonight that I think should be said and to discuss with you tonight the origin and purpose of our Subcommittee on Legislative Oversight, what it has done, and what it expects to do.

I am glad to have this opportunity not only to discuss this problem but to express some personal viewpoints on the subject as I see it. As a matter of fact, in my own opinion, this speech is 1 year late.

I should like to make it perfectly clear that I do not claim to know all the answers or that I am capable of solving all the problems. Furthermore, I do not believe that because of the far-reaching importance to the public welfare that there is any place for self-centered egotistical viewpoints, or for a half-truths technique.

I should like to make it perfectly clear that I have no intention of destroying or discrediting the independent regulatory agencies necessary for the American people. We want to make them stronger—not weaker. I have no intention of character assassination or of pursuing any course other than with justice and fair dealing.

I feel strongly on the subject of compliance with the law and the public disclosure of any corruption or maladministration or wrongdoing. From my experience I think I know something about investigations and in this instance the committee will continue to determine the policies of the work and no dubious methods will be used in developing information as has occurred in the past—which I have deplored.

The action of the committee since its reorganization is well known. The alleged misconduct of commissioners in one agency has been thoroughly developed and you, of course, know the result of the investigation of the channel 10 case in Miami, Fla. Contrary to some public claims, the committee had very little in its files on other matters pertinent to the investigation, and that mostly consisted of information from other committees of the Congress and newspaper clippings, information which long since had been made public.

I am encouraged and glad to report that the staff is working hard in developing information toward carrying out the purposes of the investigation. We feel we have an excellent staff with Bob Lishman as our counsel and I have no doubt as to the final results.

ORIGIN OF SUBCOMMITTEE

Under the rules of the House of Representatives, all proposed legislation, messages, petitions, memorials, and other matters relating to certain specified subjects are referred to a standing committee. The subject matter under the jurisdiction of such standing committee is specifically spelled out in the rules. In addition to this legislative duty, however, under the Legislative Reorganization Act of 1946 and the rules of each body, each standing committee of the Senate and the House of Representatives is given the added responsibility of exercising continuous watchfulness of the execution by the administrative agencies concerned of any laws, the subject matter of which is within the jurisdiction of such committee. This direction and responsibility is set forth under section 136 of that act under the caption, "Legislative Oversight by Standing Committees."

This Legislative Reorganization Act of some 12 years ago, however, contains certain provisions applicable to the standing committees of the Senate which do not apply to the standing committees of the House. It has been customary, therefore, at the start of each Congress, commencing in 1947, for each standing committee of the House to introduce a resolution which, when passed by the House, gives the standing committee the necessary authorization, power, and funds to carry out these legislative and investigatory responsibilities.

During the discussion on February 5, 1957, at the time the House was considering this routine resolution concerning the activities of our Committee on Interstate and Foreign Commerce which bears the number 99 in the 85th Congress, Speaker RAYBURN took the floor to say:

"I trust that the gentleman will set up a subcommittee * * * to see whether or not the law, as we intended it, is being carried out or whether a great many of these laws are being repealed or revamped by those who administer them."

To this, I replied that this matter had been discussed within the full committee and it was recognized that under the Legislative Reorganization Act of 1946 the committee must exercise watchfulness over the administration and execution of any law by any agency within the jurisdiction of the committee.

On March 6, 1957, I appointed the special Subcommittee on Legislative Oversight consisting of 11 members.

On March 11, at the unanimous direction of the full committee, I introduced House Resolution 191 asking for an appropriation of $250,000, for the purpose of carrying out this responsibility. On April 11, the resolution passed and the subcommittee undertook its organization.

PURPOSE OF SUBCOMMITTEE

The purpose of the subcommittee has been expressed in very succinct language with which I am sure you are familiar:

"To examine the execution of the laws by the administrative agencies, administering laws within the legislative jurisdiction of the committee, to see whether or not the law as the Congress intended in its enactment has been and is being carried out or whether it has been and is being repealed or revamped by those who administer it."

Inherent in this statement of purpose is a dual approach: (1) Whether the law has been and is being faithfully executed by the agency in the public interest or whether it is being repealed by the agency through lack of enforcement; and (2) whether the agency is revamping the law through interpretation by rule or internal procedures to enlarge the area of regulation beyond that intended or to administer the law through procedures not intended by the Congress.

I assume from study of your bar association's proposals that it is the latter approach with which you have been more concerned, but our subcommittee necessarily is as much interested in any inadequacies of administration as in overzealous or onerous administration.

In making such examination our studies devolved around eight major heads as follows:

1. Review and analysis of the laws and amendments, and intent of the Congress when enacted;

2. Area of the field regulated by each law, changing circumstances and growth of the field since enactment;

3. Consideration of the legislative standards in the law to determine whether they can be drafted in more precise terms with the view of reducing administrative discretion;

4. Consideration of rules and regulations issued by the agency under the discretionary delegations, reconciliation with statutory standards and legislative intent, manner in which rules have been applied in practice;

5. Administrative interpretations and practices apart from formal rules and regulations, public notice of such interpretations and practices, extent to which in fact administration is by internal interpretations as distinct from published rules;

6. Judicial decisions on the administration of the law by the agency, the statutory standards, rules and regulations, and administrative interpretation; enlargement of area of regulation supported by the decisions;

7. Enforcement of statute, rules, and regulations;

8. Organization of agency with especial attention to its independence.

ACTIVITY TO DATE

With the determination of these purposes and avenues of exploration for achieving these purposes, the subcommittee proceeded to the acquisition of personnel, which, following the adjournment of the Congress, was engaged in doing the necessary staff work. Owing to the limited funds appropriated and to the limits of time in achieving a substantial portion of this tremendous objective, this work initially was and so far has been confined to six regulatory agencies administering laws, the subject matter of which is within the jurisdiction of our committee.

When we returned to the second session of this Congress and prepared to hold hearings on what had been developed by the staff, we discovered that its work had been confined chiefly to activities of the Federal Communications Commissioners, concerning whom it made certain charges of misconduct. Owing to the circumstances surrounding the staff release of these charges as well as the nature of the charges, and the clamor of the press and the communications industry, the subcommittee felt that there should be no delay in providing an opportunity for those whose record or conduct was involved to challenge the accuracy of such charges in hearings at an early date.

Accordingly, on February 3 the subcommittee initiated hearings on the Miami Channel 10 case, which continued through March and into April. All aspects of this case and charges of misconduct were gone into thoroughly, and everything that had been developed by the staff and was left in the files after their famous midnight ride, was presented. A report on this phase of the subcommittee's study was issued on April 4.

These hearings on the conduct of members of the Federal Communications Commission revealed that over the years a pattern had developed of questionable conduct on the part of some of the members of the Commission and on the part of some members of industry and industry organizations who are subject to Commission regulation. The questionable propriety of some of this conduct, in the subcommittee's opinion, has seriously undermined public confidence in the Commission and thus affected adversely the administration of law by the Commission. To whatever extent such public confidence has been shaken, it must be restored.

In the restoration of such confidence, the Commissioners may help themselves greatly, if they will. In the restoration of this confidence, the industry which has gone far beyond what it should have done, can do much, if it will. So too, do you who practice before these Commissions have a responsibility in maintaining of public confidence, as do we on this subcommittee. We already have made certain recommendations for remedial legislation—and I am sure there will be more. I have introduced a bill covering these recommendations which will be considered in the near future.

These recommendations go farther than just to some of the questions of Commission conduct, and enter into the problems of pressures and undue influences upon the Commissioners.

The present Communications Act prohibits ex parte contacts on the part of any person who has participated in the presentation or preparation for presentation of adjudicatory cases before hearing examiners. It is clearly evident from the record on the Miami channel 10 case that several ex parte contacts on behalf of two principal contenders for the license were made or attempted to be made, by persons who had participated in the case before the examiner. This, with all other such matters, has been referred by the committee to the Department of Justice for appropriate action.

The Communications Act, however, does not cover ex parte contacts with the Commissioners or Commission staff by persons other than those who participated in the presentation before the hearing examiner. The Miami channel 10 hearings indicated that there were such persons who made ex parte contacts. It is important that the Commission, as well as competing parties, be protected by law from any attempt at off-the-record influencing of the Commission decision in such cases, and the bill I have introduced would cover this situation.

In passing, it may be appropriate to note that our committee files now contain indication that such ex parte contacts have been made in a number of other comparative television cases. Since such contacts are prohibited by law, even though the Commission itself may have taken no action with respect to the parties making them, it is interesting to conjecture what may be the legal status of the licenses which were granted in such instances. The law, of course, has been made by the Congress. It is understood by the Commission and should not be winked at by it or any enforcement agency.

PROGRAM AHEAD

I am sure that you appreciate that the subcommittee feels that, unfortunately, its complete attention seems to have been concentrated upon only one aspect of the study that was originally contemplated. It is important, of course, that this aspect be fully considered and the situation which gives rise to the possibility of improper conduct should be cleaned up by legislation and otherwise. Nevertheless, in the long-term future, the larger aspects of the subcommittee's investigation cannot be ignored. Indeed, it is just as appropriate today as it was a year ago to consider whether the laws themselves properly are being administered; whether times have changed and the laws need amendment; whether the laws themselves can be more explicit with less discretionary power to the Commissions in issuance of rules and regulations; whether, and the extent to which, the Commissions have enlarged the area of regulation; and so on.

We are proceeding to develop these other items of study to the end of meeting the purposes of our examination of these agencies, though perhaps not by the same route as we originally had planned. Having recently flown from Washington to Tokyo via Copenhagen and the North Pole over a route not much longer than that via our west coast; and having returned from New Zealand, after flying over the South Pole, via Honolulu and our west coast to Washington, although in the future I visualize a competing route which will go from here via South America and Antarctica to New Zealand, I cannot but be especially aware of the fact that goals may be achieved through different routes.

We are carefully studying the extent to which agencies arrogate unto themselves policymaking authority by extending the field of regulation. For example, it is obvious that certain communications devices and certain types of securities have come into existence which were not conceived of at the time of the enactment of the laws. It is also obvious that certain laws were silent as to such matters as rate or security regulation, but certain jurisdiction over these fields has been indirectly exercised through other statutory provisions relating to issuing of certificates or approval of contracts and agreements. It is also obvious that certain agencies in the issuing of certificates or the granting of exemptions, have changed their rules or interpretations so greatly that they are today in exact reverse position from that held a few years ago.

Such administrative interpretations, generally supported, sometimes rejected, by the courts, may reflect to great degree changing circumstances and conditions from those existing at the time the statues were enacted. Whether this extension or revision of the field of authority, however, should be arrived at unilaterally by the agencies, with the help of the courts, or be the result of congressional action, is a matter with which we are concerned.

We are also studying the enlargement of the agencies' jurisdiction by the courts, even in instances where this has been done against the agencies' wishes, as well as upon their urging. There are many individual examples which leap to mind, but the far-reaching effect of the so-called Pittsburgh decision, in which the regulatory agencies are told to consider the implications of the antitrust statutes as well as the statutes under which the agencies have been established is not fully apparent.

We are studying whether legislative standards cannot now be written into the law or be drafted in more precise terms than in existing law to cover such standards as the agency may use in its processing of cases before it. Certainly it would appear that from the experience gained over the years this might be a feasible objective. To determine whether such statutory standards now can be drafted means a study of whether an agency by rule has set up standards for the processing of cases and how it actually has been processing such cases in the light of these standards. This means a study of some decisions which have been rendered.

Parenthetically, I might observe that this does not mean a review of the cases themselves but a study of the cases only to determine whether patterns may exist. I make such parenthetical observation because, contrary to some impression that may have been given you last fall by members of the staff, it has not been and is not now our intent to review individual cases as to whether or not the proper decision itself was made. There are proper procedures in each statute by which applicants can pursue their rights if they feel they have been violated in the agency decision. Our review is for the purposes of determining what legislative correction, modification, expansion, or other amendment such studies show should be made in the public interest and of determining whether present law is being properly administered. Of course, in the study of the cases there well may be certain matters coming to the fore that will require specific attention.

Another case study for purposes of determining whether clearer legislative standards may be written is that having to do with exemptions from regulations in contradistinction to that having to do with the processing of applications for cases within the regulatory field. It is just as clear that administrative practices here and the experience of the years should lead to the establishment of standards by the agency if not in the statute.

At the same time, of course, we are continuing with our consideration of the independence of the agencies. In the hearings so far, there has been some attention to the identification of the regulatory agency with those whom it regulates. The question of independence is broader than this, of course, and encompasses the freedom from restrictive action by the executive department as well as by Members of the Congress. In such connection we are studying the effect of the Reorganization Acts of 1950 which concentrated more power in the Chairman of the many Commissions and provided for his designation by the President. There are collateral questions of the extent to which the agency budget or personnel should come within the purview of the Bureau of the Budget or the Civil Service Commission.

Finally, I cannot refrain from briefly commenting upon the bar proposals which provide generally for more formal procedures and greater uniformity of procedure among the various agencies regardless of the subject matter within their jurisdiction. At this juncture I can see no gain in creating new standing committees in the Congress or a new overriding executive agency having dominance in this field. I believe there is a grave question whether too much formalizing of procedures and insulation of the Commissioners from their staffs through making a commissionership in effect a judgeship is in the public interest. The theory, of course, of the independent regulatory agency is that the Commissioners there are acting in the public interest, on behalf of the public, and for the protection of the public. A recent trend to have them sit as judges on a record in which the applicant is represented by counsel and the public by the staff of the Commission seems to me to do violence to the very principles and purposes under which the Commissions were created. The Commissioners, not the staffs, are charged with administering the law in the public interest.

With the general proposal to overhaul the Administrative Procedures Act, however, I am in full agreement, although I am not certain that my solution would be the same as that proposed by your legislative committees. Our hearings to date already have indicated the need for changes in administrative procedures as they apply to one agency. I assume that the same consideration will apply to others.

Of course, in the evaluation of any recommendations for modifications of administrative procedures, the major question is whether the proposed modification is in the public interest. One of the great difficulties, of course, in streamlining procedures, in expediting cases, in the securing of early decisions, is that to some degree such accomplishments perforce may diminish the workload on you who specialize in practice before these agencies. I am sure, however, that it is your desire as well as ours that there be improvement in these procedures wherever examination shows that this is desired.

I believe in this connection I can best close by quoting the words of your past chairman, Donald C. Beelar, in a recent Federal Bar Journal article in which he refers to the preamble to the Canons of Professional Ethics, which reads:

"In America, where the stability of courts and all departments of Government rests upon the approval of the people, it is peculiarly essential that the system for establishing and dispensing justice be developed to a high point of efficiency and so maintained that the public shall have absolute confidence in the integrity and impartiality of its administration."

And Mr. Beelar says:

"No difference should exist between those in private practice or in government practice on the above quoted objective of achieving a high integrity in agency processes in better service to the public."

Finally, I cannot refrain from briefly commenting upon the bar proposals which provide generally for more formal procedures and greater uniformity of procedure among the various agencies regardless of the subject matter within their jurisdiction. At this juncture I can see no gain in creating new standing committees in the Congress or a new overriding executive agency having dominance in this field. I believe there is a grave question whether too much formalizing of procedures and insulation of the Commissioners from their staffs through making a commissionership in effect a judgeship is in the public interest. The theory, of course, of the independent regulatory agency is that the Commissioners there are acting in the public interest, on behalf of the public, and for the protection of the public. A recent trend to have them sit as judges on a record in which the applicant is represented by counsel and the public by the staff of the Commission seems to me to do violence to the very principles and purposes under which the Commissions were created. The Commissioners, not the staffs, are charged with administering the law in the public interest.

With the general proposal to overhaul the Administrative Procedures Act, however, I am in full agreement although I am not certain that my solution would be the same as that proposed by your legislative committees. Our hearings to date already have indicated the need for changes in administrative procedures as they apply to one agency. I assume that the same consideration will apply to others.

Of course, in the evaluation of any recommendations for modifications of administrative procedures, the major question is whether the proposed modification is in the public interest. One of the great difficulties, of course, in streamlining procedures, in expediting cases, in the securing of early decisions, is that to some degree such accomplishments perforce may diminish the workload on you who specialize in practice

before these agencies. I am sure, however, that it is your desire as well as ours that there be improvement in these procedures wherever examination shows that this is desired.

I believe in this connection I can best close by quoting the words of your past chairman, Donald C. Beelar, in a recent Federal Bar Journal article in which he refers to the preamble to the Canons of Professional Ethics, which reads:

"In America, where the stability of courts and all departments of Government rests upon the approval of the people, it is peculiarly essential that the system for establishing and dispensing Justice be developed to a high point of efficiency and so maintained that the public shall have absolute confidence in the integrity and impartiality of its administration."

And Mr. Beelar says:

"No difference should exist between those in private practice or in government practice on the above quoted objective of achieving a high integrity in agency processes in better service to the public."

I have appreciated being with you tonight before an understanding—yes, even a tolerant—audience because there are none who have a greater duty and obligation to stand in the role of protectors of the public interest than do you who have day-to-day contacts with the administrative agencies through your practice before them. I am certain that as you attorneys and members of the bar faithfully perform this role and as we in the Congress adequately discharge our legislative responsibilities, we shall have, and continue to have, administrative agencies that properly and fully execute the laws that have been entrusted to them for administration in the public interest.

Proposal by Senator Monroney To Establish International Bank

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, May 1, 1958

Mr. MANSFIELD. Mr. President, we have been hearing a great deal over the past several months about the proposal of the distinguished junior Senator from Oklahoma [Mr. MONRONEY] relative to his idea of a world bank. As one of those who think there is a great deal of merit in his proposal, and one which I would hope the administration would consider seriously, in view of the continuation of the foreign aid program on a long term basis, I ask unanimous consent that an editorial from the Montpelier (Vt.) Argus of March 25, 1958, and an article from the Las Vegas Sun of March 23, be printed in the Appendix of the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Montpelier (Vt.) Argus of March 25, 1958]

WORTH LOOKING INTO

In the never-ending search for expanded world markets it is only logical to look to the underdeveloped nations as a prospective source of new trade and commerce. Russia is already doing so, and is wooing such nations with low-interest loans to pump new life into their economies. The Soviet quite likely is expecting a substantial return in psychological value as well as fresh avenues of trade.

It behooves the free world to examine not only the possibilities presented by such a course of action but the consequences that might result if the democracies falter. In the war of democracy versus communism, democracy needs all the friends she can find.

This is substantially what Senator A. S. MIKE MONRONEY, of Oklahoma, a Democrat, had in mind when he offered the idea of creating an International Development Association.

As we under stand the proposal, the Association would be affiliated with the World Bank and be authorized to make mixed-currency, low-interest loans to spur economic development of the underdeveloped countries. The international agency would be able to make loans that the World Bank cannot make.

In other words, the loans made by the international agency would be subject to more risk than World Bank loans and could be taken without a government guaranty.

The United States, of course, would play an important role in any such scheme, taking 30 percent of the billion-dollar stock proposed by MONRONEY. The rest of the stock would be taken by the other World Bank members—59 of them.

The semi-isolationists will undoubtedly look on the proposal as another of those fool plans to give away American money. But before they holler too loudly they might be reminded that no less a personage than Eugene R. Black, president of the World Bank, thinks the plan at least merits close examination.

And Mr. Black, the conservatives among us can rest assured, is a pretty sound banker who isn't accustomed to giving money away—or even loaning it without some substantial reason.

In addition to the good politics and good business of such a plan—as measured in terms of international affairs—there are also the humanitarian aspects of assisting underdeveloped nations to the best of our abilities.

No such economic assistance can any longer be measured entirely in terms of dollars and cents. There is an investment in humanity attached, and, as in foreign aid, an investment in security and freedom.

Those who want proof of the business need don't have to look beyond a comparison of United States imports and exports. In 1957, for example, the country exported nearly $22 billion in commerce and imported at a rate of only $13 billion. What are we going to do to lessen this gap?

Undoubtedly the Monroney plan is not ideal. But as Mr. Black says, it should be examined.

[From the Las Vegas Sun of March 23, 1958]

SENATOR MONRONEY'S BANK IDEA GOOD

A proposal by Senator MIKE MONRONEY, of Oklahoma to establish an international bank which would lend money at lower rates and with less security than the present World Bank is deserving of serious consideration.

It would be linked to the World Bank and its purpose would be to make loans in mixed currencies (dollars and other national currencies). The loans would be repayable in the currencies of the borrowers instead of dollars or other hard currencies (i. e., currencies readily exchangeable for gold or dollars).

Loans would be under control of an international, multilateral group. Presumably they would be free from what some people have regarded as a sort of dollar veto which arises from the World Bank's rule that loans can be made only where there is prospect of repayment in hard currency.

Senator MONRONEY'S suggestion makes good sense. Whether it is beyond criticism in all details is beside the point. It is a serious and intelligent attack on a weakness in Western competition with Russia. With every ruble Krushchev spends in his stepped-up economic offensive this competition becomes keener.

In connection with this, the plan would clear as economically feasible loans the Kremlin is perfectly ready to make but which do not meet the requirements of the World Bank, Western governments or most private investors in western countries.

Any realistic plan to shift the emphasis in our own approach to foreign aid deserves careful consideration.

For too long now, the United States has been pouring millions and billions into foreign countries and all we have received in return is vicious propaganda depicting us as Uncle Sugar and Uncle Shylock.

The MONRONEY bank plan is a statesmanly approach to solving the economic ills of countries friendly to the United States, plus the added value of winning friends instead of economically intimidating people.

Aid of Young Nations Through International Banking Machinery

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Thursday, May 1, 1958

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Oklahoma City Oklahoman of March 19, 1958, entitled "MONRONEY'S New Look," which represents an advocacy of an international banking machinery to aid young nations.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Oklahoma City Oklahoman of March 19, 1958]

MONRONEY'S NEW LOOK

Senator MONRONEY thinks the once young and vigorous foreign-aid program bequeathed by President Truman is now old, tired, weary, haggard, and worn out.

He's convinced that we need to take a new look at foreign aid. The Senator has been doing his own looking and is suggesting a fresh approach to the International Finance Subcommittee this week.

MONRONEY embodies his fresh approach in a Senate resolution he describes as "an effort to facilitate economic development of young nations through international banking machinery instead of through United States loans and grants."

In the circles where foreign aid is usually accepted as a more or less permanent way of life the Senator's plan elicits a great deal of polite applause. Its details remain to be worked out but broadly it envisages a companion agency to the International Bank of Reconstruction and Development (World Bank) to make loans in mixtures of hard and soft currencies on terms more favorable than the World Bank can advance. Senator MONRONEY points out that the World Bank can't make project loans which may be good but impossible of repayment in dollars or other hard currencies over the 20-year required term. He thinks that therein lies our opportunity.

As a starter, Senator MONRONEY's proposed International Development Association would need an original capital of a billion dollars in hard currencies of which the United States would put up 30 percent, or $300 million. By mixing local currencies with hard currencies MONRONEY feels $1 could be made to do the work of many dollars now being spent. He says that would help us to put to work the vast amount of local currencies we have received and will receive from sales of our agricultural surpluses abroad.

The Senator plainly regards his program as a replacement for the economic development loans provided in the existing foreign-aid program. In order to qualify as a fresh approach, his plan would have to eliminate some existing phase of the foreign-aid program and not simply become a further accretion to it. The Senator would substitute his program for the additional $625 million that Secretary Dulles is asking for development loans in the new foreign-aid budget.

In view of parliamentary and political red-tape the Senator isn't likely to get his project going this year even if the Senate acts favorably. In the meantime the existing economic-aid programs will presumably be continued. It is only important to note that the Senator's proposed $1 billion of capitalization is represented as a starter. By his own estimate the Senator's suggested TVA-type joint watershed development loan to India and Pakistan would require $400 million alone. As it turned out the original Marshall plan was only a starter. It and succeeding foreign-aid schemes have now cost the American taxpayers about $60 billion.

It is evident that the United States can't continue to export at a rate nearly twice its import rate. It is also evident that in the interim between now and the perfection of the intercontinental ballistic missile the United States will need foreign bases and foreign friends. Presumably also it will continue to have embarrassing farm surpluses to trade for embarrassing surpluses of foreign soft currencies.

But instead of a fresh approach through refinancing maybe the present need is a fresh definition of the motivations behind the various far-reaching activities loosely lumped together as foreign aid. With the perfection of the ICBM and the missile-carrying submarine fleet the present military justification could quickly recede. Would foreign aid then serve principally to finance surplus crop dumping or factory exports?

It is true that the program bequeathed by President Truman is now tired, weary, and haggard. It ought to be tired. It has outlived by 6 years the 4-year envisaged life of the original Marshall plan. The birth of MONRONEY's new plan is worth a 31-gun salute only if it is accompanied by the long overdue death of unilateral foreign economic aid.

Publicity for Income Sources

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 1, 1958

Mr. PROXMIRE. Mr. President, one sure way to create public confidence in Government is to eliminate conflict-of-interest situations in decision-making. One way to eliminate conflict-of-interest is to make public the sources of income of decision-makers. This point is underscored in an excellent editorial in Labor, a national weekly newspaper published by 16 railroad labor organizations.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "No Goldfish Bowl?" which appeared in the April 26 issue of Labor.

There being no objection, the editorial was ordered to be printed in the Appendix of the RECORD, as follows:

NO GOLDFISH BOWL?

President Eisenhower last week rejected the idea that Members of Congress should make public all their outside sources of income. As for high administration officials and members of Federal regulatory commissions doing so, Ike said, "I have never thought about it, and so at this moment I certainly wouldn't express a conviction."

The President was questioned on the subject at his news conference. The idea of requiring high officials to reveal their private incomes has been revived recently because of scandals in the Federal Communications Commission.

Actually, however, the idea is an old one. Back in 1951, President Truman asked Congress to require all Members of Congress and all Federal officials and military officers paid over $10,000 a year to reveal their private sources of income.

In the same year a Senate subcommittee investigating corruption, headed by Senator PAUL H. DOUGLAS, Democrat of Illinois, urged the same thing. More recently Senators MIKE MANSFIELD, Democrat of Montana, and WAYNE MORSE, Democrat of Oregon, and some other legislators have also sought such a measure.

Nothing has come of any of these efforts, and President Eisenhower's opposition seemed to kill any chance of uncovering the full network of private personal interests held by high Washington officials.

Quite a few Members of Congress have proposed legislation requiring union leaders to disclose all their sources of income. If the idea is good for labor, why not for the lawmakers and Federal officials, too?

William Manger, Assistant Secretary General of Organization of American States

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, May 1, 1958

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the May issue of Americas magazine, entitled "Right Hand Man, William Manger, OAS Assistant Secretary General."

Dr. Manger has without question made a great contribution in furtherance of the objectives of the Organization of American States. He will retire on May 18 of this year. I know that the services which he has rendered will be appreciated by all of us in the United States, as well as those in every country of Latin America. His leadership has done a great deal toward promoting and cementing the ties of friendship between the United States and our Latin American neighbors.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RIGHT-HAND MAN WILLIAM MANGER OAS ASSISTANT SECRETARY GENERAL

(By Harry W. Frantz)

"I have always said that I am a very fortunate man. One of my greatest fortunes is the opportunity that I have had to know and to be associated with representative men not only of 1 country but of 21 countries." These were OAS Assistant Secretary General William Manger's opening words when he went before the Council last November 14 to announce his "determination to retire" when his term expires May 18. As farewells are said, Washington observers will perceive that one of the ablest craftsmen of the inter-American diplomatic structure will be taking his leave. He is esteemed much like a university professor about to become emeritus.

For 43 years "Doctor" Manger—as he is known to all, though he refers to himself simply as "Mister"—has been an integral part of the Pan American Union, no less familiar to the OAS staff and the Washington diplomatic corps than the Aztec fountain, the brightly colored macaws in the patio, or the white-trunked sycamores on the beautiful grounds. The marble exterior of the original building, built in 1910, has yellowed a little and the stone steps have worn smooth since Manger, as a boy of 16, came here to work in April 1915.

In recent years Dr. Manger has occupied a second-floor office in the southeast corner of the old building with a splendid view of the Mall and the Washington monument. The door is always open—to diplomats, government officials, reporters, visitors, OAS employees, in short, anyone who has need of his knowledge or his counsel. On the walls are the portraits of four men who inspired him in his youth: Andrew Carnegie, who largely financed the construction of the main building; Esteban Gil Borges, the celebrated Venezuelan diplomat; Leo S. Rowe, Director General of the Union for 25 years; and Francisco Javier Yanes, Assistant Director from 1910 to 1924.

When Dr. Manger completed 40 years of service in 1955, the OAS Council met in his honor. Ambassadors vied in expressions of tribute and appreciation, but he has always thought of himself as only "an inter-American civil servant." He would be the last to claim any personal credit for the transformation of an institution that in 1915 was little more than an international commercial bureau into the most powerful political, economic, and cultural regional system in the world—the Organization of American States.

William Manger was born in Richmond, Va., on September 22, 1899, the son of George and Helena (Lenz) Manger. In 1915 he was attending a private school in Washington, contemplating a business career. The Pan American Union was looking for a file clerk, and young Manger took the job. His supervisor, Mrs. William J. Kavanaugh, who soon recognized his unusual talent and diligence, urged him to continue his education and to specialize in Latin American history and inter-American affairs.

By dint of hard work and self-sacrifice, Manger rose from one position to another. After office hours he attended Georgetown University, where he received his bachelor of laws degree in 1921, his master of science in 1923, and his doctor of philosophy in 1926. His doctoral thesis was on the protection of foreign investments, then as now a key topic in inter-American affairs. In July 1923 he became the chief of the PAU financial section, and for the next 9 years he worked unstintingly at preparing a number of valuable annual publications, assembling documentary material and drawing up preliminary

nary agenda and regulations for inter-American conferences, and guiding the Union's first efforts in the public-relations field. During this time Dr. Manger did a great deal of the complex preparatory work that led to the permanent establishment of Pan American Day. The formal proposal, which was made by Brazilian Ambassador S. Gurgel do Amaral to the PAU governing board, was adopted in 1930, and the first official celebration of the day was held the following year.

In February 1934 Dr. Manger became counselor of the Union, and continued to devote much of his time to the behind-the-scenes but nonetheless essential and highly technical activities involved in preparing for inter-American conferences and in putting into effect the resolutions that came out of these meetings.

Eleven years ago, on July 2, 1947, Dr. Manger was unanimously elected assistant director of the Union by the governing board, a position he has held ever since, though the name was officially changed with the signing of the charter at Bogotá in 1948. From that time he has been Assistant Secretary General of the Organization of American States. The governing board, incidentally, became the OAS council.

Even Dr. Manger's personal life has been closely identified with the Pan American Union. On June 30, 1923, he married Anna Kleiser, secretary to PAU counselor Franklin Adams. They have 2 sons, William Franklin and John Edwin, and 3 charming grandchildren. For same years the Mangers lived in a small house (now the offices of Americas) on the Union grounds, and Dr. Manger was willingly on call 24 hours a day. Now their home is in northwest Washington close by Rock Creek Park, where he still enjoys an occasional hike. His out-of-office interests have always been his family and, in recent years, his garden. At one time he shared Dr. Rowe's enthusiasm for tennis, and he smokes a pipe and Habana cigars—his closest friends can recall nothing more sensational about him.

Dr. Manger has quietly served as right-hand man and expert informant to six chiefs of the Pan American Union: John Barrett, Leo S. Rowe, Pedro de Alba (acting director for some months after Dr. Rowe's death), Alberto Lleras Camargo, Carlos Dávila, and José A. Mora. Besides handling multiple routine tasks in Washington, he has been attending international conferences all over this hemisphere since 1923. The first was the Santiago Conference that year, concerned primarily with disarmament in the Americas; then the Habana Conference in 1928, which adopted Pan American codes of public and private international law; the Montevideo Conference in 1933, which approved the nonintervention declaration; the Lima Conference in 1938, which established the principle of inter-American consultation; the Bogotá Conference in 1948, which approved the Charter of the OAS; and the Caracas Conference in 1954, which adopted measures to discourage communism in the Western Hemisphere. He has also participated, in a technical capacity, in the four Meetings of Consultation of the Foreign Ministers of the American Republics; at Panama in 1939, Havana in 1940, Rio de Janeiro in 1942, and Washington in 1951. Dr. Manger was secretary general of the fourth meeting. He attended the Chapultepec Conference in Mexico City in 1945, which charted the course for preservation of the inter-American regional system within the projected United Nations Charter. Apart from actual attendance, Dr. Manger has helped with the preparatory and administrative work on so many technical and special-purpose inter-American conferences that only he himself could now give all the dates and places.

Of particular importance to Western Hemisphere newspapermen was the First Pan American Congress of Journalists, held in Washington, April 7–13, 1926. In point of distinguished attendance, broad achievements, and valuable documentation, this Congress is still remembered as the most significant press meeting ever held in this hemisphere. Dr. Manger served as secretary general of the Congress and, as I have mentioned, in those days was personally conducting the Pan American Union's press relations.

At all these historic assemblies, Dr. Manger's principal function was to apply the Pan American Union facilities to the preparation, smooth organization, and post-conference fulfillment of resolutions. As a result, he became acquainted with an extraordinary number of American statesmen and foreign-office and embassy officials on all levels. Among his many unreserved admirers was Senator Arthur Vandenberg, the architect of the Rio de Janeiro mutual-security treaty.

Add to this imposing list of duties and accomplishments Dr. Manger's efforts to establish close cooperation between the Pan American Union and women's organizations, schools and universities, chambers of commerce, libraries and other institutions, and his personal influence on inter-American relations becomes even more evident. Yet despite his multiple services—and many of them on dramatic occasions—Dr. Manger has rarely emerged from his willingly accepted—indeed, preferred—behind-the-scenes role. Countless reporters have called at his office, only to return to their typewriters to chronicle the plans and achievements of others. As he retires, newsmen will give Dr. Manger their accolade for that most esteemed public service: the cheerful acceptance of urgent telephone calls at home and at any hour.

The key to Dr. Manger's success, long-time colleagues suggest, is an extraordinary capacity both for writing and using official documents. The contents of his many bookcases are almost entirely the records, proceedings, and annals of the inter-American system. A reporter entering his office unannounced would probably find him working at his desk, but whenever a question called for a precise answer, Dr. Manger would quickly turn to an appropriate reference volume. Then, with the visitor, he would sit down at a large round mahogany table to find the exact information.

This punctiliousness has over the years earned Dr. Manger a well-deserved reputation for encyclopedic knowledge of Pan American affairs. The hundreds of articles, pamphlets, and background documents he has written are the backbone of diplomatic documentation in this field.

Rarely has he written in a personal, nonofficial vein. One exception was an article for the Pan American Union Bulletin in 1937: A Rendezvous with Life—A Voyage to South America. Speculating about his ship companions, he wrote: "Here we have a real cross section of the life of a continent. * * * Traveling on a ship of this character * * * is in itself a liberal education that gives one an insight into what the people of other parts of the continent are thinking and what they are doing. Contact with them is an admirable introduction to the countries one is planning to visit."

For the past 25 years Dr. Manger has been lecturing at Georgetown University, and after he leaves the Union he plans to continue in an academic career. He will give courses at the Georgetown School of Foreign Service on Latin American history and will conduct a seminar in the graduate school on politics and governments of Latin America. He will also continue to write on international affairs in the Western Hemisphere. Incidentally, his best-known publications in this field, written for the Pan American Union, are The Basic Principles of the Inter-American System and Pan American Postwar Organization. The latter was published in 1944 and was an invaluable guide to government officials and diplomats who were anticipating the international readjustments certain to follow the war.

Many people will remember Dr. Manger as a gracious but unostentatious host at countless functions in the Hall of the Americas and at open-air concerts on moonlit nights in the Aztec garden. Others will picture him as he swiftly delivered documents to conference tables and whispered information or advice. There was always something quiet and deft about such minor transactions that seemed to inspire confidence. Swift recall and a tremendous accumulation of facts made him an ideal conference aid.

Diplomats and students of inter-American affairs are keenly aware that William Manger's tireless efforts, his "know-how," and his constant purpose have made a real and lasting contribution to friendship and cooperation among the American nations. He has helped to give the regional system an internal sense of tradition and to foster its day-by-day technical efficiency. In decades to come, there will be thousands of such civil servants. But Dr. Manger will always be remembered as the pioneer.

Statement of Secretary of Agriculture Ezra Taft Benson Before the House Committee on Agriculture

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1958

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the statement made by Secretary of Agriculture Ezra Taft Benson to the Committee on Agriculture:

STATEMENT OF SECRETARY OF AGRICULTURE EZRA TAFT BENSON BEFORE THE HOUSE COMMITTEE ON AGRICULTURE, MAY 1, 1958

I am pleased to discuss with you the dairy situation, and particularly the various dairy stabilization bills introduced by Members of of House of Representatives with a view to helping dairy producers.

It is most appropriate for this committee to consider the problems of the dairy industry and possible solutions. From the standpoint of numbers of farmers engaged in selling dairy products and the income derived therefrom, dairying is one of the important segments of agriculture. The dairy enterprise ranks second as a source of income to farmers, being exceeded only by beef cattle.

The importance of the industry has long been recognized by the Department and much constructive action has been taken to assist dairy farmers. We recognize, of course, that numerous problems remain to be solved, even though in 1957 cash receipts to farmers from sales of dairy products totaled $4,643,000,000, the highest on record.

ACTIONS TAKEN TO ASSIST DAIRY PRODUCERS

The Department of Agriculture is helping the dairy industry to achieve more efficient production and marketing through research and education and through promotion and merchandising programs.

For years the Department has made great efforts to achieve increased efficiency in milk production through improved breeding, better feeding, and other desirable farm practices. We have sought ways and means of producing and marketing at lower costs.

We have helped to develop and encourage new and expanded outlets for dairy products.

We recommended and the Congress enacted in 1954 the Agricultural Trade Development and Assistance Act, Public Law 480, to move surpluses into constructive use. Under this law we have moved a very large quantity of dairy products. This program has not only been of benefit to the dairy industry; it has also won much good will for this country.

Under title I of this law we have programed the export movement of dairy products equal to about 1.4 billion pounds milk equivalent, with a value of $71.8 million. We are using a substantial amount of foreign currency to develop markets abroad for our dairy products.

We should note that unless action is soon taken to extend Public Law 480, dairy producers will lose some of the benefits which otherwise would be derived from extension of title I of Public Law 480.

Under title II of this law we have programed for donation to various governments a total of $76.5 million of butter, cheese, and nonfat dry milk. These donations have been made for famine and emergency relief as provided by the law.

Under title III we have also donated very large quantities of dairy products to private and other eligible welfare agencies. A small quantity has been moved through barter. We have donated under title III a total of around 1.6 million pounds of nonfat dry milk, 337 million pounds of butter and butter oil, and 516 million pounds of cheese.

We are improving the nutrition of many schoolchildren under the special milk program. This program, now in its 4th year, is currently being undertaken under legislative authority for the use of $75 million of CCC funds. It is operating in all the 48 States, the District of Columbia, Alaska, and Hawaii. A total of 1.8 billion half pints of milk were consumed by children under the program last year. The program has made it possible for many more children to drink more adequate quantities of milk. It has also contributed substantially to the effective operation of the dairy price support program.

We are also donating large quantities of dairy products for distribution to schools under the national school lunch program, to eligible institutions, and to needy persons in this country.

During the past fiscal year: 46 million pounds of butter, 32 million pounds of cheese, and 24 million pounds of nonfat dry milk were donated to the national school-lunch program; 9 million pounds of butter, almost 16 million pounds of cheese, and 16 million pounds of nonfat dry milk were donated to eligible institutions; 12½ million pounds of butter, 72 million pounds of cheese, and 83 million pounds of nonfat dry milk were donated to needy persons in the United States.

We have also made large quantities of surplus butter, cheese, and nonfat dry milk available for increased use by veterans' hospital patients and military personnel. A total of 23 million pounds of butter and nearly 2 million pounds of cheese have been transferred to the military agencies during the past 5 years. These transfers increased consumption of dairy products by military personnel and veterans' hospital patients over and above their normal use.

Under another special program, for which the Department pays part of the cost, the United States Armed Forces have more than doubled their consumption of fluid milk. In 1957 the military personnel used about 560 million pints of milk more than they would otherwise have consumed. This program comes under provisions of the Agricultural Act of 1954 which not only authorizes purchase of fluid milk in carrying out the mandatory dairy price support operations, but also provides that CCC stocks of dairy products may be transferred for increased use by the Armed Forces.

Consumption of milk by veterans' hospital patients also has been increased.

We have made excellent progress during the past year under the accelerated brucellosis program. At the present time approximately one-third of all of the counties in the United States, including all of 11 States and Puerto Rico, have qualified as modified-certified areas. This means that the incidence of the disease does not exceed 1 percent of the cattle and 5 percent of the herds. If the program is continued at the present rate, it is expected that around 90 percent of the States will be certified by 1960.

Major efforts in our current dairy production research involve: (1) the national cooperative dairy herd improvement and sire proving program; and (2) breeding, nutrition, herd management, and physiological research. In our current utilization research program we are emphasizing: (1) Research into preparation of improved dry whole milk, particularly as to keeping qualities, improvements in flavor, reconstitutability and reduction in bulk; (2) fundamental research on cheese to obtain better quality and reduced costs of production; and (3) developing new and expanded uses of other dairy products.

Our research on marketing problems of the dairy industry is being directed particularly at market expansion for dairy products. We are studying market potentials and seeking more effective methods of presenting dairy products for purchase by consumers. We are surveying consumer buying habits, preferences and other factors affecting purchases.

We are also studying factors bearing on costs and efficiency of marketing dairy products. These range from simple measurements of the farm-to-retail price spreads on a number of products to detailed engineering studies of various processing and marketing operations. New developments such as the shift from handling milk on farms in cans to handling it in bulk tanks may necessitate changes in the structure of the industry. Some of the Department's research is aimed at helping the dairy industry adapt its structure to such new developments.

In summary we are taking all the sound and constructive steps available to increase the use of dairy products. We are continuing to cooperate closely with the dairy industry in promotion and merchandising programs. We have urged the continuation of the Public Law 480 programs and also the programs designed to increase the consumption of fluid milk by children and military personnel. We are carrying out research and field education efforts to make more efficient the handling and marketing of milk and other dairy products. Butter, cheese, and dry milk continue to be donated to the school lunch program, to charitable institutions, and to needy persons not only for the purpose of reducing surpluses, but also as a means of developing and strengthening markets. Dairy products will be exported in increased volume when this can appropriately be done. Efforts will be continued to encourage the development and expansion of domestic and foreign markets for dairy products for the long-time benefit of our dairy farmers.

PROVISIONS OF THE DAIRY STABILIZATION BILLS

Self-help efforts, as distinct from government programs, are to be encouraged and aided. Self-help is in the American tradition—and a far more healthy, progressive, prosperous agriculture flows from individual planning, self-reliance, and self-help than can ever be achieved through dependence on Government.

The self-help principle in its broad sense is a most desirable objective for the dairy industry. Yet I find it necessary to recommend against the enactment of legislation such as embodied in H. R. 10043, H. R. 9743, H. R. 10060, and other bills which have been presented as self-help measures. Much as I regret the need for this decision, there are compelling reasons.

The reasons lie in the principal provisions of the bills. They are not truly self-help measures.

1. These bills would create in the Department of Agriculture, as an independent agency and instrumentality of the United States, a Federal Dairy Stabilization Board. The Board would consist of 15 milk producers or officers of dairy cooperatives appointed by the President from nominees selected on a regional basis by milk producers. The Secretary of Agriculture would be an ex officio member without vote. The Board could use employees and services of any Federal agency. Or it could set up its own staff outside the civil-service system.

2. These bills would require the Secretary of Agriculture to appoint a Federal Dairy Advisory Committee of 12 members. They would represent manufacturers, processors, handlers, and distributors of milk and its products, consumers, other agricultural commodities or programs, and other interests directly concerned with the operation of the act. The committee would confer with and advise the Board concerning the dairy stabilization program.

3. These bills would give to the Board almost unlimited authority to acquire facilities and to acquire, process, store, sell, donate, advertise, and otherwise handle milk and dairy products.

4. These bills would authorize and direct the Board to stabilize prices of milk and butterfat to producers and to determine and announce price support levels. The Board would take into consideration such factors as the declared policy of the act, the importance of milk and dairy products to the health and general welfare of the Nation, and the estimated supply and demand situation for milk and its products. Other factors would be the support level for feeds; the cost of producing, processing, and marketing milk and dairy products; relative prices of other foods; hourly returns for labor; and the need for and reasonable relationship between the prices that farmers receive and pay.

5. These bills would authorize and direct the Board to carry out price support through purchases of milk, butterfat, or other dairy products. They would give to the Board the same broad authority that CCC now has to sell, donate, or barter any dairy products acquired by it, in domestic and foreign outlets, and for use by the armed services, in school lunches, and for welfare uses.

6. The Board could transfer to CCC, or dispose of for CCC account, quantities of dairy products equal to imports of dairy products and the increased production of milk and butterfat resulting from diversion from production of other commodities under control programs. CCC would be required to pay to the Board the full cost of such products. United States Government agencies would be required to cooperate with the Board in the disposal of dairy products acquired by the Board by barter, exchange for foreign assets or currencies, and in the use of foreign currencies in connection with relief distribution, or procurement activities.

7. Whenever the Secretary of Agriculture determined, after public hearing, that the Board's operations had resulted, or would result, in unreasonably high prices to producers, he must prescribe a support level and recommend action by the Board. If the Board did not take such action, the Secretary could petition the United States Court of Appeals for a decree directing the Board to take such action or to cease and desist from other action.

8. The Board could borrow money from anyone, pledging dairy products as collateral

or without security. CCC would be required to loan to the Board, without security, amounts requested by the Board up to $350 million outstanding at any one time.

9. The Board would be required to determine marketing assessments to cover cost of price supports, except costs due to imports and crop diversions. Whenever marketing allotments were in effect, the Board could establish different assessment rates for producers' sales within allotments and sales in excess of allotments. The first buyers of milk and butterfat from producers would withhold the assessments from prices paid producers and would pay the assessments to the Commissioner of Internal Revenue. There would be appropriated, for use by the Board, sums equal to the assessments collected. Marketing assessments also would be collected on imports of dairy products, for use by the Board.

10. These bills would require the Board to put into effect a marketing allotment program for any marketing year when the marketing assessment would exceed a given figure, such as 25 cents per hundredweight of milk. The Board would allocate bases to individual producers, taking into consideration historical production, trends, and other factors. It would allocate the available markets to producers annually and would issue marketing certificates to producers covering their marketing allocations.

11. A referendum would be held to determine whether dairy farmers favor a dairy stabilization program as provided in these bills or a price support program as provided by the Agricultural Act of 1949. If producers approved the dairy stabilization program the Board would be required to support prices to producers for milk and butterfat for the marketing year beginning April 1, 1959, at 90 percent of parity. The marketing assessment would be 25 cents per hundredweight of milk or milk equivalent. In computing the support level for manufacturing milk, the Board would be required to use the July 1946–December 1948 average ratio instead of the lower last 10-year average ratio of manufacturing milk price to all milk price. Thereafter the Board would set the support levels and the assessment rates. The Board's stabilization program would be subject to subsequent referendum to determine whether it should be continued or discontinued, if 10 percent of the producers petitioned for such referendum.

12. The Board's operations would be exempt from taxes, antitrust actions, and other laws applicable to Government contracts.

13. These bills would suspend dairy price support operations by the Secretary during the Board's operations.

SERIOUS QUESTIONS INVOLVED

These bills represent an effort by representatives of dairy producers to develop a self-help program under which a large part of the cost of dairy price support operations would be transferred from the Federal Government to the producers. Self-help objectives, I repeat, are meritorious and warrant careful consideration. However, there are several provisions in these bills which raise important questions regarding delegation of authority and responsibility, the lack of limits on price support level, and administrative feasibility.

Broad authority with respect to dairy price support operations would be vested in an independent board of producer representatives. If producers initially voted in favor of the stabilization program, the Board would determine the level of support and the amounts of assessments on producers' sales of milk and butterfat after the first year. Producers would have further opportunity to approve or disapprove the Board's actions only if 10 percent of the producers petitioned for another referendum.

The Board could act without the approval of either the Secretary of Agriculture or the President. Moreover, the guiding standards in these bills are very broad. Except for the first year, they do not specify any maximum or minimum limit on support level. It appears advisable for the Congress to continue to determine the criteria and maximum support levels for agricultural commodities.

A second question is whether the authority and responsibility for agricultural price supports should be divided. The Secretary of Agriculture now has the responsibility for operating a consistent and balanced agricultural program. These bills would give an independent board authority to conduct programs for dairy products. It is believed that the coordination of the farm program as a whole would be best accomplished by continuing a unified authority and responsibility for price support operations for all commodities.

The provision for review, recommendation, and petition by the Secretary of Agriculture for court action—to require the Board to take the recommended action or to cease and desist from other actions—would be impracticable. The time involved in hearings and court procedures would be excessive. An unsatisfactory relationship might develop between the Secretary and the Board with respect to authority and responsibility for price support operations.

Furthermore, it is not advisable that questions between Federal administrative agencies and officials regarding administration of Federal laws and programs be taken to and resolved in the courts.

The stabilization program would go into effect if a majority of the producers voting in the referendum favored it. Under some of these bills the Secretary would be directed to consider the vote of any cooperative association of milk producers bona fide engaged in marketing milk, butterfat, or dairy products for producers as the vote of the producers in such cooperative. Other self-help dairy bills do not provide for such method of voting but require individual voting.

If producers voted in favor of the stabilization program, the support level for the first year would be 90 percent of the parity price for butterfat and 90 percent of the parity equivalent price for manufacturing milk. The base period would be the 30-month (July 1946-December 1948) average ratio of 88 percent between the price of manufacturing milk and the price of all milk, instead of the last 10-year average ratio now used, which for 1958 is 81.2 percent. Based on the March 1958 price of all milk, different percentages of the parity equivalent price of manufacturing milk as computed by the present method and the proposed method are as follows:

	Present method (basis 10-year average)	Proposed method (basis July 1946–December 1948 average)
Parity price of all milk at wholesale per hundredweight	$5.02	$5.02
Ratio of manufacturing milk to all milk prices (percent)	81.2	88.0
Parity equivalent of manufacturing milk per hundredweight:		
100 percent	$4.08	$4.42
90 percent	$3.67	$3.98
75 percent	$3.06	$3.31

Butterfat parity is not altered by the proposals. Based on March 1958 parity data, 90 percent of the parity price of butterfat would be 67.9 cents per pound as compared with the support price of 56.6 cents per pound announced for the current marketing year.

Thus, if producers voted in favor of the program, the following increases would be required over the 1957–58 support level:

Manufacturing milk: 73 cents per hundredweight, or 22 percent.

Butterfat: 9.3 cents per pound, or 16 percent. After deduction of the prescribed 25-cent assessment for the first year, the net support level would still be above the 1957–58 support level by 48 cents a hundredweight, or 15 percent, for manufacturing milk, and a somewhat lower percent for butterfat (depending upon how the butterfat assessment rates were computed). The effect of the increased support level would be to further encourage milk production. The higher support level would result in approximately corresponding relative increases in prices to consumers for milk and its products. This would decrease consumption.

It is apparent, therefore, that with similar production and marketing conditions a substantial increase in purchases of dairy products would be necessary to make the higher support level effective. This could result again in the accumulation of large stocks of dairy products, since the Board, operating as a Federal agency, would be confronted with the same problems of international trade and relationship as would be encountered under the present type of program.

The present method—computing the parity equivalent of the price of manufacturing milk by administrative determination—is preferable to fixing by law a method that requires the use of a relationship that existed 10 years or more ago. Moreover, the present method of using the latest 10-year average relationship allows for trends and is consistent with the modernized parity provisions of existing legislation.

It appears preferable for Congress to continue to leave to administrative determination the actual level of support within prescribed ranges rather than to prescribe specific levels of support for specific years.

The bills would require marketing allotments on sales of milk and butterfat by individual producers if the marketing assessment would exceed 25 cents per hundredweight of milk. The apparent purpose of such allotments is to make it possible to establish relatively high assessment rates on overquota sales. The objective is to tax the surplus out of existence. This provision warrants careful consideration.

Much study has been given to the feasibility of a dairy allotment program by the Department of Agriculture, the dairy industry, and farm organizations. Very difficult administration problems would be involved. These are associated with seasonal variation in milk production and seasonal distribution of individual producer's allotments. Such allotments would be necessary in order that first buyers of milk and butterfat would know, when they paid for such milk and butterfat, the quantities on which they must deduct the differential assessment on overallotment milk and butterfat. These sums must be remitted monthly to the Commissioner of Internal Revenue. Because the experience with crop allotments has not been highly satisfactory, we are sure that such controls on dairy producers would be even less acceptable and successful in controlling output of dairy products. The Department questions the advisability of legislation that would require milk and butterfat allotments.

The bills would, in effect, exempt producers of milk and butterfat from self-financing dairy support operations attributable to imports of dairy products and to diversions from the production of other ag-

ricultural commodities resulting from such Federal production control measures as acreage allotments.

With respect to imports, section 22 of the Agricultural Adjustment Act, as amended, provides authority to restrict imports of dairy products to prevent their interference with the dairy price support program. With respect to diversion, there is no satisfactory basis for measuring the effects of crop acreage allotments, quota, and related programs on the production of milk. There are too many offsetting and immeasurable influences.

Milk production is influenced by numerous factors. These include the relative farm prices of milk, butterfat, and other commodities (including those subject to acreage allotments or marketing quotas), feed prices, supplies and quantities under loans, and technological developments in both crop and livestock production. It would be virtually impossible to determine with reasonable accuracy what part of the total milk production, or of the price-support purchases, should be attributed to each factor.

The self-help principle in its broad sense is a desirable objective for all agriculture. Reaching this goal calls for a better adjustment between production and consumption, more efficient production and marketing, more freedom from Government regulations and interference, and less dependence upon Government price supports and related programs.

It would appear, however, that several major policy considerations must be resolved before a definitive position can be taken with respect to this type of legislation. Such questions which the Congress should decide include:

1. The desirability of giving very broad authority on price support and related operations to a commodity board not directly subject to control by the legislative and executive branches.

2. The desirability of providing similar authority to other commodity groups. If so, there would be the need to set up a superboard to coordinate the decisions of the various independent commodity boards.

3. Since the granting of broad authority to agricultural commodity boards to fix minimum prices would be a reversal of the policies agriculture had advocated for over half a century on certain nonagricultural services, what should our position be with respect to these other controls? These include costs of services farmers buy, such as freight rates, truck transportation rates, electricity, etc.

4. What should be our policy with respect to providing adequate protection to the general public under the commodity board setup?

5. If a dairy board is set up, should the Secretary of Agriculture have veto power over its actions? In evaluating this policy consideration should be given to the following:

a. Which actions should be subject to veto?

b. Who would reconcile differences between the Secretary and the board?

c. Who would have responsibility for the decisions made?

d. To what extent would divided authority affect efficient operations?

e. To what extent would veto authority permit the Secretary to reconcile the price-support actions of the various commodity boards?

f. To what extent would a double review of every major action result in duplication of personnel?

6. How will the plans be financed to the extent the assessment does not cover costs? This question arises because while the various plans claim to be self-financing all call for the borrowing of large sums, such as $350 million from CCC with no provisions for repayment. If the plan is not successful and builds up a substantial deficit so that farmers vote to return to the present price support method in order to avoid paying high assessments, what happens to the unpaid obligations to CCC?

7. Because a single commodity board is not subject to the same overall commodity responsibility with respect to international relations as a Government agency, this commodity board approach on disposal operations could undo in the international field much of the good being done through other efforts.

CONCLUSION

The dairy industry already is using the self-help principle.

Many dairy farmers are helping themselves by producing milk more efficiently through better breeding, better feeding, culling, quality improvement, and other pratcices. They are also striving to improve the marketing of their milk and butterfat through cooperative actions. A major feature of the current revolution in the dairy industry is the establishment of modern, efficient processing plants, and the development of dairy products in packages more appealing to consumers. More effective merchandising by individual distributors is being supplemented by group advertising and promition of milk and its products. This is financed by farmers through voluntary deductions from the prices they receive for milk and butterfat.

Emphasis on increasing consumption of milk and its products in the regular commercial market channels offers the best solution to the dairy problem. It is estimated that if all households that are low on calcium were to raise their consumption to the recommended level, milk consumption would go up about 9 percent. This is roughly double our current annual purchases of dairy products for support purposes. Not only would it wipe out the surplus—it would call for a substantial increase in production.

Mr. Chairman, I shall be very happy to respond to such questions as you may have.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. WILLIAM E. McVEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. McVEY. Mr. Speaker, on May 3, people of Polish ancestry throughout the world will observe the 167th anniversary of the enactment of the famous Polish Constitution of 1791. At this time, I believe it is fitting that we pause to reflect upon the sacrifices made by the people of Poland in an effort to maintain the principles embodied in that historical document.

Although Poland has been subjugated many times since the adoption of her constitution, her people have maintained their patriotism and moral resistance. The events of October 1956 and the Poznan revolt clearly illustrate the resistance of the Polish people to Soviet control and their aversion to communism. They realize that Communist concepts of economy and industrial planning have brought them to the brink of disaster. Their desire for liberty is strong and will eventually lead them to victory over their oppressors.

I wish to take this opportunity to pay tribute to the noble people of Poland, who, by reason of their fortitude and love of freedom, are a source of inspiration to oppressed people everywhere. I look forward to the day when Poland will have obtained complete independence.

The Pearl Harbor Complex

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 1, 1958

Mr. PROXMIRE. Mr. President, Mr. Walter Lippmann is one of the most penetrating and enlightening commentators in America. In an article appearing in today's papers, Mr. Lippmann points out how tremendously important it is for America to get over her Pearl Harbor complex. Mr. Lippmann writes eloquently that our military and economic policies are paralyzed by an hypnotic infatuation with the possibility of a nuclear knockout blow. He says that after we take all the necessary precautions to protect our retaliatory power, we should forget our Pearl Harbor complex and address ourselves with all our initiative and energy to the fact that we are pressed by the competition of a new, extraordinary powerful social order.

Mr. President, I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the Appendix of the RECORD, as follows:

THE PEARL HARBOR COMPLEX

(By Walter Lippmann)

At the U. N. on Tuesday, Mr. Hammarskjold said that the basic reason why no progress is being made on disarmament is that there as a "crisis of trust from which all mankind is suffering at the present juncture." It is reflected, he went on to say, "in an unwillingness to take any moves in a positive direction at their face value * * * because of a fear of being misled."

This surely is the heart of the matter, and we may take it that our Arctic bomber flights, which Mr. Hammerskjold referred to a "the present state of extreme preparedness," reflect an absolute mistrust in the intentions of the Soviet Union. Mr. Lodge in the same debate spelled out this mistrust, which actuates our military policy, by saying that "the awesome destructive power of modern armaments makes it at least theoretically possible to wipe out the military capacity of a state—even one of the great powers—in a single attack. But such an attack must come without warning if it is to succeed.

The proposal for international inspection in the Arctic Zone are based on the theory that the inspectors could detect the preparation for a super attack and could, therefore, nullify the danger of an all-out and absolute Pearl Harbor. Our remedy, in short, for the mistrust we have of Soviet intentions is to put a great deal of trust in an inspection system.

If I read Mr. Hammerskjold's remarks correctly, he thinks that if the Soviet Union and the United States would make an agree-

ment to set up an Arctic inspection system, this would reflect a state of mind in which other agreements might then be reached. Certainly inspection as such, which would be as the saying goes, "foolproof," is not in the cards. If the will exists and the means exists to deliver the absolute knockout, no system of inspectors can prevent it.

The real guaranty against the super-Pearl Harbor is that the means do not exist, and therefore the will to attempt it cannot exist. It is not necessary in this situation to trust Russian intentions. It is necessary only to have trust in Russian sanity. In Mr. Lodge's remarks, which I have already quoted, the key words are that it is "theoretically possible" to strike a knockout blow.

But is it even theoretically possible to do that now? Not according to the Director of Central Inelligence, Mr. Allen Dulles, who said in an address this week that "as I see it, under its present policies, the U. S. S. R. does not intend to use its military power in such a way as to risk general war." Why not? Because "they have a healthy respect for our retaliatory capability."

We have a right to believe that Mr. Dulles does not believe that it is now even theoretically possible to knock out our retaliatory capacity. For, as he said in the next paragraph, we must be ever watchful of military developments, "in order to anticipate any attempts at a breakthrough which would change the balance of military power." Until and unless there is such a technological breakthrough, there exists a balance of military power which is a true deterrent to a Pearl Harbor.

In the last analysis, a more flexible policy on our part does not depend upon putting trust in the intentions of the Soviet Union. It depends upon our putting trust in their ability to read correctly the balance of power.

The rest of Mr. Allen Dulles' address reinforces this view. He dwelt at length and in rich detail upon the spectacular success of the Soviet Union in promoting its own industrial development, and with the prospect that in the course of a generation the Soviet industrial capacity may catch up with our own. Is it likely that with such prospects, the Kremlin will risk everything on the very theoretical possibility that it could knock out the United States?

The moral of this argument is that, having taken all the necessary precautions to protect our retaliatory power, we should resolve our Pearl Harbor complex. It paralyzes our military thinking and it stultifies most of our diplomacy. We should instead, conscious of our own security, address ourselves to the great fact of our era that in almost every field of human endeavor we are pressed by the competition of a new and extraordinarily powerful social order.

Secretary Dulles

EXTENSION OF REMARKS
OF
HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 27, 1958

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Stanley High, appearing in the current edition of Reader's Digest, entitled "The Unshakable Mr. Dulles":

THE UNSHAKABLE MR. DULLES

(By Stanley High)

However history rates John Foster Dulles as United States Secretary of State, it will almost certainly record that, in a spot more exposed than any other in our Government to the ill wind of criticism at home and abroad, he has had more and sharper censure than any of his recent predecessors. It may well record too that few Secretaries of State survived their critics for so long with less loss to themselves or greater gain to their country.

"It is ironic," writes Marguerite Higgins, Washington correspondent of the New York Herald Tribune, "that the loudest calls for Mr. Dulles' scalp should have been made over policies that history is already showing to have been among his wisest."

Only once in his nearly 5½ years in office has Dulles' continuance as Secretary been in genuine doubt. On November 3, 1956, he was rushed to Walter Reed Hospital in Washington for a critical operation. With the State Department boss incapacitated for a prolonged period as, at 68, he seemed bound to be, the urgent Washington question was: Who now for Secretary?

Within 48 hours the Secretary, with 2 telephones installed by his hospital bed, was supplying his own answer: Dulles. Soon a story was going the rounds which Dulles himself hugely enjoyed. It seems that a high State Department official was expressing some doubt as to the Secretary's post-hospital future. He was rebuked by a colleague: "Only the Lord could pry John Foster Dulles out of his job, and He tried and failed."

"There is a difference," Dulles recently declared, "between being respected and being liked. We do not run the foreign policy of the United States with a view to winning a popularity contest. We have to do some things which we know are not going to be popular. But we have not done, in my opinion, anything for which we are not respected."

No other issue visited upon Dulles such an outpouring of vilification as Suez. Following Israel's invasion of Egypt and the British and French attack on the Suez Canal Zone on October 31, 1956, the survival of those principles of peaceful settlement and of law and order which the United States and the United Nations were sworn to uphold was in the balance. Sure that free world nations would never muster sufficient courage and unity for decisive action, the Communists were set to move in on the Middle East and Africa for an unprecedented propaganda killing.

Late in the evening of November 1, Dulles appeared before the U. N. General Assembly. There, in open disagreement with our two oldest and most powerful allies, he opposed this resort to force and called on the U. N. for action that would make it apparent to the world, not only for the benefit of ourselves but of all posterity, that there is here the beginning of a world of order.

This refusal to compromise or even momentarily to suspend his principles put the Dulles must-go critics, particularly in Britain and France, in full cry. But, moved by Dulles' appeal, the U. N. rose to the challenge. On its demand, the fighting stopped and a U. N. police force took over. Both Suez and the Gaza Strip were liquidated as immediate trouble spots. And the Communists were robbed of an issue they would have turned to sure-fire account.

When, in January 1953, Dulles moved into the Secretary of State's paneled, heavily carpeted office, the peace-at-all-costs line then coming from Moscow had lulled the West into unconcern and its leaders into inaction. Dulles had been too long and too deeply involved with events, often as part-time adviser to the State Department, to require any briefing. He waited 6 days and then, in a startlingly, undiplomatic TV roundup, gave a chapter-and-verse review of what the Communists, behind their pretenses, were up to and what the United States proposed to do about it.

He spoke first to the United States: "We have enemies who are plotting our destruction. Those enemies are the Russian Communists and their allies in other countries."

Then he turned to a Western Europe whose leaders had stalled effective measures for a common defense. Thirty billion dollars of United States funds, he said, had already been poured into Western Europe on the theory that there could be unity there. If, now, such effective unity, with West Germany included, did not take rapid shape, it would be necessary to give a little rethinking to the American policy of European aid.

Widely applauded in the United States, this speech, in Europe, was bitterly attacked as a veiled threat, and the new Secretary was assailed as insensitive, inflexible. As for the Communists, the violence of their reaction indicated that, in their estimate, Mr. Dulles had already begun to move into the position he now occupies as world communism's public enemy No. 1.

Today, even the hardiest of Dulles' die-hard critics make little effort to obscure the fact that, preaching, pressing, and negotiating, in Congress and in 470,000 miles of globe-circling travel, he has had an often decisive hand in clearing up threatening trouble spots, shoring up the free world's defenses, advancing the free world's unity and strength, and slowing to a halt communism's geographical aggressions.

Six months after he took office, the United States made it clear that resumption by the Communists of hostilities in Korea would lead to immediate action that might not be confined to North Korean objectives. A month later, in a stinging propaganda defeat, the Communists accepted the United States principle that no prisoners of war should be returned to Communist subjugation against their will and, ending negotiations they had stalled through 2 years, signed the Korean truce.

A like policy of boldness at the time of the French setback in Indochina saved south Vietnam, Laos, and Cambodia from the expected Red sweep in southeast Asia.

Austria, from having been a Communist base, has been liberated by peace treaty.

The dispute between Italy and Yugoslavia over the port of Trieste has been resolved.

A crash program of United States technical and economic assistance helped bring Iran back from the brink of Communist disaster and aline that country with the free world.

West Germany has been admitted to equal defense partnership with the nations of West Europe.

Confounding the critics, the North Atlantic Treaty Organization (NATO) has not disintegrated, but is growing in effectiveness. At its latest meeting last December—a meeting the critics foredoomed—Dulles' objective, wrote Cyrus Sulzberger, foreign editor of the New York Times, was "to secure Allied agreement for installation in Europe of intermediate-range missile bases and nuclear warhead stockpiles. In this he succeeded brilliantly; and he paid no price."

The principles of joint defense, exemplified in the Organization of American States and in NATO, has now been extended through the Baghdad Pact, the Southeast Asia Treaty Organization (SEATO) and the Formosa Resolution, by which Congress authorized the President to employ the Armed Forces of the United States to prevent Communist aggression against Free China. Thus the free world's defenses have been extended from western into eastern Europe and across the Middle East and Asia to Japan.

Dulles' part in these momentous achievements reflects his strong conviction that moral, essentially Christian principles are not only right, but provide a sound basis for ordering international relationships. He strikingly set forth this conviction when, in 1950, President Truman appointed him to negotiate a peace treaty with Japan.

"We want the kind of peace that has a good chance of making Japan and the United States close associates in the future," Dulles said. "It cannot be done without the free will of the conquered. It must be a peace of reconciliation."

Negotiated in the unprecedentedly short span of 1 year, the Japanese peace treaty "translated," as Time magazine said, "the Dulles word into the Dulles deed."

If Dulles' capacity to translate word into deed has diminished the vociferousness of his free-world critics, it has served, conversely, to confirm the Communists' worst fears. That he is now, more than ever, communism's public enemy No. 1 was revealed by no less than Soviet Premier Nikolai Bulganin in a letter dated February 1 to President Eisenhower. Arguing for a summit conference between heads of state, Bulganin referred to the President's earlier suggestion that the success of such a meeting would be likelier if the way were prepared by meetings between the foreign ministers of the nations involved. Wrote the Soviet Premier: "It is hardly necessary to explain why we would like to avoid this. * * * Considering the biased position of certain possible participants in a ministerial conference, we cannot be confident that talks on this level would not create additional obstacles to the organization of a summit conference."

James Reston of the New York Times stated that this back-handed tribute to our Secretary of State "cemented Dulles in his job for good." By this declaration Bulganin acknowledged that Secretary Dulles, in a period overshadowed by Communist menace, has proved to be the free world's toughest, most experienced, least easily fooled negotiator. Beyond anyone else, he has shown the capacity to "create additional obstacles" in the way of the Communists' unchangingly agressive purposes. Throughout, of course, he has been the target for some of the Communists' choicest epithets: "slave-owner," "imperialist," "pillager of the people" and so on. In view of the record he finds these attacks not too hard to bear.

"I recall," he said recently, "that the Communists in an editorial in Izvestia on January 1, 1950, gloatingly listed the various satellite states—'the camp of democracy and socialism'—and went on to boast that 'the forces in this camp are multiplying daily.' Since then the Communists have made important material, scientific, and military advances. But they have made no important territorial gains.

"Meanwhile, such events as the East German revolts of June 1953, the Polish outbreaks of June 1956, and the Hungarian uprising of October-November 1956 reveal that the satellite states, from being a source of Communist strength, are becoming a source of weakness."

No one is more aware than Secretary Dulles how far short these encouraging facts are from proving that the Soviet threat is now decisively diminished. But, "we should not let hatred, prejudice, or past misadventures," he wrote recently, "lead us to refuse all association with the Communists and to have no agreements with their governments. Nor should we refuse to do what is sound merely because the Communists want it. We must keep on trying, again and again, to make them realize that a world of 'peaceful coexistence,' which they profess to desire, requires that international engagements be honored."

Then, as in his first address as Secretary, he spoke to America:

"In a struggle where freedom is the issue, the only adequate exponents of freedom are free people. Only individuals can have a personal faith and can demonstrate freedom. Such faith and works are what we need today. They are more important than material things. And they can be provided only by individuals, not by government."

The record shows clearly that the United States and the free world have gained greatly because of the "demonstration of freedom" which has resulted from the "faith and works" of John Foster Dulles.

Movies and Television Shows Which Flaunt Indecency and Applaud Lawlessness

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. SMITH of California. Mr. Speaker, recently there have appeared motion pictures and television shows which flaunt indecency and applaud lawlessness. One such recent picture is Baby Face Nelson which, in addition to the above contains wanton killings, sadism, and immorality.

Mr. J. Edgar Hoover, Director of the Federal Bureau of Investigation, who is well qualified to detail the effect of such productions on the Nation's terrifying crime wave, has written an article on this subject dated May 1, 1958, which apears in the FBI Law Enforcement Bulletin. I recommend this article to my colleagues:

To All Law Enforcement Officials:

As a law enforcement officer and as an American citizen, I feel dutybound to speak out against a dangerous trend which is manifesting itself in the field of film and television entertainment. In the face of the Nation's terrifying juvenile crime wave, we are threatened with a flood of movies and television presentations which flaunt indecency and applaud lawlessness. Not since the days when thousands filed past the bier of the infamous John Dillinger and made his home a virtual shrine have we witnessed such a brazen affront to our national conscience.

As an illustration, two brothers, aged 10 and 12, who a few weeks ago terrorized a town in Oklahoma in a shooting spree that left one man dead and two others founded, told the police they got the idea from watching television and movie crime stories.

There are, of course, many responsible leaders in the motion picture and television industries who dedicate their efforts to producing wholesome entertainment and to upholding the worthwhile principles of established production codes of ethics. Again and again, they serve the best interests of law enforcement and the public welfare by genuine portrayals of criminals in their true light—wretched, unglamorous leeches who bring nothing but degradation to themselves and human suffering to their fellow men.

Regrettably, however, there are some unscrupulous individuals who value money above morals, and whose actions should be exposed in the searching klieg light of public opinion. In their lust for bigger and bigger profits, they glorify violence, glamorize corruption, and picture criminals as heroes for youth to idolize.

One movie code official recently declared that the number of murders in a film is not particularly important—only the reason why the criminal committed a murder is of concern. He said he would not permit a wanton killing to be depicted but indicated that the killer first had to be wronged. What kind of double moral standard is this? This same official, in describing a film, said there were only 12 murders—not an excessive number according to his interpretation of the production code. What kind of rationalization is this?

I deplore censorship—and certainly law enforcement officials have no right to dictate what should or should not be shown on the rectangular screens. They do have, however, the obligation to insist on the observance of the moral law which binds men in all matters. They also have the right to speak out when law enforcement is held up to ridicule and the criminal is elevated to heroic proportions.

No standard of decency or code of operations can justify portraying vile gangsters as modern-day Robin Hoods. Film trash mills, which persist in exalting violence and immorality, spew out celluloid poison which is destroying the impressionable minds of youth. In commenting on a current blood-drenched screenplay, one reviewer wrote, "If you enjoy turning over rocks to see what crawls out, you'll have a gay time. * * *"

Parental supervision over the entertainment fare of children, discretion on the part of movie and television viewers, fulfillment of community responsibility by film exhibitors and television station executives, and citizen protests to producers of offensive shows can solve this problem.

Unless the leaders in the television and motion picture industries take the initiative to correct this ominous trend of crime glorification, they may be assured it can be accomplished by the strong pressure of public opinion. Time after time, the voice of the citizen has brought action, and it can be done again.

Very truly yours,
JOHN EDGAR HOOVER,
Director.

The Monroney World Bank

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 1, 1958

Mr. PROXMIRE. Mr. President, the Green Bay Gazette has earned an excellent reputation for the lucidity and persuasiveness of its editorials.

Recently it carried an editorial eloquently supporting the second World Bank proposal of the distinguished Senator from Oklahoma [Mr. MONRONEY].

This editorial emphasizes the solid commonsense wisdom of the Monroney proposal—a program that would put to work idle, tragically unemployed, blocked balances, including our soft-currency holdings. It would cost American taxpayers little. It would benefit the free world immensely.

Mr. President, I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Green Bay (Wis.) Gazette of March 4, 1958]

THE MONRONEY WORLD BANK

The matter of foreign aid is one of the knottiest problems which confronts Congress again this year.

The President's dire warning that, unless his request for about $4 billion is granted, a much larger sum will have to buy armaments in the future is difficult to evaluate. It stems from the puerile point of view that, without foreign aid in great sums, we must fight a war. Obviously any thinking American would rather have a higher tax at present than wage a nuclear war tomorrow. The doubts raised come from the lack of confidence in the way in which the money is spent, disgust with some of our allies, charges of gross waste and foolishness in spending, and questioning of the philosophy that we can buy friends who will really stand up to the Russians. Those doubts are hard to allay and, on the other hand, it is difficult for the administration to prove good results from past foreign aid.

Senator MIKE MONRONEY has proposed that another international agency, similar to the World Bank, be created to make long-term loans at a low percentage to underdeveloped countries. This proposal seems to have two advantages. First, it can make loans with less security than the present World Bank and at a comparable rate of interest to that offered by Russia. Secondly, it is international in scope rather than being merely from the United States. Again it is hard to evaluate this point, but our handouts no longer seems to make firm friends and no one loves a creditor. The initial United States contribution to this new agency, as envisioned by Senator MONRONEY, would be $300 million, a long way from $4 billion.

An extension of such an agency would also tend to do away with some of the complaints about our present methods of foreign aid. Pakistan representatives charge, and with reason, that the nations which threaten to turn to Russia get more money than those which are firmly in the Western camp. A lot of Americans would have preferred that the money spent on bombs which the French used to kill Tunisian children had bought missile research in the United States. The Wisconsin teacher who is now organizing and administering a physical-education program for the Kingdom of Laos may be winning friends, but should American tax dollars be used to train Asian track teams?

Miss Barbara Ward, a British author and economist, calls for a "fully thought out, fully sustained, and accepted strategy for worldwide economic growth" from the Western Powers and paints a gloomy canvas of country after country falling under the Communist sickle otherwise. It may be, and we must acknowledge that, while we seem no closer to peace than before we started a foreign-aid program of such huge proportions, neither are we in a shooting war.

But it is extremely doubtful that our foreign-aid program has paid sufficient dividends in goodwill to warrant such a tremendous investment as demanded by the administration. Senator MONRONEY's proposal, or one similar to it and perhaps on a much larger scale, would seem to be a lot closer to a continuing program of assistance impossible on the year-to-year basis which we must maintain.

Has My Church Left Me?

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1958

Mr. SMITH of Kansas. Mr. Speaker, recently an article was called to my attention. This article appeared in the DAR magazine. I am sure everyone knows of the high ideals and high purposes of this fine patriotic organization.

This article to some may be unjust in the ideas expressed. Some of us are aware that in many organizations and groups—the idea of patriotism is a bit old fashioned to many of our so-called progressive social welfare organizations. In fact many have been so bold to state openly that patriotism and national sovereignty is dangerous to the continued well-being of the United States. They further point out the concept of a world government is the more modern concept, and must be adopted to guarantee a peaceful world. Patriots are often pointed out as persons callous for the welfare of the world's downtrodden people.

It is true that our churches have been a great force in the developing of our modern American ideals. It is not sufficient to merely want to help our fellow man. But the basic issue is how to do it. Many of us believe that self-help, self-interest, and self-determination are all powerful ideals.

This article is most worthy of consideration. It asks some questions that a lot of people must answer:

HAS MY CHURCH LEFT ME?

There are two subjects which are difficult to discuss in an uncomplimentary manner with a good conscientious woman—her child and her church.

A mother who assumes the attitude of "He is right because he is my child," usually ends up in juvenile court. Any woman who feels that "It is right because it is my church," becomes a target for all destructive forces without and within its confines.

A wise mother sits down and finds out what is wrong with her child. She believes in him as far as his conduct will possibly allow her. Then she expresses her rebuke for his misconduct and administers the degree of punishment she feels the act warrants.

During the last few years, many people have said, "I am leaving the Methodist Church, I can no longer stand the socialism, liberalism, and communism, in its teachings." Others have said, "I teach Sunday school classes, but I don't use the literature. I just don't say anything about it."

If it is not too late, and I pray it isn't, shouldn't we, as loyal Methodists and true Americans, sit down with some of the leaders of our church and find out what is wrong—then like the mother with her child, discipline them accordingly? We cannot improve the situation by leaving the church, nor by building up resentment in other members. We should have righteous indignition and attack with the fury Christ showed the moneychangers in the temple.

Nothing would be more pleasing to "the pink fringe" element of our church than for all of us who see them in their true light to quietly slip out and leave them to brainwash the youth and the unsuspecting members.

Many of us suffer with nostalgia when we think of the experiences in the Methodist Church of our childhood. We did not know then that it was frustrating to children to meet in general assembly with the adults. There we read the lesson, which was from the Bible rather than one on economics. We heard a petition sent up to God in prayer by an older member, asking for our guidance and future life. We went to our classes and there we learned the Golden Text, the names of Christ's disciples, and were taught the profound truth of the Scriptures. This built up a reservoir of faith from which we have drawn in the trials of life. We were taught to respect all that was good and holy.

Today when we enter the beautiful piles of brick and stone which we call churches, Christians are aghast at what they find—Mother Goose Rhymes on the walls of the primary department. This serves to confuse the inquiring mind of the child. Was Jesus another make-believe character? The house of God is no different from the schoolroom.

Many fine youthful teachers are not aware of the subtle force which recommends such decorations and settings for their teaching. Another example: A few years ago we studied in the circles of our Women's Society for Christian Service, a book called Symbols of the Church. A fine young mother reading a chapter from this book to our study group commented, "The American flag is not recommended for the sanctuary, for after all, it is one God and Father of us all."

In our local church, the American flag and Christian flag had been put out of sight for they had become soiled and worn, and no one had taken the time and effort to see that new ones were placed there. The shocking paragraph from the above study group was presented by this writer to the next official board meeting. Result—new flags were purchased and put in their proper place, in which they have been and will continue to be, for now we have had the warning.

We move from the classrooms to our modern church to find that the education building is the main feature and the place of worship the smaller building. Do you ever wonder what we are educating toward and what for? A few years ago I came in contact with a young lady who was supposed to be a well-trained youth leader. She admitted that she couldn't lead a devotional. She told me that the church she had just left had the most beautiful pool table she ever saw. Then with an air of flippancy, she asked, "You don't approve of that, do you?" I replied, "My only comment is, 'God have mercy on the First Methodist Church when it tries to outworld the world.'" This young lady soon left that church because she was promoted to a larger field of church activity.

It is this writer's firm conviction that our young people do not want their church to compete with the world. When they want to play pool, they have tables in their own recreation rooms at home, or they find them in the recreational centers of the community. When they want to dance, there is a better orchestra at the club. This is a conclusion I have reached after many years of church work and as a teacher in public schools.

For 5 years Col. George Smoot and I conducted a Sunday morning boys' club. We soon found that the boys didn't come for the handicraft period, nor did they come for the breakfast we served as most of them worked and had their own money. They came for the Bible study, the morning devotionals and entered into the spiritual part of the program.

Colonel Smoot, who represented everything to those boys that was Christian and American, was called back into active service. Seven of the boys enlisted in the Armed Forces for that was during the Korean police action.

One morning, John, who was one of the most faithful members of our club came to my home. He was home on leave, and he knew that when he returned to his post he would be sent to Korea. He was not hunting a ping-pong table or a music box where he could dance. He was seeking something that was real and vital, that would strengthen his faith for the task ahead. He wore the expression of a frightened little boy, for he had never been away from home until he joined the Army, and now he was going to a strange land. After some conversation he said, "I'll never forget the Bible lessons we had, that is why I am in this uniform. I made up my mind I would do something to deserve the blessings I have had in this country."

That morning when John left armed with a New Testament and his head held high,

I felt that no godless war lord could change his attitude toward his God and his country. He returned safely, and he, his wife and two little boys, go to Sunday school each Sunday.

We have a foster son who spent 8 years in the Navy, and he saw much fighting in the Second World War. However, this was not as hard on him emotionally as fighting his way through the modernism and socialism of one of our biggest seminaries to become a Methodist minister.

Now we are faced with the problem of finding a school for our 19-year-old son, who is in his second year in a small Methodist school. He, too, is to become a minister. He is younger and has had less experience than the one who had been through the war and had learned the practical meaning of Christianity. Shall we send him to a school where they permit old-fashioned liquor glasses with the blue-devil on one side and the cross on the other to be sold for souvenirs? Must we send him to a school where they will tell him that all he has learned at home is outmoded? That it is all right for his parents to believe in the physical resurrection of Christ, or His virgin birth, or that we need a spiritual rebirth, but that he must be more enlightened?

My question is "Has my church left me?" Do I have to have a higher class in political science, learn more economics, and be able to admire Eugene V. Debs in order to enter into the discussion of a Sunday school class, or be trusted with the minds of our young people?

Have we grown so big that we have turned into big business? God has never counted upon the multitudes for His work. Using some examples, which the modernists would have us believe are only legends, God only started with two people; he could only bring one man and his family through the flood; he could only save one man in Sodom and Gomorrah. He sent His only Son into the world, and Christ selected just 12 apostles. Never did He expect to hold the multitudes in loyalty to Him. He knew that they would spread palm branches in His path and proclaim Him King, then would shout "Crucify Him," a few days later.

Thank God we have many fine loyal Christian Americans in our pulpits today. In too many cases, they are afraid to cry out against a few leaders, to warn the laymen. They have seen examples of a few men who have, and they became labeled, crackpots, or alarmists. Isn't it time that we, as laymen, stop repeating like parrots the things we are told to say and start thinking about who is telling us to say it?

Today we attended the worship service in our church. It was a delayed laymen's day program. Last Sunday we had visited in another State and their worship service was laymen's day. Although it was a different speaker, and a different State and church, the talk was the same. It happened to be a subject that would bring approval from anyone present, My Father's Business. The point is that each speaker gave the same words, the same examples, and thoughts. This should remind us of how very regimented we are in being a puppet for those who do the thinking for us.

Can we awaken our loyal churchmembers before we lose every trace of the stewardship God gave us in this great church? By the help of our Creator I will continue to fight for my belief and the doctrine that is so much a part of my life that I cannot separate it from the very atmosphere I breathe.

Once I accepted our church literature as I accepted the Bible. Today as I read the comments on the lesson, I turn to the front of the publication to see where the gentleman who wrote it was educated. That explains much of his thinking. Can't we clean up our church schools? We all know that this is the source of much of our brief today.

I implore you to ask the question, "Has my church left me?"—"Am I being swept on with the devastating tide and doing nothing about it?" If the answer is Yes, speak out and object to the modernism, and be unafraid for He has said, "Lo, I am with you always." But we must elect to be with Him first. May He bless us in our efforts to save our beloved Methodist Church.

The North Dakota Theodore Roosevelt Centennial

EXTENSION OF REMARKS
OF
HON. OTTO KRUEGER
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. KRUEGER. Mr. Speaker, within recent weeks, many Members have received in their offices material highlighting the forthcoming Theodore Roosevelt Centennial observance. Since last October 27, North Dakotans have been observing the centennial occasion in many ways. In the weeks ahead, many special events are planned in North Dakota, where the Theodore Roosevelt National Memorial Park—this country's only national memorial park—is located. It is the hope of all North Dakotans that as many Members of Congress as possible will attend some of these events, which are well described in the following article by Gov. John E. Davis, which appears in the April issue of State Government:

THE NORTH DAKOTA THEODORE ROOSEVELT CENTENNIAL

(By John E. Davis, Governor of North Dakota)

(North Dakota this year—from last October 27 through the same date next autumn—is conducting statewide and diverse events and programs to celebrate the 100th anniversary of the birth of Theodore Roosevelt. It is doing so with special pride because of the large place his experience in the State had in T. R.'s life. In the following account Gov. John E. Davis tells of the formation of the North Dakota Theodore Roosevelt Centennial Commission, summarizes the theme the celevration has taken and points up its outstanding features.)

In keeping with the progressive thinking of North Dakota people, the 35th Legislative Assembly approved House bill 547, March 11, 1957, which established a commission for the commemoration of the 100th anniversay of the birth of Theodore Roosevelt and made an appropriation of $10,000 to carry out the purpose of the act.

The North Dakota Theodore Roosevelt Centennial Commission is composed of 19 members plus the Governor (chairman), the president of the senate, and the speaker of the house.

At its first organizational meeting, the commission hired an executive director and developed broad policies for conducting a Statewide observance. One month later, the newly hired director, whose office is in the State Capitol, presented a suggested program and committee asignments for each category of activity.

Theodore Roosevelt is immortalized as the 26th President of the United States. He was one of the world's greatest teachers of the philosophy of free government and developed the basic program of conservation of natural resources.

T. R. AND CITIZENSHIP

The theme of the centennial—October 27, 1957 to October 27, 1958—has been declared "Responsible citizenship," and the centennial's major pupose is to make Roosevelt's teachings and principles a driving force to strengthen and inspire the American people. "Responsible citizenship" is obtained through self-discipline combined with a devotion to the public good.

Roosevelt himself said, "In the long run, success or failure will be conditioned upon the way in which the average man, the average woman, does his or her duty, first in the ordinary, everyday affairs of life, and next in those great occasional crises which call for the heroic virtues. The average citizen must be a good citizen if our republics are to succeed."

The Theodore Roosevelt Centennial offers an oportunity for the American people to realize and appreciate the ideal of greatness that was ever before Theodore Roosevelt—the greatness that is built on personal character, faith in God and man—responsibility, brotherhood and the fire of high purpose in the heart.

Theodore Roosevelt publicly stated, "I never would have been President if it had not been for my experience in North Dakota," and we in North Dakota are justifiably proud. He is the only United States President who has ever lived in our State.

T. R. undoubtedly never thought while living and ranching in the Badlands of North Dakota in the 1880's that a national memorial park would be established more than 50 years later as a memorial to his enduring contributions to the conservation of the country's natural resources for public benefit. However, Theodore Roosevelt National Memorial Park was established by act of Congress, April 25, 1947, thereby giving North Dakota the first national memorial park in the United States. Today, it is still the only national memorial park in the Nation.

CENTENNIAL FEATURES

Although the centennial observance is rapidly developing along many avenues, the major ones are: Education, speaker's bureau, club activities, and a gala pageant, "Theodore Roosevelt, great American."

Committees are actively working on every level of education in the State, from grade school to university and college. The Young Citizens League (students mostly from rural and village schools) has adopted the centennial theme as its league theme and project for the 1957–58 school year. A suggestion that the University of North Dakota and the North Dakota Agricultural College consider granting an honorary degree to worthy recipients in a field of endeavor closely related to a comparable Theodore Roosevelt field has been well received.

Through the cooperation of the North Dakota Bar Association, a statewide speakers bureau has been established, with subcommitteemen in every county of the State. This group is well versed in the history of Theodore Roosevelt, and all civic, service, social and fraternal organizations in North Dakota will be contacted for program engagements before the end of the Centennial year.

Plans are progressing nicely for active participation in the centennial observance by Girl Scouts, Boy Scouts, 4–H Clubs, Camp Fire Girls, YCL (Young Citizens League), and many other organizations of young people.

SUMMER EVENTS

July 3, 4, 5, and 6 have been designated as Theodore Roosevelt, Great American, pageant days. In conjunction, there will also be a world championship rodeo, designed to attract the best known names in rodeo circles. The rodeo will run 3 days, July 4, 5, and 6.

The pageant is to be professionally staged, with a nationally known director and author in charge. Present plans call for a pageant costing between $35,000 and $50,000. It will

be free to all visitors. Nationwide publicity will be helped by the National Theodore Roosevelt Centennial Commission.

Finally, the Dickinson State Teachers College is advancing rapidly with plans to present a free-to-the-public symposium of nationally known speakers. Lectures will be held at the college throughout the summer months. Three national figures have been scheduled to date, including Dr. Hermann Hagedorn, National Centennial Commission Director, and one of the world's greatest authorities on Theodore Roosevelt.

The eyes of the Nation will be on the Theodore Roosevelt Centennial observance this summer. North Dakota, to the best of my knowledge, has the most active program planned of any State in the Union.

Rhode Island Independence Day

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. FORAND. Mr. Speaker, again on May 4, Rhode Island will again be celebrating the anniversary of its freedom. It was 182 years ago today that the brave people of Rhode Island declared their independence from their mother country, Great Britain.

With the passage of time, many events are overlooked or failed to be recorded and personal sufferings are not related. But, these brave people endured such inequities with a strong determination and the taste of freedom in their mouths. True to the tradition of democracy the people imposed their will upon the legislators to act, and speedily, to rid themselves of the rule of a tyrannical ancestor. It was on the 4th of May 1776 that the Rhode Island Assembly adopted the resolution renouncing allegiance to the British King. This act was the initial spark of freedom that fired the Congress of the United States to take similar action 2 months later.

Rhode Islanders have always been noted for their individual initiative and independence. The people of the State have stood together when they thought their cause was just. Rhode Island was the first of the 13 colonies to declare complete independence of Great Britain, and the last to ratify the Federal Constitution, refraining until it felt that certain injustices had been corrected.

Colonial resentment found expression in a series of incidents, many of which occurred in Rhode Island. As early as 1764 Newporters climaxed a riot with crewmen of the British schooner *St. John* by firing upon the vessel with cannons. The following year a Newport mob, angered by impressment of American seamen, seized and burned the British vessel *Maidstone*. Most famous of these incidents to Rhode Islanders was the burning of the British revenue schooner *Gaspee*.

The colonial spirit of independence was the rock on which Britain's North American empire was finally wrecked. Accustomed for more than a generation to little or no taxation, and to almost complete freedom in the management of their internal affairs, the colonists were disposed to resent every British attempt to strengthen colonial administration.

As in the past Rhode Island will celebrate its Third Annual Heritage Week featuring pageants, ceremonies, and exhibits honoring our historic inheritance. The Heritage of Rhode Island is a continuing thing, a patrimony passed on from generation to generation. New honors, new accomplishments, new discoveries—all are based upon that devotion to liberty and integrity that was implicit in the founding of our State. The many industries that make Rhode Island renowned today had their beginnings in the humble crafts of our early settlers. The culture of Rhode Island is the contribution of those made welcome by this State's tradition of freedom and conscience.

Many illustrious names are woven into the fabric of Rhode Island history, from Roger Williams to the ancestors of our beloved Senator THEODORE F. GREEN. These and many more have helped to make our Nation strong and secure and have contributed to its economy and culture.

We are proud of our State.

Extension of Reciprocal Trade Advocated by American Bankers Association

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. McGOVERN. Mr. Speaker, yesterday, the American Bankers Association formally advocated a 5-year extension of the reciprocal trade agreements program as "an important contribution to the economic well-being both of the United States and of the entire free world." I believe that the position of this distinguished group of American leaders in the banking field merits the careful consideration of the Congress. I concur entirely with the warning of the bankers association:

> In view of the mounting economic and military challenge of the Communist nations, it would be extremely unfortunate if we were to allow domestic economic difficulties of a transitory nature to turn our foreign economic policy back toward economic isolation.

We all remember the disastrous consequences of the extreme economic nationalism of the post World War I period—a period which saw the choking of international trade by the mistaken tariff policies of the nations of the world.

I urge my colleagues to read the following resolution of the executive council of the American Bankers Association which was adopted on April 22, 1958, and offered to Chairman WILBUR MILLS, of the Ways and Means Committee of the House, by President Joseph C. Welman yesterday:

RESOLUTION ON FOREIGN TRADE POLICY ADOPTED BY THE EXECUTIVE COUNCIL, AMERICAN BANKERS ASSOCIATION, APRIL 22, 1958

Over the past several months, the economic decline in this country has emphasized the pervasive interdependence of the economies of the free world. If long continued, the recession here would pose a serious threat to the economic stability of friendly nations abroad, because our foreign investment outlays and our imports and exports exert an important influence on the level of economic activity of these countries. In turn, if economic conditions abroad were to become unfavorable, this would intensify our own distress by reducing demand for the products of our export industries.

Over the past 25 years much has been achieved in the way of developing a foreign economic policy that is truly in the national interest. Our efforts to reduce restrictive and discriminatory barriers to the expansion of world trade, our mutual security program, our economic and technical assistance programs, and our encouragement of American private investment abroad have strengthened our own Nation economically and politically and have enhanced the economic stability and military security of the nations of the free world. Indeed, the present strength of the free world can be attributed in large part to our foreign economic policy since World War II.

In view of the mounting economic and military challenge of the Communist nations, it would be extremely unfortunate if we were to allow domestic economic difficulties of a transitory nature to turn our foreign economic policy back toward economic isolationism. From the point of view of our own industrial recovery, it is important that American private investment abroad continue to expand, for such investment increases the dollar purchasing power of foreign nations, thereby raising demand for the products of American industries. Broadening the market for American exports also requires that we continue to negotiate for the reduction of barriers to the international movement of goods and currencies.

It would be fallacious and dangerous for us to try to stimulate economic recovery in the United States by placing greater restrictions on the entry of products from abroad. Such restrictions would serve to increase the impact of the current recession on other nations of the free world and to depress further the demand for products of our own export industries. By broadening the market for our own products and stimulating world trade in general, we can make an important contribution to the economic well-being both of the United States and of the entire free world.

In view of the foregoing considerations: Therefore be it

Resolved, That the executive council of the American Bankers Association go on record as approving the 5-year extension of the reciprocal trade agreements program, and the related legislation necessary to its effective implementation.

For a Free Poland

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. DAGUE. Mr. Speaker, no American who prides himself on his dedication to the patriotism embodied in our Declaration of Independence can remain insensible to the high principles contained in the Polish Constitution as enacted in 1791. For 167 years free people everywhere have paused to pay their tribute to those staunch patriots whose action is

commemorated each year on May 3 as Poland's Constitution Day.

The brutal arrogance with which the Communist dictators have undertaken to trample underfoot the rights of this free people has met with unwavering resistance from within the Polish Republic as well as the strongest condemnation from without. And the belligerent attitude of the masters in the Kremlin toward any movement to slacken the chains on this gallant people has shown how utterly insincere is their protestation that they stand for peace.

Happily, there are increasing signs that Poland is moving forward step-by-step to the realization of her rights as a sovereign state and it is most gratifying that the United States has shown a readiness to assist such movements. In addition we shall continue to make available substantial evidences of our concern for Polish economic stability and the right to work out their destiny without interference from neighboring aggressors.

The Real Enemies of Union Labor

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. SMITH of Kansas. Mr. Speaker, in view of all that was said in the other body last week in regard to labor legislation, it is rather significant that 1,800 miles from Washington, D. C., a country editor would write an editorial that exactly expresses the issues involved—namely, freedom to the man who labors—from his arrogant labor racketeering bosses.

Power always corrupts. Many wars have been fought for freedom. It seems tragic that so many men who labor—are now confronted with a new menace more deadly and more arrogant and more domineering than in olden days before labor unions were all powerful.

I commend this editorial:

THE REAL ENEMIES OF UNION LABOR

There is nothing wrong with union labor that a dose of freedom tonic wouldn't cure. The racketeers and the Communist inclined who are riding the movement now would automatically come under control if there were no captive membership to suck for wealth and power.

Actually, it is the union members who should be working to rid their unions of the stench that arises every time unionism is investigated. There is absolutely no reason why our wage earners cannot have unions which proudly conform to the American creeds of justice, decency, honesty, fair play and freedom. All that is necessary is to let the membership swing both ways.

Union labor leaders have shown themselves past masters at using double talk to make the ridiculous sound sensible and many of the membership have been brainwashed into believing that it is right that unions should have governmental power in forcing citizens to join, pay dues and toe the unions political line. But now the doubletalk artists are in trouble.

Kansans are going to vote on a constitutional amendment next November and the amendment reads, "Guaranteed freedom to join or not to join a labor organization." The old Right to Work phrase, which was rather meaningless, has been dropped and the issue defined more exactly for what it is.

Even gifted double tongues will get into trouble trying to explain why Kansas people should vote against freedom. And that is exactly what labor leaders are forced to attempt; either that or give up the fight.

Freedom to join or not to join is the only way there can be any freedom. Management once fought viciously to prevent employees from joining unions and this violated freedom because the freedom not to join became meaningless when freedom to join was denied by force. Turn it around and it reads exactly the same way. Freedom is destroyed when unions use force, either legalistic or terroristic to suspend the workers' right not to join.

Every freedom-loving citizen in Kansas, both in and out of union labor, should join the fight to put across the guaranteed freedom amendment. The power-maddened union leaders, who are trying to destroy freedom through compulsory membership are the ones who are threatening to destroy the labor movement, and all that is good and great about America in the process.

Freedom is the issue. Everyone who truly understands and truly cares—for the good that unions can do, for the American way, for freedom—these are the ones who must work and fight to see that the guaranteed freedoms amendment not only wins in Kansas, but wins by an overwhelming majority.

Ambassador Par Excellence

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. ASPINALL. Mr. Speaker, it is seldom indeed that the completion of a tour of duty of a diplomat on the Washington scene brings universal regret at the thought of his forthcoming departure. However, this is the existing situation whenever reference is made to the return to his homeland of India's Ambassador to the United States, the Honorable G. L. Mehta.

Mr. Speaker, the Indian Ambassador to the United States during his 6 years' stay in this country has understood and appreciated American policies and their motives, and has successfully explained them to his Government. In addition, he is largely responsible for a better understanding in this country of India's policies in international affairs. Consequently, he deserves a great deal of the credit for the existing improved relations between our respective nations.

Testimony of his outstanding services to the cause of better human relations is evidenced in the recent editorial in the Washington Post and Times Herald in this respect.

Mr. Speaker, as a part of my remarks, under unanimous consent, I include this article in the RECORD following these brief words:

AMBASSADOR PAR EXCELLENCE

It is a rare ambassador who has the satisfaction of seeing a marked improvement in his country's foreign relations as the direct result of his own efforts. But it is no exaggeration to say that the recent growth of understanding between India and the United States has been very largely initiated by G. L. Mehta, India's Ambassador in Washington who will be honored at a national dinner tonight before bidding farewell next week.

When Ambassador Mehta arrived in 1952 there was much mutual mistrust between this country and India. The prevailing American attitude seemed to hold that India was a nation of Hindu mystics who enjoyed poverty and that Prime Minister Nehru was oriented toward, if not a secret ally, of the Communists. In India there was a tendency to look upon the United States as a chauvinistic country of materials which had a soft-drink culture and insisted on forcing its beliefs on everyone else as a condition of friendship.

Happily, there is much more maturity today. Many Americans have come to respect India as the strongest exponent of democratic government and free institutions in Asia and to recognize that India's success will have a great deal to do with the future of these institutions. Indian neutrality is understood if not applauded; and the ties of freedom have become more important than disagreements over particular policies. Mr. Nehru, for his part, has shown warm appreciation of the help this country has given India, and has evidenced his confidence in American motives and idealism. Thousands of exchange visitors—students, teachers, businessmen, journalists—have buttressed this understanding with personal experience.

Mr. Mehta, along with some able American Ambassadors in New Delhi, has been a prime architect of the improved climate. He had done far more than interpret India to the United States; in his travels and speeches over much of this country he has grasped the meaning of American life and aspirations and has interpreted them to India. He has had somewhat the same sort of influence as Benjamin Franklin had in France 180 years ago. His voice has been listened to in the evolution of Indian policy; the success of Mr. Nehru's visit in 1956, for example, reflected his patient background labors. He has been an amicable critic of American shortcomings; but, following Cromwell's advice to the painter, he has never let the defects obscure the whole.

This gentle, witty nonprofessional diplomat has been hard minded in advancing his credo that similarities are more important than differences and that the choice of means has much to do with the worth of ends. A truly civilized man, Ambassador Mehta has won an enormous gratitude as he leaves. Americans, no less than their Indian counterparts, are vastly in his debt.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. ZELENKO. Mr. Speaker, on May 3, the Polish national holiday, the anniversary of Polish Constitution Day of 167 years ago, will be celebrated. Although the Government of Poland is under the iron heel of communism, the hearts and minds of the Polish people are governed by their belief in God and their burning will to be free. It will be just a question of time before Poland will rise again, as it has in the past, to throw off the yoke of the oppressor. Let us

fervently pray that when this is done their freedom will be everlasting and eternal. Mere hope and talk on our part is not sufficient. We Americans must indicate by our every thought, word, and deed in whatever way possible, that we will render whatever assistance is necessary to the Polish people to enable them to regain their rightful heritage.

Indelible in the hearts and minds of the American people are the glorious deeds of those great Polish freedom fighters, Pulaski and Kosciusko, and others who in our own struggle for freedom fought side by side with our ancestors.

We salute our Polish brethren, the great Americans of Polish descent and their brethren in the homeland at this time, and we join with them in the prayer that before long we shall see a rededication of Poland's Constitution Day, this time under a free government.

To Restore Employment to Those Who Are Now Out of Work and To Guarantee Permanency of Existing Jobs

---

SPEECH

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1958

Mr. O'KONSKI. Mr. Speaker, I send to the desk for appropriate reference a bill which will:

First. Create jobs for American working men and women now unemployed.

Second. Add stability to and improve existing jobs.

Third. Stimulate business with resultant expansion of the national economy in the years to come.

Certainly, there are no more important tasks facing this session of the Congress.

BILL IS OF VITAL IMPORTANCE TO EVERY MAN, WOMAN, AND CHILD IN THE UNITED STATES

Because of the extreme importance of the subject matter of this bill to every citizen of the United States, I urge sincerely that Members of Congress study very carefully provisions of the bill, and my statement thereon in relation to the depreciation schedules set up in bulletin F.

IMMEDIATE ACTION BY THE CONGRESS IS URGENT

Once Members of Congress have had the opportunity to study this matter, Mr. Speaker, it is my hope that the appropriate committees will find it possible to hold immediate hearings so that the bill may be considered thoroughly and passed without undue delay.

Our Nation, its workers and its businesses need this legislation. I am convinced that no other measure here proposed or under committee consideration will do the all-important job of creating jobs as quickly, as surely, and as soundly as will this bill.

WHAT THE BILL DOES

Mr. Speaker, briefly the bill does simply this. It proposes to reduce substantially the periods during which capital investments may be depreciated for tax purposes if they are made or contracted for over a specified period of 18 months.

For the accelerated depreciation to apply, it would not be necessary that the projected capital investment become a finished reality in the 18-month period.

The depreciation benefit would accrue if the contract for such an investment was made during that period even though the normal completion or delivery date should fall thereafter.

THE BILL IS RETROACTIVE TO JANUARY 1, 1958

It is proposed likewise that the provisions of the bill be made retroactive to cover capital investments made or contracted for since January 1, 1958.

The reasons for the retroactive feature are obvious. As long as the bill is retroactive in its application, anticipated capital investment will not be delayed pending the final approval of the bill.

WHAT IS SCHEDULE F?

This schedule contains tables of the numbers of years of useful life of capital investments as now computed by the Bureau of Internal Revenue.

Members of Congress should keep these figures before them constantly in considering this legislation and study them in relation to my statement on the bill and the bill itself.

THE BILL COVERS ALL CAPITAL INVESTMENTS

The Internal Revenue schedule to which I have referred, sets up depreciation periods for capital investments based on the estimated life of the product of the investment, be it buildings, machine tools, farm equipment, or any of the hundreds of other items covered by the broad term of capital assets.

This bill would apply to all of them so that its advantages would accrue to all on exactly the same basis.

TEN MILLION JOB SOURCES

The provisions of this bill would be applicable to farmers and to small and big business alike.

It has been estimated that there are some 6 million farmers in the United States.

There are some 4 million businesses of every size and description.

Thus, when we pass this bill we will be making it possible for these 10 million business units to put more poeple to work almost at once.

SPECIFIC PROVISIONS OF THE BILL

The bill, Mr. Speaker, proposes these changes in the depreciation schedule for capital investments made or contracted for in the specified 18 months' period:

First, the depreciation period for any capital investment now based on up to and including a 15-year estimated useful life would be reduced by one-half.

Second, that portion of the estimated life on any capital asset exceeding 15 years would be reduced by two-thirds.

THE IMMEDIATE EFFECT OF THIS BILL

Let us see what this bill would do.

First. It would encourage the 10 million job-producing units in this country to do now what they may have anticipated for the future and open up financing to enable them to do it.

Second. It will create now hundreds of thousands of jobs for people who do not have jobs.

Third. It will act as a guarantee of greater security and improvement in existing jobs.

WHO WOULD BE THE MOST ENTHUSIASTIC ABOUT THIS BILL?

It is perfectly obvious that the most enthusiastic supporters of this bill would be the men and women who want and need jobs, and the men and women who run the 10 million business units which could provide those jobs.

Their enthusiasm would be shared, too, by the men and women who now have jobs because they would benefit through improvement in and greater stability of the work they are now doing.

All American taxpayers should support this bill because here is a way to cure the present recession and expand the national economy without costing the taxpayers a single penny.

EXAMPLES OF HOW DEPRECIATION WOULD BE FIGURED UNDER THIS BILL

For a farmer: A new tractor could be depreciated within 5 years instead of 10 years; a threshing machine would be depreciated within 7½ years instead of 15 years; a corncrib could be depreciated within 12½ years instead of 30 years.

For the small factory owner: Tools and dies could be depreciated in 1½ to 2 years instead of 3 to 4 years; heavier machinery and tools could be depreciated in 7½ to 9 years instead of 15 to 20 years.

For heavy industry: A new plant of average construction could be depreciated in 16 years instead of 40 years.

For rental housing: Homes, apartment buildings, and office buildings of average construction could be depreciated within 16 years instead of 40 years.

For transportation systems: The beneficial effect of this bill on our dilemma-ridden railroad system would be tremendous. Because they could depreciate it more rapidly, it is my best judgment that the railroads would immediately acquire hundreds of millions of dollars' worth of new equipment. Of course, the bill would also be applicable to other forms of transportation.

For wholesale and retail establishments: This bill would provide an incentive for wholesale and retail stores to carry out now the renovation programs—new store fronts, new fixtures, and so forth—that they may need and have been anticipating in the future.

WHY THIS IS THE BEST LEGISLATION THE CONGRESS COULD PASS TO PUT PEOPLE BACK TO WORK TODAY

This legislation has many advantages over public-works programs.

Public-works programs are selective The people they would employ would, at best, be only a fraction of those who need jobs.

Public-works projects would help in only certain scattered areas. Generally speaking, they would take a long time to get underway.

In addition, under this bill workers would be more likely to get jobs in their own communities rather than having to move to an area in which a public-works

project is planned because this bill will put 10 million business units in the United States in a position to act the very hour the legislation is passed using their own capital instead of taxpayers' money.

THE ADMINISTRATION HAS TAKEN SOUND STEPS

Mr. Speaker, the Congress has moved with admirable courage and speed to take those steps it has been possible to take up to this time to cure our economic ills. They have been constructive steps, and I am sure that all of us have approved of the motives behind them.

But here is a new, an additional, and a wholly businesslike approach that will complement the program that is already underway. And again, I repeat, this bill would not cost the taxpayers a penny.

PERMANENT JOBS CREATE NEW TAX SOURCES

It is true, Mr. Speaker, that this bill would have the effect of postponing some tax revenues.

But, at the same time, it is altogether possible—yes, even probable—that the end result of stepped-up capital investments would, over the long pull, create even greater tax revenues in the future.

I believe that this would be the case.

There is every reason to believe that this would be the case because these, Mr. Speaker, would be lasting and permanent jobs growing out of the creation of new, permanent, and lasting capital assets to add to the wealth of the Nation and to expand our economy over the years to come.

This, then, Mr. Speaker, is the best way to create jobs.

It is the best way to add stability to existing jobs.

It is the private-enterprise way.

It lets America's 10 million business units solve the problems of our economy without costing the taxpayer a penny.

Because this is the best way, let us get the job done just as quickly as the legislative process can be completed.

Hon. Thomas J. O'Brien

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks, I want to take this opportunity to salute and congratulate my colleague and warm personal friend, TOM O'BRIEN of Illinois, on his 80th birthday. Because of his fine character, genial and friendly disposition, he counts his friends by his acquaintances, and knows no enemies.

Mr. Speaker, I have had the pleasure of knowing him for many years, as many Members of the House have, and have found him always a gentleman of the highest type, always willing to be helpful if one's cause is worthy, and a man whose word, when given, is always as good as the soundest bond.

Educated in business law and and accounting, for years he was associated in the accounting business with John S. Weisbach & Co., Chicago, and for a time served as State bank examiner under auditors Brady, Russel & Nelson. Before coming to Congress, he served as a State representative in the 45th, 46th, and 57th General Assemblies of Illinois. He was first elected to the 73d Congress; reelected to the 74th, and 75th Congresses; elected sheriff of Cook County for the term 1938 to 1942. Was afterward elected to the 78th, the 80th, 81st, 82d, 83d, 84th, and 85th Congresses, and for many years has been a member of the great Committee on Ways and Means.

His many friends wish him continued good health, happiness, and service in this body.

American Water Works Association Endorses New Water Development Bill

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. ENGLE. Mr. Speaker, I was delighted last week to learn that the American Water Works Association, through its board of directors, at the association's annual meeting held in Dallas, Tex., adopted a resolution endorsing H. R. 11544, the bill, which I introduced, setting out the basis for Federal cooperation in the construction of multiple-purpose water projects by States or local agencies, primarily for the development of domestic and industrial water.

The American Water Works Association is a national association of agencies interested in water development, and is the first national organization to endorse this legislation, although it has had the support and endorsement of numerous California water agencies.

I attach a copy of the resolution for the information of Members:

Whereas domestic and industrial water supply is of growing importance and must be coordinated in the planning and development of drainage basins for their most economic use—by construction of multiple purpose water projects; and

Whereas domestic and industrial water supplies have historically paid their own way as the responsibility of local agencies, and have not been aided by Federal or State subsidies, and it is important to the general Federal taxpayer that such policies be continued; and

Whereas under existing laws there is little opportunity for the financing and construction of multiple purpose water projects other than by the United States; and

Whereas H. R. 11544, introduced by the Honorable CLAIR ENGLE, chairman of the House Committee on Interior and Insular Affairs, sets forth a means of much-needed Federal cooperation with States and local agencies, and under this bill, where domestic and industrial water supplies are the principal purposes, State and local agencies may construct multiple purpose water projects with the Federal Government contributing the cost of navigation, flood control, fish and wildlife as would be nonreimbursable under existing law, if built by Federal agencies, and loaning the cost of irrigation allocations without interest where compliance is had with the 160-acre limitation of reclamation law, and with interest for excess lands: Now, therefore, be it

Resolved, That the board of directors of the American Water Works Association, assembled at Dallas, Tex., on April 25, 1958, hereby endorses in behalf of the association such general principles of Federal cooperation with State and local agencies as set forth in said bill H. R 11544.

Tweedt Watches, Takes Part in Dramatic Farm Changes

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. CUNNINGHAM of Iowa. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include an article which appeared on Tuesday, April 22, 1958, in the Ames Daily Tribune, Ames, Iowa:

TWEEDT WATCHES, TAKES PART IN DRAMATIC FARM CHANGES

In 1911, Burney Tweedt started farming for himself 1.5 miles southeast of Huxley.

Then 21 years old, he had a pair of purebred Hamiltonian trotting horses, a team of big bays, some milk cows, and the privilege of renting the 80-acre place from his father for his start.

Now 68 years old, he is planting his 47th crop at this place and can look back, sometimes nostalgically, on intervening years in which he had witnessed dramatic changes in the world as a whole, in the world of agriculture, and in his own personal world.

EASIER NOW

He admits that farming is much easier now with tractors and more equipment but doubts if it is as much fun as it used to be.

"I was slow to change," he recalls. "I didn't even buy a tractor until 1947."

Actually Tweedt kept a team of horses until just 2 years ago. He used them for planting corn and a few other jobs.

"It's hard to get used to being without them. I kinda feel like I still don't have the chores done without feeding some horses," he mused.

Horses were to the young man of 1911 what a snappy automobile is to the 21-year-old of today.

Tweedt recalled how beautiful his purebred Hamiltonian trotting horses looked when he hitched them to the top buggy and went to court his future wife. He called them Harp and Leroy. His work horses were Polly and Prince.

It was in 1914 that Tweedt married. This was the year after he purchased the farm from his father in 1913.

"Young fellows nowadays wouldn't start up farming on an 80; they would think it was just a garden spot. But we've always made a good living here," Tweedt recalled.

He talked briefly of the days when farmers harvested their grain by threshing. There were days of going out on the threshing rig. Hard work, but fun, he recalled. Tweedt ran a threshing machine for about 7 or 8 years.

LARGE FAMILY

The fertile 80-acre place, some of which was virgin land when Tweedt bought it nearly a half century ago, has not only made a nice home and provided a good living for its owner and his wife, but they have been able to raise a family of 10 children there.

The Tweedts' children are scattered all over the country now, "and only one lives on a farm," exclaimed the father.

Tweedt feels that he doesn't need Government assistance with his farming. He's not in the farm program now and has not participated in it in the past more than was absolutely necessary.

"I'm glad as long as I can run my own farm. The Government doesn't owe me anything except a free country to live in," he declared.

He's against any trend to bigger farms and believes no man should be allowed over 160 acres.

He also dislikes the trend for farmers to work their place and hold down a job in town. There are plenty of things on the farm that need attending to, he opined.

Tweedt loves the farm life.

"All my life I've been my own boss," he said. "If I want to take a day off, I don't have to ask anyone."

Tweedt said that with 10 children he has of course had his difficult times. He always had had a cash income from milk cows, however. From the time he started until just 2 years ago he has milked. He has always kept about eight brood sows for spring pigs.

QUIT MILKING

"I quit milking to cut down on the work a little. I still have the hogs and am raising seven Holstein heifers," he told. He has 150 pullets.

Tweedt actually came to the farm one-half mile east of U. S. 69 on Highway 210 in 1902 when his parents, Mr. and Mrs. S. K. Tweedt, moved there from Estherville. He started running the place for his father in 1907.

Tweedt was confirmed and has been a longtime member of the Palestine Lutheran Church just a short way east of his place. All of the 10 children were confirmed there, too.

Tweedt doesn't look 68 because he is slim, tanned and healthy looking. In this, his 47th year of farming, he still gets a tremendous amount of zest out of turning over the black soil, planting the crops and watching them grow.

His wife has had a heart condition for the past several years and though she can do her own housework, leaves the chicken chores, etc., to him.

"She keeps telling me I ought to go have a checkup," said Tweedt. "But I say to her what would I tell the doctor. I feel fine."

The Tweedts' children are: Silas and Burnie, Jr., both of Houston, Tex., and both in the insurance business; Donald, El Paso, in the Army; Norman, Oakland, Calif., heavy machinery serviceman; Clare, student in an electrical engineering technical school at Kansas City; (Gladys) Mrs. H. M. Barnes, Cole Comp, Mo., and the only 1 of the 10 now on a farm; (Beulah) Mrs. Ray Allen, Ames; (Mildred) Mrs. Richard Brown, Ames; (Wilma) Mrs. Ray Shiery, Ames; and (Frances) Mrs. Ray Olson, Des Moines.

Hon. Thomas J. O'Brien

EXTENSION OF REMARKS
OF
HON. WILLIAM E. McVEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. McVEY. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to associate myself with those who are congratulating our colleague, Congressman TOM O'BRIEN, on the occasion of his 80th birthday. I have known Mr. O'BRIEN since the first day I came to the Congress, and over the years I have grown to respect him most highly and to place great confidence in his judgment.

He is a good American who fills his position, not only to the satisfaction of his constituents, but to the country generally. Not all of us are permitted to live out a life as full and complete as his has been. It is, therefore, fitting that we express our unusual interest in his age attainment and wish for him a continuation of his good health and activity.

The School on Beacon Hill

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article on the Suffolk University in Boston, which maintains high-scholarship standards under the leadership of President Robert J. Munce:

THE SCHOOL ON BEACON HILL
(By Floyd Lee Bell)

(Suffolk University, which now includes a college of liberal arts, journalism, business administration, as well as original school of law, has today a total enrollment of more than 1,500 students in day and evening classes. Maintains high-scholarship standards under the leadership of President Robert J. Munce.)

It's the University on Beacon Hill—the great downtown university—it's the university from which more law students have been graduated into high places on the courts of Greater Boston and of the Commonwealth than from any other school or college. In brief, it's Suffolk University, whose blue and gold colors are those of the Commonwealth itself, whose alumni are from every State in the Union and who swear by their alma mater as the greatest.

Suffolk University is unique in this area of colleges and universities. Since its location is directly at the rear of the State house and with almost a puddle jump leap an ambitious student may skim the distance between classroom and legislative and judicial, as well as executive, offices of the government; and many of them have made the leap to attain high prominence in governmental affairs.

Suffolk is a school beloved by its students and its graduates—of whom there are now literally thousands. It is a university which grew from a law school—and that latter remains a very important division of the big university itself. It is the last university to offer low-tuition rates so that the boy or girl seeking an education and a degree may not be prevented by sky-high rates from achieving his or her ambition.

At the helm of Suffolk University sits a most humane gentleman, President Robert J. Munce, whose door is literally always open. Any student may drop in to chat with and to discuss problems at any moment of the college day. Bob Munce is a man with a record—a splendid one—having been on the faculty of various other colleges and universities including the University of Pittsburgh, Washington University in St. Louis, and Washington and Jefferson. He believes that every student has potential success stamped upon his brow and that he needs only encouragement to become a leader. That is why President Munce devotes many, many hours to intimate chats and coaching of students, many of whom have gone forth prepared to swear that their future success was because of those talks with the dean (for he was dean for a number of years) or the president. He is a topmost educator but above all else he is human, he is understanding and his kindly attitude does much to make Suffolk so highly regarded among schools and colleges of this territory.

Suffolk probably presents more opportunity for the young man or woman desirous of working through college, or at least to do part-time work, than do most institutions of higher learning.

Its classrooms are spacious and well lighted, its laboratories and lounging rooms are likewise. Although emphasizing scholastic attainment, Suffolk provides plenty of recreation and entertainment for its student body, realizing that many extracurricular activities are necessary if school spirit is to be maintained at a high level.

Many businessmen seek Suffolk graduates because of the unusual training given in business administration just as law offices are happy to receive for further training or as associates those who have been graduated from Suffolk.

One of the points of interest at Suffolk is the magnificent office and reception room on the third floor occupied by President Munce, but actually used almost as much by the students and members of the faculty as by the tall, handsome and gregarious president. In the very center of this room is a long table some 30 feet in length, perhaps as handsome a "directors" or "trustees" table as one ever could find.

The Suffolk Journal is the school publication and is a newsy, well-written journal of news and notes, edited entirely by students of the university, printed on "slick" paper and affording a wonderful chance for budding journalists to practice their arts.

The location of Suffolk makes it accessible from MTA or from any of the three railroads entering Boston; it likewise affords students an unparalleled opportunity to visit the historical shrines of a great part of Boston, many of which are within walking distance. The great metropolitan shopping centers are also just a few blocks from the university. Only several blocks distant is the Boston Public Library, one of the finest in America, and the Museum of Fine Arts is a 10-minute subway ride. On the historic Charles River, a view of which may be seen from the upper stories of the university building, there is a chance for the athletic prowess on water to be worked out.

No school, college, or university in the Nation presents greater opportunities for its students to achieve scholastic distinction and none has a board of trustees of higher caliber. This board is made up of some of the leading professional and businessmen of the Commonwealth and is headed by Hon. George B. Rowell, former Assistant Attorney General, as chairman.

In Suffolk University auditorium, which seats some 1,800 persons, many celebrities of the political, civic, stage, screen, and television worlds have appeared; and Suffolk is proud of the fact that Miss Jane Wyman, who was later to be granted an "Oscar" by the Motion Picture Academy Awards Committee as leading screen actress of 1949, was before that granted the Suffolk award for being, in the judgment of the students, the greatest screen actress of the era. The late Miss Gertrude Lawrence was another who was granted an award in Suffolk auditorium. Leaders in political thought and action, in religion, and in education have appeared as guests and speakers in this auditorium.

Suffolk, although primarily a day institution, was the first college in New England at which a student might earn a bachelor-of-arts degree through evening study.

Suffolk is a member of the New England Association of Colleges and Secondary Schools. The college departments are approved by the board of collegiate authority, department of education, and the Commonwealth of Massachusetts. The law college is approved by the American Bar Association. The judicial, supreme, superior, probate, land, and municipal courts are next door to the university.

As of now, Suffolk University includes Colleges of Liberal Arts, Journalism, Business Administration, and Law. It has a total enrollment of more than 1,500 students in day and night classes and its standards of scholarship are regarded as ranking as high as those of any university in the Nation.

Annually for several years past, the commencement exercises, at which degrees are granted to more than 200 each year and to some 8 or 10 recipients of honorary degrees, have been held in the old Boston Opera House, a tradition of years in this area—but with the razing of that famed building this year the exercises will be held in Mechanics Building.

Donald Goodrich is dean of the colleges other than law, and Frederick McDermott is dean of the Law College. The attorney general of Massachusetts, and at least eight judges of the higher courts are members of the Suffolk Law School Alumni Association of which Judge Frank J. Donahue, one of the best known judicial minds in the East, has long been president. Judge Donahue brings each year to the annual midwinter and fall meetings of this alumni association some of the topnotch legal minds of the Nation as speakers and as guests of honor.

Suffolk University, under the skilled guidance of Charles Law as coach, has noteworthy athletic teams in baseball, basketball, soccer, and hockey. The blue and gold teams have won many honors for the university.

The library at Suffolk is one of the largest and most comprehensive in the New England region and recently Richard J. Sullivan, of Lawrence, longtime city librarian at Lawrence, was named librarian at Suffolk. He has held many important posts in library circles and is recognized as one of the leaders in this branch of education.

The true measure of any university or college is reflected in the record of its graduates. Early in its history Suffolk gained recognition for the high quality of its faculty and the success of its graduates. Judges, lawyers, bankers, business leaders, educators, and statesmen have emerged from its hall of learning. Their advancement, they cheerfully admit has been due to the training they received at Suffolk University.

It's a truly great school, this "downtown" university, this Suffolk University which has fitted so many young men and women for useful careers.

Law Day

EXTENSION OF REMARKS
OF
HON. JOHN J. FLYNT, JR.
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. FLYNT. Mr. Speaker, today, May 1, 1958, has been proclaimed Law Day by the President of the United States. As a Georgia lawyer and as the son and grandson of Georgia lawyers, I was taught from birth a reverence for the law and the Bill of Rights.

As a former active participant in the work of the Georgia Bar Association, it was my privilege to observe among the members of the legal profession many of the most able and scholarly men it has been my privilege to know. It is, therefore, my sincere hope that those Americans who will today express their respect for the codes, the standards and the traditions of our legal system will simultaneously acknowledge the capabilities of the members of our legal profession who so conscientiously and tirelessly administer that system, and who have so consistently contributed to the stability and the progress of our country.

Had this Nation discarded the English common law when it declared and fought for its independence in the 18th century, it might well have lost its freedom before the end of the 19th century.

If, today, the American people decide that they should discard the traditional judicial interpretations of the United States Constitution and embark on an untried course of judicial legislation and depart from the doctrine of judicial precedent, they might well lose their freedom before the end of the 20th century.

It is my hope and belief that the American people are becoming more and more aware of those standards and those traditions of the law that elevated their Nation to greatness.

It is my hope that today, Law Day, when we honor our system of jurisprudence, we shall remember that it is a system which has been tried and proved to be the best in the history of the world.

Pay TV or Free TV

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1958

Mr. SANTANGELO. Mr. Speaker, Congress is being asked to consider the question of pay television, and to determine whether the long-range interests of the public at large are best served by permitting or denying permission for large-scale undertakings in this area.

Anything that might affect television as basically as subscription television is of intimate concern to the American public. Current reports of the A. C. Nielsen research organization show that there are 42,500,000 homes in the United States with television sets—84 percent of all homes in the Nation. Recent reports of the Television Bureau of Advertising show the average home watching television about 6 hours per day, so that the television set works a 42-hour week in these days of a 40-hour workweek economy. Watching television is the most popular waking activity of the American family. It is appropriate, therefore, that we examine closely any proposal that would drastically affect that medium.

On February 19, 1958, Donald H. McGannon, president of the Westinghouse Broadcasting Co., Inc., in an address before the San Francisco Advertising Club, examined the subject of subscription television in terms that I feel bear our close examination. Mr. McGannon expressed fears for the future of public service broadcasting, if pay television comes. Public service broadcasting, by definition, is that area of programing not basically classified as entertainment, but designed to inform, educate and enlighten the audience. In his talk, Mr. McGannon also expressed concern over the danger that pay television may hold for our national economy. Partial text of Mr. McGannon's address follows, and will prove interesting reading:

We cannot, however, overlook certain obvious causes which may have an effect upon the prosperity of broadcasting in the future. This is especially true in the case of the visual medium when we consider the effect of the various plans of subscription broadcasting. Too many of us in free television are inclined to accept the soporific that pay television "can't happen here." We base this on the conclusions that the public will resist any idea of paying for home entertainment which they now have largely free; the Government will not permit such a system; the investors will not be attracted to the economic considerations of pay television; or simply that the system will not work.

Too many people regard subscription television as somebody else's problem—as something that will have no effect on them beyond the decision whether or not to pay for one of the things in their home. Pay television, ladies and gentlemen, is the problem of every person in this country, whether or not he subscribes; in fact, whether or not he watches free commercial television.

We cannot wish away by subjective thinking the fact that pay television is technically and economically possible and we should approach it as openmindedly as possible, bearing in mind three major premises:

1. If this system of subscription television will weaken our free system of television by reducing the potential audience, this could correspondingly weaken our economic program and would run contrary to the conviction that the growing consumer population requires enlarged avenues for selling in order that production could be maintained.

2. The services that radio and television can render in the informational field are made possible directly or indirectly by advertising revenues. These services, such as news, special events, and supporting of great national causes and public-service programing, in general would suffer radically or be nonexistent in the cash-and-carry atmosphere of subscription television.

3. A system of television that must depend upon popular subscription for revenue would tend to stultify creative efforts in the field of programing, which efforts represent the future of our industry and the potential of the medium. Even the proponents have stated that they plan to rely upon existing program formats to bulk out their schedule—such as motion pictures, sporting events, spectacular programs, theatrical productions, and the like.

One of the aspects of this problem that disturbs me the most is the tendency of the proponents of pay television to derogate advertising in their efforts to establish what they seem to believe to be a new art form, or the variation on existing themes. On numerous occasions I know you, too, have

seen them depict broadcasting advertising as generally distasteful and, specifically, costly to the consumer.

Our task, therefore, is to maintain the integrity of our present system of free broadcasting and encourage its growth, to tell the positive story of advertising as well as of the mediums. Our long-range thinking should be turned to improving our own mediums in advertising itself and perhaps give more energy to that task than to simply worrying about the potential intrusion of the various subscription schemes and the promoters behind them. It is fair to state that people have become accustomed to and even like advertising when presented in a balanced and creative form. I believe they even rely upon it as a service and understand the contribution that it makes to the control of costs in a mass economy.

I cite you specifically the classic example of Ivory soap—its unit cost has increased very little in 75 years, although production and material costs have risen sharply, demonstrating the efficacy of advertising in a competitive and dynamic production economy.

As Thomas D'Arcy Brophy, chairman of the board of Kenyon & Eckhardt, recently said, "Advertising is not expendable. It is not a garnishment of business * * * it is an essential ingredient of our economy * * * it is to selling what the machine is to production. Advertising mass produces customers for a mass production economy."

Broadcasting is not alone an industry of buying and selling, producing and using. We are an industry interested in the welfare and betterment of the people we serve, and determined to contribute to the peaceful progress of our Nation which we genuinely feel possesses, by circumstances of history, a large responsibility in the affairs of today's world. The task to retain the God-given liberties of the free world and to resist the Communists' slavery-recruiting program is one in which free people cannot fail.

Their success, however, is predicated upon being informed. The responsibility, therefore, of people employed by free media, such as ours, to fully and intelligently inform is a massive thing. We feel that this responsibility to society far transcends the labors to which we turn our hands each day, and must be predicated upon ingredients that are as inherent in broadcasting as they are in government and law, journalism and industry, labor and elsewhere—these are responsibility and leadership.

It is not enough to say that we will serve the American public on the basis of a formula comprised of program ratings, but must exercise ingenuity and courage in programing efforts that achieve increasingly higher plateaus of success. It is not sufficient in the interest of public service to ask for blood or money for the indigent, or that we encourage the purchase of bonds as a hedge against inflation, or the hiring of the handicapped, or urge safety on the highways.

These are worthy badges to wear, but beyond this we, too, must deal in ideas. We must contribute in an editorial sense to the people's understanding of the issues of the day—the facts and conditions that surround the cold war, the differences in ideologies between the Communist and free worlds, the reasons that create a need for NATO, and the purpose and effectiveness of the United Nations.

In a government-operated system of broadcasting, leadership, such as it is, is preordained and, unfortunately limited in most instances to the party in power. Ours suffers no such limitations for we are the custodians of an instrument for enlightenment—forever charged with the responsibility to achieve its greatest potential. We cannot let broadcasting become a mere appliance in the home which becomes for the mind what the refrigerator is for the stomach—a storehouse of staples to satisfy an appetite. Our efforts must be far greater, and serve as a source of inspiration and enlightenment to which each of our people may turn to fulfill their ideals and aspirations.

The broadcasters of America, and certainly those engaged at the Westinghouse stations, are of the sound conviction that we will be free only so long as we are respected, and we shall be respected only so long as we are principled, ingenious and courageous, and ever aware of the responsibilities we assume in dealing with the minds of men.

Why I Like To Live in Michigan

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the text of an address by Mr. Reid Brazell, president of the Leonard Refineries, Alma, Mich., at the 12th annual testimonial dinner given by the Association Executives of Michigan for Michigan Members of Congress at the Hotel Statler in Washington on April 29, and entitled "Why I Like To Live in Michigan":

Needless to say, I appreciate the opportunity and feel honored to have the privilege of speaking to you on this auspicious occasion—an occasion when busy folks take time to come here to Washington, to talk to, to break bread with, and to honor their representatives in the Congress of the United States.

When Bill Palmer called and asked me to talk to this group, my first reaction was, "What do I have to say that would be of interest to such a meeting?" I asked Bill, "What do you want me to talk about?" His reply was, "Why you like Michigan." That was easy. I like Michigan because I believe in Michigan, and because I believe in Michigan I suggest to you and to the people of Michigan that we establish as an objective, as a goal, the job of putting real meaning and truth into the three words, "Michigan means business." The achievement of this goal should not be too difficult for the people of Michigan if past performance is any indication of what they can and will do if such a challenge is accepted.

Let's take a look at our State, its history, and more importantly its people; also a look at the present, and look to the future.

First, as personal reference, I should like to mention that it was by no accident of birth that Michigan is the State in which I make my home; in which I raise my family and in which I earn my daily bread. I was born in Oklahoma and lived there and elsewhere for 30 years before adopting Michigan. Notwithstanding my love for Oklahoma, my native State, and my pride in it, I adopted Michigan for my home. I chose it for reasons that are reflected in its history, its geography, its climate, and above all, in its people. I chose it because I believed in Michigan, its people and its future. That faith of mine has become stronger each of the years that I have lived here. I truly believe in Michigan.

Perhaps from the vantage point of the past we can more clearly perceive why confidence in the future of our Michigan is justified—and come to a better understanding of why we all of us should believe in Michigan.

Consider for a moment: What sort of a State is Michigan? What are Michigan people like? There is no simple answer to those questions. Michigan is unlike any ohter State lying between the two oceans. Michigan people and the development of the State reflect circumstances most unlike those that exist elsewhere in this world.

Senators MCNAMARA and POTTER must find it a great challenge as well as great honor and responsibility to wear the mantle of United States Senator for Michigan.

If we start at Monroe in Congressman MEADER'S district and go westward to the western boundaries of Congressman HOFFMAN'S district, we find fertile lands where Michigan farmers plow soil as rich as can be found in our whole country.

Moving northward, we find the busy Saginaw Valley district so ably represented by my own Congressman ALVIN BENTLEY, to the east we find the great Thumb area represented by Congressman MCINTOSH, moving farther north into the districts represented by Congressmen GRIFFIN, CEDERBERG, and KNOX; a vast region of generally sparse soil where a few short years ago stood our vast treasures of pine and hardwood. Some people thought these treasures inexhaustible, but the trees were felled and by 1890, they were largely gone. In every frontier country there are heedless people who despoil without thought for the future. So it was with Michigan's forests. But others come to heal the wounds. Thus today, happily, there stands in that region row upon row of growing pines and hardwoods which will bless future generations.[1] At the upper part of Congressman KNOX' district are the Straits of Mackinac which so long divided Michigan, but now spanned by the world's great new bridge, to unite the people of the upper and lower peninsulas and open new horizons for us. The eastern end of the upper peninsula, also in Congressman KNOX'S district, was another land of hardwood and pines which, once despoiled, is again emerging as a land of bounty. Traveling westward toward the Wisconsin border, in Congressman BENNETT'S district, rock ridges emerge from the soil and there are found the iron and copper riches that for so many years sustained large segments of our population.[2 3]

I believe in Michigan because of its great natural opportunities. Michigan is a State apart. Its uniqueness lies in the varieties of its geography, climate and terrain and particularly in the uniqueness of its peoples. Its uniqueness is perhaps best exemplified by the fact that Michigan is dotted by more than 11,000 inland lakes, is traversed by 20,000 miles of streams and is framed by waters as blue as those of the Mediterranean. It has a shoreline of over 3,200 miles. Michigan is bounded by 4 of the 5 Great Lakes. There is Lake Superior, with its cold and mighty breakers smashing the rocky shores of the upper peninsula—Lake Michigan, beating at the sand dunes to the west; Lake Huron, gently touching the eastern side of Congressman MCINTOSH'S district; and Lake Erie, lazily lapping the Monroe marshes.[4 5]

Michigan's climate is also unique. Our State is air conditioned by the waters of the Great Lakes. The lake waters absorb heat from air warmer than themselves and warm the colder winds. The Great Lakes regions are frequently a meeting point for high and low pressure areas, with the result that we have frequent changes of weather. Our climate is a seasonal climate. Each year we enjoy spring's rebirth of nature, summer's warmth tempered by the cooling lakes,

---

Footnotes at end of speech.

autumn's brilliance unexcelled in beauty in any place else in the whole world, and winter's quiet snows.

Our uncommon geography and climate have produced an uncommon people. Our people vary as to types and ancestry, and because of what Michigan people have done with the land that they found, our State never developed into any common type of State.

Little more than a hundred years ago Michigan was wilderness. Its chief industry was the fur trade. As late as 1814 history records Indian massacres in Michigan. It was not until 1842 that the Indians ceded the last Michigan lands. In the space of little more than a hundred years this State was created from a wilderness land of trappers and fur traders to its present greatness. Into its development went incredible extremes of vision and stupidity and greed and generosity.

Our State was born of bloodshed and dissensions so often common to frontier lands. It was born of the calamities of Indian massacres, pestilences, destructive fires, wars and unprecedented waste and greed and wisdom and folly and cupidity and integrity. Truly Michigan has had a tempestuous past.

The Michigan wilderness did not come to the forefathers easily. They fought for it. First they fought the French, then the British and then the British again, and all the while they fought the Indians. When peace came many of these frontiersmen entered upon an orgy of exploitation of the Michigan land and the treasures beneath the surface unprecedented in history. It is, however, of some comfort to recall that the pines of Michigan housed much of the Nation and produced values equal to 3 times the gold that California's earth gave up and 10 times the gold from Alaska. Many houses built of Michigan pine still stand today. And much of the money derived from this so-called rape of the woods found its way into our colleges and our hospitals. It might be well to consider that had these pinelands not been cut away we would not have our great and growing State and national forests that are so important to our beloved Michigan outdoors.[6]

During roughly the same period that Michigan trees were producing their fortunes, Michigan produced half the copper mined in the United States—more than 9 billion pounds of it—and millions of tons of iron ore. Into this land came Welshmen, Lithuanians, Austrians, and Finns to fell the trees and tend the mines, joining the earlier migrations of Germans, Dutch, Irish, and Polish peoples, who had come to mingle with the original French and English settlers. Thus came our complex and uncommon people.

When the last great native pines came crashing down in the Michigan forest and when our iron and copper ore became much less bountiful, there were heart-breaking times in many parts of our State. The lumberjacks and the ore workers took up farming. We see today in many sections of our State tragic reminders of their vain efforts and of their dreams of establishing farms in soil inhospitable to farming. A lonely chimney against the evening sky. A rotting door stoop. A dilapidated barn. We must not assume that all of our State is thus inhospitable. Today much of that soil once unsuccessfully tilled is producing fruits, cereals, and meats in great abundance. These developments have come about because Michigan men who failed once were willing to try again and try ever once again. They have come about also because, just as there were those who despoiled our land, there were in greater number those who made efforts to enrich it and to insure its future bounty. In 1857 our legislature had the wisdom to found our great Michigan State University, the first agricultural college in the entire Nation to open its doors. That institution and our great conservation department are fulfilling their destiny in securing to us the utmost bounty of our soil and the riches beneath.

I believe in Michigan because our State has been well endowed with many resources. There are the great salt deposits in the State which have placed Michigan ahead of all other States in salt production. Lest we think salt a common sort of product for table use only, we should remember that salt and derivatives from it are used in more than 14,000 different products.

Petroleum, too, is found in Michigan—enough so that in 1938 Michigan was second in the producing States east of the Mississippi. While production has been declining, it is still an important product to many of us.

In the era before the automobile, other great industries came to Michigan—furniture in Congressman FORD's district; wagons and carriages in Congressman CHAMBERLIN's district; the great paper and pharmaceutical industries in Congressman JOHANSEN'S district, and the great and growing pharmaceutical industry in Detroit. There came also a wide variety of small factories which depended upon the hardwood of the region, dotting areas to the north.

Michigan is bounded by waters that were bountifully filled with fish. Thus it became a land of fishermen. It became also a land of sailors. Our great fishing industry has declined, but with the development of the St. Lawrence seaway, our State promises to provide ports for the shipping of all the world. Michigan woods have always abounded with game. Thus we are a land of hunters and outdoorsmen.

Up until now we have considered for the most part those people of Michigan that depended upon the soil, the forests, and the treasures beneath the soil for a livelihood.

There was, and is, the Detroit industrial complex so ably represented by Congressmen MACHROWICZ, DIGGS, RABAUT, DINGELL, LESINSKI, GRIFFITHS, and BROOMFIELD. First established as Fort Pontchartrain by Cadillac in 1700, Detroit and its environs had a population of only 1,442 people in 1820 and only 21,000 people by 1850. As late as 1900 Detroit's population was only approximately 300,000 people. Today its population exceeds 2 million, and it has become one of the largest cities in the United States.[7 8]

In 1900 Detroit was a city of stability. It was a self-satisfied city. True, there had developed in Detroit the successful manufacture of stoves, drugs, machinery and railroad equipment, which continue to be successful. But at the turn of this century the most extravagant prediction as to Detroit's future would have paled into insignificance when compared with the actual events that followed. Ford, Chalmers, Olds, Joy, Durant, Nash, Willys, Chapin were pioneers of another sort than the trappers, fur traders, and timber men who penetrated the Michigan wilderness, but they pursued their dreams with the same tireless energy and zeal and at the same hectic pace. By 1910 the population of Detroit had grown to almost half a million people and Detroit had become the ninth largest city in the United States.[9]

Detroit did not invent or create the automobile, but Detroit did create and perfect the art of making tens of millions of them through assembly line techniques and industrial practices that revolutionized not only Detroit but the world; techniques and practices which may revolutionize society itself before their influence is fully spent. Into the crucible of Detroit came armies of unlike men. From Michigan itself came the grandsons of the fur trappers, the sons of the lumberjacks and timber cruisers, the unsuccessful farmers and the sons and grandsons of the copper and iron miners. But Michigan was an insufficient reservoir of manpower to supply the virtually insatiable appetite of the assembly lines. From the Appalachians and from the deep South came other armies of men. When World War I ended, other nations poured their unneeded and unwanted sons into Detroit. These were a most uncommon people.

These diverse and unlike peoples from all parts of the world have been assimilated in the State of Michigan. The melding of their diverse skills, cultures and backgrounds has given us a citizenship unique among the States, but with many common characteristics.

Michigan peoples have many common traits. Among those common characteristics are ambition, industry, bravery, skill and a love of their State and Nation. We should not forget that Michigan gave us many supremely brave and self-sacrificing men—673,000 of them who served our Nation in World War II. Most of our peoples who were not in active service, hundreds of thousands of others, gave their skills to produce the munitions of war—more than $20 billion worth by the end of World War II—far more than the production of any other State, to make Detroit and Michigan the "arsenal of democracy" in World War II.

Until now I have spoken most of material things. I have said little of Michigan's inanimate treasures. True, we are a people who have devoted much of our lives and resources to material things—but there is another side equally or more important. In 1817 our forebears established a great university—the University of Michigan—one of the 4 or 5 great universities in the world. At almost each crossroad we established a church and in hamlets a college, so today there are more than 20 colleges and universities. In 1785 a land ordinance was adopted setting aside section 16 in every township to be used for educational purposes. Thus today the son of a Finnish immigrant writes our Nation's songs, the son of a Polish immigrant is a judge or a Congressman. A most uncommon people we are.[10 11]

Detroit made automobiles available to even the poorest of our country's citizens. More than 7 million of them in a single year. That availability has been largely responsible for the second greatest industry that our State now enjoys, the tourist industry. Thus there is a close kinship between Detroit and the outer regions of our State.

Our 11,000 lakes, our shorelines bathed by the waters of the Great Lakes, our thousands of miles of trout streams and our tens of thousands of reforested acres beckon to the weary to come at all seasons and enjoy peace and beauty and to return to their homes and jobs refreshed. The automobile has provided the means for them to come. And how they have come. From an occasional visitor a few years ago seeking relief perhaps from hay fever, we now have a flood of visitors who come from all parts of the world and at all seasons of the year to visit with us and to spend with us more than $600 million annually.

With Etienne Brule crossed the Straits and landed at Sault Sainte Marie in 1618 he could not imagine that a few short years hence, as history goes, a span of steel and stone more than 5 miles long would bridge the rushing waters of the Straits. Cadillac and his small band of men and women manned the ramparts of Fort Pontchartrain on the shore of the Detroit River in 1700, and met with equal fortitude the vicissitudes of Indian attack, destructive fire, cholera, and near starvation. I doubt Cadillac could envision that towering edifices of steel and stone would 1 short day stand on the site of and near the old fort.

Footnotes at end of speech.

Footnotes at end of speech.

The timber cruiser who as late as the 1880's stood in the hushed silence of a grove of towering pines would never have believed that hundreds of thousands of people would come to these woods and lakes and streams of Michigan each year to find renewed vigor and contentment. I suspect that as Brule, Cadillac, and the timber cruiser would have been unable to prophesy the future of Michigan, we now cannot successfully prophesy that future.

We do know one thing well, however, that this great State of ours, and its magnificent institutions and its people, have developed, been preserved, grown and flourished in a climate of personal, political, and economic freedom. It is the hallowed function of you gentlemen whom we honor tonight, to help to continue to preserve those institutions of freedom.

It is not my purpose or province to advise you as to how you shall insure that freedom endures. There comes to my mind, however, the words of two great and honored Michigan statesmen who described their creeds when dealing with critical political problems of their day. First, there was Senator Lewis Cass, who as a Senator in 1850 enjoyed the dubious help of being required by custom to vote in accordance with instructions of the Michigan Legislature, which appointed him. Differing with the instructions received from the legislature, he had this to say, "When the time comes and I am required to vote upon this measure, I shall know how to reconcile my duty to the legislature with my duty to myself by surrendering a trust I can no longer fill." Friend and foe alike proclaimed him for his courage and ultimately the instructions from the legislature were withdrawn and Senator Cass not only retained his integrity and independence, but he has been forever honored by his people.

More recently the late Senator Vandenberg, having changed the views he had previously held on matters of the greatest national interest, reported to the shocked constituents who had elected him and said, "What happens to me politically is of no moment to me or to the State, but what happens to the country is of vital moment to all."

What can we predict for the future of Michigan? I am reluctant to predict as to its physical characteristics, its modes of transportation or even as to the form and nature of its industry. It has been predicted by scientists that in the next 25 years worldwide transportation may become as rapid as communication is now; that nuclear developments may make energy almost as cheap as air and that climate control will permit us to have alternatively a tropical garden or an ice age. In the light of these predictions it would be presumptuous for me to try to predict the rate of growth of our State or the precise forms that growth shall take.

I believe that Michigan has the greatest growth potential of any State in the Union. It has great natural resources, particularly the greatest bodies of fresh water in the world; the geography and terrain that make it an outdoor paradise for its residents and tourists; and, above all, the most important resource, people of indomitable spirit.

How can we put action, truth into the words, "Michigan means business"? First, we, you, each person in Michigan, should recognize it is a job for us to do ourselves. Stop expecting Washington and our Federal Congress to do the job for us. We should ask far and expect to receive the cooperation of the Federal Government in those areas where joint State and Federal action is required.

Second, advise our State officials and our State legislative bodies that in the development of our land of plenty, it will be necessary to invest money, now and in the future, in many projects, such as roads, educational institutions, health institutions, harbor projects, recreational facilities, to name only a few—projects that will permit the rapid development of our Michigan, and, incidentally, a rapid return of the money invested, through taxes that would be paid. We should expect the legislature to provide the funds necessary.

Third, the organization of groups whose efforts can be directed toward the many community projects that should be undertaken, projects that will help to put action and truth into the words, "Michigan means business."

---

[1] 1857: Michigan State University was the first agricultural college in the Nation to open.

[2] Michigan is the second State in production of iron ore; first in salt; second in sand, gravel, magnesium compounds, and peat.

[3] 1919: The Soo Canal was completed and it became and remains the busiest in the world.

[4] 1887: The Nation's first game warden was appointed at Grand Rapids.

[5] 1891: The Nation's first ski club was established at Ishpeming.

[6] 1881: The first forestry school in the Nation was established at the University of Michigan.

[7] 1868: First refrigerator box car was patented in Detroit.

[8] 1875: First ice cream soda developed at Sanders in Detroit.

[9] 1893: The first policewoman was appointed in Detroit.

[10] 1867: Michigan was the first State to support a university by direct property tax (University of Michigan).

[11] 1874: First school for underprivileged children in the world opened at Coldwater, Mich.

Hon. William J. Lindsay

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. LIBONATI. Mr. Speaker, it is with deep regret that the citizens of the metropolitan area of Chicago, and the State of Illinois, learned of the recent death of the Honorable William J. Lindsay, 79, former judge of the superior court of Cook County for 30 years, retired since 1953.

He was born in Aurora, Ill. He attended the East Aurora High School and Grinnell College, Iowa, where he captained the baseball and football teams. After his graduation he taught mathematics and athletics at Iron Mountain, Mich., and at Englewood High School in Chicago. He attended Chicago Kent College of Law and, after graduation, taught law there from 1917 to 1927.

He was a stanch and active Democrat and was selected as the Democratic candidate for State's attorney in 1928. He was recognized as one of the greatest jurists of his time. And numbered among his many students are the outstanding lawyers at the bar today.

Judge Lindsay will be remembered for the many celebrated trials over which he presided. He was a brilliant and considerate jurist. He was rigid and strict in court decorum, fair in his applications of the principles of law, and thorough in his knowledge of procedures and evidence.

Entering his courtroom, the citizen knew that the dignity of the law and its honest application would be upheld. He instilled in everyone great respect for the judiciary and confidence in its institutions. His great contribution to the people of Cook County in the high service that he rendered to his fellow man will never be forgotten.

He tempered justice with mercy and, in his fairness, made one feel proud of having known him. Those who came before him respected his high qualities as a judge and his humane understanding as an honest man.

It is with deep feeling that the Congressmen of Illinois extend to his widow, Teresa, and his daughter by a previous marriage, Mrs. Mary McCormick, and his three grandchildren, their heartfelt condolences.

Russia Faces Food Crisis

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mrs. BOLTON. Mr. Speaker, you will recall that in February Lawrence Sullivan, coordinator of information, House of Representatives, made an interesting summary of a study by Prof. G. Warren Nutter, of the University of Virginia, which showed that in every basic industry Russia today is 25 to 100 years behind the United States, as measured in per capita production. I was happy to insert this study in the RECORD of February 10, 1958, and it is found on page A1243.

Mr. Sullivan recently completed a study of the Communist food crisis. His documentation from testimony before the Joint Committee on the Economic Report, plus several studies by the Foreign Agricultural Service and the National Industrial Conference Board shows that the Communist world in both Eruope and Asia faces an explosive food situation.

Believing it will be of great interest to all my colleagues, I have asked unanimous consent that this study, entitled "Russia Faces Food Crisis," be inserted in the Appendix of the RECORD:

RUSSIA FACES FOOD CRISIS

(By Lawrence Sullivan, Coordinator of Information, U. S. House of Representatives)

Why is Moscow so frantic for an immediate summit conference? Chiefly because the Communist food crisis is critical. A gaudy conference with top leaders from the lands of plenty is demanded urgently to restore the sagging prestige of the Kremlin masterplanners in the eyes of their own people.

Unless Moscow can do something spectacular before winter to improve Russian nutritional standards, an explosive food situation will confront the entire Communist world, in both Europe and Asia.

Diplomats currently are watching the Communist food supply more closely than at any time since the Bolshevik revolution of 1917.

Communist agriculture has failed for 40 years to keep abreast of Russian population growth.

In Russian money today, the average Soviet factory hand must work 3 hours to earn 1 dozen eggs.

Translated into American wages, this means that eggs in Moscow are selling at $6.30 a dozen, New York equivalent.

Slovenly tailored woolen suits in Moscow sell for 350 hours of labor at current Russian wages. Translated into American wages, the shoddy woolen suit in Moscow cost $735, New York equivalent.

A pair of shoes in Moscow requires 62 hours of factory wages, which is the same as shoes at $130.20 a pair in Chicago.

One pound of butter costs the Moscow worker 3 hours and 11 minutes wages—equal to $6.65 a pound, New York. By the same calculation, milk is $1.20 a quart in Moscow.

These examples, from a United States Department of Agriculture study published in November 1957, on the 40th anniversary of the Bolshevik revolution, epitomize today's acute crisis in Russian farm production.

Upon his return from a Russian tour last November, Senator ALLEN J. ELLENDER, of Louisiana, reported: "Many Russian people today have only black bread, cabbage, potatoes, beets, and a pot of tea."

Reporting on his 10 years in Russian slave labor camps, a returned American prisoner, John Noble, reported: "The Soviet Union is a land of shortages and hungers."

"The country is insufficient in all respects, in food and industry. There simply isn't enough of anything to go around."

"Prisoners in the Arctic slave labor camps have denuded the countryside even of its dog population," Noble reported.

"Dog meat, I found, has a taste all its own, but if anything it is softer and tastier than beef. In all, the doctor and I ate up two dogs. The pieces, kept hidden in the snow, fed us for months."

Noble reported between 25 million to 28 million men and women in the Russian slave camps as of mid-1954.

The average weight of some 100,000 slaves in the infamous Vorkuta camp ranged 75 to 115 pounds per man. (Normal Europeans would average 175 pounds.)

"Our teeth rotted from lack of vitamins."

The Department of Agriculture's World Food Survey for January 1958 estimated food production per capita this year in the free world at 4 percent greater than the 1935–39 average, but the Communist nations are still 8 percent below their per capita prewar averages.

"Per capita production in Communist countries as a whole is still significantly below prewar, whereas per capita production in the rest of the world is slightly above prewar" (Foreign Agriculture, January 1958, p. 28). Thus, failure to feed a steadily expanding population continues as the first challenge to world communism.

"With population growing rapidly and nutritional standards low, a stagnant agriculture," reports Gregory Grossman of the University of California, "unquestionably threatens the very basis of a country's existence" (World Economic Growth, p. 32).

The National Industrial Conference Board confirms this picture with its own conclusion from a recent Russian tour, that "the emphasis given to heavy industry has left the bulk of the population of Russia with living standards that are woefully inadequate."

Steadily mounting pressures for better living standards, both within Russia and all the satellite states, raise grave doubts concerning the survival of communism (p. 45).

Before the Communist revolution, Russia was a principal world exporter of wheat, but in 1956 the Soviets imported 15 million bushels of wheat from Canada and additional tonnages from Argentina and Australia.

Our own Department of Agriculture emphasizes that all the temperate zones in Russia already are under collectivist cultivation. There are no new lands available for corn and feed grains, as basis for more meat and dairy products.

Russia is also totally lacking in quality breeding stock.

"There is also a great shortage and backwardness in refrigeration and processing equipment." Transportation is inadequate everywhere.

Russia's hunger crisis would have developed 10 years ago, save for millions of tons of lend-lease shipments of food, farm machinery, and fertilizers during the war years.

After the war, direct food shipments from UNNRA sustained Russian nutritional standards at the bare subsistance level through 1948.

For the years 1952–53 Russia, on her own for the first time since 1942, produced annually only 86 percent of her 1935–39 average farm yield, as measured on a per capita consumption basis.

By 1957 this per capita food production had been advanced slightly to 92 percent of the prewar average.

Harry Schwartz, Soviet affairs specialist for the New York Times, attributed the Polish and Hungarian uprisings of 1956 primarily to food shortages.

"There also has been the smaller scale, but still interesting, armed revolt in northern Vietnam," he told the Congressional Joint Committee on the Economic Report (p. 37). "All of these are primitive expressions of the resentment of the people at the sacrifices they have been forced to undergo."

The urgency of the food crisis inside Russia was again underscored by Khruschev's order last October abandoning the old Stalinist collectivist tractor stations, in favor of direct ownership of tractors by the state farms.

In his address before the Supreme Soviet accepting the premiership, on March 27 of this year, Khrushchev devoted more than two hours of his 3-hour speech to agricultural production and food distribution.

But even here, communism still was unable to grasp the core of the problem—lack of incentive under collectivism.

All the world sees clearly that the solution of Russia's chronic food crisis lies in a return to private ownership of land and production machinery, with production-for-profit as the powerful incentive to expansion.

But that solution, of course, would entail complete abandonment and repudiation of all communism.

Even Khrushchev now admits that communism cannot deliver the goods.

But nobody in the Kremlin yet has suggested a practical solution within the terms of doctrinaire Communist theory. Hence a current political and economic crisis of the first magnitude. Gnawing stomachs do not wait on refinements of Marxist theory. Despite the sputniks, all the Communist world still queries, "When do we eat?"

Moscow's successive 5-year plans always have emphasized industrial development at the expense of agriculture. Many city populations have multiplied by 10 since the 1917 revolution, but often supporting farm acreage around the mushrooming cities has scarcely doubled.

Baku had 150,000 population in 1917 and 1 million in 1957. Novosibirsk had 60,000 in 1917 and 800,000 in 1957. Omsk had 160,000 in 1939 and 560,000 in 1957. Kuibyshev had 360,000 in 1939 and 800,000 in 1957.

In part, these new city masses have been supported since the war by commandeered crops from the satellites of eastern Europe. The great Danube Valley, for centuries the breadbasket of central Europe, is today a land of rigorously collectivized hunger and want.

As Harry Schwartz told the Economic Joint Committee of Congress in December 1956: "The chief characteristic of economic management this past decade in Poland has been that men sent to run a particular field knew nothing about that field. This was particularly true in agriculture.

"The second reason is, of course, that the peasantry of eastern Europe has, by and large, been opposed to collectivism. * * * The peasant's only possible resistance has been passive resistance. He simply did not do his job as well as he might have. So the really fundamental answer to what has happened to the great Danube granery is that the ills of Communist management have so deprived peasants of incentive, and have so mismanaged agricultural affairs in eastern Europe, that the countries like Rumania, Hungary, and Poland are today countries which badly need imported grain to feed their own people" (p. 50).

On the other side of the world the same tragic story is told in China.

"It is abundantly clear that the Chinese peasants hate the very idea of collectivization," the United States Department of Agriculture reported in December 1957. "They showed their contempt by such measures as slaughtering their livestock before they were taken away at ridiculously low prices, or were confiscated outright. The very few who could, have fled to other countries. The hundreds of million who remain know that if they produce more the state will take more; that it is dangerous to have wealth and safer, if not more comfortable, to be poor. For a country with limited agricultural resources, negligible surplus stocks, and a rapidly growing population of 600 million, this could have the most serious implications.

"Moreover, floods and droughts occur frequently, so with a population already living near the brink of famine, mismanagement of resources might bring about unparalleled disaster. Regardless, the Chinese Communists are determined to build industry, and they intend to make the peasants pay the bill" (p. 18).

The population of Red China is increasing at roundly 15 million a year. But total food production is shrinking every harvest, because the insistent back-country resistance to collective farming is driving millions to the cities.

Between 1949 and 1956 the strictly urban population of Communist China jumped by 32 million.

In 1949 Red China had only 5 cities of more than 1 million population. But by 1957 it had 13 cities of a million or more.

These surging seas of hungry unemployed, driven from the land by iron-fisted collectivist agriculture programs, soon must bring the breaking point for Chinese communism.

Nor does Khrushchev blink at the disaster now confronting the whole Communist world.

J. Edgar Hoover reports in Masters of Deceit, published in March 1958, that Khrushchev remarked flamboyantly at a Moscow diplomatic fete late in 1957:

"Those who expect us to abandon communism will have to wait until a shrimp learns to whistle."

In an earlier epoch of cataclysmic catastrophe in Europe this sentiment was rendered: "After me, the deluge."

Communists and Bombings

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. DORN of South Carolina. Mr. Speaker, the following article by David Lawrence, which appeared in the Washington Star of April 30, is most worthy of the attention of this Congress and of every patriotic American:

COMMUNISTS AND BOMBINGS—REDS BELIEVED INSTIGATORS OF BLASTS AT NEGRO AND JEWISH BUILDINGS

Is Communist money back of the bombing of a Negro school and a Jewish church building in Jacksonville, Fla.? Have the same tactics—but with a different group of persons—been employed to intensify interracial feeling there as a grand jury charged were used in 1954 when a Negro moved into a house in a white neighborhood in Louisville, Ky., that was damaged a month later by a bomb?

The Communist issue was raised in the Louisville case because of suspicious circumstances. The warnings given at Jacksonville sound like Communist-inspired utterances. They came over the telephone from persons who made reference to a "Confederate underground." This is the language of the dedicated Communist, who is familiar with "undergrounds." In the South, moreover, there is less anti-Semitism than anywhere else in the United States. Prominent Jewish lawyers are active in the crusade of Southerners to retain "separate but equal" school facilities for whites and Negroes as sustained for 58 years by the Supreme Court of the United States. The effort to provoke anti-Semitism is a Communist tactic that has emerged in other countries recently, especially in West Germany where interracial feeling had been dying down since Hitler's day.

The incidents at Jacksonville are to some extent reminiscent of an episode 4 years ago in Louisville. A Negro had been trying unsuccessfully to buy a house in a white neighborhood. In May 1954 a white man alleged to have Communist affiliations bought it—not for himself—and transferred it immediately to the Negro. Trouble began at once. Shots were fired. A rally, supposedly of the Ku Klux Klan, burned a fiery cross. Feeling began to run high. Then, on June 27, came the bombing. No one was injured. Though it occurred at 12:30 a. m., the residents of the house were outside on the porch or away from the rooms bombed.

"It is very significant to this grand jury," said the formal report of the Jefferson County grand jury which investigated the bombing, "that this case seems to follow the pattern used by the Communist Party to create trouble between the respective races in this country, and that one of the specific methods of doing this is by the purchase of property for Negroes in areas which normally are occupied by white persons," and then causing incidents such as this. * * *

"It is the opinion of this grand jury that it would have been impossible for the explosive to have been placed under the house as it was by anyone from the outside. * * * In other words, it is our opinion that the charge was placed and was discharged by someone having ready access to the home.

"It is significant to this grand jury that a portable, battery-type radio, identified as having belonged to a white man who took up actual full-time residence at the home shortly before the explosion, was found underneath the house in damaged condition. * * * This person refuses to state, on the grounds that it would incriminate him, whether or not he was the owner of the radio involved, and whether or not he ever had been under the house. He thereafter * * * refused to state whether or not he is a member of the Communist Party for the reason that the answer to that question would incriminate him."

The grand jury indicted five persons on charges of banding together to "commit, aid, or counsel" the bombing.

The first person tried, though not accused of the actual bombing was charged with stirring up racial friction in violation of a State sedition law. At the trial two former undercover agents for the Federal Bureau of Investigation testified that Communist Party members were taught to incite racial violence. The accused man denied he was or ever had been a member of the Communist Party. A woman undercover agent for the FBI testified, however, that he was a member, that she attended a Communist Party meeting at his home, that she had paid party dues to him, and that his wife was also a member of the Communist Party. The jury voted for conviction, and the sentence was 15 years in prison and a fine of $15,000.

But the high court in Kentucky felt bound by a new decision of the Supreme Court of the United States that States couldn't enforce antisedition laws and that this was a Federal matter. Hence, the accused was released. Further trials were abandoned as useless.

In October 1957, A. Scott Hamilton, commonwealth attorney at Louisville, told the Senate Internal Security Subcommittee the story of the part played by the Communists in the Louisville affair and how his efforts at prosecution were frustrated by the rulings of the Supreme Court of the United States.

In Praise of the Congressional Record

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 30, 1958

Mr. CURTIS of Massachusetts. Mr. Speaker, readers of that great Washington daily, the CONGRESSIONAL RECORD, will surely be interested in an understanding editorial from the Boston Herald of April 28, 1958, entitled "For the Record."

Under unanimous consent, I include it as part of my remarks, as follows:

Senator NEUBERGER, of Oregon, is an earnest young man who has little regard for stuffy traditions. Even his first-term status has not prevented him from unsettling the dust in the upper Chamber with daring proposals for reform.

In an article for the New York Times magazine he leveled his pen at one of the most hallowed senatorial and congressional practices, revision of the CONGRESSIONAL RECORD. And by and large he makes an excellent case.

A record, says the Senator severely, should be a record. Yet by custom the Nation's lawmakers are permitted completely to rewrite what they say "for the RECORD" before it appears in the official "proceeding and debates" of the Congress. They are permitted to delete whole sections of what they have said or to introduce lengthy speeches which were never delivered.

This, Mr. NEUBERGER feels, is a fraud on the very large readership—mostly nonpaying—of the CONGRESSIONAL RECORD and a dangerous perversion of history. He advocates a change in the rules so as to permit the editing of grammar only, not substance, and a much stricter limitation on insertions in the Appendix.

From the point of view of economy alone there is much to be said for this reform. The Government now shells out about $1,700,000 a year to publish 43,000 copies of the RECORD. And perhaps a third of that goes to the printing of recipes or the prize-winning essays of local high-school seniors. There is certainly a tremendous amount of padding and waste.

But can the useless material be eliminated without cutting into the real values which the RECORD gives us? If some Senators and Congressmen fill out their remarks with rhetorical flourishes and long-winded digressions, others insert material of the utmost pertinency and value. How distinguish between them?

It is bad to distort the debate on an issue after the fact. But a too literal transcription of extemporaneous comments may also create misconceptions. We might lose as much as we gain by stopping revisions of the RECORD.

We hate to admit, particularly to a man like Senator NEUBERGER, that we are in any way tradition bound. But we have gotten rather used to the RECORD the way it is. And we hope Congress won't jump too quickly to change it.

What New Yorker magazine flippantly refers to as "Wind on Capitol Hill" still has the capacity to refresh, when taken in moderation. Let Mr. NEUBERGER not blow too hot too soon.

Clean Laundry Locals Form New Council in AFL–CIO

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. REUSS. Mr. Speaker, since the new AFL–CIO Laundry and Dry Cleaning Trades International Union will hold its first convention here in Washington on May 12, 1958, a brief recital of the history of this new organization is appropriate at this time.

The story of the new Laundry and Dry Cleaning Trades Union is a tribute to the clean, courageous, responsible leaders and rank and file members of American labor who have worked and are working ceaselessly and dedicatedly to build the foundations for a better labor movement.

I am particularly interested in this new laundry workers' union because it was in my own city of Milwaukee that the Laundry and Dry Cleaning Trades International Council was formed earlier this year, and because a Milwaukee union leader, Arno Schulz, whom I know and respect, has played an extremely important part in the new union's creation and subsequent operation. Mr. Schulz is serving as provisional secretary-treasurer of the new International Union, as well as president of local 3008 in Milwaukee.

The following article from the AFL–CIO News of February 1, 1958, describes the new union's creation:

CLEAN LAUNDRY LOCALS FORM NEW COUNCIL IN AFL–CIO

(By Eugene A. Kelley)

MILWAUKEE.—A new clean Laundry and Cleaning Trades International Council was formed here by delegates representing locals with approximately half the membership of the discredited Laundry Workers International Union, expelled by the AFL–CIO convention.

The appointment of President Arno Schulz of directly affiliated local 3008 in this city as provisional secretary-treasurer of the LCTC was announced following the founding convention by Peter M. McGavin, assistant to AFL–CIO President George Meany, who presided at the sessions.

The headquarters of the council will be located in Milwaukee where several LWIU locals made the first break with their union and received direct AFL–CIO charters.

Four unions from widely separated sections of the country made applications for charters during the convention and delegates from a number of other locals said they would make application in the very near future following meetings to take this action.

The vote to establish the council was unanimous as was the vote to have McGavin designate provisional officers until another meeting of the council can be held. McGavin indicated that this would probably be set within 90 days.

He, said 17 former LWIU locals have seceded and been chartered by the AFL–CIO to form the nucleus of the new council.

No council charters, he made plain, will be given to any but former locals of LWIU. "There will be no charters for racketeers, hoodlums, or characters of dubious reputation," McGavin said.

McGavin called the council the forerunner of a new international union and told the delegates they faced the choice of remaining with a union corruptly dominated or reaffiliating with the AFL–CIO and building a union dedicated to legitimate principles and advancement of workers in the industry.

Mr. Speaker, formation of the new union came soon after the AFL–CIO, at its Atlantic City convention last December, expelled the Laundry Workers International Union, LWIU, on charges of domination by corrupt influences. The following article from the Milwaukee Journal of December 17, 1957, tells what happened:

LAUNDRY WORKERS OUSTED, WISCONSIN LOCAL WILL BOLT

(By John D. Pomfret)

ATLANTIC CITY, N. J.—The AFL–CIO Thursday expelled the 72,000-member Laundry Workers International Union (LWIU) on charges of domination by corrupt influences.

A spokesman for about 2,300 Wisconsin laundry workers immediately announced that his group was bolting the international union and would remain in the federation.

Arno Schulz, of Milwaukee, president of LWIU, local 174, said he has asked the AFL–CIO for a charter as a directly affiliated AFL–CIO Federal labor union. An AFL–CIO spokesman said that the charter would be issued.

Thus, local 174 will become the first unit of an outcast union to seek and be granted a charter to remain an AFL–CIO affiliate.

Local 174 has nearly 2,000 members in the laundry and dry cleaning industry in Milwaukee, 75 in Racine, 225 in Madison, and 13 in Oshkosh.

* * * * *

Schulz said that the membership of his union already had authorized him to take whatever steps were necessary to remain in the AFL–CIO.

Schulz's move to leave the union was the climax of a longstanding dispute between his local and the international.

Schulz, with the aid of Milwaukee laundry owners and the backing of the Wisconsin State Insurance Department, has waged a long and successful fight to take the welfare program of his local out of the hands of the international union's social security department.

Schulz, 45, was born in Sheboygan and brought to Milwaukee by his family at the age of 1. The son of poor parents, he quit school after the sixth grade to go to work.

He entered a laundry as a washman in 1932 and sold kitchen equipment at night. He was appointed business agent of local 174 on October 15, 1937. He later became secretary-treasurer and in 1940 was elected president.

He served as a vice president of the international union for 3 years during the 1940's. He is vice president of joint council No. 13 of the union, which covers Wisconsin, Minnesota, and Iowa.

Mr. Speaker, I am sure that we will watch with interest the continuing progress of the new AFL–CIO Laundry and Dry Cleaning Trades International Union in the forefront of our clean and responsible American labor movement. Steps taken to date give us confidence for the future, and are a credit to labor, to Milwaukee, to Wisconsin, and to the entire United States.

Sermon by Mrs. Neil M. Lieblich, President of Sisterhood Shaari Zedek, at Sisterhood Sabbath Services at Congregation Shaari Zedek, of Brooklyn, on Friday, March 7, 1958

EXTENSION OF REMARKS

OF

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1958

Mrs. KELLY of New York. Mr. Speaker, it is an unusual event for a woman to occupy the pulpit on a Sabbath, but this great honor was recently conferred on my good friend, Mrs. Sarah Lieblich, a gracious lady, loved and respected by all in our community. The occasion commemorated the festive holiday of Purim.

This holiday is an annual observance of the biblical festival as recounted in the Book of Esther which is reread on the eve of the day of the festival and is also dedicated to the memory of a woman, Queen Esther, a Jewess, who turned a day of weeping into a day of happiness.

Queen Esther was successful in convincing King Ahasverus to rescind a decree issued by the king empowering his deputy, Haman, to wreak his vengeance on the Jews in his empire extending from India even to the borders of Ethiopia.

The queen fortified with proof, beauty, and charm assured King Ahasverus that the Jews were loyal subjects of his kingdom but rather that Haman was plotting and planning against the king and his household. Haman and his followers were executed on the very gallows that he, Haman, built to execute the Jews.

Thus a woman, Queen Esther, turned a day of sadness and sorrow into a day of rejoicing.

Worthy rabbi, cantor, officers, members, friends of Shaari Zedek, many stories have been told of the creation of man, and this allegory is one of them.

Since God created man in His own image, He decided: "What better way to do this—than to just chip off pieces of His precious self and send them earthward?" That he did.

Some of these precious bits fell on pure white sand; some fell on yellow sand; some were immersed in black earth; and others fell on brown sod. They then began to take on the outward appearances of the land in which they were born—and they continued to fulfill their destiny on earth until they once again were called unto Him on judgment day.

What do you think was the basis upon which each was judged? Was it the material goods he had accumulated during his sojourn on earth? Was it anything related to the outer appearances of man? You know the answer: God sought out in each of His children that which He had originally sent down to earth. How unblemished was this precious item He had instilled in each human being? How much of the original soul and spirit remained? Those are His criteria.

What are our own criteria for judging man? What makes someone a good or a bad neighbor? It is for the purpose of clarifying our thinking about our fellow man that I want you to go with me—not behind the Iron Curtain, nor into Asia, Africa, or other farflung places where historians of great note have taken us—but into our neighboring community, better known as Bedford Stuyvesant.

Who are these people? What are they like? What makes them what they are—and, of course, what is our responsibility to our brethren elsewhere?

Let us first look into the history, if you will, of this neighborhood roughly bounded by Myrtle Avenue, Reid-Utica Avenues, Fulton Street, and Franklin Avenue. The houses in this section are predominantly brownstone—1-, 2-, and 3-family dwellings. Scattered here and there still are five-story walkup tenements and a few elevator apartment houses.

This was the paradise to which the people on the lower East Side had emigrated at the beginning of the century. Trees are plentiful, even several small parks dot this area, and wherever the eye turns, a house of worship is evident.

Who came across the East River? You and I know well these people. Many of us are descendents of the Jews who came to this land of opportunity at the close of the 19th century. Then there were also Italians and Germans who had fled famine in Europe and came to these shores to settle here.

These people worked hard—in factories—better known in those days as sweatshops—or set themselves up in small businesses. They labored so that their children could have greater educational and cultural opportunities than they had had—and in a large measure, they were successful in achieving their goals.

They made the grade—and immediately sought to better themselves physically as well as culturally; and so the exodus began.

Examine with me these families—their interests and aspirations. It's easy to tell about them—for it's almost biographical. Papa worked from early morn till late at night. Mamma was in her house all day—cooking, cleaning, sewing, baking—and ready to serve each member of the family as he

returned from his daily chores. She was always able to meet the changing circumstances of a given day. If it rained all day, we found rare dishes native to her home on the table that night to imbibe, and to exclaim about.

What else, said she, was there for her to do—except to cook or bake something special? She listened to her programs on the radio while she worked and the psychology she learned and the psychiatric analyses she heard—she immediately put to use on her family.

Mamma was never too tired to listen to the gripes and grumblings of her children. "All," said she, "so that when Papa comes home everything must be calm and peaceful so he can eat and enjoy his meal in peace." After his dinner, then the family confabs or pow-wows started. Each one made his demands upon Papa—and slowly—and not always to everyone's liking—all problems were resolved, and the family made ready for a peaceful night's sleep to be alert for the day to come.

Recreation? Of course. So the children went to an occasional movie or vaudeville show—and as they grew older, to a neighborhood stock company performance. The folks went to a benefit show now and then and occasionally the whole family had to attend a union or political rally or even a concert. This was the family working, striving, and enjoying life together, and trying to get the most out of life for all, for it was truly all for one—one for all.

Then, one by one the children went on to higher learning or professional pursuits or became wage earners and soon the family became restless and made ready for the exodus.

These people left Bedford Stuyvesant many years ago—but the houses in which they lived still stand—and there are people living in them—who have that selfsame precious bit in them as did the people who came before them. Who now occupies these old, dilapidated houses—some without central heat or hot water? Primarily, the Negro who came into this area because he, too, was trying to better himself physically and culturally. The wage earner in these families took the places of the former workers in the sweatshops—now known as 40- or 44-hour factories—or bought small businesses, some of which are still open 7 days a week and 14 hours a day.

The cycle has started. Let us not for 1 moment minimize these people who came into Bedford Stuyvesant and are still coming into the area—be it an influx of Negroes or as is now the case—Puerto Ricans.

These families move here because they hope for a far better life than they've ever had. They, too, have aspirations for their children and themselves. They, too, wanted to improve their surroundings and also want to improve their financial and social status.

You remember the stories told by our parents and grandparents of the relatives who came from their native land and who stayed with them for months, and some for years; until they could send for their families and set up households of their own. I remember Jonah who lived with my family even before my time—and then brought his own family here and settled in Liberty, N. Y. I got to know Jonah because he was an integral part of my family. And every time that he came to New York City, he stayed with us. Our family was his family until his own family came to these shores. These ties bound us together until death did us part. This was the essence of brotherhood in practice.

Today the same pattern is followed. The wage earner comes up from the South or from Puerto Rico; settles with a relative or friend; tries to find work, and then is caught in the maelstrom of 20th century living; no, not living, existing. He stays with a relative or friend—but not a family—for there's no family life to speak of. The 1958 concept of a family is far different than the one held by our predecessors at the beginning of the century. Blame this change on the present day tensions that are within all of us; blame it on the spiralling cost of living that necessitates more than one wage earner per family; blame it on antiquated, inadequate, and overpriced housing; blame it on society in general. We who permit our governments—city, State, and Federal—to lag a generation or two behind the needs of the people in housing, education, medicine, mental hygiene, and every conceivable area that answers man's needs. And you know what's happening: it's often too little that comes too late.

Oh, it's so easy to throw up your hands and even utter a few not such nice words when you get into your car for a relaxing drive—and make no headway on the streets—or can't find a place to park once you've gotten to your destination. Isn't there something wrong with our present day civilization when you are given the opportunity to achieve but can't make proper use of your achievements that you've gotten by dint of hard work?

We're all full of frustrations. But those, who are struggling to make material ends meet, have—you'll have to admit—far greater problems. Whereas a good percentage—yes, the greater number of us, no matter how great the pressures from without, can solve our problems within the confines of the law—there is always a group in our society that takes the easy way out—hurting others as they seek refuge from their problems in drink, dope, and other forms of social behavior.

What shall we do with Raymond who at 8 years of age brings an iron wrench to school ("My uncle gave it to me," he said), and hits another child with it. Fortunately no one was badly hurt. But Raymond's father deserted him—but lives close enough to tear this child asunder from his mother wherever he gets the urge to see him or buy him a new outfit, or give him 25 cents spending money. So last week, Raymond's mother decided to go out to work to earn some extra money for her spring outfit, and she told Raymond, "Go to your father this week and let him take care of you." She didn't desert him. At least so she thought—but Raymond felt differently and he showed how hurt he was. Now Raymond is suspended until his parents are brought to trial. Who is to blame? Who should be brought to trial?

Then there's Robert, 12 years old, native born, and can't read a single word—yet intelligent. His mother is in heaven, he hopes, after bringing 4 children into the world, each having a different father. Grandmother is caring for these children as she cares for 4 other children of her own. These children have daily prayer services at home (one of grandmother's tenants is a preacher). But this 12-year-old cuddles up to you as an infant does, wanting a kind word and a smile, feeling the world has deprived him of his own family, of his own place in the sun—and we have.

I could go on and on, but what does it all add up to? Are we to close our eyes, close our doors, not venture out from our homes in the hope that a miracle will happen?

Shall we be part of the exodus and say, "Let them solve their problems as we did."

It's not that easy. They can't solve them alone because we, society, have placed too heavy a burden upon their shoulders. Their earnings are meager, their children ill-fed or not fed at all, their homes are squalid, their family is scattered as their souls are splintered and their spirits broken.

They tell us and we are well aware that the world is getting smaller. Billions of dollars go up in smoke when a Vanguard fails, and more billions are wasted as our supposed defense mechanisms become obsolete before they're ever used. No, we can't feel smug here in our beautiful Temple, nor in our well appointed homes, without at least raising our voices in defense of our fellow man who cries out for help, but whom we permit to drown in a sea of despair and hopelessness.

Let us, therefore, as we go forth tonight—each in his own way—lift a finger, raise a hand, yes, even help to raise another's hand, so he, too, can reach out for a better life.

And then, with Arthur Guiterman, the poet, we can repeat:

"No printed word or spoken plea,
Can teach young hearts what men should be;
Not all the books on all the shelves,
But what we, the people are ourselves."

A Great Contribution to International Understanding: Thirty-three Thousand Fulbright Scholars in 10 Years

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. REUSS. Mr. Speaker, of all the programs engaged in by the United States to advance international understanding and to promote good will between our citizens and the peoples of other nations of the world, none has been more effective or more successful than the program of scholarships which bears the name of the distinguished Senator from Arkansas, the Honorable J. WILLIAM FULBRIGHT.

It was just 10 years ago that the first Fulbright scholarships were awarded. The program since then has proven its worth many times over, and our investment in it will continue to be repaid with dividends of knowledge and friendship for many years. Of course, the Fulbright scholarship program will be continued, and I hope it will be extended soon to include participation by all nations.

I submit for the RECORD an editorial tribute to Senator FULBRIGHT and the scholarship program from the Milwaukee Journal of April 29, 1958:

THIRTY-THREE THOUSAND FULBRIGHT SCHOLARS

When the first Fulbright scholarships were awarded just 10 years ago, they went to 65 Americans and 36 foreigners. It was a modest beginning for a program that since has led to the largest international educational exchange in history.

The program was founded August 1, 1946, when the 79th Congress passed Public Law 584, originated by Senator J. WILLIAM FULBRIGHT, Democrat, of Arkansas, for the promotion of international understanding. Two years of patient spadework followed before the program started to roll.

By the fall of 1947, the first two educational exchange agreements had been signed. The Fulbright Act, as it came to be known, authorized the sale of American military surplus goods to foreign governments for their own currencies, with the understanding that part of the funds would be set aside to finance educational exchanges. The program later was augmented by Congress with further financial support.

As of this year, approximately 33,000 people have received Fulbright grants, including some 4,000 in 1958. They include Americans for whom the program has financed graduate study, advanced research, university lecturing, or teaching abroad, and foreign citizens for whom it has provided travel funds so that they could come to the United States to study, teach, and train.

Fulbright scholarships this year are being exchanged between the United States and 31 other countries. Since the program's inception, 39 different countries have participated. Senator FULBRIGHT said recently that he hoped there eventually would be Fulbright scholars in the Soviet Union and that Russian scholars would come here under the program.

Extending the program to Russia would be in keeping with the stated purpose of the act: "To promote a better understanding of the United States in other countries and to increase mutual understanding between the people of the United States and the people of other countries."

In just one decade the Fulbright Act has done much to widen the range of international contacts between scholars and teachers. In its second decade it could become a potent force for understanding between the United States and Russia.

The 39th Annual Convention of the United States Army Ambulance Service Association

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. VAN ZANDT. Mr. Speaker, this year the United States Army Ambulance Service Association will celebrate the 40th anniversary of the return home from World War I of the thousands of young Americans who formed the United States Army Ambulance Corps during World War I and served with heroic devotion as an integral part of the American, French, and Italian Armies during that conflict. The year 1958 also marks the 42d anniversary of the opening of Camp Crane, Allentown, Pa., which was the training site of the United States Army Ambulance Service.

Organized in Paris, France, in 1918 to perpetuate the friendships formed in the ambulance service during World War I, the United States Army Ambulance Service Association will meet this year in Boston, Mass., for the 39th annual convention.

In connection with the activities of the United States Army Ambulance Service Association and its plans for observing the 40th anniversary of returning home from World War I and the 42d anniversary of the opening of Camp Crane, as well as the convening of the 39th annual convention, Past National Commander Albert E. Herrmann has prepared the following article in commemoration of the three events which, at this point, I include in my remarks:

COMMEMORATING USAAC'S 40TH ANNIVERSARY

In May 1917, in Philadelphia and all parts of Pennsylvania, young men joined the United States Army Ambulance Corps, as an integral part of the Medical Department of the United States Army, to serve with the American, French and Italian armies, in June the groups from different sections of the Commonwealth of Pennsylvania entrained to Allentown, Pa., and at the fair grounds, Camp Crane was opened.

Many colleges and universities of Pennsylvania sent groups to the USAAC's at Allentown, Pa., and representatives were from University of Pennsylvania, State College, Lafayette College, Temple University, Susquehanna University, and Bucknell College. Community groups came from Philadelphia, Allentown, Wilkes-Barre, Reading, Pottsville, Pittsburgh, Scranton, Johnstown, Susquehanna, the United States Rubber Co., and the Packard Motors of Philadelphia sent sections for training.

In 1917 the first group of USAAC's left for overseas to serve with the French army, later with the Italian army, and then with the American AEF when they went into the front line service.

In Paris, France, in 1918, the organization now known as the United States Army Ambulance Service Association was formed, by Lt. Col. A. Piatt Andrew, who served with the French army, later with the USAAC's, and who served as a member of the 67th Congress, to which he was elected September 27, 1921, to fill unexpired term, and to succeeding Congress, until his death. Lieutenant Colonel Andrews with other representatives of the USAAC's with many Pennsylvanians, held their first annual convention, June 8–10, 1920 at Allentown, Pa., and elected national officers.

The 39th annual convention, will be held this year, July 17, 18, 19, and 20, at Boston, Mass., and the following national officers serving the organization: Commander, Warren S. Ward, of Lewistown, Pa.; senior vice commander, Rudolph L. Wilhelm, of Bloomfield, N. J.; junior vice commander, Robert W. Faulkner, of Elkins Park, Pa.; treasurer, James J. Cummings, of Philadelphia, Pa.; adjutant, Charles L. Winkler, of Philadelphia, Pa.; chaplain, Rev. Guy A. Bensinger, of Dutch Neck, N. J.; editor, USAAC Bulletin, William B. O'Brien of Milton, Mass.; service officer, Frank J. Williams, of Buffalo, N. Y.; and publicity director, Albert E. Herrmann, of Philadelphia, Pa.

National trustees, James M. E. Boes, Philadelphia, Pa.; Les Craigen, of Seattle, Wash.; Ed Heflinger, of Pasadena, Calif.; Al Sommers of Montgomery, Ala.; and Robert W. Rhoades, of Euclid, Ohio.

Regional commanders, North, Fred B. Huebenthal, of Maywood, Ill.; East, Kenneth R. Moore, of Philadelphia, Pa.; West, William D. Sullivan, of Los Angeles, Calif.; and South, G. Wade Earle of Sarasota, Fla.

Post No. 1 of the USAAC's will hold their 40th anniversary banquet on Saturday evening, June 7, in Philadelphia, Pa., national officers of the association, members of the New Jersey, New York, Batavia, Johnstown, Atlantic City, Boston, and Allentown clubs will attend. Comdr. Edward P. Kasten will preside and Senior Vice Commander Clarence E. Keifrider has been appointed chairman. The local committee for distinguished guests will be William J. Raudenbush, Albert E. Herrmann, F. Warren King, Robert W. Faulkner, George E. Wilson, Fullwood P. Hayes, Charles E. Ashford, Gustave Blind, Thomas H. Ellis, Frank E. Olds, James D. Hill, J. Harry Davis, Rev. William F. Wefer, Rev. Guy A. Bensinger, James M. E. Boes, Von H. Byre, I. Edward Cohen, J. J. Cummings, C. J. Winkler, Renato DiLauro, H. E. Dunstan, L. Floro, Col. F. E. Hendler, Ted W. Hissey, C. L. Hoag, H. G. Huf, S. La Noce, P. A. Meglio, K. B. Moore, J. N. Morgan, John O. Parcell, James R. Parris, W. N. Price, H. A. Sattler, and J. H. Hodges.

National Commander Warren S. Ward has pointed Horace Wood of Milton, Mass., as chairman of the national convention committee who will serve with the following members from Boston: William B. O'Brien, Ray Wolloff, Harold Rutledge, Russ Maintain, Dr. Bill Loker, Dr. Bill Baumgartner, Bill Herbits, Bob Allison, Ted Kemp, Jim Collins, Bert Cone, Clint Hannaford, Bill Boyle, Judge George Jones, Matt Arnold, Ed. Simmons, Bill Clifford, Ray Hinds, and Jack Murray. Headquarters will be at the Somerset Hotel.

Statement of David J. McDonald on Current Unemployment Problems

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. MULTER. Mr. Speaker, on April 28, 1958, David J. McDonald, president of of the United Steelworkers of America, appeared before the House Banking and Currency Committee, of which I have the honor to be a member. Mr. McDonald's testimony was most enlightening and I commend it to the attention of our colleagues, as follows:

STATEMENT OF DAVID J. MCDONALD, PRESIDENT, UNITED STEELWORKERS OF AMERICA, ON CURRENT UNEMPLOYMENT PROBLEMS AND NECESSARY CORRECTIVE MEASURES, BEFORE THE HOUSE OF REPRESENTATIVES COMMITTEE ON BANKING AND CURRENCY, APRIL 28, 1958

My name is David J. McDonald. I am president of the United Steelworkers of America. I wish to thank this committee for affording me an opportunity to present the views of my union concerning the unemployment problems facing steelworkers and labor generally.

It is clear that the state of the national economy is not good. Unemployment has doubled in the short space of 6 months. Industrial production has declined almost 12 percent in the same period. And almost all of the other important economic indicators continue to reflect downward movements.

In many industries the situation is far worse. In basic steel, production in early April has a full 50 percent lower than a year ago and was actually 20 percent lower than production a decade ago in the years 1947 through 1949. From the latter part of 1956, when the steel industry was operating close to capacity, to February 1958, employment declined by 22 percent, a los sof 114,000 jobs. In addition, the length of the average workweek was cut by 6.4 hours, which is the equivalent of an additional loss of 65,000 jobs in the industry. Based on an even lower operating rate in April it is apparent that the loss in employment in basic steel to date by reason of layoffs and reduced workweeks approximates 220,000. As a result, employment of production and maintenance workers in the basic steel industry has declined to about 400,000, or approximately 100,000 less workers than in 1937. This significantly smaller work force, incidentally, is producing steel ingots at an annual rate 19 percent above actual production in 1937.

In the other industries in which the union's members are normally employed—nonferrous metals, iron ore, and metal fabricating—the unemployment rate is almost as high as in the steel industry. Altogether, there are about 250,000 of our members who have been laid off and another 350,000 who are on reduced workweeks in the United States. In other words, half of the United

steelworkers' entire membership is facing serious family economic difficulties.

As the collective bargaining representatives of these workers the union has succeeded in gaining certain benefits which have helped not only those affected by layoffs and reduced workweeks, and their families, but also their neighborhood merchants and in some cases entire communities. I am referring to the supplementary unemployment benefits plans which we negotiated in 1955 and 1956. Under these plans tens of thousands of workers have received, and are receiving, supplementary compensation which, together with woefully inadequate State unemployment compensation benefits, equals about 65 percent of the employee's normal take-home pay. Benefits paid out, or due under these plans to date approximate $26 million and, in numerous communities, have more than proven their worth in terms of relieving serious economic hardship for individual steelworker families as well as others who depend upon their continued ability to buy goods and services. We are proud of this direct contribution which we have been able to make through collective bargaining toward mitigating the human misery caused by unemployment.

Helpful as these supplementary unemployment benefits programs are in so many communities to offset partially the effects of the recession, in some quarters vicious and unthinking attempts still are being made to block them—notably in Ohio and Indiana. In Ohio, for example, the State is preventing the payment of about $6 million in benefits already accrued and held in escrow for unemployed Ohio workers despite the fact that both the common pleas court and the seventh district court of appeals have ruled that their payment is permitted under present Ohio law. In Indiana the State legislature has succeeded in preventing supplementation, thus forcing the supplementary unemployment benefits trust funds to make up for the loss of State unemployment compensation which has been denied to workers receiving supplementary unemployment benefits.

These are two outstanding examples of the inhuman type of action taken to prevent and limit the payment of vitally needed unemployment benefits. These harmful actions are paralleled by equally serious State inaction. There is not one State in which the State unemployment compensation laws are not outmoded or where such laws now serve the purpose for which they were established. State unemployment compensation laws are inadequate throughout the United States with respect to levels of benefits, duration of benefits, and basic coverage. One of the important reasons these laws are so poor is the lack of basic Federal minimum standards. Appeals to the various States for necessary improvements, even when made by the President of the United States, have fallen largely on deaf ears.

The Nation's economic problems have served to highlight the urgent necessity for Federal action. The Kennedy-McCarthy bill (S. 3244, H. R. 10570) which would establish Federal minimum standards for unemployment compensation laws should become law without further delay. It would result in immediately adding to the purchasing power of unemployed workers covered by present State laws as well as additional millions of workers who are not covered by present laws or who already have exhausted their benefits, or who live in States with such backward State administration as those in Ohio and Indiana.

While adequate unemployment compensation is urgently needed to relieve some of the economic difficulties of the unemployed by offsetting a portion of the loss of purchasing power caused by unemployment, such compensation cannot provide the stimulus necessary to return these men and women to gainful employment. This problem obviously requires other actions. Certain positive steps toward stimulating the economy have been taken by the Congress, but much more remains to be done.

It seems to me that the observable tendency of the administration to wait and see, and to hope for the best stems largely from a failure to look objectively at our economy and to determine its needs. The Employment Act of 1946 requires, among other things, that the needed levels of employment, production, and purchasing power consistent with full prosperity for all be set forth clearly for everyone to see—presumably so that needed corrective action can be taken promptly at times such as this. Those mainly responsible for administration of the act have refused to implement the act. As a result, with goals unstated, today's serious economic downturn is passed off as a business readjustment. A rising level of unemployment, instead of resulting in action to reverse the trend, becomes the basis for a discussion of how much unemployment is serious. Production losses amounting to tens of billions of dollars, instead of signalling for all possible steps to halt such a gigantic loss, sets a number of people to figuring that, compared to 5 or 10 or 20 years ago, we are really doing fine.

If we do not pause periodically to take stock of where we are in relation to where we want to be and ought to be, we are inviting trouble. Economic drifting is insidious. If today there are those who refuse to concern themselves about 5 to 6 million unemployed, this will become the floor from which the number of unemployed could rise by several more million without unduly concerning these same people.

Establishing realistic goals for our economy would enable us to see when and where we are lagging and even suggest appropriate actions in support of the unanimous desire to keep our economy expanding and prosperous.

This is a legitimate function of government; one which is, in fact, set forth as the intent of the Congress in the Employment Act of 1946. I recommend that this act be fully implemented and one step in this direction could be the creation of an Advisory Commission by the President of the United States. Such a Commission, composed of appropriate representatives of major industrial companies, of major unions, of agriculture, small business and consumers, could provide vitally needed information, experience and advice which the President and his economic advisers could utilize in carrying out their responsibilities under the act.

For the present it is squarely up to the Congress to provide leadership in the task of helping to turn the economy toward full employment and full production. Many suggestions have been advanced for Federal action. A good many relate to Federal spending and tax policies. As I interpret the pros and cons put forth with respect to increased Federal expenditures and income-tax reduction, there seems to be an area of general agreement that such measures are likely to increase the level of economic activity, production, and employment. But the arguments of those opposed to such corrective measures seem to center about the contentions that a rising price level is our main problem, that increased Federal spending automatically will add impetus to higher prices in some future period and, accordingly, that it is better to let the economy limp along in the hope that this inaction will depress prices.

I am as opposed to inflation as any man who is not deeply in debt. A continuously rising price level hurts many people and interferes with the orderly growth of our economy. But I am unable to understand the blindness and the callousness of those who insist that our first and most important problem is to speculate about a rising price level in the future when month after month prices continue to rise now in the midst of a recession.

I say they are blind because it is clear that the price level continues to move up not because of excessive demand for materials and goods and services, not because of an unbalanced Federal budget, not because of a loose money policy—because none of these exist. Those major industries where prices are administered and where pricing policies have been designed to yield ever-increasing profits and profit margins are responsible for the paradox of a rising price level in a period of falling demand, falling production, and increasing unemployment.

I say those who oppose Federal action are callous because the problems of the millions of unemployed are as nothing to them.

There can be no denying that a Federal tax cut and significantly increased Federal expenditures will result in a temporary deficit. But a deficit of $10 billion or even more is a small price to pay for reversing the economic tide and ending losses of production, profits, dividends, wages, and salaries equal to an estimated $40 billion a year.

With these facts in mind the international executive board of the United Steelworkers of America, meeting in Washington, D. C., on March 17, 1958, formulated the following 9-point program designed to place us on the road to recovery:

1. Cut Federal income taxes for lower-income groups: The tax cut should be concentrated at the lower and middle part of the income scale by increasing the present $600 a year individual exemption and reducing the tax rate of 20 percent on the first $2,000 of taxable income. The tax savings would strengthen consumer demand for many types of consumer goods.

2. Eliminate or reduce most Federal excise taxes: Reduction or elimination of the 10-percent tax on such products and services as automobiles, tires, tubes, luggage, transportation, communication, and others would result in lower prices and, accordingly, would stimulate demand. Most of these taxes were enacted originally to reduce demand. Surely no such purpose is desired today.

3. Enact the Kennedy-McCarthy bill to raise and extend unemployment compensation benefits: Average benefits of about $30 a week are wholly inadequate and must be increased. The duration of benefits must be lengthened and the program extended to many now excluded.

4. Institute a broad program of constructive and much-needed public works. The needs of the country are great. For an extended period there has been a lag in the construction of such necessary public facilities as hospitals, post offices, and other Federal buildings, harbor development, airports, parks, and others. Now, when there is no shortage of materials or labor, is the time to make these necessary improvements which will add to the health and wealth of the Nation and its people, future as well as present.

5. Adopt an expanded Federal housing program: Despite an estimated need for 2 million new homes a year, new housing starts are currently at a rate of less than 1 million.

A Federal housing program is required which will step up slum clearance and public housing, and make available funds for long-term, low-interest mortgages which people with modest incomes can afford.

6. Pass a Federal school-construction bill: In many parts of the country, State, county, and local governments have been unable even to keep up with school-replacement requirements, to say nothing of the educational needs of a growing population. A Federal program of grants and low-interest bearing loans would represent an excellent investment from which dividends will be reaped by many generations of Americans.

7. Provide economic aid for distressed areas: There are numerous areas in the United States which have suffered economic distress for extended periods. The problems of these areas predate the current recession. Without a constructive program and Federal assistance many localities will continue to have serious economic problems even if the condition of the national economy improves.

8. Increase the Federal minimum wage to $1.25 per hour and expand the coverage of the Fair Labor Standards Act: The present minimum wage of $1 an hour is completely inadequate even to provide a subsistence level of existence. Furthermore, many millions of workers are excluded from coverage of the act. On the basis of simple equity it should be broadened to include as many workers as can be covered by Federal law and its minimum wage requirement raised to $1.25 an hour. Furthermore, substandard wages produce a substandard level of buying and are a drag on the economy.

9. Implement the Employment Act of 1946 by other appropriate Federal action: Although the language of the Employment Act seems perfectly clear, further clarification may be needed to bring administrative performance into line with congressional intent.

This program of action adopted by the international executive board of the United Steelworkers of America we believe is necessary now in order to end the serious economic recession. We also believe that through collective bargaining management and labor can play a constructive role in restoring the economic health of our country by negotiating appropriate wage increases at this time.

There are individuals who, although they understand that the underlying cause of the economic downturn is insufficient demand, nevertheless persist in advocating the freezing of wages. As a means of lifting the level of total demand for goods and services, this would be as effective as tying an anchor to a boat in order to make it go.

The gross national expenditures of the United States last year amounted to $434.4 billion. These expenditures are generally broken down into four major subdivisions: personal consumption expenditures, Government purchases, private domestic investment, and net foreign investment.

Each category of expenditure obviously is important in the total economic picture, but the importance of consumer spending and the purchasing power on which it depends stands forth clearly when these categories are ranked in order of their dollar expenditures. The gross national product of $434.4 billion last year was made up of the following:

Personal consumption expenditures, $280.4 billion (64.6 percent).

Government purchases, $86.4 billion (19.9 percent).

Private domestic investment, $64.4 billion (14.8 percent).

Net foreign investment, $3.2 billion (0.7 percent).

In addition to granting appropriate wage increases, industry should be encouraged to effect price reductions where inflated profit margins have been created by excessive price increases. Such action would contribute greatly to stimulating consumer spending which would be reflected in increased employment and production.

Finally, although there is little doubt that constructive action which will end the recession also will improve, to some degree the economic condition of those particular areas which have come to be known as chronically depressed or distressed areas, additional attention should be paid to this problem.

Before this economic downturn there were, in January 1957, 19 major employment centers and 59 smaller areas with substantial unemployment. Our union represents workers in many of these unfortunate communities. Special legislative action is called for. Several years ago as a member of the Randall Commission on Foreign Economic Policy, I had occasion to examine this problem in relation to hardships which might be caused to particular industries and areas by substantially increased imports. My conclusions were that although economic injury would be quite limited, it was essential that adequate provision be made to ease the impact of the necessary economic adjustments. I recommended that there be provision for technical assistance to companies and communities affected, loan assistance for the purpose of diversification of existing businesses, preference in the placement of Government contracts, special unemployment insurance for displaced workers, and intensive counseling and placement of workers, retraining facilities, and moving allowances where relocation was required. Pending bills H. R. 9505 and H. R. 1105, on the establishment of a trade adjustment program, include provisions consistent with these recommendations. The program embodied in these bills should be enacted.

We also believe that the provisions of H. R. 6215, introduced by Representative BRENT SPENCE, of Kentucky, the chairman of this committee, is a constructive measure designed to redevelop areas suffering from chronic economic distress and our union urges the passage of this bill.

Because of the urgent necessity for action at the earliest possible moment in order to relieve the hardships of the millions of Americans affected by this economic recession, and to end the truly gigantic losses of production which stem from it, the steelworkers earnestly beseech your immediate consideration of the program for economic recovery which we have recommended.

I appreciate very much this opportunity of presenting the views of the members of the United Steelworkers of America with respect to this most important problem which affects the welfare of all of the American people.

H. R. 12065

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. SCHWENGEL. Mr. Speaker, the Governor of the State of Iowa and his employment security commission have been studying the implications of H. R. 12065 as it relates to the unemployment problem of Iowa, and after apparent complete study they have reached the conclusion that certain sections of this bill are impractical, and I would like to place a telegram from Gov. Herschel Loveless on this subject in the RECORD:

DES MOINES, IOWA, *May 1, 1958.*

Hon. FRED SCHWENGEL,
House Office Building,
Washington, D. C.:

After consultation with Iowa Employment Security Commission, I respectfully urge your support of title I, H. R. 12065, for the extension of unemployment compensation. During first quarter 1958, 5,564 covered workers exhausted their benefits in Iowa. For entire year 1957 exhaustions totaled 12,232. Immediate benefits could be provided for these unemployed workers by enactment of title I. Title II, H. R. 12065, would eventually provide desirable benefits for substantial number of unemployed not now eligible but lack of records and information on earnings would pose extremely difficult administrative problems with title II. Am advised by employment security commission that they would encounter little or no difficulty in administering title I, but that title II would require substantial addition to administrative staff and require at least 6 months before any benefits could be paid to workers affected by title II.

HERSCHEL C. LOVELESS,
Governor of Iowa.

The 10th Anniversary of the State of Israel

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. DENT. Mr. Speaker, on this occasion of the 10th anniversary of the founding of the State of Israel I have the great privilege to pay my deep respects to the men and women who have struggled courageously to recreate a Jewish homeland. Today Israel is the 10-year-old fulfillment of a 1,800-year-old dream of the Jewish people. Since the destruction of the second temple in A. D. 70 by the conquering armies of the Roman Emperor, Titus, the Jews have wandered over the earth. The wish to return to their land to reestablish a Jewish commonwealth has ever been present in the hearts of many of the Jewish people. I personally derive a great feeling of satisfaction from the fact that the United States supported the cause of the Jewish people for a homeland after the Second World War. The United States has also continued to promote peace and stability in the Middle East as the only solution for the future welfare of the peoples of the Arab countries as well as of Israel.

The greatest achievement of this first decade has been the immigration of 1 million Jews to Israel and their assimilation into the new country. The first Israeli Parliament, elected in January 1949, enacted the Law of Return which opened the country to all Jews who desire to settle. An unwritten law had been in effect since the beginning of independence and embodies the vision that the new Israeli State would be a haven where any Jewish person might live in freedom and build for the future. Jews arrived from all of the eastern European countries, from Kurdistan, Morocco, Iraq, England, Yemen, and as far away as Shanghai and Bombay during the first decade. In 1948 there were 650,000 Jewish inhabitants, including about 1,800,000 Jews and 214,000 Arabs. No other country has grown so rapidly in an equal span of time. And the immigration has not ceased. Between 1957 and 1962 the Zionist leaders have planned to bring 600,000 immigrants to the Jewish homeland.

The increase in the agricultural and industrial production has been an achievement second only to the popula-

tion expansion. The Biblical landscape, where the "plants are an orchard of pomegranates, with pleasant fruits; spikenard and saffron; calamus and cinnamon; with all trees of frankincense, myrrh and aloes" had long ago disappeared. The countryside, which had reverted to desert land through the centuries, was barren and rocky. Except for the narrow strip along the seacoast, the land could not sustain many people.

Although Israel was under the constant surveillance by the rifles of hostile neighbors, the Israeli Government instituted a vigorous development program to provide land and a place in the national economy for the unending stream of immigrants. Modern agricultural methods, equipment and education have been put to work to increase cultivated areas by nearly 300 percent. A national irrigation program, which will be completed by 1961, has already put 400 percent more land under cultivation. The agricultural effort has been highly successful in increasing the productivity of the land. The yield from the land has been raised threefold and now supplies about 70 percent of the country's food requirement. It is self-sufficient in vegetables, eggs and poultry. Although foodstuffs are the main export commodity, chiefly citrus fruits, which comprise 42 percent of Israel's total exports, industrial production has risen 500 percent to augment the export trade. Among the new industries which have been opened are steel, fertilizers, tires and other rubber goods, paper products, piping, diesel engines, electrical appliances, and the assembly of motorcars and refrigerators. Textiles, plastics, all essential household items and any products are made locally.

It is invigorating to observe how ardently the Israeli Government has attacked the problem of a trade inbalance. There is a noticible determination on the part of the entire people to make the country self-sustaining where possible. Progress has been made; the formidable trade ration of 9 to 1 has been reduced to 4 to 1. This means that Israel is now producing more and buying less, and is on the way to putting its national economy on a firmer foundation. The purchase of defense equipment in foreign markets continues to bite deep into the trade balance. Today Israel exports its products to 80 countries throughout the world. I can say with pride that Israel exports more to the United States than to any other nation, over 22 percent of its total trade. It is evident, therefore, that Israel has an expanding economy, although it will be dependent on foreign assistance for the next decade.

The Government's program for the second decade is bolder and more daring than that of the first decade. It plans to open up and to colonize the southern desert area of the Negev and to establish agricultural and industrial settlements in central and upper Galilee. Exploration and investment in the Negev will open up a rich storehouse of natural resources. The legendary mines of King Solomon with all their wealth have been rediscovered in this area. The Dead Sea contains abundant deposits of potash and other raw materials for a large chemical industry. Already a growing chemical industry contributes 7 percent to the total industrial output. Deposits of phosphates, manganese, copper, iron, feldspar, and mica have been unearthed. Oil strikes have proved that the Negev has reserves of high-grade petroleum—a necessary item in a national economy which has to spend roughly $34 million annually on imported fuel. A domestic source of fuel is important since the Arab nations have levied an embargo on oil to Israel.

Water and labor are necessary, however, to make the country again flow with milk and honey as of old. The Jewish settlers have clearly shown by the results of the last 10 years that they can work and work hard. The country does have enough land to support a larger population, but there is a critical lack of water, as there is through the entire Middle East. More exactly, there is a sufficient amount of water, but it is just not in the right places. The most pressing need at the present time, therefore, is an irrigation program to make the Negev bloom and to generate more electrical power to supply the infant industries.

The future advancement of the country is based on the execution of a national irrigation project. A large part of the nation's irrigation project has already been realized. The real solution to the problem is to pipe water down from the north, where it is available. In 1955 a pipeline was opened from the Yarkon River to the Negev. The project of saving the storm waters of the big Hulah Swamps for all-year agricultural production is more than 50 percent completed. By 1961 it is anticipated that the nationwide irrigation program will have fully exploited all available indigenous sources of water. The project envisions the channeling of the River Jordan and its tributaries, which can supply one-quarter of Israel's annual requirement. But the Jordan River irrigation project is inseparably tied in with the complex question of Arab-Israeli relations and a resolution of this stalemate might open the way for further discussion of regional development and the Arab refugee question.

The completion of the irrigation project is predicated upon an agreement with the neighboring Arab state of Jordan for the harnessing of the Jordan River waters. There is not sufficient water in the Jordan to satisfy the demands of both Israel and the Hashemite kingdom of Jordan. To prevent open conflict it is necessary to draw up a regional approach to the mutual problem of land reclamation. The Johnson Jordan Valley plan of 1953 offered the most equitable distribution to enable Israel and Jordan to derive the maximum benefit from the river water. The plan was accepted by Israel and Jordan but later Syria and Egypt pressured Jordan into withdrawing.

What can the United States do at this time to bring political and economic stability and to stimulate a spirit of mutual cooperation in this area? The administration's policy of vacillation to support first Israel, then the oil-rich Arab countries has contributed immeasurably to the political turbulence of the area. A firm policy always pays off. Our failure to come to grips with the basic realities of the Middle East has opened the door to Soviet penetration.

First. The prerequisite for an enduring solution to the Israeli-Arab animosity is the Arab acceptance of the fact that the State of Israel is a sovereign nation and has become a major factor in the future of the Middle East. The United States has weakly affirmed this fact, but we could stress this basic belief of our Middle East foreign policy by increasing the amount of economic aid to Israel. We could indicate that the United States guarantees the security of Israel by consulting more frequently with the Israeli Government on affairs pertaining to the Middle East.

Second. In view of the disruption of friendly relations between Jordan and the United Arab Republic (Egypt and Syria), the United States might encourage Jordan to cooperate on the Jordan River project.

Third. Peace and stability will never be established in the Middle East until the question of the Palestinian refugee is resolved. The cankerous sore of the refugee camps infects the entire region with hatred and distrust. The receptivity of the refugees to the propaganda of Radios Cairo, Damascus and Baghdad causes a dangerously inflamatory situation. The United States has, from the beginning, contributed a major share of the funds to maintain the refugee camps and has provided proposals for eliminating the refugee problem. The Johnson Jordan River Valley Plan which recognized rightly that an irrigation project and the refugee problem were indivisible, expected and included in its calculations a resettlement of the refugees in the Arab land made fertile by the Jordan River. The United States should use its influence to end the suffering of the Palestinian refugees by repatriation to Israel or resettlement in Jordan with the choice of alternative being given to the individual refugees.

The Israeli experiment has clearly demonstrated that the Arabs and Jews can live together in mutual cooperation. The Israel Government has pursued an enlightened policy toward the indigenous population of 214,000 Arabs. The Arabs in Israel enjoy the same high social, economical, health, and education standards as the Jews. The Israeli Government has never differentiated between Jew and Arab in its policies except in matters of national defense. When Israel was founded, the Arab population numbered about 120,000; since that time about 30,000 Arabs who were living in the neighboring countries have been permitted to rejoin relatives in Israel. An Arab child received free elementary education from the state. There are Arab students in the Hebrew University of Jerusalem. The Arab farmer is not in bondage to an absentee landowner or a money-lender. The Arabs are represented in the Israel Parliament, the Knesset, and are permitted to speak

Arabic in deliberations of the Government.

The State of Israel has become a new force of enlightenment and advancement in the Middle East, and herein, lies the danger of Israel to the feudal society of the Arab countries. The democratic state of Israel springing from the respect of the Hebraic prophets for the inherent dignity of man, has been revolutionary for the Middle East in building a new society with the aid of modern science and technology. The Arab leaders know that if ever the social revolution spread beyond the borders of Israel into the Arab world, the old order of a few landlords standing on the masses of people will come tumbling down. If the Arabs and the Israelis would enter into discussion about mutual problems demanding a regional approach, there is a strong possibility that Israel, possessing a surplus of technicians and scientists, could render valuable assitance for developing the natural potentialities of the Middle East and Africa as it is now doing for the new African nation of Ghana.

I would like to see a more imaginative and more consistent American foreign policy adopted to advance the cause of peace and stability in the Middle East.

Equitable Tax Deductions for Teachers

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1958

Mr. EVINS. Mr. Speaker, one of the most extraordinary inconsistencies of the Bureau of Internal Revenue has been its long reluctance to give to the teachers of our Nation the same consideration in regard to deducting expenses that it has granted most other groups. The absurdity of this discrimination is perhaps best indicated by the fact that a movie actor was permitted by income-tax regulations to deduct the cost of ballet lessons on the ground that they were necessary to maintain his physical fitness; whereas, teachers were denied deductions for expenses incurred in attending summer school and summer institutes. Our teachers have been justifiably protesting this injustice, and as we know, there are a number of bills before the Congress to produce this end. In a recent issue of the Tennessee Teacher this legislation was endorsed by the Tennessee Education Association and under unanimous consent I insert the article in question below:

EQUITABLE TAX DEDUCTIONS FOR TEACHERS

The teaching profession has long been in the forefront of the fight for better schools and better education for all American children. This year, the members of the profession have an opportunity to express themselves for their own personal and professional advantage. Individually, and through their State and local associations, teachers have it within their power not only to talk about taxes but to do something for themselves in order to get more equitable treatment.

NEA working in cooperation with the TEA, held organizational meetings in Dyersburg, November 18, and in Knoxville, November 20, in order to lay the groundwork and explain the need for teachers to get a workable definition of necessary business expenses. Chairmen for these meetings were Claude Moore and Miss Mildred Doyle, respectively.

Supporting these attempts by NEA have been the resolutions passed by teacher associations, and letters from individual members of the profession. Similarly, there has been welcome support from many other members of the House of Representatives.

The King-Jenkins bill, H. R. 4662, faces hearings before the House Ways and Means Committee during January or early February. H. R. 4662 seeks to redefine the necessary business expenses of teachers to include the cost of tuition for summer and evening courses, transportation to and from classes, books, and necessary supplies, and the excess cost of living expenses incurred while living away from home and attending school.

H. R. 4662 was introduced by Representative CECIL R. KING, Democrat, California, last February. The same bill was introduced by Representative THOMAS A. JENKINS, Republican, Ohio. In addition, there are more than 2 dozen other bills with a similar purpose.

All these bills seek to provide more equitable tax treatment for all American teachers. If passed, this revision of the Internal Revenue Code will permit those teachers who itemize their expenses on their income tax return to deduct the cost of professional growth from their taxable income. The effect will be a lower Feedral income tax, and a saving which normally may go as high as $150. Technically, H. R. 4662 puts a limit of $600 for these deductible expenses. Because most teachers are in a tax bracket ranging from 20 to 26 percent they may effect a saving up to $150 on their Federal tax bill.

Mr. Speaker, I am sure that the teachers and all of those who have been interested in doing justice to them, have welcomed the belated ruling by the Bureau of the Budget which has removed this inconsistency and will bring equality of treatment for the teachers in regard to educational expenses. It has been pointed out that granting the teachers this privilege already enjoyed by other professions, would encourage and stimulate teachers to improve their capabilities. In this connection, it is gratifying to see that there is already evidence of this desirable result. The Nashville Tennessean recently published an interview with Dr. William H. Vaughan, registrar at Peabody College in Nashville, which offers very interesting testimony on this point. Believing that this interview will be of interest to my colleagues and under unanimous consent I am also inserting the report of the interview below.

The report follows:

A BIG BREAK FOR BETTERING TEACHERS

(By Eugene Dietz)

(An interview with Dr. William H. Vaughan, registrar at Peabody College, concerning the recent United States Treasury Department ruling that teachers may deduct certain college expenses from their income-tax payments.)

Question. What effect will this tax break have on enrollment at Peabody and other teacher-training colleges?

Answer. We expect about 400 more students for our summer quarter than we had last year.

Question. On what do you base that estimate and how many students will that give you this summer?

Answer. The heavy increase in applications indicates that we will have more students. I expect around 3,000 this summer. We had 2,600 last summer.

Question. Have applicants told you that the tax deduction made it possible for them to take graduate work?

Answer. Yes. Many. Teachers finally are getting the same break that many other groups have held for years. The Treasury Department ruling, which came after a court test in Virginia, held that a teacher could deduct certain educational expenses, came less than a month ago after an 18-year fight.

Question. Could you identify some of the other groups which you regard as having held the right that teachers now have?

Answer. Yes. Remember the lawyers' convention in London that was attended last year by many American attorneys? Well, their travel expenses were deductible from their income tax. That is one group. There are many others. We hold no grudges. We think they deserve the deductions because the conventions helped improve them professionally. We just wanted the same benefit for teachers.

Question. What part of the cost of attending college is deductible for teachers under this new ruling?

Answer. Well, the regulation, as most other Federal provisions, will be found to be highly technical. Each teacher should consult the Internal Revenue office in his or her home area for specific information. But, generally, here are some of the deductible items: Cost of tuition; cost of books and (for students who come from other areas) their travel expenses and meals and lodging while in attendance.

Question. That seems to amount to a big saving. But just what would it mean in dollars when they file their returns?

Answer. Again, I will have to be general. But most teachers will find that one-fifth of their deuctible expenses will be cut from their income tax payments. If tuition, travel, board and meals cost $600 this summer for a student, he would have around one-fifth of that, or $120, trimmed from his income tax payments when he files early next year.

Question. I understand that teachers may even get refunds for such expenses incurred since 1954. Is that correct?

Answer. Yes. But there is a stipulation that the taxpayer must claim his refund within 3 years. The deadline for seeking a 1954 refund was April 15. But the 1955, 1956, and 1957 costs may be reclaimed.

Question. How do they go about claiming the refund?

Answer. By filling out what the Internal Revenue Department calls form 843. I suggest they contract their Internal Revenue offices about that.

Question. How was the campaign conducted to obtain the tax cut?

Answer. Many educators and Congressmen have been interested in correcting the long-standing wrong. But the National Education Association did the lion's share of the work.

Question. Is there any real benefit to the Nation generally from this tax reduction which is designed to encourage teachers to seek more training?

Answer. Certainly. Our schools will have better teachers. The additional work will provide teachers with more information about the subjects they teach, as well as give them greater knowledge concerning the skills of teaching. All of us, parents, students, and teachers, will gain from this. I think none of us will regret it.

Ghost Town for Two Comes Alive With Tourists, Anglers

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. ULLMAN. Mr. Speaker, one of the quaintest ghost towns in the West is located at Cornucopia, Oreg., high in the beautiful Cornucopia Mountains in a beautiful forest setting below towering granite cliffs. It is all too fast giving way to the inroads of weather and salvage. Future generations will be poorer when historical landmarks such as this are gone.

Chris Schneider, caretaker, and his wife, Jessie, are the sole inhabitants of Cornucopia. An item appeared in the April 20 issue of the Detroit News which I believe my colleagues will find of interest.

Under leave to extend my remarks, I ask that this article be printed in the RECORD.

The article follows:

GHOST TOWN FOR TWO COMES ALIVE WITH TOURISTS, ANGLERS

CORNUCOPIA, OREG., April 19.—For a couple who are the sole inhabitants of a ghost town, Chris and Jessie Schneider are far from lonesome.

"From April right through the middle of October, we have people here every day," says 72-year-old Chris, who has lived here more than 6 decades.

"Some summer days we see maybe 50 people. You'd think it was New York, the way it gets crowded."

About half the visitors are tourists interested in seeing a "live" ghost town. The other half are eastern Oregonians who come up for the trout fishing in Pine Creek and free camping under the pines.

MASS EXODUS

Overlooking the flowing green meadows of Pine Valley from its perch on the pine-clad hem of the 10,000-foot-high Wallowas Range, Cornucopia is a picturesque page out of the State's mining history.

Half of Oregon's gold came from the Cornucopia's mines, which were worked until October 31, 1941, when the great Union Companion mine closed.

Within 24 hours a mass exodus was underway, town officials pulling out without bothering to resign. In 7 days only Chris Schneider was left. The following year he married Jessie Mires, widow of a Cornucopia miner, and the two settled down to keep the ghosts company.

Chris, who works for the Union Companion owners as caretaker, remembers Cornucopia in its prime, when it boasted 700 persons, 300 of whom were miners.

TERM MAYOR

The town was complete with post office, a 2-room grade school, city hall and jail, 2-story Keller Hotel, two mercantile stores, two taverns, two dancehalls and several sundry establishments, such as barbershop. Elected officials were a constable, mayor and 7 councilmen.

The still jaunty, good-natured Chris knows all about the mayor's job. He served 10 terms, being in office when the town shut down.

"I never wanted the job," he says. "Three, four times I campaigned for my opponent. Once I won by 1 vote. My opponent demanded a recount. I said he was right; he had really won. But when they counted again—shucks. I was still ahead by 1 vote.

"I declined every nomination, but they kept on electing me. Once I 'snuck' around to stuff the ballot box but somebody was guarding it."

SELLS PROPERTY

Life isn't too uncomfortable or boring for the Schneiders. "I never lack for things to do," says Jessie.

The cozy, well-furnished, fresh-painted two-story framehouse, adequately heated by wood, has a piano, a radio, and a telephone. Phone service, vital as it is, is quickly restored after power failures caused by storms.

Caretaker Schneider is kept busy looking after the property and selling machinery, pipes, and company houses. The houses, some infested by pack rats, are sold to a logging contractor, who resells them to Pine Valley farmers.

With spring Chris is putting some of his work aside to act as guide to the curious. He points out the sights and tells how the town was in its boom days.

SHE'LL COME BACK

The main street, a maimed jag of rocky road across Pine Creek, is softened only by a background of cabins in the pines. The crude shops of yesteryear, ravaged by the elements, are eerie landmarks waiting for a banshee wind to claw them to splinters.

The awkward lettering on the clapboard fronts and the rough, frontier style of the sagging structures show plainly that Cornucopia never lacked in earthiness.

When he points to the Union Companion, Chris seems to grow 6 inches taller.

"Someday," he vows, "she'll come back. I know she will. Why, she's hardly been touched." But then his shoulders slouch and he adds wistfully, "but I don't think I'll ever see the time. She'll come back, but I won't be around."

SKIS TO TOWN

After the last tourist and camper depart, Chris puts on a feverish spurt of stocking up for winter.

Once a week, through the long snow months, Chris straps on his skis and glides down to Carson, 6 miles below, to pick up the mail and a few groceries. It takes him 90 minutes to descend, 3 hours to return.

Chris and Jessie are glad to see the first tourists of spring, but when the rush starts—sometimes you can see 10 cars at once in town—the Schneiders lift their eyes toward the high Wallowas, hoping to find a fresh speck of snow on the sky-nestling peaks.

Law Day, U. S. A.

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. BYRNE of Illinois. Mr. Speaker, I would like consent to extend my remarks in the Appendix about Law Day, U. S. A.

As a lawyer, I am particularly glad to see Law Day, U. S. A., recognized.

One shudders easily to think what, who, or where we would be without our United States Constitution. This truly was a milestone in the evolution of our government by law.

As citizens of responsibility and as duly elected representatives of the people, we must constantly keep before our people the idea that laws are for their protection as individuals and not for their exploitation. Law is our servant and not our master.

As we view the world and conditions throughout this universe, we realize that we must continue to supplant the law of force with the force of law. The world has grown to be dangerous, and we are aware that there would be no survival for us without law.

The United States and Russia have pierced the frontiers of outer space and we are engaged in a race which is comparable to none ever undertaken before. This race imposes a bold task upon the minds and hearts of men and calls for daring and courage. Are we going to extend law to the new frontier? This is truly a great question.

In the years to come, I have full confidence that we all are going to witness great accomplishments on the space frontiers. However, in our accomplishments ahead, I hope earnestly that our contributions will be recognized not only by language but more by the spirit in which we perform these wonders: A spirit of unmistakable adherence to the principles of law and order, recognition of our Creator. These qualities are the things that made us recognized as a government under one God and of the people, by the people, and for the people. These are the things that gave us the position we have today, and the world has looked at us with wonder. The quest must go on, and in it the process of law is an integral part.

Let Us Act Quickly for the Good of Retired Federal Employees

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. CRAMER. Mr. Speaker, the two bills (S. 72 and H. R. 607) that provide additional benefits for retired civil-service employees have passed their respective bodies of Congress. A conference on the bills has been asked and the members of the conference committee appointed. It is my hope that these conferees will promptly report out an agreement on which the House and Senate can act and which the President will approve and I have constantly been in touch with some of the conferees on this matter.

I have long endeavored to enact legislation that will bring about cost-of-living relief to these people who have served their Government in many capacities over a long period of years and who have planned for and contributed to a reasonably comfortable community life. I think the provisions being studied in conference are badly needed and, to some extent, provide the additional

income these people so justly deserve. Both in the 84th and 85th Congress I have introduced similar legislation affecting retirees which fully indicates my belief and concern in their welfare. The west coast of Florida is one of the great retirement sections of the United States and many of our fine residents are from the ranks of retired civil employees. The action proposed in these two bills before the conferees is extremely important to the future of these retirees and their retirement communities. I hope that every effort will be made to obtain a conference report at the very earliest opportunity.

I trust that the bill will be reported out soon, that it will provide an amount approximating S. 72 and will provide an increase that will thus adequately compensate for the increased cost of living that so markedly affects the standard of living of these retirees on fixed incomes. This was the intended purpose of my bill and I trust the conferees will consider this factor, of increased cost of living, the principal and motivating element in their deliberations, there being adequate funds in the trust fund to provide an increase in conformity with this principal and still retain the actuarially sound integrity of the fund.

"May Day" Proclaimed "Law Day"

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr WALTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the Stroudsburg (Pa.) Daily Record of April 30, 1958:

[From the Stroudsburg (Pa.) Daily Record of April 30, 1958]

"MAY DAY" PROCLAIMED "LAW DAY"

(Series part of observation: President Eisenhower has proclaimed Thursday, May 1, as Law Day and called upon the people to reaffirm their dedication to the rule of the law as the foundation of individual freedom and opportunity for American citizens. As part of the national observance, the Daily Record invited Chester H. Rhodes, of Stroudsburg, president judge of the Pennsylvania Superior Court, to prepare a series of four articles on the judicial system at the National, State, and county levels. The articles by Judge Rhodes are recommended reading for every citizen of the United States—student as well as adult—in these trying days of cold war, nuclear weapons, and space missiles.)

"May Day" is celebrated in the Soviet Union by a display of military strength, power, and force by which the Communist government subjugates its people, terrorizes the countries bordering Russia, and threatens free nations with annihilation.

By contrast, May 1, 1958, has been proclaimed by the President of the United States to be "Law Day."

Our legal system is the antithesis of communism. We have a government under laws created by the representatives of all our citizens, enforced by police who are employees of the people, and administered in courts by impartial and independent judges. It is well at this time to consider the judicial system which administers these laws fundamental to our democracy, and to take note of its historical beginnings and its development.

Our basic law comes from the English common law which at one time was exceedingly harsh. During the reign of George III, there were at least 160 capital offenses including stealing 1 shilling from a pocket or stealing a sheep.

Today the importance of law is not always apparent, and its presence is not always obvious although the rule of law is the foundation of our free society. To appreciate our heritage it is essential to know its origin, its development, and its functioning. The rule of law may take the passive form of our constitutional guarantees of freedom of speech, freedom of press, freedom of religion, and freedom of assembly, or it may be actively and dramatically demonstrated in a jury's verdict requiring the payment of damages by one who has injured another because of negligent conduct.

It may be found as a statutory enactment of the legislature, as an ordinance passed by a local municipal government, or as the reported decision of a State or local court. Within the last few decades it has been increasingly found in the regulations of governmental administrative agencies. In whatever form the law is found, however, it is meaningless without the individuals who call it into action, the lawyers who advocate its cause, and the courts which ultimately interpret and apply it.

It is significant that judicial functions can be discharged only in that kind of society which is willing to submit its conflicts to adjudication and to subordinate power to reason.

Preliminarily, it is interesting to observe that, prior to the Norman Conquest in the year of 1066, there were no professional lawyers in England. It was in the reign of Edward I, 1272 to 1303, that the profession was first organized.

It is said that the first Pennsylvania court was established in 1642, when we were a Swedish colony, and that the court administered the Swedish law. The Swedes were supplanted by the Dutch in 1655, and the Dutch, in turn, were ousted by the English in 1664. It was then that the common law of England was invoked. The charter granted to William Penn, in 1681, gave him authority to establish a system of courts with final appeal to the Privy Council in England.

At that time lawyers were not required to be learned in the law. It was the act of 1722 that first required lawyers to be learned in the law, but it did not make the same requirement of judges.

The act of April 15, 1851, Public Law 648, provided that judges of the Supreme Court and the president judges of all other courts of record shall be learned in the law. Now all judges in this Commonwealth must be learned in the law, except associate judges.

There is still no requirement that Justices of the Supreme Court of the United States be learned in the law. The chief justice of the Supreme Court of Pennsylvania and the president judge of the Superior Court of Pennsylvania are commissioned as such according to seniority. The Chief Justice of the United States is appointed by the President of the United States, and he may be any one of the Justices of the Court or some other appointee.

Upon the adoption of the first Pennsylvania constitution in 1776, the administration of the common law was continued. The executive jurisdiction of the Pennsylvania courts was ended upon the adoption of the Federal Constitution in 1787 which created the dual system of State and Federal jurisdiction which is sometimes bewildering.

The history of the development of our judicial system is interesting, and very individual should have a knowledge of its functioning. A complete understanding of the many legal systems would require an extensive study of colonial, English, and ancient history, which I shall not undertake to narrate. However, little is known about legal systems prior to early Roman times except that devised by the ancient Babylonians. Their Code of Hammurabi (2250 B. C.), which has been preserved through the ages, recognized some legal concepts which are familiar to us today.

In early Roman history the law and its administration were primitive. During the period of the rise and fall of the Roman Empire, the Christian church became a significant factor, and by the time Emperor Constantine gave it legal status it had become sufficiently organized to have its own ecclesiastical courts. When the Roman Empire fell to Germanic invaders, a tribal system of administering justice prevailed. In administering criminal law the Germanic tribes seldom resorted to a trial. When a man was caught committing a crime he was immediately banished.

Many legal advances which are significant to the English and American systems were developed during the period of the Frankish Empire. The Franks were a Germanic tribe which conquered a great portion of Europe between the fifth and ninth centuries. The Franks continued to administer justice under the tribal system.

It was during the reign of Charles the Great that the Frankish Empire was divided into separate sections into each of which the king sent two of his representatives to hold court. This system of circuit judges was also to appear in England under Henry II. Significantly, the appellate courts of Pennsylvania still travel to various points in the Commonwealth to hear appeals.

The beginning of the jury system may also be attributed to the Franks. When the Frankish Empire collapsed in the ninth century, Europe was again divided into many tribal or national groups, and the judicial advances of the Franks fell into disuse except in the territory of Normandy from which William the Conqueror later invaded England and took with him many of the Frankish legal concepts.

Oregon Indians Await Action on Timberlands

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. ULLMAN. Mr. Speaker, a recent article appearing in the Christian Science Monitor pinpoints one of the most serious tasks facing the 85th Congress, namely to provide just termination legislation for the Klamath Indian Tribe which will both protect tribal members and preserve the great natural resources found on the reservation. Mr. Malcolm Bauer, special correspondent for the Monitor, deserves high praise for his straightforward presentation of some of the problems which must be faced.

I ask that his article be included in the RECORD.

Oregon Indians Await Action on Timberlands

(By Malcolm Bauer)

PORTLAND, OREG.—Among the important decisions the 85th Congress will make in the next few months is this: Will there be a change in the formula established 4 years ago for the dissolution of the Klamath Indian Tribe and its valuable timbered reservation with a consequent jolt to the lumber economy of the Pacific Northwest and to the Indians themselves?

This is the issue which far transcends the interest of the 2,000 members of the Klamath Tribe, who 94 years ago were confined to a tract of southern Oregon real estate which now happens to be covered by a valuable stand of pine and fir timber. For the justice of the final transaction with the Klamaths may set a pattern for all other similar legislation.

This is one of the first of the termination acts. What makes it so important and so controversial is that the reservation stands in one of the last areas of virgin forest in all of the United States.

SUM NOT ASSURED

A Government survey of reservation property, including the timber, has indicated that the 2,000-plus members of the tribe should expect to receive about $120 million for the real and personal property owned by the tribe. This is a fabulous $58,000 for each man, woman, and child. Some reservation families are, by that standard, worth more than a quarter million dollars.

But there is no assurance that the $58,000 each will be forthcoming. Public Law No. 587 now provides that the reservation will be liquidated and the Indians provided with their equal shares and full citizenship not later than August 13, 1960. If the transaction is conducted with such speed, the return will be much less than $58,000 each, most observers agree, and there will be a flooding of the Northwest timber market such as none ever witnessed.

KLAMATH VOTE ENDED

There is an estimated 4 billion feet of marketable timber on the reservation property, 3 billion feet of which would probably be involved in a forced sale to satisfy the terms of Public Law No. 587. Klamath timber-cutting capacity is approximately one-tenth that amount annually.

Such experts as Earle Wilcox, forester employed by the Management Specialists, in charge of the administration of the liquidation of the Klamath Reservation, and Vincent Bousquet, president of the Klamath Forest Protective Association, feel that to dump the Klamath timber on the market before August 1960, would smash the Northwest timber market and reduce disastrously the financial return to the Indians.

During April members of the Klamath Tribe, many of whom live in States other than Oregon, voted on the key question of withdrawal from Federal wardship. On April 28, the Department of Interior officially reported that 1,641 of a total 2,133 members had elected to withdraw and thus become eligible to receive their equal shares of the proceeds of liquidation of reservation property.

The remaining members of the tribe either abstained from voting or voted against withdrawal. Their share of the reservation will continue to be held in trust by the Federal Government.

This means that, under terms of the Klamath bill now before the Senate Interior Committee, an appropriation of slightly more than $95 million would be required for Federal purchase of the shares of withdrawing members of the tribe.

ACTION CALLED IMPERATIVE

The committee's dilemma is this: Should this sum be appropriated as provided in an administration bill, which has the vigorous support of Senator RICHARD L. NEUBERGER, Oregon Democrat? Or should the Klamath Indians and the Northwest lumber economy be left to an unhappy fate?

Senator NEUBERGER met with the Oregon Legislature's Klamath Reservation Interim Committee and others vitally interested in the Klamath problem during the recent Easter recess. "There may be differences of opinion on what we should do, but I am sure that everyone who has any knowledge of the Klamath situation recognizes that we must do something—and that we must do it soon," the Senator said.

And for the first time, Senator NEUBERGER, who has borne the brunt of the struggle to bring justice out of the complex Klamath termination, appeared to hold some hope that the United States Senate would see the necessity of Federal purchase of reservation property—at an estimated $95 million.

The Senate Interior Committee is scheduled to act on the bill soon. The bill must then clear the Senate and the House before adjournment, or the provisions of Public Law 587 will automatically and inexorably take effect: The tribal property of those who choose to withdraw will be liquidated, the withdrawing Klamaths will receive what the market will bear, and the state of the market will be anybody's guess. Northwest lumber interests believe the latter will be sorry indeed.

LOSS ESTIMATED

During his conference on the Klamath question here, Senator NEUBERGER released a letter he had received from Richard E. McArdle, Chief of the United States Forest Service, estimating the possible loss to the Federal Government of the precipitate dissolution of Klamath timber holdings.

"In order to evaluate the impact on national forest operations in terms of losses to the Federal and local governments, it is necessary to assume a period over which the Indian timber might be liquidated. It seems reasonable that such liquidation could be carried out in a 10-year period, beginning in 1960.

"During that period it is estimated, if present trends in national forest sale programs continue, some 4 billion board-feet of saw timber and pulpwood would be reduced to 1.9 billion board-feet of saw timber and pulpwood.

PERSUASIVE ARGUMENT

"Such assumption takes into account allowances for utilization of mill capacity not now being used for installations of some new capacity, and for capacity now normally supplied by Indian timber. Based on these assumptions and present timber values, revenue losses for the 10-year period are estimated as follows:

"Gross loss in Federal receipts—because of dumping necessitated—$49,700,000.

"Loss in 25 percent share for roads and schools of 7 Oregon and 3 California counties, $12,425,000.

"I think this is one of the most persuasive arguments I have heard for the passage of S. 3051 (the administration bill for the purchase of reservation property)," said Senator NEUBERGER. "It has not been explained as fully as it should have been, but I think we can all see that if dumping the Klamath timber on the market in Oregon is going to cause a loss of more than $50 million in Federal timber receipts and road and school funds for Oregon and California, that the $89 (or $90) million we may have to pay to the Klamath Indians is really not out of reason at all."

Under Federal purchase, the timber would be marketed on a sustained yield basis, which means that it could be sold only so fast as its growth replenished the cut. Thus there would be no dumping.

America Should Export More Tobacco

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. DORN of South Carolina. Mr. Speaker, tobacco farmers in America, the great American tobacco industry, and its employees are being injured by the present foreign trade policy. A 5-year extension of the so-called reciprocal trade agreements could well ruin the American tobacco farmer and the American tobacco industry. The following report from the Department of Agriculture from around the world plainly tells how America is being outtraded by foreign countries in practically every instance. We are losing our tobacco exports. It is time to tell the American tobacco farmers the truth. His acreage is being cut while the foreign tobacco grower plants more and more.

This Congress should vote down the present trade program. We should return to the concepts of the late Cordell Hull and sell more tobacco abroad with bilateral agreements and institute a mutually advantageous foreign trade program.

Mr. Speaker, American tobacco farmers should be represented at foreign trade conferences where the agreements are negotiated. Under the present policy neither the tobacco industry nor the tobacco farmer have been directly represented. We have been represented by the State Department but other countries have been represented directly by their tobacco interests.

The following tells the story. When this story is known the American tobacco farmer and our tobacco industry will rise up and demand that they be represented and that this Congress regain its power to control tariffs and foreign trade:

IMPORT BARRIERS

Argentina

Import licensing: For the past several years, the Central Bank has granted practically no import permits for tobacco of any type. This development has eliminated United States tobacco from the Argentine market. During the period 1947–51, our leaf tobacco exports to Argentina averaged 2.1 million pounds annually, principally flue-cured and burley. There were no exports of any type in 1952, 1953, and through November 1954.

Australia

(a) Preferential tariff: Under terms of a trade agreement in operation since 1941, southern Rhodesian tobacco enjoys a 9 pence (8.4 cents) per pound tariff preference in the Australian market. This places United States leaf at a disadvantage in the Australian market, and encourages the importation of leaf from southern Rhodesia.

(b) Purchase agreement: A purchase agreement is in effect with southern Rhodesia, under the terms of which Australia guarantees to take a minimum quantity or percentage of the southern Rhodesian crop. The present guaranteed quantity is 9.7 million pounds, or 6½ percent of the crop, whichever is smaller. Increasing Australian consumption has lessened the impact of this

on United States exports, although imports from southern Rhodesia rose from a prewar average of 0.1 million pounds to 9.1 in 1953. The United States share in the Australian tobacco import market declined from more than 95 percent in prewar to less than 70 percent during the period 1949–53.

(c) Mixing regulation: This regulation, which has been in effect (with modifications) since 1936, provides for substantial duty concessions on imported tobacco which is to be blended with certain minimum percentages of domestic leaf in the manufacturing process. The concession ranges from 15 pence (14.0 cents) and 18 pence (16.7 cents) per pound, depending upon the classification of the tobacco and end use. Through its influence upon the leaf usage of the larger manufacturers, this regulation has almost certainly maintained demand for Australian leaf at a higher level than might otherwise have been the case.

Austria

Bilateral agreements: For a number of years, Austria, which has a government tobacco monopoly, has maintained a number of bilateral agreements with tobacco-exporting countries, providing for the importation of tobacco of a specified quantity or value. Agreements have been in operation with Bulgaria, Greece, Yugoslavia, India, Brazil, and Indonesia. Most of the tobacco imported from countries listed are not directly competitive with American leaf; however, any quantities imported from them under such trading arrangements do tend to displace leaf from the United States.

Egypt

(a) Premium dollars: According to latest available information, Egypt has for some time permitted no dollars to be used for tobacco purchases at the official rate of exchange. Importers have been required to pay an approximate 10 percent premium to obtain dollars for United States leaf. Exports of United States tobacco to Egypt presumably would have been greater if this premium payment had not been necessary. It has tended to encourage imports of Southern Rhodesian and Indian tobacco.

(b) A trade and payments agreement is in effect between Egypt and Greece. This was recently extended to cover the period September 1, 1954, to August 31, 1955, and tobacco is one of the commodities moving from Greece to Egypt under the terms of the agreement. This encourages the importation of Greek tobaccos, and tends to prejudice the position of the United States tobacco in the Egyptian market.

Finland

Premium dollars: Severely limited dollar allocations for tobacco have forced Finnish importers to resort to "switch" transactions through third countries, in order to obtain dollars for United States leaf tobacco. There have been premium payments involved in these transactions, usually amounting to from 10 to 20 percent. It is probable that if dollars had been freely available, United States tobacco exports to Finland would have been about one-third greater than actual shipments during the past several years.

France

(a) Limited dollar allocations: A system of exchange controls covering dollar purchases for United States leaf has been maintained for several years. This has severely limited imports of United States leaf, apparently without regard for consumer preferences, comparative prices, or the traditional pattern of French tobacco imports from this country. Imports from the United States declined from an average of 21.4 million pounds in 1946–47 to only 6.4 million in 1952–53. In prewar years, the United States supplied about one-third of French tobacco imports. During 1952–53, the United States share was only 9 percent.

(b) Compensation agreements: For a number of years, France has maintained trading arrangements with a number of countries, under the terms of which tobacco has been included as an item to be imported into France. Agreements have been concluded with the following countries: Greece, Turkey, Yugoslavia, Brazil, Argentina, and the Central African Federation. These agreements have been used to implement the French desire to direct trade in tobacco toward countries agreeing to purchase French commodities. They have acted to reduce the French market for United States leaf, particularly dark tobaccos, and to expand imports and usings of oriental tobaccos. In prewar years, an overage of only about 3 million pounds of oriental leaf were imported into France; for 1949–53, the average was 22 million pounds.

Hong Kong

Preferential tariff: A tariff preference of 0.20 Hong Kong dollar (3.5 cents per pound) is in effect on leaf tobacco imports into Hong Kong from British Commonwealth sources. This probably has had no appreciable effect on imports of United States tobacco.

India

Import licensing: An import licensing system is in effect which severely limits imports of tobacco from dollar areas. This acts as a deterrent to exports of United States leaf to India, which fell to only 1.2 million pounds in 1953, compared with an average of 7.5 million during the period 1947–51.

Indonesia

(a) Mixing regulation: The government requires that a minimum percentage of domestic flue-cured leaf be used in the manufacture of certain popular brands of cigarettes. At latest report, the percentage was 10 percent, but indications are that in view of the balance-of-payments situation, the minimum will be increased.

(b) Import licensing: In the fall of 1954, licenses for the purchase of United States leaf were sharply restricted. For 1954–55 (September–August), exchange sufficient for about one-half the 1953–54 purchases will be allowed, and for 1955–56, only about one-quarter. If this regulation is strictly adhered to, imports from the United States will be reduced drastically from the average of about 13 million pounds shipped to Indonesia during the period 1951–53.

Italy

Bilateral agreements: Italy has negotiated bilateral trade agreements with Greece and Turkey. Although tobacco is not specifically mentioned as an item to be imported by Italy, reliable information indicates that such imports are virtually imposed on Italy. These agreements tend to affect Italian imports of tobacco from the United States. Italy has a monopoly which controls all phases of the tobacco industry, and can direct import trade as it sees fit. The monopoly, a government agency, is in a position to implement politico-economic policy toward countries that will accept Italian export commodities in large volume.

New Zealand

Mixing regulation: A regulation has been in effect since January 1, 1941, requiring a tobacco manufacturer to use a specified minimum percentage of domestic leaf tobacco in his total manufacturing operations. The minimum was originally fixed at 20 percent. Under the GATT agreement, New Zealand undertook to guarantee that the minimum percentage requirement, which had been increased on several occasions since 1941, would remain at the then existing level of 30 percent. According to latest information, it has been raised to 32½ percent, as a voluntary move by manufacturers. Because of steadily increasing consumption of tobacco in New Zealand, imports and utilization of United States tobacco have been maintained. It is believed that the volume of imports of leaf from the United States has been below what takings would have been in the absence of the mixing regulation.

Pakistan

(a) Preferential tariff: The tariff regulations provide for customs duties on United States leaf at $2.25 per pound, plus an excise duty. Indian tobacco, because of an agreement made at the time of the partition, is subject to an excise duty only. In effect, Indian tobacco for customs tariff purposes is treated as domestic leaf, and therefore the customs duty is not applicable. The preference is sufficient to encourage the importation of leaf from India in lieu of higher quality tobacco from the United States.

(b) Mixing regulation: There is a sliding-scale excise tariff favoring maximum use of domestic leaf. In other words, the rate of excise declines, as the percentage of domestic tobacco used in a particular product increases. This tends to discourage maximum use of United States tobaccos.

Philippine Republic

Import quotas: Under Republic Act 698, effective May 9, 1952, imports of leaf tobacco (except cigar wrapper) were limited to the following percentages of 1950 imports: 1952—75; 1953—50; 1954—40; and 1955 (and subsequent years)—25. The 1950 imports approximated 28 million pounds. As amended in mid-1954, the law continued the percentage quota restrictions for 1954 and 1955; but provided for such additional imports which, when added to domestic leaf production, would permit the manufacture of tobacco products at a level not less than that of the previous fiscal year. For 1956, and subsequent years, the amendments provided for import quotas at a level which, when added to the domestic crop, will permit manufacturers to produce a quantity of tobacco products equal to the preceding year's. These quota provisions have already restricted imports of United States flue-cured and Burley tobacco, and have promoted uneconomic expansion of the domestic flue-cured crop.

Portugal

(a) Preferential tariff: Light tobacco from Portugese colonial possessions is accorded a preferential duty of 15 percent below the rate applicable to imports from the United States. The object is to encourage tobacco production in those overseas areas.

(b) Bilateral agreement: A basic agreement with Greece, signed in 1949, provides for the exchange of Portugese fishery products for Greek tobacco (oriental) in the amount of $700,000 annually. This has reduced the market for United States leaf in Portugal, although consumers prefer tobacco products containing high percentages of flue-cured and Burley. Imports from Greece increased from 1 million pounds in 1949 to 1.4 million in 1953. Imports from the United States were only 7.9 million pounds in 1953, compared with 8.9 million in 1949.

Spain

(a) Exchange allocations for United States tobacco have been extremely limited, despite the historical pattern of trade with the United States. The Monopoly and Ministry of Finance strictly control all tobacco purchases. These measures have severely restricted United States exports of dark tobaccos even though they have been offered to Spain at competitive prices.

(b) Clearing agreements are believed to be in effect with several of the important suppliers of tobacco to the Spanish market.

imports from Brazil and the Dominican Republic have been increased sharply in recent years compared with prewar. Imports from the United States are far below prewar levels.

United Kingdom

(a) Preferential tariff: For many years, the United Kingdom has maintained a preferential tariff on imports of tobacco from Commonwealth countries. At present, the differential in the tariff on United States leaf and Commonwealth leaf is 18½ pence per pound (21.5 United States cents), for the principal category of leaf imports. It is impossible to measure accurately the effect this preferential duty has had on imports and utilization of United States tobacco. Displacement of United States leaf has continued and developed for a long period of years. The tariff preference has been a most important factor in the increased tobacco production in Commonwealth areas, and the reduced share of the United States in the British market. During the period 1919–23, only 6 percent of British tobacco imports was of Commonwealth origin; the average of 1951–53 was 45 percent. At present the tariff preference amounts to only about 3 percent, although in prewar years it was as high as 20 percent. The current duty on imports of United States unstemmed leaf containing 10 percent or more of moisture is the equivalent of a little more than $8 per pound—roughly 12 times the export value of the tobacco.

(b) Purchase agreement: A postwar development of great significance to United States flue-cured-tobacco growers is the purchase arrangement, originally negotiated in 1947, whereby British manufacturers agree to purchase a large percentage of the Southern Rhodesian tobacco crop. Under existing terms of the agreement, purchases are fixed at 85 million pounds (farm weight) for 1955, and 80 million for the years 1956–58. This agreement has acted as a strong stimulus to increased production in Southern Rhodesia. Imports into Britain from Southern Rhodesia increased from about 16 million pounds in prewar to nearly 60 million in 1952 and 1953.

(c) Dollar allocations: For a number of years, purchases of United States leaf have been limited by dollar allocations. At present, the system provides for tobacco purchases from "dollar areas" sufficient to cover current manufacturing requirements—or about 61 percent of the total usings of light tobaccos. It does not take into account the drastic decline in the United States share in total manufacturing operations over the past 6 or 7 years.

(d) Mixing regulation: At the suggestion of the government, British manufacturers agreed a number of years ago to use 5-percent oriental tobacco in cigarettes produced for home consumption.

Under the impact of this combination of barriers, the importation of United States tobacco into the United Kingdom fell from 76 percent of the total in the prewar (1934–38) period to an average of only 51 percent in 1951–53. On an absolute basis, imports from the United States declined from an average of 213 million pounds during 1934–38 to an average of 150 million pounds for 1951–53. Conversely, imports from outside the United States (mostly Commonwealth) increased from an average of 62 million pounds in 1934–38 to 147 million in 1951–53.

Uruguay

(a) Dollar premiums: Tobacco importers in Uruguay have had to pay a premium in order to obtain dollars for tobacco imports.

(b) Bilateral agreement: In effect with Greece, providing for $100,000 worth of tobacco purchases from Greece during the period May 1954–April 1955.

West Germany

Bilateral agreements: A number of trade agreements are in effect with other countries, providing for the importation of substantial quantities of various commodities including tobacco into Germany in exchange for industrial goods. The most significant of these, as far as tobacco is concerned, are those with Greece, Turkey, Brazil, and Colombia. Their effect has been to pressure German tobacco manufacturers to expand their purchases and usings of oriental leaf and non-United States cigar tobaccos. Under the impact of these agreements, the United States proportionate share in the German market declined considerably from 51 percent in 1950 to 43 percent in 1953.

COMPETITIVE EXPORT AIDS

Algeria

Export subsidy: This was made effective in 1954, in order to boost tobacco exports to areas outside of France and its overseas territories. It is too early to assess the full effects of this new subsidy system, but it may eventually cut into United States exports of light and dark air-cured tobaccos.

Colombia

Export subsidy: An export bonus, which in 1954 amounted to about 40 percent of the selling price, is paid to tobacco exporters. This has already encouraged the export of dark tobaccos to Germany and France, both of which are markets for United States dark types of tobacco.

Cuba

Commercial agreements: Cuba has commercial agreements, covering the exportation of Cuban tobacco to other countries. Agreements have been concluded with Argentina, Chile, Germany, Spain, France, and the United Kingdom. These probably have had some adverse effects on the level of exports of dark and cigar tobaccos from the United States.

Dominican Republic

(a) Export monopoly: The government has been granted permission to establish a consortium which would have the sole right to purchase and export tobacco. This paves the way for easy negotiation of bilateral trading arrangements and subsidization of exports.

(b) Commercial agreement: This was recently negotiated with France and provides for the importation into France of $1 million worth of Dominican tobacco annually.

Greece

Bilateral agreements are in effect with a number of countries, including Portugal, West Germany, Italy, Uruguay, Austria, France, and Egypt. All of these countries are outlets for American tobacco. (For significance to United States tobacco, see under comments on these countries.)

India

Import licensing: From July 1954 India has had a system of ad hoc import licenses covering the goods of countries guaranteeing to purchase lower grades of Indian flue-cured tobacco.

Italy

(a) Tie-in sales: Italy, a monopoly country, in recent years has facilitated the export of certain types of tobacco by the tie-in sales method. By means of this, the sales contracts for scarcer and more desirable tobaccos with some Western European countries have included other types not so much in demand. We have no indication that this trading arrangement has been discontinued, and it appears to have had some effect on exports of United States dark tobaccos.

(b) Trading arrangement: The Italian Tobacco Monopoly, a government agency, has an agreement with the Swiss Cigarette Manufacturing Association covering imports of Italian tobacco into Switzerland in exchange for Swiss exports of cigarettes to Italy. This agreement adversely affects exports of United States fire-cured tobacco to the Swiss market.

Madagascar

Guaranteed market: The French tobacco monopoly virtually guarantees to take the total production of Maryland-type tobacco in Madagascar. Incentive prices are maintained, and United States Maryland has been practically eliminated from the French market.

Paraguay

Exchange subsidy: There is an exchange subsidy, tied in with the minimum selling prices, which has encouraged the export of tobacco in larger volume to Spain and France, both formerly very important outlets for United States dark tobaccos. The exchange subsidy was recently raised to about 100 percent.

Southern Rhodesia

Purchase agreements: (see under United Kingdom, Australia, and France.)

Turkey

Bilateral agreements: (See under Italy, West Germany, France.)

Union of South Africa

Export subsidy: An export bounty or subsidy is in effect, permitting exports at less than world market prices. For the 1953–54 export season the bounty was up to 40 percent of the minimum selling prices. Exports totaled 4.4 million pounds in 1953, compared with only .3 million in prewar years.

MONOPOLY COUNTRIES

In many countries, most phases of the tobacco industry are controlled by a governmental or quasi-governmental agency. Policy with respect to import trade frequently is undertaken arbitrarily. The volume and kind of tobacco products manufactured, and the type of leaf used in their manufacture, are established by the government. The government in a monopoly country is in a position to direct consumers' tastes toward certain domestic and imported tobaccos, without regard to preferences or the traditional manufacturing and trade pattern. Monopoly policy is often based on political considerations. Countries in the free world having monopoly control of tobacco include the following:

COUNTRY AND TYPE

Austria: Government.
Ecuador: Leased.
Formosa: Government.
France: Government.
French Morocco: Leased.
Haiti: Leased.
Iran: Leased.
Iraq: Leased.
Italy: Leased.
Japan: Leased.
Korea: Leased.
Peru: Leased.
Portugal: Leased (two companies).
Spain: Leased.
Sweden: Government.
Syria and Lebanon: Leased.
Thailand: Government.
Tunisia: Government.
Turkey: Government.

Tenth Anniversary of Israel

EXTENSION OF REMARKS

OF

HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1958

Mr. BECKER. Mr. Speaker, 10 years ago the State of Israel was created and

from virtually nothing the people have developed a country that has been marked with extreme sacrifice and hard work rarely seen in the last century. As a visitor to Israel 3 years ago I was able to experience firsthand the undaunted courage of the people and those charged with administering the governmental affairs.

I join with all others in wishing continued peace and progress to the State of Israel.

Grant or Loan

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks, I include for the Appendix of the RECORD a telegram addressed to me from Gov. Foster Furcolo, of Massachusetts, and an editorial from the Boston Herald supporting Governor Furcolo's stand on the issue of extending unemployment insurance benefit payments:

BOSTON, MASS., *March 31, 1958.*
Representative EDWARD P. BOLAND,
House of Representatives,
Washington, D. C.:

I am enclosing a copy of the telegram which I have sent today to the President urging an extension of unemployment compensation benefits for at least 13 weeks on the basis of a Federal grant, rather than a Federal loan. I respectfully urge your cooperation in supporting an immediate extension of unemployment compensation benefits for at least a 13-week period on a grant basis. "The large number of Massachusetts workers who are presently unemployed and who have exhausted their unemployment compensation benefit payments have resulted in great personal hardship for entire families. I respectfully suggest that your proposal for the extension of unemployment benefits on a loan basis will create unnecessary hardship for industry and workers alike in Massachusetts. I urge you to consider an immediate Federal extension of unemployment benefit payments on a grant rather than a loan basis. A Federal grant authorizing at least a 13-week extension of benefits would provide immediate assistance to unemployed workers without injury to the competitive position of Massachusetts."

Sincerely,

FOSTER FURCOLO,
Governor.

GRANT OR LOAN

One recommendation in Governor Furcolo's antirecession program has our unqualified approval. It is that any Federal contribution for the extension of unemployment compensation benefits be on a grant rather than a loan basis.

We have previously criticized the administration's unemployment plan for its failure to discriminate between full-time members of the work force and in-and-outers. Neither the Federal Government nor the States should be called upon to subsidize nonbreadwinners during this emergency.

The financing of the extension program is another and equally important question.

The Associated Industries of Massachusetts has testified against the extension plan on the ground that it might lead to federalization of the employment-security program. This does not strike us as a very serious danger provided the program is temporary and is financed by a Federal grant. But the imposition of new obligations on the State via the loan route could be extremely dangerous.

For, as Mr. Furcolo quite correctly observed, throwing the burden of benefit extension on our State fund, even on a long-term loan basis, could force an increase in the tax on employers and place Massachusetts at a competitive disadvantage with other industrial States. We need to attract more industry here, not drive it away. And if the balance of our State employment security system is upset we may be forced to look for more permanent Federal aid.

The objection is, of course, greater in the case of other proposals, such as Senator KENNEDY'S, which would force the States to liberalize their programs permanently with only a 12-month assist from the Federal Government. But Congress will surely see that.

The dangers of a loan program are not so obvious. Bay State spokesmen in Washington should follow the governor's lead on this one.

West's Weapon Against Moscow, as Seen by Dr. Dobriansky

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent I am extending my remarks to include an interview given to the antibolshevik bloc of nations by Dr. Lev E. Dobriansky, distinguished professor at Georgetown University, lieutenant colonel in the United States Army Reserve and national chairman of the Ukrainian Committee of America. The antibolshevik bloc of nations is an international organization dedicated to the liberation of all the captive nations in the Communist empire, Dr. Dobriansky answers questions from an American point of view on subjects that range from Russian colonialism to missile warfare. These questions are of pressing moment and the answers are put forward clearly and incisively. The interview which appears in the current issue of ABN Correspondence follows:

Question 1. In what way do you think it would be possible to overthrow the Russian Bolshevist imperium, if the leading statesmen of the free world are not prepared to give active support to the national liberation revolutions—as was the case in Hungary?

Answer. Rationally, in order to overthrow the Russian Communist empire there is no other way possible than that of active western support of all the national liberation movements in this vast and unprecedented empire and of the eventual revolutions which they necessarily imply. As entertained by Mr. George F. Kennan, the notion of a transfiguration of this empire through cultural erosion is based on a sophisticated miscomprehension of the totalitarian enemy and a dangerous misreading of contemporary history. Mr. Kennan has been wrong so many times and with such uncanny consistency that truly, for those who have followed his thinking closely, he has become notoriously unreliable.

The equally unrealistic notion of evolution toward freedom in this last remaining empire, as advanced by CIA Director Dulles and others, is only a phraseological variant of the preceding one. Those who intellectually cling to either of these notions are obviously most susceptible to the perilous ideas of accepting the status quo of the Russian Communist empire and permanently (if it were at all possible) dividing the world into two broad spheres of influence. With some calm reflection given to this ideational generation one cannot but conclude that the only alternative is a liberationist approach which in essence precludes these wishful intellectual steps that in the end can only spell disaster for the free world.

Now, the possibility of being forced to adopt this liberationist approach is real and promising. The force of objective circumstance rather than reason may compel our statesmen to support actively the patriotic movements. This could occur in short time. For example, should the patriots of Poland reach a breaking point and the entire population revolt, it would be well nigh inevitable that this revolt would spill over not only into Ukraine and other parts of the Soviet Union but also into East Germany and West Germany, whereupon the West could not but assume the inevitable stand. Especially in the light of the Hungarian revolt, it would be foolhardy for our policymakers to ignore this short-run, real possibility.

Question 2. Do you not think that the passive attitude of the western major powers toward the national revolutionary fight for freedom of the peoples subjugated by Russia is helping to hasten on the outbreak of a nuclear war?

Answer. There is no logical doubt in my mind that this passive attitude maximizes the chances of a hot-war outbreak. By definition this passive attitude toward the liberation movements in the Russian Communist empire, which fundamentally embraces Red China, North Korea, North Vietnam, and even Yugoslavia, means the absence of any implemented policy of liberation. This lack of implementation guarantees Moscow the freedom to consolidate its empire, to resolve almost any tension in the confines of its empire, to continue its long-range military planning at tremendous costs to the captive populations, to attain not only to military adequacy but even superiority in relation to the West, to incite at will and with initiative tensions in the free world, and to strike first against the United States when the risks become well calculated.

Taken in toto, these elements add up to the fact that time is on the side of our enemy, assisted negatively by us. Sheer containment and an arms race are no solution for the prevention of a third world war. On the contrary, at staggering costs they will build their own psychological momentum to get the thing over with. They will in no way prevent several of the elements mentioned above from being fully utilized by the enemy. Aimless predictions of a cold war struggle for the next 10, 20, and even 50 years are in the nature of mouthy utterances rather than results of reasoned analysis of the basic institutional factors at work. Again, the climactic paradox of our situation might well be the salvation of the passive West by the bold mass revolts of the patriotic populations in the Russian Communist empire, as indicated above. If we are to drift with history, it might as well be along a right course determined by those who have least to lose materially.

Question 3. In view of the free world's inferior strength as regards classical weapons, how could it withstand a war of aggression on the part of Russia with conventional weapons, without being the first to resort to nuclear weapons, if it misses the

only opportunity of destroying the Bolshevist imperium from within; namely, by supporting the national liberation revolutions?

Answer. This question is more intricate in character than it appears. First, the initial proposition on the inferiority of the free world in conventional weapons is itself subject to serious question. Quality and innovations are more important considerations than sheer quantity. On these bases it is doubtful that at the moment the enemy enjoys any clear-cut superiority across the board in these weapons. Second, the possible choice between the use of conventional weapons and that of nuclear is a widely discussed problem, especially in connection with the possibility of limited wars. However, in the event of direct Russian aggression, no matter how effected, it is unlikely that much thought would be devoted to this choice since the war would necessarily be unlimited and recourse to nuclear weapons would be spontaneous on the part of the West.

There is no reason to believe that with the act of war the United States and other free nations would then be inclined to place credence in Moscow's word not to use nuclear weapons. Moreover, in this situation there would be no moral restriction against the use of the best and most efficient weapons, namely the nuclear ones. The horrors result from their particular misuse, not from their general use which the horrible act of war itself justifies. It surely would be no crime to reduce the enemy as expeditiously and economically as possible. But by far, less costly is the liberationist way of achieving this end without a global hot war. The captive nations are the West's greatest weapon against Moscow. Unfortunately, up to now only Moscow knows this best.

Question 4. Why does the free world not take part in the fight for freedom of the peoples subjugated by Russia, seeing that Russian Bolshevist colonialism represents a grave menace to its own existence, too?

Answer. There are four reasons accounting for the neglect of the free world to actively support the national liberation forces in the Russian Communist empire. One, as concerns the formidable forces within the Soviet Union itself, is plain ignorance. Many in high places are simply uneducated in regard to the primary empire of Moscow. Some have been misinformed and a few even disinformed by anti-Communist but pro-imperialist Russian emigres. In the United States ignorance still is the chief enemy.

The second reason is the understandable fear of precipitating a global hot war. Carried to the extreme, this fear would lead to national self-paralysis and, individually, many are already in their minds at this point. The way some argue, it seems that nothing positive and offensive should be done for fear that this would lead to a hot war. Coupled with the first reason, this one largely explains a lack of understanding with regard to the aims, objectives, and art of the policy of liberation.

An unphilosophical materialism is the third reason. Assuming the absence of the two preceding reasons, it is evident that this third one, a reason of the will rather than intellect, is independently sufficient to account for the free world's neglect. In brief, this reason holds life is short, let's enjoy what we have, just live and let live, and to do these things, let's be realistic and accept the status quo of Moscow's vast empire. This form of myopia and spiritual decadence is, of course, not new in history. Sufficiently generalized, it could again plunge a civilization into oblivion. However, it is a force today which must be kept constantly in harness.

The fourth reason is plain, misguided thinking. Granted some degree of knowledge concerning all the captive nations in the Russian Communist Empire, it appears that many officials do not know what to do with it. Pointing to Western Europe and elsewhere, they see trends toward federation and supra-national organization and then, by some poor logic, react unfavorably toward what they consider a "balkanization" and "splinterization" of Eastern Europe and Asia. Ironically, these same individuals would be the first to oppose exploiting cartels and huge business monopolies, for example. The obvious point is the qualitative substance of the political or economic entity. There is a world of difference between a free federation of states and nations and a forced one. The U. S. S. R., for instance, is even worse than an involuntary association of nations. Under Russian domination it has sought to become a cemetery of nations.

Question 5. Is it not true that the only guarantee for a lasting peace and for the security of the whole world lies in the disintegration of the Russian imperium into independent national states for all the subjugated peoples, all the more so since Russia is the last and most terrible colonial empire in the world? For what reason is the disintegration of the British and French Empires approved of, whereas the idea that the Russian Empire should be preserved in the future, too, at least within the frontiers of 1939, is supported?

Answer. Nothing is more powerfully true in the international realm today than the idea expressed in this question. Whether one reasons about this forward or backward, the predominent single guarantee of lasting world peace and security is the dissolution of the Russian Communist Empire. In point of fact, it is the last and most terrible colonial empire in the world. To be sure, there would still be problems in the world—in Africa, the Middle East, in Asia, and elsewhere. But with the decisive breakup of this Russian colossus, the environment and climate would be ideally compatible with the world's interests of lasting peace and security.

Taken solely in terms of power factors, it should not at all be difficult for one to visualize this international environment once the Russian colossus is destroyed and kept permanently so. If this should prove difficult, then one ought to reason out this problem backward, i. e., in terms of historical sequence. In the period of 1917–22, had the national republics of Georgia, Armenia, Ukraine, Turkestan, Azerbaijan, White Ruthenia, the Far East Republic, and others succeeded in resisting the Red Russian armies, would there have been a Soviet Union, followed later by an expanded empire? Obviously not. The course of history would have been entirely different and the particular problems confronting the free world today would be nonexistent.

This kind of historical analysis demonstrates, too, the unrealism in which the idea of restoring the 1939 frontiers of the Russian Empire is drenched. Aside from considerations of moral and political principle, the idea is patently naive when one considers the cumulative causation of East European history and the pragmatic military, political, and economic values of the additions to Moscow's empire since 1939. Often ignorance and disinformation underlie this advocacy of the 1939 frontiers, but the possibility of this being realized is as remote as the possibility of resurrecting the independence of the Baltic nations without the collapse of the Muscovite empire. Finally, unless one operates on a double standard, compromising political principle, it makes no rational sense to approve the disintegration of the British and French Empires and at the same time approve the idea of the 1939 frontiers. In fact, the Russian Empire is incomparable in modern times for its tyranny, genocide, and dehumanization.

Question 6. Do you think that the state independence of Ukraine, Caucasia, White Ruthenia, Turkestan, and other peoples forcibly included in the Russian imperium, as well as the independence of Russia within her ethnographical territory would liberate the world from fear and danger?

Answer. My answers to the preceding questions furnish in themselves the adequate answer to this one. Without doubt the independence of Ukraine, Caucasia, White Ruthenia, Turkestan, and other captive nations in the primary empire known as the Soviet Union would liberate the world from fear and danger. However, in our advocacy of the independence of these captive nations we must hold out the prospect of easy federation of these and other states into compatible unions. For example, the nations in the Caucasus could gain immeasurably by this process. In our political thinking the impact of technology and economics, and their integrating effects cannot possibly be ignored. There are multiple possible arrangements both in Eastern Europe and Asia, and these should absorb our thoughts at this stage to a marked extent.

However, before any free and democratic federation can be launched, there must necessarily be independent states, independent and sovereign, to make the free choice of whether to federate or no, and if to federate, with whom and in what directions. Only in this way can the norms and principles of western civilization be fulfilled. These after all, are basic and fundamental to our fight.

Federal Salary Raise

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. MADDEN. Mr. Speaker, the following editorial from the Chicago Daily Tribune of April 23, 1958, sets out some substantial reasons for the necessity of immediate action on the Federal pay raise legislation. Hundreds of Federal employees, including postal workers in my district, have been waiting a long time during these rapidly rising cost of living days for a satisfactory pay increase:

THE CASE FOR RAISING CIVIL SERVICE PAY

Mr. Eisenhower has evidenced a good deal of well-founded concern over the danger of a deficit in the Federal budget. He has continually put off his decision on a tax cut. He has vetoed the pork barrel water resources bill on the ground that it provided $350 million for wasteful projects. He has vetoed the bill freezing farm price supports at a high level, and there is talk that he may veto 2 bills providing pay raises for Federal workers. One provides $417 million a year in raises to 950,000 civil-service workers, and another, passed by the Senate, offers $320 million a year more to 500,000 postal workers.

As he has made plain to businessmen and labor leaders, Mr. Eisenhower is for holding the line on wages and prices. He realizes that the worst way to spur business is to let prices go any higher.

The trouble is that everybody has his own pet exceptions, and Mr. Eisenhower himself has by all odds the biggest. While nobly slicing a few hundred million here and a few hundred million there, he is demanding approval of a foreign-aid program which would

export $4 billion at a time when it could be put to good use licking our own recession. It would be sent overseas, where there is no recession, and meanwhile European economists are begging us to cure our recession before it does spread abroad.

Anyone who is puzzled by the administration's reasoning is hastily assured that much of the foreign aid is spent in this country. If foreign aid is to be defended because it makes more money available here, we can think of more direct ways of accomplishing the same thing.

As long as the President doesn't feel he can spare a penny from the billions which go abroad—in some cases behind the Iron Curtain—we don't see how he can refuse a few crumbs to the postal and civil-service workers right here at home.

The Polish Constitution Day

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1958

Mr. VAN ZANDT. Mr. Speaker, the unhappy Poles have had their ups and downs in their long and eventful history. Their annals are full of glorious deeds and sad tragedies. And the constitution of May 3, 1791, marks a glorious day in Polish history. Late in the 18th century Poland was prey to her greedy neighbors. In 1872 she had already lost considerable territory to Austria, Prussia, and Russia by the first partition. Poland herself was not strong enough to prevent that tragic event. Her weakness and helplessness had become too obvious to the Poles, and many enlightened patriots among them had been trying to devise means whereby the country's governmental machinery would be improved and strengthened by the solid support of the populace. As early as 1788 a committee was formed for the specific purpose of drafting a constitution. The completion of this exacting task took long, but when completed early in 1791, it was regarded as the crowning achievement of a band of liberal, wise, and patriotic statesmen.

That historic constitution as adopted on May 3, 1791, was an epochmaking document, a great landmark in Poland's history. The governmental machinery was modernized and brought up to date by the inclusion of many liberal and progressive features. The king's authority was limited, though he still retained many of the prerogatives of his position. His executive power was to be shared with a council of six guardians of the laws, made up of the primate and the heads of five departments. This council may be regarded as the forerunner of cabinet government in that country. Roman catholicism remained the official religion of the country, but the regime became tolerant of other sects. The nobles retained many of their privileges, but townsmen became eligible for some of these privileges formerly reserved to noblemen. Agreements signed between peasants and their landlords came within the purview of the law. There was the legislature of two chambers elected on the basis of larger electorate. In short, by the constitution of May 3, 167 years ago, Poland moved from an unlimited autocracy to a limited monarchy. In its day this was considered a phenomenal advance, to be accomplished without bloodshed. It was the most advanced governmental reform in central and eastern Europe.

We all know too well what followed the adoption of this liberal instrument. Poland's enemies, fearing that the birth of liberal ideas in Poland may spread to their lands, and also anxious to rob unhappy Poland of what was left to her citizens, made war on Poland. Before the constitution was put into force, Poland found herself under attack. Against the superior forces of her enemies she could not long resist. In the end she lost out. The second partition followed in 1793. The constitution of May became a dead, defunct document. Soon after that Poland was no more; she was parceled out among her three powerful neighbors—Austria, Prussia, and Russia—and for more than a hundred years, Poland lived only in the hearts and minds of suffering Poles. But they never gave up the hope of regaining their national independence and reviving the spirit of the constitution of May. From then on, from the time of the adoption of that constitution on May 3, that day has become a Polish national holiday. I am happy to join liberal and patriotic Poles in the observance of that great holiday, the Polish Constitution Day.

APRIL 16, 1958.

Mr. CHARLES BURKE,
Polish American Congress, Inc.,
Washington, D. C.

DEAR MR. BURKE: This is to acknowledge your letter of April 15. I shall be pleased to join with my colleagues in commemorating Polish Constitution Day, May 3, 1958, in observance of the 167th anniversary of the event.

With best wishes, I am,
Sincerely yours,

JAMES E. VAN ZANDT.

POLISH AMERICAN CONGRESS, INC.,
Washington, D. C., April 15, 1958.

The Honorable JAMES E. VAN ZANDT,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN VAN ZANDT: May I draw your attention to the approaching anniversary of Poland's Constitution Day, Polish national holiday, which for 167 years is being celebrated on May 3.

This act of wise statesmanship, enacted by the Polish Diet in 1791 in Warsaw, by unanimous solemn vote, brought about important political, social, and educational reforms destined to strengthen the Polish state at a time of threatening dangers from imperialistic neighboring powers.

Men, who undertook the task to guide the Polish nation on the path of social progress, belonged to the most enlightened brains of 18th century Poland. They were inspired by the ideals of the American Declaration of Independence and influenced by the French proclamation of the rights of man and citizen.

The principles laid down in the May 3 constitution survived while Poland was struggling for independence and were referred to in the constitutional laws of the reborn Polish state after World War I.

Free Poland's Constitution Day was May 3, and it is still observed in the hearts of the people within the country, and throughout Polish communities in the world.

The imposing on Poland in 1953, under Soviet directives, of a constitution on Communist pattern, similar to that of all other peoples republics, did but reaffirm the attachment of the Poles to their historic charter of 1791.

It became a tradition for Members of the United States to commemorate on the floor of their respective Houses, Poland's national day on May 3, to evoke links of friendship between both nations, and to stress United States interest in the fate of Poland.

Members of the United States Congress, who visited Poland lately, unanimously agree that although the Polish Government is Communist, the Polish people are not. American visitors are impressed by the friendly feelings of the population toward the United States of America. As a matter of fact, the western trend in Poland has not been eradicated in spite of great efforts of Communist propaganda to discredit the western democracies.

The commemoration of the May 3 constitution by the United States Congress will undoubtedly find a favorable response among the people in Poland.

Your support of the cause of Poland on that occasion will be greatly appreciated by the Polish American Congress.

I take the liberty to enclose for your attention a memorandum listing a few items of actual interest concerning Polish problems.

Yours sincerely,

CHARLES BURKE,
Washington Representative, Polish American Congress, Inc.

POLAND'S KEY POSITION IN CENTRAL EASTERN EUROPE

The subjugation by Soviet Russia of the formerly free and sovereign countries of central eastern Europe after World War II proved to be—as time went on—one of the main sources of international tension. A direct consequence of this shift of power was the division of Europe, totally artificial from a historical, cultural and economic point of view, and detrimental to the very idea of a United Europe.

The demarcation line dividing Europe is based solely on Soviet power policy considerations with the purpose to serve farther expansion of international communism.

Thus the ideological conflict between communism and the free world was brought nearer to western Europe and therefore to the United States of America resulting in a state of cold war in the relations between East and West.

Poland, by her geographical situation, number of inhabitants and natural resources, forms a key position in central eastern Europe.

As a general rule United States foreign policy has in the past concentrated its main interest on Germany and Russia, and less attention was paid to the countries situated between those two powers.

This attitude was largely responsible for the fact that wartime agreements, such as Teheran and Yalta, were concluded with the U. S. S. R. in disregard of Poland's vital interests as well as of the other eastern European countries.

Similarly the idea of finality with regard to European nations under Soviet hegemony which found some adherents in the United States of America, and was expressed by certain American writers—curiously enough on the very eve of the events in Poland and Hungary in 1956 which contradicted flagrantly this assertion—showed underestima-

tion of the importance of Poland and other captive nations as potential factors of security and peace in Europe.

CONDITIONS IN POLAND AND UNITED STATES ECONOMIC SUPPORT

The people of Poland, inspite of ruthless Communist subjugation on the Stalin pattern, have maintained their patriotism and moral resistance. Their feelings and beliefs did not flinch under Communist indoctrination and terror. This also applies to the much exposed young generation.

The Poznan revolt and the October events of 1956, which took place under popular pressure, have shown the resistance of the Poles against Soviet rule and their aversion to every form of communism. Ideological slogans, like "Polish road to socialism" proclaimed as a new program by the Gomulka regime are regarded by the average Pole merely as tactical moves, Communist style.

It is fully realized that the country finds itself in a compulsory situation toward Soviet Russia. The suppression of the Hungarian freedom rising by Soviet troops, practically without any reaction of the Western Powers, remains as a threatening memento.

Under these circumstances but a slim restricted margin is left for the development of direct relations with the West and the United States of America in particular.

It seems therefore profitable to the United States of America to take advantage of every possibility to give the people of Poland moral encouragement by proving interest in their fate through concrete facts such as economic support recently granted. Although this might represent a calculated risk it is in line with psychological and political necessities, considering the feelings of the Polish people who looked to America for economic support.

SOVIET INSISTENCE THAT THE STATUS QUO IN CENTRAL EASTERN EUROPE BE RECOGNIZED BY THE UNITED STATES OF AMERICA

Soviet recent successes in intercontinental missiles and sputniks are being exploited by the Kremlin to obtain final recognition of its domination over the countries of central eastern Europe.

In his address of December 20 last, delivered to the Supreme Soviet, Khrushchev asked the West "to recognize the status quo—that is the situation characterized as it is by the existence of Socialist and capitalist states."

His language became violent in Minsk, on January 22, when he replied to President Eisenhower's proposal, that "in the interest of peace and justice the right of free choice of the captive nations be discussed at the summit conference."

In the subsequent exchange of letters and memorandums with the United States of America and the Western Powers, the Soviet Union took a menacing attitude with regard to every proposal to place on the summit agenda the problem of the captive nations. The U. S. S. R. termed such a request as an insulting interference in the domestic affairs of those countries, in spite of the fact that this request was motivated by agreements and treaties binding the Soviet Union.

It is evident that Soviet Russia reserves for herself the exclusive right to exercise control over these countries using the respective Communist parties as docile instruments of action.

It is useful to remember that any country subjected to communism is considered by Soviet Russia as virtually conquered for the Soviet bloc with all consequences deriving therefrom. This means in practical terms that any effort on behalf of the people of that country to replace the Communist system of government by a democratic one, through free voting expressing the popular will, is regarded as a hostile interference in the omnipotent right of the Communist Party to rule the country. And therefore as an act of aggression against Soviet Russia and other member states of the bloc. The use of Soviet troops to extinguish the Hungarian freedom rising constitutes an evident proof of Soviet policy methods.

Judging from a wider perspective of possible future developments in other parts of the world—this shows a real menace of international Communist infiltration.

The obstinacy with which the Soviet Union opposes any discussion of problems relating to the captive nations and insists so strongly now on the sanctioning of the status quo finds additional explanation in the following consideration:

The Poznan revolt of 1956, followed by subsequent developments in Poland and the Hungarian uprising, are proofs that the countries behind the Iron Curtain are in fact a weak spot in the Communist empire. The more so that the repercussions of these events were far reaching as far as the Soviet bloc is concerned, and their influence strongly felt in the Communist Parties abroad.

U. N. O.'s reactions to brutal methods applied by Russia to Hungary, although expressed by resolutions, which were without practical consequences, had a negative effect on Soviet propaganda. The Kremlin is therefore anxious to close once and forever the Hungarian chapter.

In addition to that the Soviets try to obtain a complete disinteressment of the Western Powers, and the United States of America in particular, with regard to the countries submitted to their influence.

In this way the U. S. S. R. would acquire a totally free hand in their action against all efforts of the people to gain more independence.

From our American point of view even tacit acquiescence to Soviet maneuvers aiming at the sanctioning of Moscow-sponsored Communist domination of formerly free and sovereign countries—would alienate the people of those countries and be detrimental to the United States of America from a moral, political, and military point of view.

A Modern Pilgrimage to Jerusalem

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Monday, April 28, 1958

Mr. EVINS. Mr. Speaker, recently the Saturday Evening Post published a moving account of an inspiring excursion through the Holy Land, along roads used by the prophets, saints, and Jesus Christ himself. The article, entitled "I Took the Jerusalem Road," was written by Mr. Daniel Brown who is presently serving as information officer at the American Embassy in Amman, Jordan, and who before joining the Foreign Service, served on my secretarial staff. Mr. Brown is a native of Sparta, White County, Tenn., and former publisher and editor of the Sparta Epositor. I am sure that Mr. Brown's vivid and descriptive account of the Holy Land will be of interest to my colleagues and others. It is an article that should be preserved and I ask unanimous consent that the article be reproduced in the Appendix of the RECORD.

The article follows:

I TOOK THE JERUSALEM ROAD

(By Daniel Brown)

Next Sunday will be Easter in the Holy Land. On that day I plan to make again the world's most fascinating 2-hour drive. It is easy for me to do this, for I live in Amman, Jordan—2 hours' easy driving from "Jerusalem, the Golden"—and between the two points lie some of the most intriguing, yet least known points of interest in the world. On this trip I plunge from 2,500 feet above sea level at Amman to 1,300 feet below at Jericho and the Dead Sea in 1 hour, and climb to 2,400 feet above at Jerusalem in the next.

Amman has its roots deep in the book of Genesis. The first king of the Ammonites was Ben-ammi, youngest son of Lot by his younger daughter. He was conceived in a cave near Zoar on a wine-soaked night after Lot and his two daughters had fled doomed Sodom, leaving their wife and mother standing as a pillar of salt by the Dead Sea. Amman is the Philadelphia of Christ's time. A fine Roman amphitheater stands on one of its main streets.

Ruins of a Roman citadel crown the brow of one of its seven hills. On this hill 3,000 years ago Joab, acting on orders from King David, placed the patriotic and trusting Uriah, the Hittite, in the front ranks of a great and bloody battle, there to be slain. Uriah's demise left David, off in Jerusalem, a clear field with Uriah's beauteous wife Bethsheba, who was to bear him a famous son. This son grew up to be the "wise king," Solomon, builder of a great temple that crowned a famous height in Jerusalem, at the other end of my Easter pilgrimage.

Rabbath-ammon, the "City of Waters" of King David's day, is now Amman, the fast-growing capital of the Hashemite Kingdom of Jordan. Jerusalem "the City on the Hill," although retaining its age-old name, is tragically divided now between Jordan and Israel, a no man's land running through its heart. All of the major holy places, however, are on the Jordan side, and they blend with the historic and merely scenic to make the drive from Amman a glorious adventure for scholar, historian and tourist.

My first breathtaking thrill, driving out of Amman in the direction of Jerusalem, is the view to my right over the hills and plains of Gilead. The hills march away in splendid ranks, their purples, ochers, mauves, lavenders, and russets combining in a massive, yet delicate velvet counterpane. There is still a balm in Gilead, for the simple little shrub producing this fragrant ointment flourishes today on the hillsides as it did in Gilead of old. Among these hills is the River Jabbok, where Jacob wrestled all night with an angel and emerged from his battle with a greater appreciation of goodness and right and the new name, Israel. He named the plain which was his wrestling arena Peniel—the face of God—"for I have seen God face to face."

Somewhere off in the oak forests of this land is the unmarked and unmourned grave of Absalom, rebellious son of David. Absalom raised an army against his father and took on the forces of Joab in the mountains of Ephraim. In an amateurish display of generalship, he rode his mule under the boughs of an oak, was "taken up between the heaven and the earth," and dispatched by Joab.

The battle was long and bloody, with 20,000 casualties between the two armies, but it was more remarkable in another way. "The wood (of Ephraim) devoured more people that day than the sword devoured." Modern-day military analysts wonder if this was not the greatest mass a. w. o. l. of all time.

The spot whence these areas are viewed is the Circassian village of Suweilih, whose citizens are supplied with water from a Roman cistern. This spot in the days of Christ was a watering station on the caravan route from

Gerasa—present-day Jerash—in the north hills of Gilead, to the Nabataean city of Petra, carved out of the rose-red sandstone cliffs in south Jordan. Gerasa, like ancient Philadelphia, was a commercial center in the Roman Decapolis and enjoyed immense if short-lived prosperity. Its ruins today constitute the best preserved of all provincial Roman cities. Its massive stone columns and colonnades survive because, after trade routes shifted, the area was long deserted. When the present Circassian settlement of Jerash was founded, about 80 years ago, the old city became a handy stone quarry, and some finely cut masonry is to be seen in the goat pens of the new town.

Whereas Gilead is on the right side of the road as I drive along, on the left are the painted mountains of Moab, bearing the name of Ben-ammi's brother, borne for Lot by his elder daughter. It was in this naked wasteland that Moses incurred the wrath of God by striking a stone with his staff. The bitterness of the Lord poured forth in the form of saline water and Moses was told to go up onto Mount Nebo, the loftiest peak, to be shown the promised land and there die. His remains lie in a secret grave on those heights today.

The bones of Moses' successor, Joshua, rest on the north side of the Hill of Gaash, off the Jerusalem road 15 miles out of Amman. Joshua, who led the Israelites across Jordan and stormed and captured Jericho, died at the age of 110 and lies "in the border of his inheritance * * * which is in Mount Ephraim." His sepulcher is 27 feet long, for truly Joshua was a big man in the history of his people. Like many of the monuments of Judaism, his grave is today a Moslem shrine.

At a point near Joshua's tomb the road enters the Valley of Jethro, named for the father-in-law of Moses, from which it is not to emerge until it reaches the floor of the Jordan Valley. Soon the ancient town of Salt appears, and the road begins to descend in earnest. The people of Salt have long been known for their fierce independence. As early as 1444 B. C. Salt was spoken of in a respectful manner when described along with the other cities of the inheritance of Judah. Such towns of the mountains and plains as Goshen and Carmel were mentioned merely by name, but Salt was called "the City of Salt," even though it was a community in the wilderness.

West of Salt and deeper in the wadi I come to a sign marking sea level. For the next 35 minutes of travel toward Jerusalem I shall be below the level of the sea. But still the waters of the Dead Sea are not in view. They lie 1,300 feet down and around many curves of this tortuous highway. To the right and below me is a valley of fire and water. Flaming oleanders grow in wild profusion along the banks of a sparkling stream which tumbles down to the Jordan. To the right and the left towering bluffs reach skyward, covered with new spring grass and ablaze with the scarlet blossoms of wild anemone—the Biblical "lily of the field"—with roses of Sharon and other wild flowers in yellow, pink, and purple. The effect is that of rich Persian carpets hung on both walls of a narrow hallway.

Soon the road spills into the Jordan Valley, and the Dead Sea shimmers in the sunlight to the left and still far below. Behind now are the mountains of Moab. Between them and the sea stretch the plains of Moab. In this land was enacted one of the Bible's most inspiring stories of devotion, the Book of Ruth.

Presently I reach the Jordan River, spanned by King Hussein Bridge. A few rods downstream is the spot where Jesus was baptized by John. And just to the north of here, Joshua's legions roared down out of Shittim and camped on the banks of the river before they passed over it, on dry land—thanks to an earthquake, which jarred the powdery banks down into the stream, creating an earthen dike. Further north is Gilgal, the first campsite of Israel in the promised land. There Joshua raised a monument of 12 stones, one for each of the 12 tribes.

Most persons seeing the Jordan for the first time are disappointed at its narrowness and muddiness. In summer it is possible to hop across the river on high spots in its channel. But in winter, after heavy rains in the north, it can be a sizable and dangerous stream.

At this point I am traveling through the lunar landscape of the Jordan Valley. These heaped-up silt deposits were once the floor of the Dead Sea and now form a useless stretch of salty ash pile. The Jericho oasis looms ahead, suspended between the west-bank continuations of the ash heap and the wilderness that rises behind it toward Jerusalem. According to tradition, the seer Elisha once passed this way and tasted of the water of a certain well. Finding the water salty, he flew into a flit of pique and tossed a handful of salt into the spring. The water thereupon became sweet. Fortunately for the inhabitants of the oasis, it has remained so ever since. Elisha's fountain now supplies water not only for the city of Jericho but also for many of the 80,000 Palestinian refugees in nearby camps, and for sizable units of the Jordan Army—formerly the Arab Legion of Glubb Pasha—encamped in the valley.

To the north and west is the spot where Joshua bellowed forth commands causing the sun to stand still upon Gibeon and the moon to halt in the valley of Ajalon. Beyond this place, in the cave-riddled wilderness to the west, Joshua in one busy day slew the kings of Jerusalem and Hebron and three lesser potentates, threw their bodies into a cave and rolled stones over it which remain unto this day.

Jericho, possibly the world's oldest continuously inhabited community, is also the world's lowest. It stands on a slight rise above the Dead Sea. Here transpired one of the Old Testament's most awesome and best-known events, the destruction of Jericho's walls by the shouts and trumpet blasts of Joshua's legions—and, as one might suspect, by a second fortuitous earthquake. Of all the inhabitants of the town, man, woman and infant, only Rahab, Joshua's undercover agent—the harlot with the house on the wall—escaped the slaughter, together with her family.

This city laid waste by Joshua lies a mile and a half north of present-day Jericho, which stands on the ruins of Byzantine and Crusader Jericho. The ancient city reached its peak under Herod, who died here in 4 B. C., crazed with disease and pain. Jericho had been farmed out to him by Cleopatra for the equivalent of about $150,000 per year. She in turn had received the rich date-palm gardens of this oasis from Antony, as a small token of his esteem. Apparently she cared little for them.

Archaeologists today are sifting through digs well below the level of the time even of Joshua. There are good indications that man was building stone forts here as early as 7000 B. C. A tourist recently asked Dr. Kathleen Kenyon, British archaeologist in charge of the dig, to point out the remains of the walls from Joshua's time. Dr. Kenyon was horrified that anyone would waste his time on "modern" Jericho.

Towering above the excavation is the Mount of Temptation, where Jesus fasted for 40 days. Built into the mountainside by a Greek Orthodox order—and utilizing some of the very caves where, tradition has it, Jesus fasted—is a monastery.

Satan took Christ to the summit of this mountain to show him in the twinkling of an eye "all the kingdoms of the world and the glory of them." An energetic person who takes the time to make the climb today derives especial appreciation of this Biblical account. From the peak one may survey Sodom, Gomorrah, Hebron, Jerusalem, Bethlehem, Samaria, Gilead, Gilgal, Jericho, Moab, Edom—indeed, the kingdoms of the world of that day.

Just out of Jericho in the direction of Jerusalem there rise out of the Dead Sea the black and ugly cliffs of Qumran. In caves here Bedouin shepherd boys in recent years discovered apparently worthless rolls of parchment which the world now knows as the Dead Sea scrolls. New discoveries are being made from time to time, but many scholars have concluded from already uncovered scraps of records that John the Baptist, who exerted much influence on the life of Christ, was a member of the Essene community, a hermitlike monastic sect that inhabited this inhospitable lizard's nest on the edge of the Judean wilderness. There is speculation that during the "lost years" of Christ's life, the Teacher himself may have been a member of this sect, practicing its rituals of fasting, self-denial and mortification of the flesh before he considered himself worthy to take up his final victorious task.

Now begins the climb through the desolate wilderness of Judea, hell's half acre multiplied ten thousand times over. Hardly a blade of grass is to be spotted in this flint-scattered void, even in these days of spring when the fields of Amman and Jerusalem and the oasis of Jericho are lush with vegetation. It takes 15 minutes to climb out of this pit of Satan to the brink of a hill where green fields again make their welcome appearance.

At this spot I pass the Inn of the Good Samaritan, where the wayfayer, beaten and robbed, was comforted and taken to the inn by a lowly Samaritan. The walls of the inn, in relatively good condition, house a Jordan Army guard post on what I must now begin calling the Jericho Road. Indeed, the storied road from Jerusalem to Jericho crosses and recrosses the present macadam road a score or more times. It is preferred to the latter by the diesel-fearing donkey drovers.

Swinging around a sharp curve beyond the inn, I see for the first time the towers of Jerusalem breaking majestically on the view. Many a devout pilgrim's heart has swelled and his eyes have welled with tears as this first glimpse of the Holy City has thus thrust upon his vision.

From this spot the road prowls for another 10 minutes in the valleys and low places beneath the city. Then it makes the final climb up the boulder-littered incline to the summit. Verily, "the hills surround Jerusalem as the Lord surrounds his people." Here is the Apostle's Well where Christ and his fellows often stopped for a drink of cool water as they traversed the Jericho Road.

At the summit of the last rise is Bethany, home town of Mary, Martha and Lazarus and of Simon the leper. A neat and new little Franciscan church stands over the traditional house of this Bethany family that enjoyed Christ's special friendship. Tourist guides like to point to a ruined stone building in the courtyard of the church which they say is the house of Lazarus and his sisters. Swifts flit among its tumbled walls. Guides also point out a ruin higher on the hill which they vow was the home of Simon, where Mary anointed the Lord with precious nard, wiped his feet with her hair, and was blessed for her act.

Up a rude and stony trail is a tomb said to be that of Lazarus—more likely a clever bit of the Crusader fakery that abounds in the area—where Christ performed one of His supreme miracles. A Moslem caretaker ushers me into its clammy depths, about 15 feet below street level, and booms in

stentorian tones as I emerge, "Lazarus, come forth." This modern-day miracle is wrought for 10 piasters, the price of a small, hand-dipped taper.

Around a curve and only a few score yards from Bethany is Bethphage, whence Christ on Palm Sunday began his triumphal ride into Jerusalem on the borrowed colt of an ass. A small church is built over a boulder revered for having served as the mount for the ass. Bethphage is Arabic for "home of the fig," alluding to the time when a hungry Jesus, on his way to oust the money-changers from the temple in Jerusalem, cursed a barren fig tree at this spot and caused it to wither and die.

Swinging around yet another curve I see on the left of the road the Hill of Evil Council, where certain notables of Jerusalem met to conspire against Christ. Next in view is the Hill of Offenses, where Solomon kept his 1,000 wives. The hill is now crowned with evergreens. Nestled among them is a small hotel which does well to accommodate 100 pilgrims on this Eastertide.

On the slopes below is the Field of Blood, a potter's field purchased with the 30 pieces of silver cast aside by Judas in a fit of remorse after his betrayal of Christ. Afar to the left are the eastern slopes of Mount Zion. There the church of St. Peter in Gallicante stands over the site of the Palace of Caiaphas and a grotto believed to have been the prison into which Christ was cast on the night of his passion. The garden of this church is one of the most serene in Jerusalem. Through it runs the stairstepped Roman road over which it is said the legionnaires brought Christ from Gethsemane. It was at this spot that Peter thrice denied Christ before the cock crew.

Below is the Jebusite village of Silwan—old Siloam—and the vale of Kidron, believed by many to be the "valley of the shadow of death." It is hard below the walls of Jerusalem, whose glorious panorama now spreads before me. At 3 or 4 o'clock in the afternoon, while it is still light in the Old City, deep shadows are falling in the valley, whose grass is kept eternally green by the cool, still waters of the pool of Siloam and Job's Well. In the former, the sight of the blind man was restored. There are those who hold that the patriarch of Uz bathed the boils of his affliction in the sweet waters of the latter.

Down in this valley is Absalom's pillar, supposedly erected in the king's dale by Absalom because "I have no son to keep my name in remembrance." In fact, the pillar, carved out of the living rock, dates from a much later time and was probably erected by the Maccabees, who, like the Crusaders of much later years, went about the countryside patching up history's frayed fabric according to their own blueprint.

The Palm Sunday route from Bethphage comes down across the Mount of Olives to the right, just beyond the Garden of Gethsemane and the Basilica of the Agony of our Lord. It proceeds across the vale of Kidron and up to now-blocked Golden Gate, through which Christ entered. In the garden are eight ancient olive trees, lovingly tended by the Franciscan Fathers, which date from the time of Christ's entrance into the city. They still bear fruit.

By the garden is the tomb of the Virgin Mary; and across the road, just under the walls of the Old City, is St. Stephen's chapel, raised by the Greek Orthodox over the spot where it is said the first Christian martyr was stoned to death from the walls of the city.

Swinging off the main road now, I make my way under the walls to the back of the city. I enter through Dung Gate, so called because, until recent years, it was through this back door that the city's refuse was heaved. As I enter the North African Quarter, largely ruined and unoccupied since the shellings of the Palestine War, Mt. Moriah, and the temple area rear their domes and minarets on my right. It was here that a heavy-hearted Abraham went, willing to sacrifice his only son, Isaac. It was here that the Jebusites had a mammoth threshing floor and that David, out of favor with God, erected an altar to his Master but was not allowed to raise a temple. His son, Solomon, beloved in the sight of God, did rear a magnificient temple, only to have it destroyed by Nebuchadnezzar in 586 B. C. It was in a later temple that Christ, at twelve, confounded the elders and, near the time of his crucifixion, created a furor by chasing out the money-changers. He foretold the destruction of this temple, and in A. D. 70 it was indeed destroyed by the Romans, along with the rest of the city.

This has been the holy place for Jew, Pagan, Christian, and Moslem. After it served as the shrine of the early Jews it was the site of Hadrian's spurious temple to Jupiter. Queen Helena, mother of Constantine, first Christian emperor of Rome, came to Jerusalem and ordered all such temples laid low. The area then became the city's rubbish heap. When the Arabs took over in the seventh century they hastily cleared the debris and erected, first a simple wooden mosque, and, later, the present grand Dome of the Rock.

Later still the Crusaders occupied Jerusalem and in the Dome founded the Order of the Knights Templars. An intricate wrought-iron screen is all that remains to mark the fact that the Christian knights passed this way, for the Dome of the Rock is today Islam's third-holiest spot—the place where Abraham went to offer up Isaac. It is still the grandest example of Islamic architecture, weatherbeaten and wartorn though it is.

Visible also are the domes and golden crosses of the Church of the Holy Sepulcher. Though time-ravaged and ineptly patched, this is certainly the holiest church in Christendom, erected supposedly over the traditional site of the crucifixion and burial of Christ. Six Christian orders—the Latins, the Greeks, the Armenians, the Assyrians, the Copts, and the Abyssinians—all have shrines here and vigorously compete for hours of worship.

The lowly, ebony-skinned Abyssinians, weak in number, have literally been pushed out of the building by their stronger Christian brothers. Their shrine is on the roof, where the monks huddle in ramshackle rabbit warrens which they have built for themselves. Once a month, except in March, they celebrate Christmas. At this season, during Eastern Holy Week, they observe the strange rite called Searching for the Body of Christ. These gentle, devout, unprotesting people trace their origin to a supposed mating of Solomon and the Queen of Sheba. Their liturgical language is Geez, the all-but-forgotten tongue of ancient Ethiopia.

From the time of Saladin, the Moslem family of Nusaibeh has kept the key to the massive weathered oaken doors of the church and thus has kept the peace among the clamoring Christian factions. The early fourth-century church built by Constantine was burned, rebuilt, and destroyed again. The present structure is much as it was when completed by the Crusaders in the 12th century.

Here ends my fascinating 2-hour journey—but not the story of Jerusalem, the eternal. Jerusalem has been besieged 50 or more times, partially destroyed on 30 occasions, and 5 times razed to the ground. But the City on the Hill, sacred to Christian, Jew, and Moslem, will live forever.

"If I forget thee, O Jerusalem, let my right hand forget her cunning."

Can Airlines Fill the Gap?

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. VANIK. Mr. Speaker, in the past several months, passenger rail travel has been in the process of passing from the American scene. The effect of this transition will be very difficult to evaluate.

There is every reason to believe that the Nation's air carriers will profit most in this development. There is serious question in my mind whether they are prepared for the high volume of traffic which will require safe and economic transportation.

The following editorial in the Cleveland Plain Dealer of April 30, 1958, inquires as to whether airlines can fill the gap:

CAN AIRLINES FILL THE GAP?

In noting the passing recently of several name passenger trains, we deliberately refrained from voicing the idea that the king (railroading) is dead, long live the king (airlines).

It simply wouldn't be so on many counts. No one can flatly write off rail passenger business as extinct—not unless he possesses special clairvoyance which sees no further technical developments in the railroad field.

Besides, it wouldn't be true anyhow. The real king is the private automobile. Driving accounts for better than 85 percent of all trips. But airlines are edging up in the long-haul passenger field with close to 5 percent of the trip volume.

Thus, literally by default, the airlines are picking up a sizable chunk of what the railroads have abandoned. It's a fair question to ask if they're up to it, or if the passenger will get a fair break?

We ask this because presently some of the airlines are making grumbling noises about the no-show control program instituted only last fall to protect the passenger from himself, so to speak.

American Airlines has been the chief complainant, backed by some of the smaller carriers like Mohawk. According to American Airlines, the three-way control setup (reconfirmation, a $3 penalty on no-shows and early ticket pickup) simply isn't panning out. The line complained that its passengers were being overly inconvenienced. Bookkeeping costs of managing the program reportedly are higher than the benefits.

Some of this well may be true. We've heard other airlines rant against the bookkeeping complications. Yet might not the $3 penalty be far too low, simply not enough to jar people into thinking about how they inconvenience others?

In any case, we find this move a strange one on American's part because for years it led the way in a drive to cut late cancellations and no-shows. It makes us wonder if there may not be en entirely new trend coming into being in air travel.

This would involve—within certain high-density runs like Boston-New York-Washington, Cleveland-Columbus-Cincinnati—regular, almost on-the-hour daytime flights involving no reservations whatsoever.

Why not? If you miss one trip, you'd know another would be along very shortly. Shuttle-type service already is virtually in existence now between Boston and New York,

where you have large numbers of travelers who continually travel on standby basis.

As a result they've put in DC–6 equipment which can carry large volumes over faster schedules on some of these eastern short runs—for which this type of plane was not designed at all.

Similar service between Cleveland and Columbus would be highly welcome; we hope it's on the books to help ease a serious travel pinch.

Despite the growing popularity of air travel, reportedly 75 percent of the American public still has never flown. Obviously there remains a huge mass market yet to be tapped. Why hasn't it been done faster? Not fear, we're sure, but possibly because of the immense amount of redtape—reservations, baggage checking, checking in, and such—holds many people back. So speed the day, we say, when the fuss is removed from flying.

Beware of the Red Bear

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. HILLINGS. Mr. Speaker, today I have introduced a resolution to express the sense of the House of Representatives that we should continue testing nuclear and thermonuclear devices so long as the Soviet Union threatens the safety and security of the United States and its free-world partners by refusing to accept an ironclad inspection system for outlawing such devices.

The Communists have launched a tremendous propaganda drive against such tests, perhaps because there is truth to the report that they burned their own hands in testing such devices.

Nevertheless, I am convinced that we should continue testing under safeguards developed by our responsible Government leaders and scientists.

I note that recent discussions of the Nation's leading scientists at Asilomar, Calif., led to a conclusion that continued atomic tests were not producing radioactive fallout sufficient to endanger the present and future health of human beings.

I further noted that it was the consensus of these scientists that United States tests were being conducted so as not to produce a fallout harmful to the future of civilization.

At this point, I am inserting an excellent editorial on this subject that was published in the Los Angeles Examiner of April 30, 1958:

The nuclear weapons tests in the Pacific this summer, which the Russians are trying so hard to stop, may produce the most powerful deterrent to future war the world has ever known.

They would be the exclusive weapons of the free world.

This is the reason why the Russians have mustered the full strength of international communism against the forthcoming American tests.

They know the vital purpose of the tests may be to prove the final and vast capacities of remarkable and fantastic nuclear weapons, hitherto unheard of and still entirely unknown to the Communist powers.

They believe, and with the greatest possible weight of reason, that American scientists have developed and perhaps perfected an unprecedented range of nuclear weapons that will make the costs of aggressive war prohibitive and that will deprive future aggressors of all prospects of success.

They know the Pacific tests may raise invincible safeguards against war, and may consolidate the universal hopes of peace and security.

They know the difference between holding and not holding these vital tests is the important difference between the Communists having the top hand in the struggle for world domination and of not having it.

They are clamoring for calling off the tests, because they recognize that this may be the point beyond which they cannot go and will not dare to go in their aspirations to put the whole world under the Communist heel.

The Pacific nuclear testing grounds this summer may give us a deterrent to war and a power for defense so tremendous that we will be closer to permanent peace than we have ever been since the menace of communism cast its evil shadows over the face of the earth.

The Russians are striving desperately to stop them, in their own unholy interest.

We will net them be stopped at our own dire peril.

Child Health Day, Cystic Fibrosis, and a Call to Action

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 1, 1958

Mrs. KNUTSON. Mr. Speaker, today, May 1, is Child Health Day. Every year since 1928, the President of the United States has issued a proclamation declaring May 1, Child Health Day.

In 1916—12 years earlier—Julia Lathrop, the first head of the Children's Bureau, wrote to the Secretary of Labor:

May Day has a long and pleasant tradition among all English-speaking children. It might well be chosen by their elders as a day which should be not only a festival but also year by year a celebration of some increase in the common store of practical wisdom with which the young life of the Nation is guarded by each community.

In 1933, President Franklin D. Roosevelt—in his first May Day proclamation—supported the slogan: "Mothers and babies first."

Nine years later, in 1942, Child Health Day initiated a campaign for immunization against diphtheria and smallpox. Another year medical and dental examinations for children entering school for the first time were emphasized.

For the past weeks, you have heard me on several occasions tell you about the disease called cystic fibrosis. Mr. Speaker, cystic fibrosis is a vicious disease. It strikes 7,000 newborns every year, and 5 Child Health Days later, half of these boys and girls have died. A cystic fibrosis victim at the age of 20—in 1958—has about the same additional life expectancy as the average person at the age of 100. Almost 100 percent of the cystic fibrosis children die before they have a chance to die of something else.

On this Child Health Day, 1958, let us resolve to stop cystic fibrosis' child-killing spree. Research can do a lot for these youngsters. I have received letters from several doctors during recent weeks and they all agree that we know very little about the disease. Dr. Justin Andrews of the National Institutes of Health, when asked, in February of this year, about how much has been done, researchwise, to date, in the area of cystic fibrosis, testified: "Not very much."

I hope that next year, on Child Health Day, I can report to you progress made in the meantime to wipe out cystic fibrosis.

A few days ago, I inserted into the CONGRESSIONAL RECORD extracts from the many letters I have recently received urging acceleration and expansion of our national cystic fibrosis research programs. Let me refer you to pages A3565 and A3575 of the RECORD of April 21, and pages A3836 and A3842 of the RECORD of April 28. And then let me refer you to your hearts. Our hearts will tell us that we must declare war on cystic fibrosis.

Beware of Summit Meetings

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. BYRD. Mr. Speaker, under leave to extend my remarks I wish to include a recent editorial which appeared in the Charleston (W. Va.) Daily Mail. The editorial takes the position that it is utterly ridiculous to attend a summit conference with the Russians in the light of past experience and that we should quit yielding to pressure from the British and French on the subject. I take the same position, Mr. Speaker, and I commend the editorial to the attention of my colleagues:

IF EVERYONE IS AGREED WE SHOULD NOT GO TO THE SUMMIT, WHY TAKE THE TROUBLE?

President Eisenhower obviously does not want to attend a summit meeting with the Russians and from the American point of view doubts the value of the gesture.

Secretary of State Dulles is, if anything, even more resistant until the Soviets have met certain requirements as to good faith. There is just no point in talking, if the Soviets will not agree to discuss the only problems of any moment.

Former President Truman is much of the same mind, and, although he puts it differently, stoutly supports his successor in his reluctance to lend himself to Soviet propaganda.

Dean Acheson, Mr. Truman's Secretary of State, backs him up. He goes a little further, in fact, to suggest that in time of peace the President of the United States should not participate in any summit meetings on any score. He cites the failure of the Paris conference at the close of World War I and the Geneva conference in 1955 as examples of futility.

Here we have, then, a powerful concensus that under present conditions and without more binding guarantees of some useful exchange there is no advantage and the possibility of greater danger in any American accommodation to the Soviet timetable.

And yet, in the face of this, it seems to be taken for granted that by some road and in due time the President will eventually go to the summit and do what no one thinks he ought to do.

Why?

The only answer with any currency seems to be that the United States must yield its better judgment on the demand of its allies, particularly the British and the French, who are being pressed by their leftist and radical politicians. In other words, the United States must embark on a foolish course to allow Prime Minister MacMillan to appease his Laborite opposition.

This isn't statesmanship at all. It is simply town hall politics played on a global scale.

Real Unification

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. HÉBERT. Mr. Speaker, during these times of confusion and discussion of the unification of the Armed Forces and the reorganization of the Pentagon I believe it most refreshing to report an occasion which demonstrated to the maximum the effectiveness of real unification.

Last weekend in New Orleans there was dedicated the Alvin Callender Field which is a joint reserve training center for all the Armed Forces. This was unification in its purest and simplest form.

I admit I have a very deep interest in Alvin Callender Field because I have nourished the legislation which brought it into being. It is in my district. It is the first major military defense establishment in the New Orleans area since the turn of the century when the Algiers Naval Station was established.

So important and so great was the dedication of the Alvin Callender Field that from all sections of the Nation came the military in the uniform of the Army, the Navy, the National Guard, the Air Force and the Coast Guard.

The principal address the night before the dedication was made by the Secretary of the Navy, Thomas S. Gates and the field itself was dedicated by Admiral Arthur W. Radford, the immediate chairman of the Joint Chiefs of Staff.

Each made a profound impression on the citizens of New Orleans. Each demonstrated the fact that the services can live in unison. Each exemplified the spirit and the being of unification in the Armed Forces.

The newspapers of New Orleans, the Times-Picayune, the New Orleans States, and the New Orleans Item as well as the newspapers of the surrounding territory, the West Band Herald and the Plaquemines Gazette, contributed their best to the event.

Of course it is impossible to direct your attention to all the newspaper editorials and all the speeches made on the occasion so I have asked permission to publish here the speeches of Secretary Gates and Admiral Radford and an editorial from the Times-Picayune which bespeaks the spirit and appreciation of the entire community.

I might also say it was a distinct pleasure for me to have my colleague from the Second Congressional District of New Orleans, HALE BOGGS. While HALE BOGGS represents a different district we, in New Orleans and the First District, feel that he is an important part of our community and we were glad to have him present.

My colleagues, I suggest that you read the following editorial and the addresses by Secretary Gates and Admiral Radford:

AIRBASE UNANIMOUS

The dedication and public opening today and Sunday of the Nation's first specially designed, joint, air reserve training center mark a national event in sound planning, efficiency, economy, and unanimity which transcends the fulfillment of our own metropolitan area pleasure.

The concept goes back in general about 8 years; in particular, with reference to the Alvin Callender Field area, a little less; but 8 years isn't bad, even on the modern scale, for completion of a vision of such magnitude, imagination, and engineering.

If Congressman HÉBERT didn't originate the idea, he certainly swarmed over and pushed it like a mother hen; and he has been among the first to praise the almost unfailing cooperative zeal and help from every quarter, local to national, that really hatched the egg.

While spectators catch their breaths over the active and static samples of the Nation's aerial defense might, marshalled for the show part of this historic occasion, some of the generators and fosterers of the project will remember when breath ran a little short over a few threats to its final or timely realization.

But for once, at least, the big good idea was a cinch to win. All the travail is behind, we hope, and celebration is very much in order.

Memories have to stretch 33 years to that first 125-acre donation for a public airport by the late George A. Hero, down on the river; to its dedication in 1926 in memory of New Orleans' illustrious air fighter of World War I, to whom the 3,215-acre base is now rededicated; to its recognition in 1928 as the South's largest nonmilitary landing field; to its inauguration of night flying in 1929, and maybe even to the Navy's transformation of it 15 to 17 years ago, in World War II.

Thoughts have to enlarge to take in its retransformation; its logical place in and apt fixing of the metropolitan airport pattern; its likage by way of the new river bridge, and developing expressway routes, to every part of our sprawling community; its service to active duty and weekend warriors of Navy, Marines, Air Force, Air National Guard, Coast Guard, and Army also have been mentioned) not only in Louisiana, but eventually throughout the gulf area, where in 1957 reserve flying was tops in membership and participation.

Commissioned last December, operating in high gear since January, the United States Naval Air Station, Alvin Callender Field, today has its deserved spot in the national searchlight; it's proud to have you, neighbor, from New Orleans and all around.

REMARKS BY THE SECRETARY OF THE NAVY, THE HONORABLE THOMAS S. GATES, JR., NAVY LEAGUE DINNER, ALVIN CALLENDER FIELD DEDICATION, ROOSEVELT HOTEL, NEW ORLEANS, LA.

I don't suppose it's ever really true that the speaker of the evening is as happy in that first appalling moment he finds himself on his feet with his undelivered speech lurking in front of him as he always says he is.

But in a very real and deep sense I am happy to find myself in New Orleans tonight, at this dinner sponsored by the Navy League of the United States, to assist in the dedication of a new Naval Reserve air station, named in memory of your native son, Alvin Andrew Callender.

New Orleans has always been a magic name. You have a centuries-old culture and tradition linking you to France and the Old World, and a new tradition in gaiety, music and the arts that is one of the brightest threads in the fabric of American life. You are steeped in history, yet you exemplify the industrial might and progressive spirit of the New South.

You sit at the mouth of the greatest river in the world, and your tremendous deep-water port links you with the commerce of the seven salt oceans of the world.

You have a long and proud military history, and your sons have fought America's battles with valor and distinction ever since America existed. One of those sons was Alvin Callender, whom we honor tonight.

So I am glad to be here, and grateful to Congressman ED HEBERT, who invited me.

I have worked with ED for all the more than 5 years I have been in the Navy Department, for he is one of the outstanding members of the Armed Services Committee of the House. With my own business background, I compare that committee to a board of directors, to whom the operating executives turn for counsel, authoritative policy and the power to get things done. In many ways ED knows more about our business than I do. He never asks me to do anything—all he ever wants are facts—and he sure wants those.

This Reserve air station that we dedicate tomorrow is itself a bright example of the sensible, efficient partnership between the armed services that ED and many others have worked for. The Naval Air Reserve, the Air Force Reserve, and the Air National Guard will work together, sharing land and facilities and costs—while each will maintain its mission and identity and the pride of outfit that is the hallmark of good military spirit. Thus and in countless other ways we in the military, our friends in the Congress, and our superiors in the executive are working toward safety with solvency. Safety for our civilization against the ever-increasing military threats from abroad, and solvency for our economy in an expanding American way of life.

And it is extraordinary how the American tradition of ready reserve military forces has stood the test of time and the trial of war. Today, as they always have, they provide backup strength to the regular forces, making an indispensable contribution to our safety—and at a minimum cost to our solvency.

It stirs the imagination to think of the Reserve pilots who will train from this field, always adding new knowledge and new skills to their sound foundation of training and experience. On his country's call, one may find himself flying the bitter darkness of the North Atlantic night searching for the deadly killer submarine—another catapulted from the carrier's bow to seek the enemy in the deep blue sky high above, with the shocking roar of the jet afterburner fading away, as he moves with incredible speed up and out to meet the foe—still another endlessly patrolling some distant sea against any threat to our maritime lifeline. These pilots and air crews and their devoted mechanics are your friends and neighbors, and they are something more—the citizen warriors that have traditionally kept our country free. Your Mayor Morrison, who met me today,

and who heads the Reserve Officers Association, understands these things very well.

Alvin Callender was this kind of man. He was a distinguished civilian aviator who flew with great courage and effectiveness in the Royal Canadian Air Force and the Royal Flying Corps in World War I. He lost his life in aerial combat, in the war fought to make the world safe for democracy. Let us always pay tribute to him and to the countless thousands who died so that we may live in freedom. Let us ourselves always be ready to earn freedom for our sons, and to pay for freedom, with money and toil—if need be, with life itself. Nothing less than this measure of devotion will keep us free.

Yet there is still another requirement. We must be intelligent. We must look at the nature of the physical world, and the new science, and adapt our military thinking to it. The Navy, for example, must deal with all these things—radar, advanced electronics, atomic energy, supersonic flight, ballistic missiles—space exploration. You name it—we have it. And we will have other things undreamed of today.

This audience, on this occasion, is entitled to ask "How does all this fit in with our Naval Air Reserve training program? What is the future of Naval Aviation?" And the answer, I believe, is that it fits in very well, and that the future of Naval Aviation is bright.

It comes about this way. Not now, not tomorrow, but soon—it will be technically possible for each major power to destroy the other utterly with thermonuclear rockets and other weapons. And by the employment of secure weapons launching bases, such as the Navy's own rocket-launchiing Polaris submarine, it will become possible for each nation to destroy the other no matter if it is itself struck first. So then we will have true nuclear stalemate. And it will even be possible to have this capability relatively cheaply—for a relatively small fraction of the total defense cost. But because this deterrent is mutual, it does not mean that Communist aggression will cease. They will still pursue the combined political and military probing and searching for weakness in the free world that has marked their policy for many years—with a good many sorrowful successes. The only proof against these tactics is the solid, rock hard unity of the free world against aggression—whether political, in minor military operations or in full-fledged limited war.

This free world of which I speak is an oceanic alliance, held together with the cement of sea and air power. At the nation's need we see naval aircraft hunting submarines—striking the sources of enemy naval power—guarding our ships and our sea flanks against air attack—safeguarding the commerce of the seven seas. We see marine landing forces employing helicopters to assault vertical envelopment objectives, and naval and marine aircraft supporting the Marine divisions ashore. We see sea-based air controlling the seas as it has since the airplane came of age.

But we in the Navy have no ambitions to do everything alone, or to grow bigger for bigness' sake. We do not pretend to know all the answers, or to possess all the capabilities needed for the country's defense. We believe in unity of purpose toward a single national end—the defense of ourselves and our allies. We believe in the kind of mutual support and partnership between the services that comes from the mind and from the heart. We believe we have come a long way toward achieving this, and are making more progress every day. I give you this multi-service and multi-purpose Alvin Callender Field as an example—only one among thousands.

And now I think I am entitled to speak with frankness and sincerity to the members here of the Navy League of the United States—the civilian arm of the service. Working together—for I too am a civilian—we have a right and a duty to make the country aware of seapower to the best of our ability, so that the Navy may attract the support and understanding that it needs and deserves to do its job. We have an equal right and duty to support and aid the Army and the Air Force in their vital roles, as indispensable to the country and to the Navy as it is to them.

Now finally, I want to talk a little bit about our people. In the Navy today there are 675,000 men and women in uniform, 190,000 Marines, and 400,000 civilians. In our Reserve components there are 850,000 men and women. These dedicated men and women stand alert and ready for trouble wherever it may come—off Formosa, Indonesia, Iceland, Suez, any corner of the world. They are a big slice of America, with all the hopes, desires, worries, and ambitions of the rest of us. These people and their brothers in service are in fact our greatest national resource. Devoted young soldiers, sailors, airmen, and Marines—young scientists, young technicians, young warriors. And their leaders, who devote their lives to the defense of us all. Let us be very sure that we support them in our communities, recognize them, help them to do a better job for us all.

ADDRESS BY ADM. ARTHUR W. RADFORD, FORMER CHAIRMAN OF THE JOINT CHIEFS OF STAFF, AT THE DEDICATION OF ALVIN CALLENDER FIELD, NEW ORLEANS, LA., APRIL 26, 1958

Congressman HÉBERT, Judge Perez, Secretary Gates, Captain Hood, ladies and gentlemen, visits to the State of Louisiana have always been pleasant experiences for me. I am both delighted and honored, therefore, that you have asked me to participate in the dedication of Alvin Callender Field.

The purpose for which this field has been constructed, unity, is the subject I would like to discuss with you for a few moments this morning. In view of the threat which faces us, we must concern ourselves with the development of means to deter war. Unity of purpose, therefore, becomes a paramount objective.

In my opinion, the best way to deter war at the present time and during the foreseeable future is to be ready and strong in all respects. This readiness must be evident in the military field. Economically we must be strong, and that too must be evident. Morally and spiritually we must lead, and our aims must be clear. Readiness in these fields is not a matter of separate compartmentation in each, but rather one of interdependence and integration. Military power depends in great measure on our industrial and economic strength and both depend on our national spirit and determination.

From a military point of view, we must continuously maintain and modernize a force capable of coping with any form of aggression the Soviets might choose to initiate. We cannot have only a big war force or only a small war force.

The most dangerous form of Soviet aggression would be a surprise atomic air attack on the United States. We must therefore have such a strong atomic retaliatory capability that the Soviets will be deterred from such action. If we succeed in deterring the Soviets, and I believe we are doing so today, there exists the possibility that they will choose a lesser form of aggression such as a local war launched by a Soviet satellite. We then must have the means of meeting a local aggression quickly and decisively in order to prevent it from becoming bigger. Together with the forces our many allies have been able to raise because of our military assistance programs, I believe the free world has today the means of meeting effectively any form of attack.

Our Armed Forces today are a team whose overall combined capabilities form a deterrent with a readiness clearly evident to the Soviets. Our great task is to insure that we maintain not only a true readiness, but a superiority over the Red bloc. This will require the combined efforts of all of us. As I see it, these are some of the steps we must take.

First, we must have unity of purpose among our Active and Reserve forces. As I have mentioned, readiness is the key factor. No longer will we be able to spend months mobilizing and training. The training must be done now. This will require maximum cooperation among all the services of both the Active and Reserve components. This airfield provides a great step forward in this regard. It is the first joint Air Reserve training center in the country, I hope it is the first of many similar joint establishments.

Second, we must meet and surpass the Soviet scientific challenge. The real test will not come this year or next, but sometime further in the future. How we meet the test depends on what our youth does—beginning today. Through nationally directed efforts, the Soviet Union is now graduating twice as many engineers as the United States. I do not advocate that we adopt the Soviet school system. We cannot concentrate on quantity at the expense of quality. Nevertheless, our educational system must be geared to produce the caliber of leaders, scientists, and professionals needed in the future. Our military power and industrial prowess will depend on the products of our educational system. So, again, we have a need for unity of purpose.

Third, we must maintain our economic strength as an essential element of national security. The Soviet challenge in the world economic war is in some ways more serious than their military challenge because it is harder to combat.

Fourth, we must guard against complacency and self-satisfaction. So long as international communism remains dedicated to world domination, I see little chance of relaxation of the threat to our security. We must not be deluded by soft-soothing phrases from the Kremlin. These are but tactical variations designed to further the Communists' overall strategic aims. If we show that we are strong and ready militarily and economically and that we have the will to fight for our freedom, we can hope that a climate may eventually be created in which productive negotiations with the Soviets can be conducted. This will require unity of purpose between national and local government, the Active and Reserve military forces, and the business and industrial elements of our Nation.

Anyone examining the history of your State cannot fail to form the distinct impression that Louisiana has long demonstrated unity of purpose. Louisiana has a military tradition dating back to the earliest days of French and Spanish colonial rule.

Participants in the ceremony on December 20, 1803, when Governor Claiborne took formal posession for the United States of the Louisiana Territory, were Franco-American citizen soldiers of "Clark's Battalion" and a small detachment of United States Regulars. Thus began the friendly relationship between the Active and Reserve forces which continues after almost 155 years.

Louisiana citizen soldiers fought with distinction under General Jackson at the Battle of New Orleans in 1815. The Washington Artillery Company, formed in New Orleans in 1838, was the forerunner of National Guard units which have won honors on many battlefields. The honors and traditions of the Washington Artillery Company are perpetuated today by the 141st and 935th Field Artillery Battalions.

The Louisiana State Naval Militia was formed shortly before the Spanish-American War and was the forerunner of Naval Reserve

activities in Louisiana which today include the Navy and Marine Air Reserve squadrons in training here at Alvin Callender Field.

Air Force activities in Louisiana go back to World War I with the establishment of Gerstner Field at Lake Charles. Since that time, several fields have been activated in this State, perhaps the best known of which is Barksdale, sometimes referred to as the Mother of Flying Schools.

During World War II, Louisiana was one of the most important training areas for both Army and Air Force units. Many of the 20th Air Force B–29 crews General Twining had the privilege of commanding in the air war against Japan were trained here in Louisiana. During the years from 1940 through 1943, 1,200,000 troops received their maneuver training here before being sent off to battle.

I think this review of your history indicates the extent to which we of the military have depended on the State of Louisiana in our constant efforts to be ready for whatever missions may be assigned us. I think it also shows the extent to which the State of Louisiana has cooperated with us. I call this real unity of purpose.

As you know, there has been an Alvin Callender Field in Louisiana for many years. Today, we seek to perpetuate his name and memory with a bigger and better facility. Alvin Callender's strong belief in the cause of the Allies during World War I was shown by his eagerness to enter combat. He couldn't wait for the possibility of seeing combat with United States forces. Instead he joined the British Royal Flying Corps in June 1917 and by April 1918 was flying in France. On October 30, 1918, he gave the last measure of devotion for the cause in which he believed. He joined the many other heroes who have died to preserve our Nation.

In honor and memory of his name, I expect all those who train and use this field to display the courage and faith of Capt. Alvin Callender. They will be proud to serve with his example before them. It should be a source of pride as well to serve at a field which is unique in that, from the very beginning, its sole purpose has been joint use by the several Air Reserve components. You thus give to the entire country an example of the teamwork and unity of purpose so important to our security.

Thank you.

Birthday of Congressman Thomas J. O'Brien

EXTENSION OF REMARKS

OF

HON. WILLIAM L. SPRINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1958

Mr. SPRINGER. Mr. Speaker, I am happy to join with my colleagues in the House in congratulations upon the birthday of our friend, TOM O'BRIEN.

No one in the House has been more thoughtful or more kindly in his everyday contacts with Members than the gentleman from Illinois. There has never been anything too much to do for him in his way for any other Member. He always has time for a friendly chat and to do a good deed for those he values as his friends.

I hope that he will enjoy many more years in this House and that they will be as happy and as fruitful as the ones that have preceded it.

Polish Constitution Day

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1958

Mr. MULTER. Mr. Speaker, Saturday, May 3, is one of the most significant landmarks in Poland's history is the constitution of May 1791. The drafting and the adoption of that document by the Great Diet (or Parliament) 167 years ago was a real turning point in the history of the Poles. By it they effected a peaceful revolution in their form of government without resorting to the violent and terrifying measures characteristic of the French Revolution. By the adoption of that liberal and progressive document Poland's leaders led their countrymen from the feudal path of the Middle Ages to the broad, democratic highways of modern times.

That constitution restrained the authority of the monarch, and introduced ministerial responsibility in government. The intricate and obstructive features of the old system and many class distinctions associated with it were eliminated. A bicameral legislative body with full legislative authority was created. Economic and social barriers between the nobility and the townsmen were broken down. The townsmen recovered their judicial autonomy and were admitted to many higher offices. Religious toleration was established and the peasantry was taken under the protection of the law. The constitution thus abolished the worst abuses from which Poland had been suffering for centuries. As has been justly observed:

> Through the abolition of the most crying political evils of the old regime * * * and granting of increased freedom of action to the middle and lower classes, the constitution marked a great advance upon all previous attempts at reform in Poland.

But this democratic document aroused the ire of Poland's enemies, who fearing that through this document Poland might regain her former strength, hastened to fight her and bring about the eventual partition of Poland. As we all know, before the unfortunate Poles had any time to enjoy the benefits of their new constitution their country was parcelled out among the autocrats of Austria, Prussia, and Russia. Having lost their independence, all Poles became subjects of alien governments in their own homeland. Still, they managed to keep alive the spirit of their national independence—drawing spiritual sustenance from the principle enunciated in that constitution. At the end of the First World War they all happily witnessed the defeat of their oppressors, and they rejoiced at this opportunity to regain their independence.

A strange coincidence is that May 3 comes in the midst of the 15th anniversary of the heroic uprising in the Warsaw ghetto—April 19 to May 16, 1943—which is being solemnly observed in the Jewish communities the world over.

We should pause today to remember the heroic resistance 15 years ago of the Jewish community of Warsaw to one of the most inhuman and brutal persecutions in the history of mankind. After the Second World War the horror of the systematic Nazi program to destroy the Jewish community in Europe was revealed. The problems of the postwar era have made us forget the valiant stand the Jewish communities made to resist the Nazis, but we should remind ourselves of the suffering of the Polish Jewish community least we forget one of the darkest pages of human history.

The aim of the Nazis was the extermination of the Jews in Poland. The numerous pronouncements of the Nazi leaders during the first 3 years of occupation made that aim unmistakably clear.

The Nazi pattern for dealing with the Jews consisted of four consecutive stages: First, depriving the Jews of civil rights; second, driving them out of the economic life, thus making it impossible for them to sustain themselves; third, segregating them in ghettos where they would perish of famine and disease; fourth, destroying those who had survived the previous stages. The last stage was begun in the spring of 1942.

The increasing number of daily acts of persecution left no doubt that the Nazis were engaged in a savage campaign of extermination against the many thousands of Jews who were considered unfit even to work as slaves for the Nazi regime. The Warsaw Jewish community died heroically resisting the Nazi persecution. The underground Jewish organization in Poland made it clear in its messages to the free world that it was anxious to offer resistance to the Nazis, but it had no arms or ammunition. Arms were finally obtained with the assistance of the Polish underground movement with which the Jewish organization had maintained continual contact. The underground and various labor Zionist groups organized a Jewish defense corps. It first took the field against the Nazis in Warsaw in January 1943. A full-scale resistance effort did not get underway until sometime in April and the fighting continued well into May. The fight between the Jews and Germans ended in the complete eradication of the Warsaw ghetto and other Polish ghettos. It was a daring, if futile, action for the Jews to undertake against the overwhelming superiority of the enemy.

Patriotic Poles and Jews together fought the Nazis for days and inflicted heavy German loses. After their victory, the Nazis proceeded to liquidate the ghetto. On April 21, 1943, SWIT, the clandestine radio of the Polish underground broadcast a message:

> The last 35,000 Jews in the ghetto at Warsaw have been condemned to execution. Warsaw again is echoing to musket volleys. Women and children defend themselves with bare hands. Save us.

These were the last words.

Out of the martyrdom of Polish Jewry has risen a reborn Jewish homeland. Five years after the Warsaw crime the independence of Israel was proclaimed. The vision behind the establishment of

Israel was inspired by the Nazi terror. Israel opened her arms as a refuge and haven where Jews from every land might come to live in dignity and freedom.

Today once more the fate of the Poles is tragic. In their country today more than 25 million Poles are not even permitted to celebrate this constitution day. We of the western democracies join all Americans of Polish ancestry in this celebration and heartily express our hope that soon all Poles will again be able to observe freely and without fear in their beloved homeland the anniversary of their constitution day and all that this means in terms of human freedom and political justice.

By Their Fruits Ye Shall Know Them

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. BYRD. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD a column entitled "Our Flexible Foreign Policy," written by Constantine Brown and appearing in the Washington, D. C., Evening Star on April 29. The writer views the United States as being largely influenced by our more timid allies to proceed toward a summit conference with the Russians, a conference which we know, on the basis of past experience, would be foredoomed to failure. I recommend to the people in the State Department that they read this column, and I trust that they are aware of the fact that the majority of Americans, regardless of what certain pollsters may say, are against any more summit debacles. If anything could be gained by summit talks it would be a fine thing to proceed without delay, but I am positive that the Russians would not be willing to meet with the United States and other free countries at the summit if the free world stood to profit thereby. The Russians want such talks for propaganda purposes and some of our allies want them for political purposes. Commonsense and history militate against such a course and our leaders full well know it. Why do we, therefore, not stop kidding ourselves? Khrushchev has said to us, "We will bury you yet." Let us beware.

The article follows:

OUR FLEXIBLE FOREIGN POLICY

In the summer of 1919 this reporter had lunch in Paris with Emir (later king) Feisal of Iraq and his famous adviser and mentor, Colonel Lawrence of Arabia. At the time, Greece's brilliant Premier Venizelos was leading Western statesmen, not only on Greek affairs, but also on every facet of western European affairs. I asked the emir what he thought about it.

He had a faraway look when he replied, "My friend, you have surely seen in the desert a little donkey leading a string of camels." Would Feisal apply the same figure of speech now, when the policies of the United States, in regard to the Soviet Union, are being so largely influenced by our weaker and timid British and French allies?

Washington is a city of contradictions. There is only one question on which there is unity of thought. In off-the-record talks responsible officials, legislators, and military men all agree that a summit meeting under existing conditions would be an utter waste of time, serving only Comrade Khrushchev's propaganda goals.

The drive for summit talks was initiated with trumpets and drums nearly a year ago by the Kremlin. Neither President Eisenhower nor Secretary Dulles could see any advantage in such a gathering. It offered no chance to relax the tensions which have their deep roots in the Kremlin's efforts to achieve world domination.

There seems to be little doubt in the minds of many policy advisers that America would become the sacrificial lamb at a summit meeting. The reluctance of our top leaders to play into the hands of Stalin II (as Khrushchev is now described) appears to be to no avail.

Our allies, supported by a small but highly vocal group of American ideologists, are actually pushing the administration to take once more the road to Geneva where we reluctantly went in 1955 principally to assure the success of the British Conservatives at the polls. Hence, our rigid demands for a purposeful summit meeting are being watered down. The all-important question of German unity which Mr. Dulles has insisted must have top priority on the agenda has been removed after talks in London between Chancellor Adenauer and Prime Minister Macmillan.

Negotiations at the ambassadorial level in Moscow have been slowed down by Khrushchev's insistence that they must be conducted separately unless we agree to participation by the Poles and Czechs. Our objection to those two puppet states was the same we had in 1944 to the two Soviet provinces of the Ukraine and Byelorussia becoming individual members of the United Nations. Their presence in the U. N. like the attendance of Poland and Czechoslovakia at a summit meeting is meaningless since they are merely Charlie McCarthys of the Kremlin. The British were the first to reject this demand by Khrushchev. Yet within a few days they changed their minds and have successfully pressured Washington into at least considering the proposal for the sake of "saving" the summit meeting.

The London and Paris governments know only too well that a summit gathering will not bring a relaxation of tensions unless the free world is willing and ready to yield to the wishes of Comrade Krushchev. This reporter has not met a single responsible official in Washington—or in the foreign countries he has visited recently—who actually believes that the men in the Kremlin want a relaxation of tension except on their own terms.

Democracies are tightly united only in a shooting war—and even then that unity is sometimes questionable. Events have demonstrated that since the beginning of the cold war our allies have been going their own way in keeping with what they believed to be their own individual interests. The inside story of the war in Korea proves this fully. They have given lip service to our utterances for a common front and collective security. The NATO supreme commander, Gen. Lauris Norstad, recently stated that he needed at least 30 ground divisions in Western Europe. He has 15. The Warsaw pact nations have 52 exclusive of Russia's 184.

The administration has been accused frequently of lacking a foreign policy. This is an exaggeration—it does have one, but it changes with the winds that blow from across the Atlantic.

Israel's 10th Anniversary

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. DEROUNIAN. Mr. Speaker, I am happy to offer my congratulations to the State of Israel in this, the 10th anniversary of its founding.

It has been 10 remarkable years of disappointment and encouragement, strife and peace, struggle and accomplishment, and as we look back, the pattern we see is definitely one of growth.

Immigration has more than doubled the population in these 10 years and Israel is today made up of people from the Middle Eastern countries, from Yemen, Iraq, North Africa, Turkey, in addition to the many countries of Europe and of the Western Hemisphere. The resulting social and economic challenges are being met and Israel's own, distinctive culture is emerging.

We have watched the State of Israel progress in science and the arts, in agriculture and industry, and we all hope for it the attainment of its goals in the years ahead.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. YATES. Mr. Speaker, the revolutionary spirit of the 18th century has had profound impact in many countries. New ideas were taking roots in the Western World, liberal and progressive ideas seemed to be spreading in all directions. In this country our Revolution produced the Declaration of Independence and the constitutional form of government. In France the cry for liberty, equality, and fraternity led to the French Revolution, and in Poland the spirit of equality and tolerance, and also the urge to revamp the governmental machinery, led to the adoption of the May constitution in 1791.

That constitution attempted, for the first time, to introduce a responsible cabinet type of government in that part of Europe. Monarchical authority was considerably curtailed, and that of the people's representatives was enhanced. The Polish peasantry was relieved from the arbitrary authority of local feudal landlords and placed under the protection of the law. Even more significant than these changes was the guaranteeing of religious freedom to all citizens of the country. Today we are happy to join freedom-loving Poles everywhere in the celebration of this anniversary, the 167th anniversary of the adoption of this great epoch-making document, the Polish Constitution of May 1791.

Short Term Amortization of New Capital Assets

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. SCUDDER. Mr. Speaker, today I introduced H. R. 12316, a bill identical to S. 3718 introduced by Senator CAPEHART earlier this week.

I firmly believe the enactment of this bill is the stimulant our economy needs to promote more jobs and encourage greater capital investments.

The principal objective of this legislation is to provide for a short-term amortization of new capital assets. What greater boost does the small businessman need at this time than to enable him to invest in necessary building, equipment, and machinery which can be depreciated over a shorter period of time. The effects of a program of this type would increase employment immediately and provide greater stability to the working force of the Nation.

Passage of this legislation would be a great stimulant to the entire country. It would encourage initiative and the expansion of business and industry without costly Federal subsidization of so-called temporary programs which, through experience, we have found to drag out into permanent Federal projects competing with private enterprise.

In my district alone, this bill would aid the farmer, the fisherman, and the lumber industry and many small businesses.

The farmer would be able to invest in new machinery which could be depreciated within a 5-year period as contrasted to a 10-year period now provided by law for some types of farm machinery.

The fisherman would be encouraged to invest in new boats and equipment and in costly repairs and renovation of the same.

Where the lumber industry is concerned, the benefits would be twofold. Allowance for short-term depreciation on building units both for industrial and private uses would create a greater market for lumber. The demand for lumber products together with the advantage of short-term depreciation on capital assets would be the adrenalin this industry needs.

I could enumerate by the hundreds businesses such as wholesale and retail establishments, transportation systems, heavy industry, rental housing, small factories, and the like that would discover in this legislation the boon they have been searching for.

In all my years of public service I have been one of private enterprise's strongest advocates. I have seen our country grow because of the initiative and farsightedness of those who also believe in this precept. In this day and age of growing socialism when the small businessman and the large one alike, need the added incentive and encouragement, in my opinion this bill is that shot in the arm that can snap us out of a lethargic state and an overemphasized reliance on the Federal Government.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Serious Limitations of President's Antarctic Proposals

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 5, 1958

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared in relation to the President's Antarctic proposals.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SERIOUS LIMITATIONS OF PRESIDENT'S ANTARCTIC PROPOSALS

President Eisenhower last Saturday announced a most significant and historic proposal for an 11-nation treaty to preserve Antarctica as a continent for research and to prevent its becoming a battleground.

The announcement was sent to all the countries now engaged in Antarctic scientific work as a part of the International Geophysical Year, including the seven territorial claimants there.

I ENDORSE THE SPIRIT, BUT QUESTION IMPLICATIONS

At the present time, I should like to commend the high spirit in which the United States has made these proposals, a spirit of good will and conciliation of what might prove to be a most quarrelsome problem.

The White House announcement is in keeping with our President's continuing deep interest in using science for peace.

The proposal is also one of the most significant examples of generosity on the part of one nation to other nations of the world.

The United States, as I have stated many times before, has done more actual work in exploration and discovery in Antarctica than all the other nations combined. The United States has clearly established her rights to territorial claims over wide areas of the Antarctic continent, rights which we have thus far not asserted specifically.

WE HAVE DONE MOST OF EXPLORATION

The Antarctic consists of some 5½ million square miles. Of that vast area, nearly 75 percent—around 4 million square miles—have been seen by United States eyes alone.

So, in offering to enter into the type of treaty described by the President, we are being most generous, indeed perhaps overgenerous, for it is we who have made most of the sacrifices to date and it is we who possibly have the most to lose.

Yet we are basically interested in cooperation with nations, not quarrels, in minimizing of East-West disputes, rather than widening them, in harmony within the Western World, not disunity, if we can feasibly attain these goals, without undue risk to our own interests.

DON'T GIVE UP A SQUARE INCH AT PRESENT

At the same time, I should like to state emphatically, as I stated on February 13, on the Senate floor, as recorded on page 1765, that the United States had best look to the preservation of its own flag interests—I emphasize its own flag interests—before it now or ever relinquishes title to as much as a single square inch of Antarctica.

It should be noted that, under the proposal, all territorial claims in Antarctica would remain in their present unresolved status. No new claims would be permitted.

The White House pointed out that the United States has direct and substantial rights and interests including the right to file territorial claims.

NEED FOR CAUTION CITED

In drafting the treaty suggested by the President we must use a particular large degree of caution. There are many factors which the United States must consider before it enters into any agreement of this nature.

1. First of all, we regard treaties as inviolable.

However, one of the nations which is involved in the Antarctic treaty proposal is Soviet Russia.

Time and again, this nation has shown her contempt for obligations established under treaties and international agreements.

We have no assurance that the Government of Russia will respect our rights under this treaty any more than she has respected her past commitments.

Are we therefore to write ourselves into a trap of Soviet making?

I trust not.

In any event, I certainly would not commit myself to a treaty even before it has been written; much less before all of its ramifications are understood.

I am glad that the Senate Committee on Foreign Relations has heard testimony on this subject.

To my way of thinking, we must find out a great many more facts, as must other interested committees of the Congress.

WHY HAVE WE NOT AERIALLY PHOTOGRAPHED ANTARCTICA?

2. As one reviews the record of America in the Antarctic, one sees, once again, that it is a record marked by great deeds of valor on the part of outstanding explorers of many nations. I am glad to say that American heroes have written some of the most outstanding chapters.

But as I read that record, too, I also note this fact: The United States has—I say very bluntly—been seriously negligent in not determining exactly what there is of value in the Antarctic.

Despite all of the scientific work we have carried out, we still do not have anything beginning to resemble complete data on two counts:

(a) We have never completed an aerial photographic survey, with adequate ground control points, of all of Antarctica; and

(b) We do not have thorough geological surveys of the rock outcroppings on the continent.

And so we are in the dark as to the mineralogical and other values of these 5½ million square miles. Why?

Why, I ask, have we spent tens of millions in Antarctica without these most fundamental types of reports and charts?

It seems elementary, but I know of no intelligent bargainer who would ever give up so much as a single inch of real estate, to which he is entitled, if he didn't know what was on and under the real estate.

And so I am opposed to the United States relinquishing a square inch of the continent, at least until we know exactly what we are relinquishing.

VALUE OF MINERALS CHANGES

Even then, the fact of the matter is that minerals which may appear to be inaccessible or which may appear to be uneconomic to extract, as of 1958, may be both accessible and economic to extract a few years hence. So why write them off as valueless?

Who would have predicted 20 years ago that a substance known as uranium would be important?

And all the other miracle metals which have come to the fore in the war and postwar decade show that we had best go very slowly in determining if any mineral is undesired, so to speak.

WE HAVE WASTED EXPERIENCE OF MANY EXPLORERS

3. Another ironic fact about our record is that some of the American heroes who have made greatest contributions to Antarctic exploration are not now engaged in Antarctic work.

I am not going to attempt an analysis of individual case histories involved. But I say that it is strange, indeed, that some of the great men who have devoted virtually their lifetimes to braving the elements and advancing the interests of our country's flag in Antarctica are not now engaged in this work.

We are wasting their precious experience, and I should like to know why.

WHY ARE WE GIVING UP OUR STATIONS?

4. A further disquieting fact is that the United States is going to turn over some of its scientific stations to other countries.

Naturally, I welcome IGY or other scientific cooperation, but I ask: "Is the Government of the United States so poor, are the people of the United States so disinterested, that we cannot afford even to maintain our own stations? In all of the $40 billion budget for the defense of the United States, is there not enough money to be found to at least continue the stations which we have established?"

NEEDLESS DUPLICATION OF UNITED STATES AGENCIES

5. The United States, although it has a record for many years of work in Antarctica, still has no clear-cut, coordinated policy or program of its own in Antactica.

At the present time, there are 14 separate agencies of the Government, interested or conducting studies in this region. There is without doubt considerable duplication of effort on the part of these several organizations. There is almost certainly a high degree of administrative overlap and confusion.

In other words, Mr. President, we as a Nation really don't know where we stand. We are, on the one hand, offering to establish an apparently sensible program of international utilization in Antarctica, while on the other hand, our own national policies lack direction and coordination.

That is why I have proposed S. 2189—to coordinate our policies through a Polar Commission.

I have spoken on many occasions concerning our Government's unfortunate drifting policies in Antarctica. I have repeatedly urged that we establish a special commis-

sion to administer and direct our Nation's Antarctic program.

Only 2 weeks ago, Mr. President, I told my colleagues in the Senate that time was running out with regard to our Antarctic program. Now, however, it appears we will have an extension of time by virtue of the proposed treaty. This time should be used to "get our own house in order," so that we will be able to move forward with a coordinated United States crystalized Antarctic policy.

LET EARLY SENATE HEARINGS BE HELD

Therefore, I urge once again that action be taken on my own and other bills calling for the creation of the Richard E. Byrd Commission. I respectfully request that the Senate Education and Labor Committee schedule hearings on this vitally important bill in the immediate future, so that this Congress will not adjourn without some concrete action.

A great many of the Members of the Congress have been deeply interested in this subject. Without, in any way, underestimating the contributions of others I should like to single out, in particular, the notable work of the chairman of the House Committee on Interior and Insular Affairs, Congressman ENGLE, who has introduced a companion bill, H. R. 7869, and the work of my colleague, the junior Senator from South Dakota [Mr. CASE].

As I indicated recently on the floor of the Senate, it appears—speaking very frankly—that Polar Commission legislation will be dead for the 85th Congress unless speedy action is taken by both Senate and House committees.

Let the speedy action come.

Let us not waste the time which providence has granted us. If we delay action this time, Mr. President, we may not be granted another chance.

CONCLUSION

All in all, the President's 11 nation proposal is a highly motivated program. But it has considerable limitations and is a long way away from being a United States antarctic program for our own flag purposes.

Texas Teacher Saves Students in Tornado-Hit School

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, May 5, 1958

Mr. JOHNSON of Texas. Mr. President, my State of Texas has been struck in recent days by a series of tornadoes that have taken human lives and caused great property damage.

Among the news accounts of the destruction resulting from the tornadoes, a United Press story appearing in the New York Times on last Saturday stands out vividly. It tells how the presence of mind and quick action of a Texas teacher, Mrs. Dorothy Marthis, saved her junior high school students in the town of Lacoste from injury or death.

I ask unanimous consent that this story of calm heroism in a moment of great danger be printed in the Appendix of the RECORD.

There being no objection, the news story was ordered to be printed in the RECORD, as follows:

TEXAS CLASS SAVED AS A TORNADO HITS

LACOSTE, TEX., May 2.—A teacher herded her junior high school class to a downstairs classroom today moments before a tornado ripped off the roof of the building. It dumped steel girders on desks where the children had been sitting.

None of the children were injured. They were trapped by debris on the first floor of the 2-story school. Rescuers had to dig through debris to free them.

"It was a miracle," Deputy Sheriff Alex Cardenas of Bexar County said.

Mrs. Dorothy Marthis, 27-year-old teacher, said that she sensed something was about to happen when the sky turned black.

She moved her pupils to a downstairs room where they huddled together to await the storm.

"I didn't know the roof was gone until I looked up through a hole and saw the sky," Mrs. Marthis said.

Effect of Installment Buying on the Economy

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 5, 1958

Mr. PROXMIRE. Mr. President, one of the outstanding economic statesmen in this country is the junior Senator from Wyoming [Mr. O'MAHONEY]. Yesterday an article appeared in the New York Times, written by Senator O'MAHONEY, entitled "Do Installments Peril the Economy." This article considers the explosive danger to our economic system of the Nation's hugh payment debt. It is a remarkably wise and perceptive analysis.

I ask unanimous consent, Mr. President, that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DO INSTALLMENTS PERIL THE ECONOMY?—A CONGRESSIONAL SPECIALIST ON CREDIT DISCUSSES THE NATION'S HUGE TIME PAYMENT DEBT AND ITS POSSIBLE EFFECTS ON THE RECESSION

(By JOSEPH C. O'MAHONEY)

WASHINGTON.—Now that the recession is officially here, we may finally get an answer to the troublesome question of whether installment credit has gotten too high. It is no secret that Americans' installment debt, or the amount of money people still owe for things they have bought on time, has risen spectacularly in recent years—from about $9 billion in 1948 to a peak of more than $34 billion last December.

I hope that the answer to this question is not a dramatically catastrophic one; I hope that repossessions and failures to meet time payments won't snowball the economic downturn by dumping used consumer goods onto a declining market. Time will tell, but clearly that possibility is with us, for consumer credit can curl our economic hair.

To combat the recession, Washington advisers call for a restoration of confidence. It must be remembered that confidence and credit are not synonymous. A credit system which is extended to the breaking point, by no down payments and eons in which to pay, will destroy confidence and ruin sound government.

A clue to the danger we face lies in the fact that installment spending for consumer durables—the big things like cars, refrigerators, TV sets—began dropping in January and may well be contributing to the recession. It is my personal hunch that this is the proof that people had overextended themselves on installment purchases and have had to retrench; it also serves to reinforce my feeling that now is an important time to take a keen look at the wholy installment segment of the economy and to act to prevent future excesses.

The fact that many antirecession moves are being aimed at the consumer to stimulate buying does not affect this situation. Certainly in an economy that is already sick, it does not help to stimulate it with phony buying—purchases without any cash payment by people whose income and jobs are in jeopardy. Efforts to stimulate sound installment purchases, using, for example, extra income from an excise-tax cut as a downpayment, are all to the good, of course, but such buying would in no way be dampened by sound consumer credit regulation anyway.

In recent years, several of my senatorial colleagues, Republicans as well as Democrats, have shared apprehension over the installment credit situation. We have watched the growth of this form of money lending, and we know that it alone was largely untouched by the anti-inflation credit restraints exerted by the Federal Reserve Board until very recently on the other major sectors of the money market. We also know that installment credit, based on steady employment and payrolls rather than tangible collateral, may prove to be built on quicksand in a declining economy.

Now I, for one, feel strongly that a healthy consumer credit market is essential to our mass-production economy and the well-being of our people, and that it is a national responsibility to see that it is soundly based. Therefore, before I discuss the dangers in the present situation and what ought to be done to correct things, let me make plain just how important installment credit is as a force for growth in the economy.

When the average person steps into his gleaming new car to drive into the country, the chances are he will be traveling in a vehicle he calls his own but which, in fact, belongs to the seller. As he whirls along the highways, he views clusters of new homes from which television aerials spring like trees in a grove; to most of them a debt tag is attached. And if this average driver were to step into any of these houses, he would find all kinds of luxurious items—dishwashers, clothes dryers, furniture, even the jewelry in madam's bureau—in use and unpaid for, bought on time.

Homes equipped with inventions for taking the drudgery out of housework, speedy automobiles, the gadgets of modern living, even world tours on a pay-later basis—all these, and more, sold on credit, have helped raise to record proportions the total output of the American economy.

Nothing illustrates this better than the automobile industry. The 4,000 automobiles manufactured in this country in 1899 were sold only to the very rich. When they were brought with the reach of the common man, first by Henry Ford and his concept of mass production, and then by installment selling, the total output was fantastically multiplied.

As car sales increased, the whole national economy benefited. New markets were made not only for steel and copper and zinc, but for glass, for fabrics, for rubber and a vast multitude of commodities without which the automobile could not be made. New jobs were created not only for those operating the machine tools on the production line but also for those who built the tools and supplied the raw materials which go into every car.

Clearly, the rise of the installment credit technique for increasing retail sales has been as important as the general use of commercial credit in the healthy expansion of our fundamental production and distribution capacity.

After all, business cannot be conducted on a cash basis.

Generally, however, the credit which makes economic growth possible is the confidence of society that those who borrow money have the assets to repay the loan. In most lending operations, the assets of the borrower—blue-chip securities, real property, the inventory or stock of a corporation, and the like—are put up as collateral for the loan. They are the guarantee to the lender that, come what may, he can get most of his money back out of the possessions already owned by the borrower. This commitment also tends to make the borrower more cautious.

In this fundamental respect installment credit is different. Here the confidence of the lender rests upon the belief that the borrower will have the assets to pay up in the future, when the time comes to pay the installments. The only collateral posted by the buyer is the article he is purchasing and this is not really his, since in most cases, he buys on a conditional sale and title does not pass to him until his final installment payment is made.

In substance, then, credit for a time purchase is granted by the lender in the faith that the buyer's income will remain steady enough to meet regular payments for 12, 24 or even 36 months; his security is the article sold—the television set or automobile or washing machine—which drops enormously in value the minute it leaves the retail store. No lender of commercial credit—say, mortgage money—accepts so ephemeral a guaranty for his largesse.

For this very reason, the risk taken by the installment credit lender is greater than in most other business loan operations. His interest charges, naturally, are likely to be greater, too.

And this leads me to stress the noteworthy fact that installment credit was unrestricted by the tight money policy pursued by the Federal Reserve Board for more than 2 years as a weapon to discourage inflation. The instrument for tight money policy is the power of the Federal Reserve Board to raise or lower basic interest rates, that is, to set a minimum price on the cost of borrowing money. Many commercial borrowers could and often have deferred new funding operations when the high cost of money made the transaction too expensive to be profitable.

The installment buyer does not measure things that way. Here we have an individual driven by the desire (self-generated or inspired by zealous salesmen) for some new possession. He pays little or no attention to the rate of interest he is paying or whether it might be absurdly high in relation to the cost of the article or his need for that article. His sole concern is whether the monthly payments seem to fit within his income, and, of course, he presumes his income will not shrink in the coming months.

This lack of buyer-resistance to high interest rates at the consumer-goods level has in effect negated the tight money policy in this sector of the economy; installment credit has remained easy money. By the same token, installment credit is untouched now that the tight money policy has been dropped. Psychologically, the relaxed monetary atmosphere may tempt installment sellers to offer even easier terms—smaller down payments and longer time periods—but this probably will not add appreciably to the already swollen installment credit lists.

Consumer credit is now a far larger sum than all the cash in circulation. It is, in my view, a sum so enormously important in the Nation's economy that the question of its soundness (i. e., the probability that all the huge debt will be repaid in full) becomes a national issue.

Has the consuming public overextended itself?

This is a frightening question. Let us look for a minute at the reasons why it arises especially in the consumer credit field.

1. By and large, the individual consumer determines for himself how much debt he can carry. Most installment sales retailers and their finance companies make no real effort to find out whether the buyer about to sign an installment contract might already have a dangerous percentage of his pay check committed to other credit purchases. Even if they find a big commitment, the chances are they will go ahead with the new conditional sale anyway.

2. In many instances, the financing, because of the risk, is at usurious interest rates. The usury laws apply to loans of money. Since installment credit results from the sale of goods, legal ceilings on interest rates are lacking and the uninstructed purchaser pays rates that are in higher brackets than he often realizes.

As an example of this, let me cite a recent credit offer made by a very reputable retail store. A housewife who wishes to make a major purchase may agree with the store's credit people that she can afford monthly payments of, say, $20. The store then grants her credit to purchase 10 times that amount of goods, or $200 worth. Each month, she pays her $20 plus a service charge of 1½ percent on the remaining balance; but she is also entitled to maintain her debt to the store at $200 and make $20 worth of new purchases each month to be paid for later. If she does this, she continues paying 1½ percent a month on the balance—for an annual interest rate of 18 percent.

3. The rise of the credit finance company, although a worthy institution in many ways, presents another difficulty. Today, a great deal of installment credit money is loaned, not by the seller of the article, but by a separate company in business solely to lend money. In effect, these credit companies pay the retailer for the article you purchase; you pay the credit company. Under this system, the company, seeking to make a profit on its operation, charges a very high interest rate.

Recently, a Federal Reserve Board study of consumer installment credit found that automobile dealers pass on to finance companies more than 95 percent of the debt on the cars they sell, and that retailers in other fields pass on nearly half of their customers' debts.

4. More important that the high interest rate is the fact that the system relieves the retailer of any responsibility for the soundness of his sale. And this, in turn, is an open invitation for the irresponsible, fast-talking, fly-by-night dealer.

Senator A. S. (MIKE) MONRONEY, chairman of a subcommittee of the Senate Interstate and Foreign Commerce Committee on automobile marketing practices, declared during hearings last year that "it was freely admitted that many destructive sales tactics were practiced by the fringe of the industry, and that while only a small percentage of the trade engaged in gyp methods, phony advertising, packed prices and misleading offers, these things had a demoralizing effect on the automobile industry as a whole." Even the ethical majority is being badly squeezed because dealers must pay cash for their stock and sell on credit, with diminishing profit margins.

The automobile industry is not alone in offering what can only be described as wildly unsound credit terms, but it presents some striking examples: "1958 model; no fixed downpayment; your old car is all you need to offer; drive home the No. 1 deal—even if you still owe on your present car."

Even in 1955, according to the Federal Reserve, 30 percent of those credit buyers of new cars who had also bought the traded-in car on credit had debt still outstanding on the car they traded in. It is doubtless true that many individuals are capable of taking on new debts before retiring old ones, but when this becomes a practice it would certainly seem to be a warning of difficulties around the corner.

5. The final element I want to stress is that the installment purchaser represents a segment of society at the bottom of the income scale. He is among those most likely to be laid off when jobs get scarce, and least likely to have any financial reserves. Into this group fall the young people from 18 to 24 who are caught up in the desire to possess the conveniences and luxuries of the present era—and have no first-hand knowledge or recollection of the great depression after 1929.

So, in sum, this is our situation: by the latest figures available, there is a little more than $33 billion in credit outstanding, backed largely by faith in steady employment at a time when unemployment is rising, assumed largely by people who never knew the great depression, unregulated by the Federal Government because its users pay no attention to interest rates, and uncontrolled by normal market caution because the sellers (or lenders) take no responsibility for the soundness of the loans.

Up to now, there seems to have been little concern, either in the Government or private business, for the dangers inherent in all this. For example, the United States Chamber of Commerce reported recently to the Federal Reserve Board that of approximately 4,000 businessmen who replied to a questionnaire, about 50 percent thought consumer credit might be too high for safety, and yet 70 percent opposed any Federal regulations because ours is a time of peace.

The Federal Reserve Board itself, having recently completed an exhaustive study of the consumer credit situation at the request of the President, concluded that regulation or control was not needed, even though its Chairman, William McC. Martin, previously had agreed that standby control powers might be advisable. The Board seems to have been persuaded by such hoary arguments as: "Self-regulation is a sufficient protection against abuse," "The people should have the right to spend their own money as they please," and, finally, "The law of supply and demand will take care of any excesses."

In other words, this kind of problem isn't the Government's business except in time of war. Why shouldn't it be, if maintenance of a stable economy is—and it is—the Government's business?

What should the Government do, particularly now that it is realized that Soviet Russia is waging economic war against us? What kind of control or regulation should we have? The answer is simple—reestablishment of the legal authority behind the old World War II regulation W. This authority would enable the Federal Government to require a minimum downpayment on any installment purchase, based on a percentage of the selling price, and a maximum length of time in which the debt must be paid off. The fact that the monthly payments would be higher—over a shorter period—would make the buyer more keenly aware of the debt he was assuming. Also, the requirement of some downpayment would be an effective brake on many an irresponsible consumer (and on the salesman tempting him) because it would force him to have some hard cash on hand.

These devices would quickly put installment credit on a basis that the Nation could know was sound. They might, at least initially, curtail installment purchasing. But those who argue that, in a declining econ-

omy, nothing should be done that might cut down consumer buying, I would say simply this: Regulation W restraints need not lead to a measurable reduction in consumer purchasing if the installment credit market is already soundly based. If, as I suspect, the base is weak, it is far better for the national economy to cut back in an orderly fashion to a healthy market than to go on to a catastrophic collapse of a phony market.

Obviously, few factors are more important to the economic stability of the country than the continued ability of the installment debtor to meet his debt. In the past few months there have been distressing signs that installment credit collections are becoming more difficult. We are told that banks are beginning to find a higher ratio of delinquency among debtors.

These are symptoms of trouble, or termites eating away at the basic support of our economic structure. It is the clear job of Congress to study the situation and pass legislation that will give the Government the power it needs to step in.

At this stage, I am personally uncommitted on the question of whether the Government's power to issue credit regulations should be mandatory or permissive; whether the power should be granted to the Federal Reserve or to some other agency. This can be determined after hearing the experts and assessing the attitudes of those who would administer the controls. I am also not prepared to state just what the terms should be, whether one-fifth to one-third down and 15 months to pay, as under the final stage of regulation W, or some other combination.

In any case, I can only hope that the present recession does not cause the market supported by installment credit to collapse before Congress can enact a protective law.

In candor, I do not think such a catastrophe is impending unless we refuse to act. Delay can be disastrous. I believe even the threat of it should force immediate action to save the great American consuming public from the blanishments of irresponsible supersalesmen and from the excesses of its desires for the luxuries of modern living. On the basis of past experience, I am sure that congressional interest in this vital matter will be nonpartisan.

These are not times of peace and prosperity. They are times of scientific, military, and economic conflict on a level mankind has never before experienced. The cold war in which we are engaged, especially with a domestic recession in progress, can be more dangerous than any of the brush wars some of our military men talk about. The survival of the system of private ownership is the issue of our time; we cannot afford to risk its stability.

Tribute to Senator Bridges

EXTENSION OF REMARKS

OF

HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1958

Mr. COTTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the May 1 edition of the Exeter News-Letter, Exeter, N. H. The article, written by James P. Lynch, editor of the News-Letter and a widely read political writer, pays fitting tribute to the leadership and ability of my colleague, the senior Senator from New Hampshire, STYLES BRIDGES.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DOWN IN OUR CORNER

(By James P. Lynch)

It was 5 o'clock on Saturday afternoon and most businessmen were either out at the golf course or relaxing at one of their favorite spots. But in Washington important legislation was being considered and the Senate was in session throughout the day.

We were seated in the vice president's office in the Capitol when a messenger came in to inform Senator STYLES BRIDGES that his colleagues were waiting for him in the Senate cloakroom.

The Senator hurried away to be present for this conference for his vote was indeed important. Bustling outside were various members of Congress and their staffs holding briefings on matters of government.

Again remember, this was on a Saturday but you could easily forget and think it was another day.

Some may consider this an unsual day but it is a typical one and stresses the need for electing men of courage and leadership in the days ahead.

Just previous to joining us in the Vice President's office, Senator BRIDGES took to the Senate floor to present his views on the legislative matters of the day.

He was firm and determined for his vigorous leadership has been an inspiration to his fellow colleagues in the Senate.

Others Senators look to BRIDGES for counsel for they realize he will champion legislation that will prove beneficial to the Nation.

While Democrats fear him they also respect his leadership. Down through the years his voice has rung out in support of measures that have benefited the American people.

HUMAN DYNAMO

But what of this human dynamo who has built up seniority in the Senate. On occasion his adversaries have been critical of his health only to realize that his physical fitness is far better than that of most men many years younger.

Saturday was an illustration but it is typical of the grueling schedule that Senator BRIDGES undergoes daily.

As he walked to the cloakroom very few realized the fast pace that the Senator's schedule called for that day.

In this day and age when there's so much talk going around concerning dedicated men, it would be wise for the people to consider BRIDGES and many of his colleagues in this classification.

Perhaps, he too, would have enjoyed relaxing on a Saturday afternoon. It would be folly to think otherwise. But STYLES BRIDGES wasn't thinking of himself Saturday. He was considering the people of the United States.

Each and everyone of you were in his mind as he fought for legislation.

But the Senate floor incident and the meeting in the cloakroom were only part of the role he played on Saturday and throughout the week.

History is being written today in Washington and when your children and your children's children study the greatness of this Nation they will be reading about the man by the name of BRIDGES whom you sent to Washington.

BENEFITS COUNTRY

For regardless of party beliefs, the United States has benefited extremely well from New Hampshire's choice to the Senate in the person of BRIDGES.

The Senator was at work early that morning, long before some of his staff members. He finds it convenient as well as necessary to get to his office hours before the Senate convenes.

Regardless of how early he arrives there are always people waiting to see him to discuss their individual problems. As pressing as is his schedule he never turns a deaf ear to a particular cause for he is desirous to do his utmost for his constituency.

While some of the duties are relegated to members of his staff, under no condition does he lose personal touch with any situation. The Senator makes it a point to pass final judgment on any move members of his staff will make.

The Senator takes his responsibility seriously much to the annoyance of those who try to pressure him into a decision.

Leaving his office he heads to the Capitol to be on schedule when the Senate convenes in the morning. Newer Members in the Senate look to him for advice and as the record will show STYLES BRIDGES has counseled many successful political leaders during the early days of their careers.

FIGHTS FOR BELIEFS

Seniority does not always breed leadership but the Bridges case exemplifies capabilities of a remarkable degree for many years. His astuteness in fighting for what he believes in has been one of the greatest assets of the Nation.

When we talk about America's leadership in world affairs we cannot overlook the Bridges contribution.

When we discuss giveaway programs of the so-called liberals neither can we divorce the name BRIDGES from the subject for he cautioned long before passage of all these programs of the waste and extravagance.

In all his greatness the Senator is a humble man. He has not forgotten the many sacrifices he had to make to rise to this important position in Government. He accepts his responsibility as a challenge.

During recess for lunch he crammed into his busy schedule more administrative matters. There were a few appointments too that had to be kept before he returned to the congressional debates.

Around 6 p. m. he returned again to his office. There was still more work to be done before he called it a day. About an hour elapsed and the phone rang. The Senator didn't bother to wait for one of his staff members to answer it as he had a good idea it was a call from home.

LONG HOURS

On the other end of the line was Doloris Bridges, his attractive wife, who called to check in with the boss and see that he was O. K. It was going to be a late meal that night for she long ago learned never to plan scheduling early meals as they would always get cold.

What's his average workday; 8 hours, 10 hours, 12 hours? Certainly not, because if any of these were his schedule then STYLES BRIDGES would feel as if he had been enjoying a vacation. The Senator presently devotes up to 16 hours of the day to official duties.

While these long hours work an undue hardship on the Senator they certainly point out, regardless of so-called liberal propaganda, that conservatives offer the greatest leadership in politics today.

STYLES BRIDGES is not a conservative because of political expediency. He is a stanch advocate of the fundamentals of conservatism and fights hard for these principles.

He is not an idealist for his practical nature steers him clear of unattainable dreams.

He believes in a strong America and, as most military men down through the years know, he has always endeavored to recognize their problems.

The workingman never had to fear BRIDGES because his foresight on their behalf is more

to their advantage than that offered by many of the union leaders.

His sound economic views have irritated the spenders in government but STYLES BRIDGES never confessed to being their ally. He has endeavored down through the years to instill in the minds of the people that government spending can only be paid for by taxes and you are the taxpayer.

There are no hidden sources of money to tap and the cost reverts back to you. When the Senator fights for economy in government he is battling for you.

While we were with him in the Vice President's office we could not help but wonder if eventually he will occupy this position.

ALL THE QUALIFICATIONS

It's an important role for a leader and STYLES BRIDGES has all the qualifications. However, it would benefit the Nation greater if the senior Senator from New Hampshire moved down Pennsylvania Avenue to the White House and served his country as President.

He lacks none of the qualifications necessary to occupy this position and he has many assets that would be beneficial to the Nation.

New Hampshire can be proud of STYLES BRIDGES and you can be sure that he is proud of the State. His leadership illustrates to the Nation that the size of a State does not always indicate the caliber of its people in public life.

STYLES BRIDGES does not have to take second place to any man in public office. He has set a pace for others to follow.

Unemployment Statistics

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1958

Mr. BRICKER. Mr. President, I ask unanimous consent that I may have printed in the Appendix of the RECORD an article just released by the Secretary of Commerce concerning unemployment statistics.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATEMENT OF SECRETARY OF COMMERCE SINCLAIR WEEKS

Senator JOSEPH S. CLARK is reported in the press today as accusing me of releasing deceptive April unemployment statistics on Tuesday.

He is absolutely wrong. The facts clearly disprove his reckless charge of distortion.

The figures were the regular official monthly estimates of the Census Bureau, honestly collected and honestly released in the same way as they have been for the past 15 years. Because the sample was increased in 1956, it is even more accurate than in previous years.

Moreover, my release on Tuesday most certainly did state that the seasonally adjusted rate of unemployment rose from 7 percent of the labor force in March to 7.5 percent in April and gave reasons for this rise.

The fact overlooked by the Senator is that 600,000 more people were at work in April—to a total of 62.9 million—and 78,000 fewer people were unemployed.

Instead of playing politics with the plight of the jobless, Senator CLARK should feel as glad as I do that thousands are returning to work. He should join those of us who are doing all we can to stimulate increased employment.

Defense Reorganization

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 29, 1958

Mr. HÉBERT. Mr. Speaker, the Daily Iberian is one of the most influential daily newspapers published in the rural areas of the State of Louisiana.

It has taken some time for the real problems of the so-called Presidential Defense Department reorganization to get to the hinterlands, but judging from this editorial in the Daily Iberian, the country folks are beginning to see the light.

There has never been such a propaganda machine organized and functioning with so much wrong information as those elements attempting to sell to the Nation the President's version of a defense reorganization program. There is no dispute about the desirability of the objectives, but there is a great difference of opinion as to the potential dangers of the language of the bill.

Here is the Daily Iberian editorial—

DEFENSE REORGANIZATION

The so-called Pentagon plan backed by the President brings up the perennial problem of consolidation and unification of the Armed Forces of the country. It appears to us that this can only be solved by an examination of what we want our Armed Forces to do and to be capable of doing.

First and foremost, we want them to act as a deterrent to the outbreak of major war. Second, we want them to be able to handle minor wars in such a manner and in any part of the world that these brush fires do not become major conflagrations. Third, should war strike, we want them to insure that the scene of conflict is away from our shores, and to be able to project and support our military effort in an overseas theater.

These are really the basic rules and missions which we, the American people, want our Armed Forces to do, and for which we are ready to pay, in terms of dollars and the time and training of our young men. The question is how to accomplish these tasks.

Let's look at the President's proposal. It is in effect a proposal to let George do it; George being the Secretary of Defense. George is supposed to assign roles and missions; to determine the size and composition of our Armed Forces; to handle single handedly a budget in the tens of billions of dollars; to act as the master of strategy; to administer and command our forces at sea and in the field.

There is more concentration of power in this proposition than the American people have ever dared to delegate to any one person—and this, not in the crisis of war, but as a basic peacetime procedure. This is to be done by a revamping of the basic Unification Act of 1947, which reserved some of these functions to the Congress and to the President. Let's examine that act.

In the first place, its very name is a misnomer. Its basic premise was that it took 2 services and created 3 services out of them, with all the overhead, duplication, an confusion inevitable that goes with them. It created the separate Air Force out of the former Army Air Corps. Essentially the President's proposal is to undo this act, and provide for a combined service—which is about what we had before. It does bring the Navy into the same act; but will this accomplish what we, the American people, deem to be wise and in our best interest? We believe that it does not.

It is the Navy, and the Navy only, which can assure that the military might of the United States can be projected and supported across the seas. It is the Navy that can act from the high seas, without complications involving the territory and sovereignty of other nations.

Witness Egypt, at the time of the Suez crisis; witness Korea, where our forces were able to fight and exist based solely on the sea. The Navy has amalgamated the power of the aircraft into its concept of control of the sea until no one could dream of separating them.

Therefore, after a fair trial, let us admit that the basic premise of the 1947 Triplification Act was unwise; let us amalgamate our Army and our Air Force into a single land-air service, essentially as the Navy has done by amalgamating into a single sea-air service.

Thus we will resolve nearly all of our difficulties; we will have a naval service, the greatest and most flexible in the world, ready and capable of insuring to us and our allies the vital control of the seas, and thus capable of projecting our military might into any corner of the globe; and we will have a land-air service, flexible and mutually supporting, for the long-range missilery of the future and capable of fighting and holding ground wherever it is needed. These objectives are not in conflict. They are complimentary.

Have we statesmen big enough to envisage and propose this solution?

Nixon Doing Another Good Job on Current Latin American Tour

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1958

Mr. HOSMER. Mr. Speaker, the popular historian and political scientist, Professor Polyzoides, writes in the Los Angeles Times of the outstanding job being done by Vice President RICHARD NIXON on his current Latin American goodwill tour as follows:

NIXON DOING GOOD JOB ON CURRENT TOUR

(By Polyzoides)

Vice President NIXON undertook a bold and courageous job when he tackled his goodwill trip to 8 South American republics, with a first visit to Uruguay and then his participation at the inaugural ceremonies incidental to the swearing-in of President Arturo Frondizi of Argentina. That this happens at a time when we have a major task of recapturing our old popularity in Latin America is certainly an item of major importance.

This act, incidentally, testified to the fact that the United States is particularly gratified over the reestablishment of popular constitutional practices in a number of the friendly neighboring countries to the south of us, including Argentina.

SEQUEL TO PERON

In this connection one may mention in passing that even though the last presidential election in that country came as the sequel to the overthrow of Peron, it nevertheless took the solid support of more than 2 million Peronista votes to elect Frondizi.

When it comes to the question of improving our relations with South America, what should be taken into consideration is that all our interest in that area notwithstanding,

we have not done as much as we should down there.

It is no mere incident that while we were paying more attention to the Middle East, West Europe, and southeast Asia, the Soviet Union was increasing its penetration and its efforts in the Western Hemisphere.

DICTATORS OUT

The overthrow of such dictators as Peron in Argentina, Rojas Pinilla in Colombia, Marcos Perez Jimenez in Venezuela, and Paul Magloire in Haiti have constituted events of the very first importance. It is along the same lines that normalization of political conditions in such progressive republics as Peru, Bolivia, and Ecuador, where Dictators Odria, Villaroel, and Velasco Ibarra gave way to such distinguished presidents as Manuel Prado, Siles Zuazo, Ponce Leon Enriques, constituted political steps of great consequence.

Similar changes occurred in Guatemala, now normalized under President Miguel Ydigoras Fuentes; Nicaragua under progressive Luis Somoza; Costa Rica under Echandi; Honduras under Morales Villeda; El Salvador under Jose Maria Lemus, and so on.

That leaves only three dictatorship surviving—in Cuba, the Dominican Republic, and Paraguay under Batista, Trujillo, and Stroessner, while everywhere else from Brazil to Chile, not to mention Mexico, parliamentary democracy is progressing in strong strides.

AMONG REASONS

One reason for some loss of our popularity in South America was that rightly or wrongly we have been accused of favoring a number of extremely conservative elements in those countries; a major grievance, however, is due to our expressed opposition to certain economic and business measures in which Latin Americans are interested.

This became noted at the Buenos Aires Pan-American economic conference last September, where many spokesmen insisted on such things as creation of something like a Pan-American common market, establishment of a central bank, and things of that sort.

Further reluctance on our part to extend to South America the kind of economic aid we so lavishly provided for other countries is another cause of dissatisfaction. All of which taken together explains why one must wish Vice President NIXON the fullest success in his undertaking.

Politics and Foreign Policy—Address by Senator Mansfield

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1958

Mr. PROXMIRE. Mr. President, the relationship between politics and foreign policy is always troublesome to patriots. No American who loves his country wants to play politics with its safety. But there are differences between the parties on foreign policy which ought to be recognized, and the American people have a right to choose among the alternatives which are open to them in the field of foreign relations.

One of the most statesmanlike and judicious statements I have seen on this subject is the address made by the distinguished junior Senator from Montana [Mr. MANSFIELD] before the 1958 Campaign Conference for Democratic Women. The Senator draws a clear distinction between endangering the welfare of the country by attacking the opposition for partisan advantage, and debating the issues and offering viable alternatives. One is the course of partisan recklessness and the other the course of partisan responsibility.

The address to the Democratic women is the kind of wise and lucid analysis of the problems of foreign policy we have come to expect from the Senator from Montana. I congratulate him on it.

Mr. President, I ask unanimous consent that the address, entitled "Politics and Foreign Policy," delivered by the Senator from Montana before the 1958 Campaign Conference for Democratic Women, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the Appendix of the RECORD, as follows:

POLITICS AND FOREIGN POLICY

As I look around the room I see the faces of very good Americans. I also see the faces of very good Democrats. They are the same faces. As a matter of fact, I cannot detect a single American in the room who is not a very good Democrat or a single Democrat who is not a very good American.

The company could not be nicer.

As Democrats we want a victory at the polls in November and we are going to win a victory. As Americans we want to secure America in a peaceful world and we are going to get that kind of America and that kind of world.

We have not won the victory at the polls, yet. We have not got a secure America or a peaceful world, yet. To achieve both requires the ablest though and the most dedicated work of which we are capable. To achieve both requires competent, concerned, and consistent leadership. I am confident Democrats are capable of that kind of thought and that kind of work and that kind of leadership.

I want you to have this thought on foreign policy in mind before we plunge into the 1958 political campaign. As Democrats, I know that you will work and work hard to defeat Republicans and to elect Democrats. As Americans, however, I call upon you to cooperate, to cooperate responsibly with all Americans regardless of party in the search for the peace that will give us a secure nation in a secure world.

In an election year, cooperation with the opposition on any issue is not easy. It will be difficudt for Democrats and with good reason. We have seen in the past an irresponsible opposition grow so reckless as to ignore the needs of the Nation on foreign policy. We have seen members of that opposition seize on international difficulties as the occasin to cast vile slurs upon the integrity and the patriotism of our great party and the tens of millions of Americans who have supported the party through the years.

The temptation is there to reply in kind. It is an understandable temptation but I urge you not to yield to it. I urge you not to follow the ugly precedent set a few years back by the opposition in its desperate search for political victory. We want, as I said, a victory in November. But I say to you in equal earnestness that if we can win only by deliberate distortion of the truth, by willful destruction of the personal reputations of our opponents, by ruthless sacrific of the Nation's position in the world, then we do not deserve a victory.

We are going to win but we are going to win on the issues. Foreign policy is one of those issues. To cooperate responsibly with the opposition on foreign policy, as I have urged, is not to bury this question. It means simply that we do not distort the question for party advantage. It means that we act with restraint, bearing in mind at all times that what we say and do here is heard round the world. It means that we do not slander the character, we do not, by innuendo or otherwise, cast doubt on the personal integrity or the patriotism of any member of the opposition simply because we may disagree with him, simply in order to win votes.

In short, we stick to the issues in foreign policy. Believe me, there are issues in this matter. The American people are entitled to a full discussion of them in the months ahead. Let me, in the remainder of these brief remarks, try to summarize some of these issues as I see them.

This administration is trying to sell the American people on the idea that there is peace in Korea, in Formosa, and Vietnam in the Far East. It is not very modest, either, about claiming credit for this peace. I tell you that there is no peace in those areas, and the administration knows there is no peace. What there is, is a tenuous truce. It was won not by any magic of this administration but by the bloody sacrifices of thousands of Americans and others and by the expenditure of billions upon billions of dollars.

We made the effort in the Far East—in Korea particularly—because Americans, Democrats and Republicans alike, believed it was necessary to make it for our own security and freedom. The Republicans will try to tell the American people that Korea was a Democratic war but look back through the records of 1950. You will find that the intervention in Korea was just about the only act of the Truman administration that Republicans fully and wholeheartedly endorsed. As a matter of fact, they were so enthusiastic about it many of them even wanted to carry the war into China. That is where Americans would be fighting now if the Democrats had not restrained this Republican enthusiasm.

The job of peace in the Far East is not yet finished. This administration has had 5 years to do it but it has merely sat with its eyes closed on the brink, propped up by American military commands on 24-hour alert within sight of the coast of China and by aid to others of a billion or more a year. This is called peace and the American people are asked to thank the Republican administration for it.

That is one issue of foreign policy. There are others. There is the whole question of foreign aid and its maladministration. One of the things we need to find out and find out soon is whether the aid program is supposed to serve the ends of foreign policy or to provide a dumping ground for voluntarily or involuntarily retired Republican politicians and surplus colonels.

The world has changed drastically since the days of the Marshall plan. But except for the pressures that have been exerted by Congress to reduce expenditures and to improve methods, this administration goes on in foreign aid as though everything has remained the same. It has passed out arms from Cuba to Japan, throughout the world, with inadequate thought to the ultimate effects of these weapons. It has gone on giving away aid when it is clear that other countries and our own people would both be better off if we would put an equivalent effort into helping these countries become self-supporting.

That, too, is an issue of foreign policy on which Republicans and Democrats differ. There are others. We have not yet got stability in the Middle East despite the so-called Eisenhower doctrine. This administration has tilted with windmills in that region. It has toyed with autocratic and dictatorial movements and nations, while it

overlooks with almost snobbish disdain countries like Lebanon and Israel which are struggling to keep the concept of freedom alive in an area that reeks of terrorism, militarism, and conspiracy.

That, too, is an issue on which Republicans and Democrats differ and there are others. We Democrats do not believe that public relations are a substitute for intelligent policy, that generalities on peace are the actualities of peace. We do not believe that this country is remotely secure so long as the weapons of mass destruction continue to pile up throughout the world.

We Democrats do hold that peace can be achieved and that it is going to be achieved by a leadership which, first of all, believes peace is possible and, second, is willing to work day and night, 7 days a week to get sound and equitable agreements for its preservation.

Let me say, finally, Democrats in Congress will cooperate responsibly with leadership of that kind, regardless of its party label. By the same token, I know that all Democrats are going to work to see that this Nation gets that kind of leadership.

Poland's Constitution Day

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 5, 1958

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the the Appendix of the RECORD a statement prepared by myself, entitled "Poland's Constitution Day—A Reminder of Freedom-Loving People's Refusal To Be Dominated."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

POLAND'S CONSTITUTION DAY—A REMINDER OF FREEDOM-LOVING PEOPLE'S REFUSAL TO BE DOMINATED

As we all realize, Saturday, May 3, when the Senate was in recess, marked the 167th anniversary of the foundation of constitutional government in Poland. I join many of my colleagues in paying tribute not just on that occasion, but throughout the year.

This anniversary serves to point out the vital importance of Poland in the current struggle between East and West. Although forcibly allied politically with Russia, the overwhelming proportion of the people of Poland are stanchly allied spiritually with the nations of the West.

The same spirit of independence and love of freedom which was responsible for the drafting of the Polish constitution 167 years ago, still burns brightly in the hearts of the citizens of Poland today. The people of Poland aspire to freedom and democracy. We sympathize with and support these legitimate aspirations, and we are endeavoring to assist these noble people in coming closer to the day when they may once again live under the provisions of their own cherished constitution.

Recent actions by our Government and by private United States organizations have offered encouragement to the spirit of freedom in Poland.

One example of this encouragement was the grant—which I have previously commended—by the Ford Foundation. It establishes a program of scholarly and cultural exchange with Poland and other east European nations. These funds will enable research scholars, professors, and experts in many fields from Poland to visit the United States and nations of western Europe. Funds from the first allocation are enabling 40 Polish scholars to study in the United States. Many of these individuals are even now studying and doing research at our leading universities. Similarly, this grant will allow United States citizens to study in Poland.

Another purpose of the program is to finance the purchase of American and west European textbooks, periodicals for distribution to Polish educational institutions.

Likewise, as Senators well know, our Government has entered into an agreement for a long-term loan of $95 million for the purpose of purchasing wheat, fats, cotton, and mining equipment, thus assisting in strengthening the economy and health of Poland and lessening her dependence on Soviet Russia.

These and other types of assistance, such as the hoped-for resumption of CARE shipments, are, I believe, in the best interests of the United States and the free world. However, we must never let it be misinterpreted as a support of Communist domination over Poland. Conversely, we must make it known to the world that we are supporting the hopes and the heartfelt desires of the Polish people that they may continue to weaken the chains which unfortunately exist between their nation and the totalitarian authority in Russia.

The goals of the people and the people of the United States are parallel. As symbolized by Kosciusko and Pulaski and other deathless leaders, both peoples believe in freedom—both believe in the dignity of the individual—both believe in independence and self-determination.

When the people of Poland hold out their hands in friendship and supplication to us, we would be betraying our common ideals if we were to ignore them.

On Saturday's occasion of the anniversary of the Polish Constitution and today and every day, we salute the people of Poland who are continuing the struggle for their worthy objectives.

We also salute the more than 7 million patriotic Americans of Polish extraction of the United States, including, of course, the vast Polish-American segment which has contributed so much to my own State.

We further make known our solemn pledge to continue to offer all possible encouragement to the Polish people in order that the day may soon come when they may once again enjoy the liberties for which brave Poles have sacrificed so much in so many uprisings, including the Poznan revolt, throughout Poland's history.

Rear Adm. Robert L. Campbell, United States Navy, Lauded

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. HOSMER. Mr. Speaker, the expressions in the editorial from a recent issue of the Long Beach Press-Telegram regarding Rear Adm. Robert L. Campbell are heartwarming. They represent the unanimous feelings of many thousands of people who know, respect, and admire him, including myself. It is good to know such men as Admiral Campbell occupy key positions in the United States Navy.

The editorial follows:

ADMIRAL'S TRANSFER LOSS TO LONG BEACH

Rear Adm. Robert L. Campbell, commander of the United States naval base here for the past 2½ years, leaves April 30 to take on a new job, command of the services forces, Pacific Fleet. His transfer is a real loss to this community.

Some military commanders are tight-lipped men who feel it is not their place to utter any opinions about the world around them. When they remain mum on questions that involve both the community and the Armed Forces, unnecessary difficulties and misunderstandings arise.

Admiral Campbell, however, has done a marvelous public-relations job during his service here. He hasn't remained aloof but has participated in community affairs to the extent that his position would allow. This has made Long Beach's relationships with the Navy more congenial and constructive.

For example, the question of where to locate the new Navy landing could have been held in suspense for years by indecision resulting from not knowing what the Navy preferred. After studying the question, Admiral Campbell made it clear what would be best from the Navy's point of view. The city had something to go on, and the question was promptly settled.

He has always been candid, helpful, and friendly. Our salute for a job well done, and we know he will serve with distinction in his new assignment.

Is Congress Going To Do Something About Sports Rackets?

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. HÉBERT. Mr. Speaker, several weeks ago I exposed the manipulations and machinations of a certain degenerate segment of the professional boxing mob which should have the immediate attention of the appropriate committee of the Congress.

I regret that I am not a member of that committee, but I am sure that those of this body who have already evidenced a deep interest in the conduct of professional sports will include boxing along with professional football and baseball in their deliberations.

My words, spoken from this floor, did not fall on deaf ears.

From all sections of the Nation I received letters and telegrams. Practically all were in accord with my views. Those few who did oppose, and there were very, very few, had their own purposes to serve for their own reasons. Denials were made by the principals which were to be expected. They had better make denials—or else.

Sports commentators from all over the Nation spoke and wrote their pieces. I have selected two typical expressions.

One comes from Dan Parker, the prominent sports editor of the New York Mirror who never knew how to pull a

punch. His article is typical of the reactions of the American press.

The other piece is by Cro Duplantier, the executive sports editor of the New Orleans States, who knows more about this particular smelly business, perhaps, than anybody else except the principals themselves.

First is Dan Parker's piece and then is Cro Duplantier's piece.

After reading them I again ask: "How long is Congress going to wait to do something about it?"

[From the New York Mirror]

PATTERSON-HARRIS MATCH WOULD PROVE CUS A PHONY

(By Dan Parker)

Among other things, the fight racket invents its own past participles. When a fight manager is insolvent, he doesn't say he's broke. He is broken. The past participle of copyright, by the same token, is copywritten. Thus, Cus D'Amato isn't broken, even though Floyd Patterson, his heavyweight champion has been as inactive as a voting machine in Moscow. On the other hand, Cus has Floyd copywritten.

All this falderal is necessary to explain a copywritten story, authorized (past participle of the nonexistent verb form of the noun author) by one of the boys on the boxing beat to fill a Monday morning void. The substance of this piece of extra light fiction was that Patterson and Roy Harris, the built-up tyro from Cut and Shoot, Tex., would meet for the heavyweight title at Roosevelt Raceway next August.

Shielding his vocal orifice with the Homburg he uses as a conversation strainer, Mr. D'Amato verbally splashed the copywritten story with a ripe tomato by snorting: "Nothing to it."

Then, speaking ex officio as the Duke of Humbug, from under his towering, castle-like Homburg, His Dukeness warned all and sundry that he was working on at least five different matches for Floyd and that if any of the people he was negotiating with dropped so much as a misleading hint about it, they would be automatically out the picture.

Whether the guillotine has been abolished in the Duchy of Humbug, no one is quite certain but the duke has been known to shout: "Off with their heads!" to commoners who have the temerity to question him about matters of state.

If I were permitted five guesses as to the matches the Duke of Humbug is working on, I would list them in this order:

1. The new princeling of Monaco, at catchweights.

2. Commodore Dutch, Rtd., of the Chesty-Slovak Navy.

3. Pete Rademacher, who decked Floyd in their last bout, with the breeze of one of his wild swings.

4. Pete's Uncle Zachariah Habenschnaben, a sausage stuffer.

5. The Old Woman Who Lived in the Shoe.

If all these suggestions sound ridiculous, consider the implications of a Patterson-Harris match and see how much more probable any of them is than a meeting between Floyd and the Texan. Harris is under the aegis of I. B. C. through Frankie Carbo and his manager of record, Lou Viscusi. Carbo is a silent partner in the Houston club Viscusi operates as a sideline, although the boxing laws of all States forbid managers to be promoters and vice versa.

Some weeks back, D'Amato took Patterson down to Houston for an exhibition bout in the Carbo-Viscusi club, which is an I. B. C. television outlet. This gave rise to the report that a Patterson-Harris bout was in the making. If, after all his pious preaching about the holy war he was waging against the iniquitous I. B. C., D'Amato walked right into its den, he would be unmasked as a colossal fraud. At this stage, one would guess that D'Amato would have no truck with this crowd. Still, there is his visit to Houston to show his fighter at the Viscusi-Carbo club. Besides, the New York State Athletic Commission's records contain a transcript of his testimony before the Helfand investigation, supporting Honest Bill Daly and admitting he was collector of tribute for the New York Managers' Guild, since outlawed. Since that time, D'Amato has pleaded that he was so naive he didn't realize he was doing anything that would endanger his chances of winning his merit badge.

Strictly on his own resources, Harris, as an opponent for Patterson, would probably be a softer touch than marshmallows in a bed of meringue. Bob Baker, an honest fighter, in an interview some time after meeting Roy in Houston a year ago, said he almost knocked Roy out with an accidental punch while carrying him in a buildup bout. In Houston, Harris had to win—even when Willie Pastrano, a protege of the same cozy little group that is pushing Harris, for whom Angelo Dundee fronts, met him there.

The idea of a fellow with Harris' rather limited experience outpointing a ballet-dancing boxing master such as Pastrano is too ridiculous to think of as something that could happen without benefit of script. Just as Bob Baker's defeat had been. After Pastrano lost in Houston to the Cut and Shoot Kid, there was to have been a return bout in Chris Dundee's Miami Beach Club with Guess Whom winning. Something happened to change the program, however, and to this day, nothing has been mentioned about the return bout after the original postponement. This could have been long-range planning to keep Harris' record clear for title-challenging purposes. With Machen and Folley temporarily out of the way as serious contenders, Harris suddenly becomes hot merchandise again.

The ironic part of his spotless record is that it no longer is without blemish on paper. In the latest Ring Record Book, through a printer's error, a four-round knockout one Willie Miller scored against Will Harris, a Peoria lightweight, in Milwaukee last December 28, has been charged against the Cut and Shoot Kid.

The sudden windstorm issuing from the IBC's ballyhoo jet turbines is part of a concerted move to force D'Amato out of his solid ivory tower. From Syracuse simultaneously come windy challenges from the winner of Wednesday night's Mike DeJohn-Nino Valdes bout (which DeJohn figures to annex for strategic reasons). Meantime, Willie Pastrano will be hurling trans-Atlantic thunderbolts at the Iron Duke from Perfidious Albion, if his voice can be heard above Babel that it still dominated by the knightly prattle of D'Amato. Jim Norris' resignation as head of the IBC, of course, automatically makes it an entirely different organization, and, with Truman Gibson his successor, what I mean is that it will be worse than ever. This bureau is impartial. It fervently hopes that D'Amato will hold out not only against the IBC and its hoodlum satellites but also against all other challengers except my Favored Five. We've had everything else in the festering fight racket. Now, let's have a heavyweight championship bout in a sealed length of giant-sized concrete sewer pipe, stood on end.

REPRESENTATIVE HÉBERT'S GIANT STEP

(By Cro Duplantier)

When Representative F. EDWARD HÉBERT delivered his speech on boxing yesterday in the House of Representatives, he took two giant steps forward toward correction of the ills that plague the business.

The New Orleans Congressman who bluntly accused persons identified with the International Boxing Club with having forced Ralph Dupas to submit to a shakedown in order to get a shot at the lightweight title, in effect, not only diagnosed the business' principal ailments but turned the spotlight of publicity on them.

In the eradication of any disease—the public health authorities will tell you—these are always the first steps, correctly identifying it and educating the public about it, educating the public about how it spreads, whom it affects, what the results can be.

The education, actually, is the big thing, because you've got to eradiacte the elements of mystery, the elements of baseless fear, the methods of combating or preventing it.

Twenty years ago, for example, poliomyelitis—polio or infantile paralysis, if you wish—was a dreaded word. The sickness struck so secretively. It was so sudden. It was so indiscriminate.

Then the campaign started to learn more about it, to educate the public, to get support for a program to study potential cures. Today, while polio still exists, it is no longer the fearsome thing that it was, because man knows that a vaccine is available to make him practically immune to it.

A disease which affects the Nation's politics, its business, or its sports is no different from one which attack man's body.

It needs the same diagnosis, the same education. And an effective vaccine, in the form of legislation, can be provided.

What HÉBERT told the House yesterday has long been suspected by many fans—that boxing is manipulated by a small group which controls many of the name fighters and most of the titles. And there were many who suspected how these few stayed in control.

But HÉBERT spelled it out, insisting that Dupas' story was a typical one, the story of the worthy challenger being forced to sign up with a "member of the International Boxing Club's fraternity of favored managers" before he gets the approval for a title shot.

This accomplished, the IBC is in the driver's seat. The champ may lose the title, but the IBC doesn't.

His comparisons of the leeches in boxing with the racketeers in other fields was not unwarranted, and his charge to his fellow Representatives was a strong one.

Demanding action, he asked:

"We denounced monopolistic practices in business and corporations. We denounced racketeering in labor unions. We cry out against defiance of antitrust laws in professional baseball and professional football. Will we sit by idly while professional prize fighters are being victimized by musclemen?"

HÉBERT'S are not the first efforts made to expose the behind-the-scene manipulators, nor is his the first suggestion for action to curb them. There have been others, including some of the victims, men like heavyweight champion Floyd Patterson and his manager, Cus D'Amato, for example.

But too often their efforts have resulted in disaster for themselves, for the IBC has a way of freezing out of business the individuals who oppose its will.

But HÉBERT'S efforts could well be the first successful ones.

If Congress carries through with HÉBERT'S suggestions for action, the IBC, which prides

itself on matching "worthy opponents" may well find that it has at last met one.

In fact, it could find that it is badly overmatched.

Full Disclosure in Government

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 5, 1958

Mr. PROXMIRE. Mr. President, the Milwaukee Journal has been one of the foremost American papers in fighting for full disclosure in Government. The Journal has had a healthy fixation on the immense importance of the cleansing effect of full public scrutiny on Government operations.

For this reason, a recent editorial in the Milwaukee Journal entitled "Secrecy Loses a Round," reporting the progress in the Federal Government toward full public disclosure, is very encouraging.

This editorial shows that in the legislative as well as the executive branch of our Federal Government the public interest is winning battles in the war against secrecy.

Mr. President, I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SECRECY LOSES A ROUND

One big hurdle has been happily cleared in the drive against suppression of routine government information to which the public is entitled. The House quickly passed the basic corrective measure put forward by the study committee under Representative Moss (Democrat, of California). Senate concurrence now seems a good prospect this year.

The attack is on misuse of a 1789 law intended merely to give the Cabinet departments necessary housekeeping powers, including records management. This has been stretched, by non-Cabinet agencies as well, into a license to lock up records whenever they feel like it. The correction simply says, with sublime brevity, that the housekeeping law does not bestow such license.

Some bureaucrats have tried to frighten Congress by absurdly asking if it intends to open every last file drawer in Washington to be pawed through by all comers. Of course not. Other, specific laws are ample to safeguard properly classified secrets. This has to do only with normal access to normal public records. If a case can be made for withholding a particular part of such information, the right recourse is to seek express legal authority, not to assume blanket discretion.

This enactment, if or when achieved, won't automatically end the problem. It never ends. There will always be officiousness to be vigilant against, and irrelevant assertions of executive prerogative to combat. But the intent of Congress—the doctrine that government belongs to the people, not to the bureaucrats—will be spelled out with crystal clarity, and that will be the landmark.

Nor will such legislation, even if fully effective in its sphere, touch other areas of Government secrecy. One is Congress itself. Congressional Quarterly, a private research agency, finds that one-third of all committee meetings so far this year have been closed. That's better than the 1954 peak of more than 40 percent, but still far from the irreducible minimum of necessity.

A comparatively high rate of secrecy in hearings on foreign and military affairs is understandable, and some details of military appropriations can't be blabbed. But the House Appropriations Committee hasn't had even one public session yet this year. House Ways and Means best showed how much room there is for reform; its secrecy ratio last year was 93 percent, so far this year 5 percent.

Distribution of Food Reserves

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 5, 1958

Mr. THYE. Mr. President, one evening as I was driving from the Capitol, I heard a radio broadcast which attracted my attention. It was a broadcast called "Three Star Extra," with Ray Henle reporting from Rome. Because of the importance of the broadcast, I asked for a copy.

One item of particular importance in the broadcast was when Mr. Ray Henle said, speaking about the people in Rome, Italy—

One official said to me, "You people call it farm surplus. Why don't you call it reserve food, and with the reserves of food you now have, costing you a million dollars a day in storage alone, you have a great political instrument to win friends."

I fully concur with Ray Henle's remarks in the broadcast, and I ask unanimous consent, Mr. President, that the text of the radio broadcast be printed in the Appendix of the RECORD.

There being no objection, the text of the broadcast was ordered to be printed in the RECORD, as follows:

The future of Italian politics will be decided in a parliamentary election late in May.

In a nutshell, here is the prospect: The Christian Democrats, now the most numerous party, are almost certain to remain in that position—gain or lose some—but they say over here not likely to win a majority of the Italian Parliament seats. Therefore, a deal with parties either to the right or to the left is to be expected in order to form a government after the election. Either case holds some good.

Most observers feel that a move to the left would give Italy still more social progress, which she could stand, and do it at least partly under a system of free enterprise. A move to the right might mean alliance with the Italian Liberals—actually conservatives—the leader of whom is a friend of the United States, of NATO, and of Italian participation in the European common market.

This election will not be affected by economic fact. Much attention is paid here to the economic trend of the United States, but Italian economy would not be adversely affected even from a continued recession in the United States, sufficiently to be noticed at the election time.

There is much evidence in Italy as to how American help has kept this nation solidly in the free-world lineup. Therefore, no authority in Rome thinks the Communists will gain ground in the parliamentary election. Most of them think Communist strength will fall off.

The strength of the Communist Party lies in its very excellent political organization down to the precinct level, and they obviously have plenty of cash. Except for our help, the Communists might well be in the saddle here. Even with our help, Italy has a strong Socialist Party and her free industry must compete with nationalized industry.

There is much good feeling here toward the free-enterprise system, but the nature of Italy's politics makes it difficult for Italy to break loose from socialistic ties, just as England finds it hard.

United States foreign aid and our mutual-assistance program have strengthened Italy's chance to remain at least partly in the free-enterprise rank. Also, outstanding social-welfare programs of private industries, such as Fiat automobile and others, have kept workers from falling for the Communist line.

Our people are doing wonders here with American farm surplus. In fact, our technicians running this program already have changed the diet of much of the younger generation of Italians from largely spaghetti to one of vegetables, soup, milk, and other dairy products, along with protein products.

One official said to me, "You people call it farm surplus. Why don't you call it reserve food, and with the reserves of food you now have, costing you a million dollars a day in storage alone, you have a great political instrument to win friends."

And this official went on to say, "What you Americans need is another Herbert Hoover who would organize your food resources and distribute them on a broad scale to feed those who are hungry and to improve the diet of poorly fed people. This, in turn, would get you more prestige in the world than armaments and satellites in outer space. It calls for bolder planning and bolder thinking than I think you have done so far."

This is Ray Henle reporting in Rome.

Talmadge Farm Plan

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, May 5, 1958

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Talmadge Has New Farm Plan," from the April 26, 1958, issue of the Waycross (Ga.) Journal-Herald.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TALMADGE HAS NEW FARM PLAN

Senator HERMAN TALMADGE has come up with what appears to be a sound plan to give the Nation's farmers a fairer share of the national income.

His plan calls for the abolition of all price support loans and acreage controls. Farmers would be free to plant as they pleased and their products would sell on a free market.

Farm income would be bolstered by giving growers of tobacco, cotton, corn, wheat, rice, and peanuts direct Federal payments covering the difference between open-market prices and 100 percent of the fair earning power parity level.

Each farmer growing basic commodities would be given a domestic production quota

to be expressed in pounds, bushels, or bales instead of acres.

A bill of sale would be required with the farmer's application for sales price support payments.

TALMADGE contends that the plan would eliminate a lot of redtape, end regimentation and dictation imposed by acreage controls, and take the Government out of the business of buying, storing, and selling farm commodities.

Georgia's junior Senator said his plan will cost approximately half as much as the $3.250 billion spent on present farm programs.

Already several of TALMADGE's colleagues in the Senate have had some kind words for the proposal.

Besides putting more money in the farmers' pockets the thing we like about the plan is that it would put a lot of people back to work and presumably would slow up the present farm-to-city migration.

In our own county, for example, more and more land is going into the Soil Bank. According to 1958 figures, just released, 69 percent of the county's cotton allotment and 23 percent of the tobacco acreage has been proposed for acreage reserve.

Last year the figures were 40 percent of the cotton and 15 percent of the tobacco. The increase is sizable.

Senator TALMADGE's plan may not have all the answers, but it sounds to us like a lot better deal for all concerned than the program under which farmers and taxpayers are now suffering.

Agreement to Safeguard Salmon Runs of Columbia River

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, May 5, 1958

Mr. NEUBERGER. Mr. President, development of dams to improve flood control and provide low-cost power without further decimating the migratory fish runs of the Columbia Basin is one of the most complex problems confronting the Pacific Northwest region. Because the Columbia is an international river, solution of this problem involves important questions of policy in negotiations between the United States and Canada.

Earlier this month, the Senate Interior and Insular Affairs Committee held hearings to determine what progress has been made, if any, to resolve differences between the United States and our northern neighbor over future development of the upper Columbia. Unfortunately, testimony from officials of our Government has not been encouraging. Prospects seem dim for an early completion of negotiations on future use of the boundary waters of the Columbia.

Despite the apparent lack of progress, there emerged from the hearings definite indications that the eventual solution will have far-reaching effect on fisheries of the two nations. Canada has threatened to divert part of the Columbia's flow into the Fraser River, which spawns a major Sockeye run of North Pacific salmon. If such development were carried out, the salmon of the Fraser would be doomed. Moreover, if agreement is not reached soon for water storage in the upper reaches of the Columbia, pressure will increase to locate high dams and vast reservoirs in the middle Snake River region which provides the major spawning ground for migratory fish on the American side of the border, particularly Chinook salmon.

The upper Columbia is a so-called fishless river above Grand Coulee Dam. It has huge potential for water storage needed to check floods and to create kilowatts. This is the area where additional efforts to build big dams should be concentrated. An excellent editorial discussing this subject appeared in the Astorian-Budget of April 25, 1958. I ask consent to include this material in the Appendix with my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Astorian-Budget of Astoria (Oreg.) April 25, 1958]

AGREEMENT VITALLY NEEDED

A dispatch from Washington tells of testimony by Assistant Interior Secretary Ross Leffler that it is vitally important for Canada and the United States to reach agreement on development of the Columbia River so that Fraser River sockeye salmon runs will not be decimated by proposed hydroelectric development there.

Such agreement certainly is important for preservation of the Fraser fish runs and for rendering unnecessary a proposed diversion by Canada of Columbia River water into the Fraser.

It is also important for protection of fish runs in the Snake River, if agreement can be attained in time to permit power developments on the Columbia River above Grand Coulee that will relieve some of the pressure for Snake developments.

Fate of fish runs on two streams, therefore—the Fraser and the Snake—are in jeopardy while potential hydroelectric power on the fishless upper Columbia is going to waste.

Common logic indicates that the place where maximum possible power development should be sought is on the upper Columbia, where no salmon runs exist. Grand Coulee has killed them.

But simply because Canada and the United States have been unable to agree on joint use of this river, no power projects are being planned there. Meanwhile it seems as though everyone who wants to build a dam is anxious to do so on the lower Snake, threatening the one remaining major salmon spawning stream in the Columbia River system.

And in Canada the power folk are proposing to destroy the highly valuable Fraser River runs which only lately have been restored after long years of study and hard work.

Senator NEUBERGER has been pressing hard for a United States-Canada agreement on the Columbia River problem. He is absolutely right in doing so, and his efforts deserve early success, the earlier the better for the future welfare of the fisheries of two great river systems.

Reds Give Little, Profit Much

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 5, 1958

Mr. PROXMIRE. Mr. President, even American citizens have a disproportionate notion of the benefits of the Russian program of technical assistance to other nations. Actually the Russian program is dwarfed by comparison with our own immense generosity. A recent editorial in the Milwaukee Journal develops the facts and figures which show how much credit the U. S. S. R. is getting for the little it is giving.

Mr. President, I ask unanimous consent that this editorial be printed in the Appendix to the RECORD at this point following my remarks.

There being no objection, the editorial was ordered to be printed in the Appendix to the RECORD, as follows:

REDS GIVE LITTLE, PROFIT MUCH

Russia and her satellites have made but meager contributions to the United Nations technical assistance program for underdeveloped countries, yet they are reaping valuable political rewards. This point is clearly developed in a recent study by Robert Loring Allen, associate professor of economics at the University of Virginia.

The U. N. regular technical assistance program came into being in 1948. In 1950 it became a permanent U. N. institution. From 1950 through 1957, about $175 million was spent under the expanded program. The United States made 55 percent of total contributions. Great Britain contributed nearly 8 percent and France and Canada about 5 percent each.

Russia and the east European countries have given only 3.7 percent of the total since 1950. In fact, it was not until 1953 that Russia started to support the expanded program. Before then, Soviet delegates sharply criticized the program as the tool of western imperialism and an extension of United States foreign aid.

The Communists had an abrupt change of heart when they saw that the program was becoming a popular and successful international undertaking. They began making minimal contributions. Now they are boasting of their U. N. technical assistance role. In November, 1956, for example, a Soviet U. N. delegate asserted in a general assembly speech that "the Soviet Union had always taken a positive attitude to the United Nations programs of technical assistance."

"The principal impact of Soviet and east European participation has been psychological and political rather than economic," Allen writes. "Before the Soviet Union and eastern Europe began to participate, certain underdeveloped countries felt the program was not fully multilateral; with them in, such countries argue that it is a better program. In their eyes the Soviet Union has risen above its objections to the expanded program in the interest of helping underdeveloped countries."

West Coast Petroleum Glut

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. HOSMER. Mr. Speaker, on previous occasions I have called to the attention of this body and of the administration the serious dislocation of the west coast petroleum industry due to oversupply of products. In further clarification of this situation two leading oil editors, Ed C. Lloyd, of the Los Angeles Examiner, and Robert J. Sullivan, of the

Los Angeles Times, have recently set forth details of general interest.

Mr. Lloyd's column is as follows:

[From the Los Angeles Examiner]

OIL PRODUCERS ASK REVIEW OF COAST IMPORTS

(By Ed C. Lloyd, oil editor)

A current rate of imports not to exceed 55,000 barrels a day, and a second half 1958 rate of 54,000 barrels daily, would be sufficient to make up the deficit between domestic supply and demand, which is the policy of the Federal Government's Cabinet Policy Committee for District 5, California, Oregon, Washington, Arizona, and Nevada.

So ran a statement submitted yesterday by the Oil Producers Agency of California to Capt. M. V. Carson, Jr., administrator of the voluntary import program, and supporting an immediate review of west coast oil imports.

The agency said the first half 1958 figure of 55,000 barrels a day compares with permissible amounts of 220,000 a day and an average actual rate of approximately 160,000 barrels daily during the first quarter.

Failure of demand to reach expectations was given by the agency as the main reason for the reduction in need for supplemental imports.

In its December 12, 1957, report which brought district 5 into the import program, the Cabinet Committee estimated that petroleum demand in the district would approximate 1,286,000 barrels a day in the first half of 1958. This estimate is about the same as demand in the first half of 1957, as shown by United States Bureau of Mines figures.

As a matter of fact, the agency said demand in the first quarter of this year was 10 percent under that of the corresponding period of 1957.

On the basis of the latest information from both the United States Bureau of Mines and the American Petroleum Institute, the agency explained that this period demand was around 1,200,000 barrels daily, against 1,351,000 barrels in the first 3 months of 1957.

It was concluded by the agency that there was no present indicators to lead to the belief that second quarter demand will improve in relation to the subsequent quarter.

Mr. Sullivan's column is as follows:

[From the Los Angeles Times]

WEST COAST OIL STOCKS 38 PERCENT TOO HIGH

(By Robert J. Sullivan, oil editor)

West coast oil inventories of 145 million currently are estimated to be 40 million barrels in excess of desired levels, according to a yardstick worked out by William F. Kirk, manager of the economics department of General Petroleum Corp.

"Inventories of crude oil and petroleum products resulting in a turnover rate of 4.5 times a year appear to be about maximum for the west coast petroleum industry," according to Kirk who based his theory on United States Bureau of Mines statistics. "This turnover rate corresponds to a minimum of 81 days' supply and appears to be a good yardstick for measuring both inventories needed and surplus supplies."

The current excess of 40 million barrels, therefore he estimated, if maintained will result in the industry here operating with an inventory surplus of 38 percent or 31 days' excess supply.

"Assuming that inventories remain at their present levels and that demand reaches 464 million barrels, the turnover rate will be only 3.2 times during the year 1958, with supply amounting to 114 days," Kirk said.

According to his studies, inventories on the west coast turned over only 3.6 times during 1957, with the industry operating on 110 days' supply. The 5-year average, 1953 through 1957, was 95 days with a turnover rate of 3.9 times a year.

Storage capacity at refineries, tank farms and terminals is 57 percent full, compared to 37.4 percent a year ago.

"As these facilities are used principally for working storage, any sustained use in excess of 50 percent of capacity is a serious impairment to orderly and efficient operations," Kirk concluded.

The Full Story

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mr. HÉBERT. Mr. Speaker, it is unfortunate that the entire American public cannot attend the hearings on the so-called reorganization of the Department of Defense now being conducted by the House Armed Services Committee.

Unlike the proponents of the President's plan for reorganization, the opponents do not have a high-geared propaganda machine. The opponents are under compulsion to depend entirely on the meager information given out by the daily wire services, the radio and television media. These services, in reporting what is taking place in the limited capacity of the armed services room, are doing a splendid job but they, too, are limited in equipment.

Under orders, nobody in the Pentagon can speak out in public against the proposal but anybody can speak out in favor of the plan. It seems to me this is a rather one-sided way to handle such a controversial subject.

In addition to this Pentagon gag on those who oppose the plan there are powerful propaganda groups which have been able to tell only one side of the story to the American people and have created the impression that everybody in the Pentagon and everybody in uniform is in favor of the President's proposed legislation. There could be nothing further removed from the facts and the truth.

In an effort to get the widest coverage possible for those who are opposed to the language of the proposed law because of its dangerous implications I have asked permission to publish here in full the statements of two of the highest ranking military officers in the uniform of the United States. They are Admiral Arleigh Burke, Chief of Naval Operations and a member of the Joint Chiefs of Staff and Gen. Randolph McPate, Commandant of the United States Marines. Admiral Burke's comments are given here. General Pate's comments appear on another page.

These men can well speak for themselves and have done so before the committee.

I now let them speak to the entire membership of the Congress and assure you that they cannot be charged with speaking nonsense simply because they oppose the position of the President of the United States.

Read their papers carefully and you will soon learn that those of us who oppose, not the objectives, but the violent language of the President's proposal are not talking through our hats or talking nonsense as the President suggested before the newspaper editors of America.

STATEMENT OF THE CHIEF OF NAVAL OPERATIONS, ADM. ARLEIGH BURKE, UNITED STATES NAVY, BEFORE THE HOUSE ARMED SERVICES COMMITTEE

Mr. Chairman and gentlemen, I appreciate the opportunity to contribute to your deliberations on the important subject of the organization for the defense of the United States.

Organization is the framework by which effectiveness of our military forces is achieved. Organization not only determines who is responsible, and who gives commands, and who advises, and who does the fighting, throughout all the echelons of the military services, it not only provides the flow chart of how orders, and information, and intelligence, and reports flow from one element of the military forces to another, but organization can also influence greatly how problems are solved and whether full information can normally be given to all facets of the problems.

Organization can assist in assuring that the various possible solutions to a problem are thoroughly and candidly examined, so that premature action is not taken on one of the possible solutions without measuring the consequences, or without adequate analysis of the other possible solutions to the problem.

Organization largely determines who examines the problems, who submits views, and how decisions are made. It is important that those who can contribute do contribute, for solutions to problems which confront the Department of Defense and the military services have vast impact on the future of the United States.

Organization also has great effect on how juniors in the organization prepare themselves for assuming responsibilities in the future. Organization, coupled with the manner in which it is administered, will influence officers either to exercise initiative and to advance ideas they develop or to become compliant. The only source of future leaders in the armed services is the younger officers in the services. It is, therefore, most important that they train themselves to exercise initiative, to examine problems thoroughly, to recognize their duty to contribute their best judgments to solutions in which they participate, and above all to retain the spirit, enthusiasm, and the willingness to enter combat which have been the hallmark of our predecessors.

Organization is most important, but other factors also contribute to the effectiveness of our services. Most of these factors are interrelated and influence each other. Obviously, the most important factor is who fills the slots in the organization. The knowledge, the understanding, the character of individuals who man the organization are even more important than the organization itself. Good men can make a poor organization work well, and poor men cannot make a good organization work at all.

The stability of the organization, the resources available to the organization, the various controls imposed on the Department of Defense and on the Armed Forces, all have important bearing on the effectiveness of the services.

No one can work long in any organization without seeing ways in which it can be improved. I have given a lot of thought to possible changes in the existing defense organization. There have been many different

ideas advanced on how improvements could be made. This committee is a proper group to resolve these differences into a sound plan founded in carefully drawn legislation.

The basic requirement of our defense organization is that it be responsive to the Nation's security needs, now, and in the future. The Defense Establishment must have stability, and it must at the same time have flexibility. Both are important, so that it may be capable of absorbing the impact of new technology, new concepts, and new weapons.

Change is an inevitable process in a dynamic organization. It is part of the business of progress. The important thing about making changes is to be sure that they are really improvements. Change is not in itself progress. The changes neded are those which will make the defense organization more effective than it is today as an element in the security of the country.

It is reassuring to know that this committee is devoting its full attention to this important matter. The broad extent of your knowledge and experience in matters relating to national defense is widely recognized. It is fine proof of the rightness of our governmental system which places the power and responsibility of ultimate decision in representatives elected by our people.

Whatever law emerges from these deliberations will be wholeheartedly supported by the United States Navy. The fact that the Navy and our sister services are able at this point to participate in these important deliberations and to present our views is significant.

Whatever emerges from these deliberations, moreover, should carefully reflect the intentions which are to be fulfilled. The legal authority should be provided to do those things which need to be done. The law should be precisely and clearly drafted so that those intentions can be implemented under the terms of the law, so that the law cannot be misinterpreted in the future to include actions not now intended, or which would tend to defeat the expressed intentions. I hope that the resultant statute will insure that the intent is clearly spelled out in all provisions of the legislation.

I would like now to give my understanding of what is intended to be done and the manner in which it is proposed to do it.

THE AUTHORITY OF THE SECRETARY OF DEFENSE

It is my understanding that the primary objective of the proposal is to insure that the Secretary of Defense has clear, indisputable authority under the President, of direction and control over all matters in the Department of Defense. The legal authority for supervision over the department will rest in the person of the Secretary of Defense. His authority will be clarified.

I am in accord with clarifying the authority and responsibility of the Secretary of Defense as necessary to accomplish this. If he is to run the Department of Defense efficiently he must have appropriate authority to do it.

UNIFIED COMMANDS

It is my understanding that the commanders of each specified and unified command will have full operational authority over the operating forces assigned to them, such as assigning missions or tasks to subordinate commands, deploying units, assigning forces to subordinate commands, and assigning operational or tactical control as the commander deems necessary. Forces may not be assigned to a unified or specified command or withdrawn therefrom except on authority of the Secretary of Defense upon the advice of the Joint Chiefs of Staff.

I support the objective of having the authority and responsibility of the commanders of unified and specified commands clarified so as to insure they have full operational authority over their forces.

It is also my understanding that the military services will continue their responsibilities for administration, discipline, training, and other such matters rather than having them become the responsibility of unified or specified commanders. Support such as logistic support, replacements of personnel and ships, repairs and overhauls of ships, maintenance and overhaul of aircraft would also remain with the services.

It will require very close cooperation between the Joint Chiefs of Staff, the unified commanders, and the services to insure that the operating forces are fully ready and trained for combat, and fully supported by the services. It is most important that the operating forces be supported adequately and that the funds and resources available to the various elements of the Department of Defense be distributed so as to be most efficiently used. The military services have developed the techniques and experienced organizations to provide the necessary support to the combat elements of their services and these organizations should continue to be used. Close attention must also be paid to the necessity of having the support rendered to operating forces be fully responsive to the individual needs of the particular force being supported.

It is understood that there are no substantial changes expected to be made in the unified and specified commands or in the way the commanders operate and are supported. This is important, since the methods of implementing the proposals are as important as the proposals themselves.

CHAIN OF COMMAND

I am in accord with elimination of the present executive agency chain of operational command established by the President's message accompanying Reorganization Plan No. 6 and the substitution therefor of direct command from the President to the Secretary of Defense, through the Joint Chiefs of Staff to the unified and specified commanders. This will permit quick action when necessary and insure that the Joint Chiefs of Staff are cognizant of all significant operations. There are many details connected with operations, however, especially details concerning support, logistics, communications, and so on, with which the Joint Chiefs of Staff should not be concerned. These details should remain with the individual services.

Should the Joint Chiefs of Staff become involved in the detailed direction of operations and their support, they will not have sufficient time to devote to the important problems of strategical direction, advance planning, and broad policy.

Should the Joint Staff be increased to such an extent that it handles details, two things can happen:

First, the Joint Chiefs of Staff may not be fully informed as to what its staff is doing.

Second, the staff might interfere with the duties of the services and of the commanders of the unified and specified commands, resulting in confusion of responsibilities or derangement of the supporting systems.

CHAIRMAN OF THE JOINT CHIEFS OF STAFF

The proposals that the Chairman select the Director of the Joint Staff, that the Director and the Joint Staff operate under the management of the Chairman, and that the prohibition against the Chairman having a vote be removed, are, in my opinion, in the interest of more efficient management. These proposals all add to the importance and prestige of the Chairman.

This is all right. As long as the other members are not mere figureheads; as long as they have the ability, knowledge, experience, and machinery to develop views and have those views considered in the solution of the problems; as long as any chief can present his views to the Secretary of Defense or the President if he desires; and so long as the Chairman has the duty prescribed by the present law to inform the Secretary of Defense of those issues on which the Joint Chiefs of Staff are not agreed, the additional prestige of the Chairman is good. Since decisions of the Joint Chiefs of Staff will be made by the Joint Chiefs of Staff as a corporate body, and not by the Chairman alone, the proposals in regard to the Chairman are satisfactory.

THE JOINT STAFF

There have been many proposals in regard to the Joint Staff. The size of the Joint Staff would have to be increased somewhat to take care of the operational functions additionally assigned to the Joint Chiefs of Staff. There are differences of opinion as to how much this increase should be. If the Joint Chiefs of Staff get into details of operations, the increase needed will be considerable, or conversely, if there is a substantial increase in the size of the Joint Staff, the Joint Chiefs of Staff, or at least the Joint Staff, will involve themselves in details or in matters other than strategic planning and operational direction. This would not be good. I, personally, favor holding to a minimum the increases in the Joint Staff.

I am in favor of limiting the tenure of the Joint Staff to 3 years with an extension of 1 year only under exceptional circumstances when approved by the Secretary of Defense. This will reduce the possibility of making a career out of duty on the Joint Staff. Similarly, it may be desirable to provide for at least a 3-year period between successive duties on the Joint Staff.

I am also in favor of the provision to have the members of the Joint Staff selected by the Joint Chiefs of Staff equitably from the Army, the Navy and Marines, and the Air Force. Representation such as this will avoid having the Joint Staff manned by people with a single background and will permit cross-fertilization of ideas. It is my understanding that the important positions, the positions of influence, in the Joint Staff will be rotated among the services as is presently done.

The procedures for the Joint Staff and its organization are now undergoing study. The questions connected with procedures and organization of this very influential group are not easy to resolve for the staff must not only operate quickly, but must provide the correct answers to complex problems. There must also be methods worked out so that arbitrary decisions are not made and that preconceived views on the solutions of problems are not imposed by subordinate echelons on the elements of the staff who have been directed to prepare the papers concerning a problem. Although details such as these are not subject to legislation they are brought up to emphasize that not only is the legislation itself important to the effectiveness of the organization, but that the related matter, the method of administering the organization is equally important.

RESEARCH AND ENGINEERING

I am infavor of establishing a Director of Defense Research and Engineering in the Department of Defense not only to eliminate duplication and to stop unproductive development before millions have been spent on it, but, more importantly, to insure that no gaps are left in our research programs and that promising research is pushed to completion quickly and economically. There is a need for a Director of Defense Research and Engineering to assign responsibility for research in new fields such as satellites.

At the same time each of the services has research and development organizations which have been successful in developing much new material and new and improved weapons and systems. These organizations are experienced and are responsive to the needs of the operating forces of their services.

It is my understanding that these organizations will continue to function largely as they have in the past, but in the future their programs will be generally supervised by the Director of Defense Research and Engineering. Each service will continue to be responsible for research peculiar to the needs of that service, such as antisubmarine warfare research for the Navy. The Director of Defense Research and Engineering should have sufficient funds available to him to exploit new scientific breakthroughs which show promise of achieving significant results. It is understood that the authority given to the Director of Defense Research and Engineering will be exercised so as not to generate instability in promising programs already underway whenever a need is generated for another program.

MILITARY DEPARTMENTS

Although the words "separately administered" are proposed to be removed from the Declaration of Policy of the National Security Act, it is my understanding that the three departments will be administered and controlled in the same manner as at present. The law will continue to provide that the military departments are administered by their respective Secretaries under the direction, authority and control of the Secretary of Defense. Each Secretary will continue to be responsible for the support and administration of all forces in his department, including those in the unified commands. He will continue to be responsible for personnel administration, training, purchasing, research and development, budgeting, and such matters. This is sound, for the existing organizations in the military departments are experienced and are particularly adapted to the needs of the forces of their own department.

The only responsibility that will be taken away from the Secretaries of the military departments is responsibility for operational control of forces assigned to unified and specified commands. I do not believe that loss of this responsibility will downgrade the position of Secretary of a military department. It is important that this position not be downgraded. The Secretary of a military department exerts a tremendous influence on the esprit de corps, morale, and sense of dedication in the service he represents.

We have been most fortunate in having good, enthusiastic, and experienced men accept these positions, and the United States will be the loser if the importance of these positions is so diminished that only men of lesser caliber will be attracted to them.

GENERAL

I am also in accord with the intent not to do certain things, including:

1. Not to merge the services into a single service.
2. Not to establish a single Chief of Staff or take steps leading to a single Chief of Staff.
3. Not to create a general staff.
4. Not to establish a separate service of supply.
5. Not to involve the Joint Chiefs of Staff in details of operations or support of unified commands.
6. Not to centralize administrative matters.

CONCLUSION

In conclusion, I would like to bring up a point sometimes overlooked.

A sound organizational structure for our defense system is necessary. But the most important element in any human endeavor is the people whose intelligence, knowledge, experience, and dedication make the organization work.

In the Armed Forces you cannot go out and hire experienced military people. You can't hire an admiral or a general to take command of operating forces. You have to train men for these positions, and this takes a long time, a lifetime.

Any organization plan has to provide the kind of environment which attracts inspired young men to make the service a career—young men who want to accept and discharge military responsibilities.

You have to have people in the services who know how to, and who want to, defend their country when the chips go down, when the security of the Nation is at stake.

Whatever else a military organization plan provides, it is important that the spirit of the services be preserved. It must be an organization that allows for that vital incentive, pride of service.

In the Armed Forces today we have that pride of service. We have men who are proud of their regiments, men who are proud of their wings, men who are proud of their ships—in short, men who are proud of the traditions of the Army, the Navy, the Air Force, and of the Marines, whose exploits in the history of our country have reflected honor and valor among Americans and respect among the nations of the world.

Motivation of servicemen cannot be legislated. It stems from patriotism, pride of service, recognition of professional competence, opportunity to assume responsibility, and the satisfaction of accomplishment. These are simply parts of the human element which, in the final analysis, is the vital ingredient of everything we do. And this vital element we must preserve.

Thank you, Mr. Chairman.

Threat to American Economy by Soviet Union

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1958

Mr. PROXMIRE. Mr. President, the Milwaukee Journal has recently emphasized the great importance of a speech made a few days ago by Mr. Allen Dulles, which pointed to the immense importance of our American economy meeting the production challenge of the Soviet Union.

Mr. President, I ask unanimous consent that this editorial, which calls on our Federal Government to take prompt and decisive action to end the recession, be printed in the Appendix of the RECORD at this point following my remarks.

There being no objection, the editorial was ordered to be printed in the Appendix to the RECORD as follows:

SOVIET ECONOMIC THREAT IS SHOWING MOUNTING VIGOR

The Director of the country's hush-hush Central Intelligence Agency, Allen W. (the other) Dulles, seldom makes public speeches. When he does, they deserve attention.

Dulles told the United States Chamber of Commerce the other day that the United States can't afford a prolonged recession if it wants to keep ahead of Soviet Russia and if it intends to keep large areas of the world from falling into Communist hands.

The CIA Director painted a most disturbing picture.

Forced draft industrialization is proceeding in Russia. The United States is still ahead, but the U. S. S. R. is gaining. Two startling facts: In the first quarter of 1958, Soviet industrial production was 11 percent higher than a year ago and United States production was down 11 percent. And for the first time, in the same quarter, Russia and China together surpassed this country in steel production.

As its production climbs, Russia is increasing its trade with the free world, particularly Western Europe. It is already a supplier of basic metals in a few traditional American metal markets. Said Dulles: "Once they have penetrated western European markets to the extent that these markets become substantially dependent on Soviet industrial and raw materials, they will have a new and formidable weapon of economic warfare."

Since 1954 the Russians have provided $2 billion of development and military aid, mostly on a loan basis, to non-Communist countries. They are stepping up the pace. Attractive trade and aid offers have been made to nations of Asia, Africa and even South America.

The Soviets have real advantages in this kind of economic warfare. Dulles explained: "They have no budgetary controls when it comes to diverting funds to urgent national policies. There need be no prior consultation with parliaments or the people. They have no interest rate problems. They have no legislative restrictions. They have developed an attractive package credit deal."

And where does the current recession fit into all this?

"A recession," Dulles said, "is an expensive luxury. Its effects are not confined to our own shores. Soviet propagandists have been having a field day in recent months, pounding away at American free enterprise. The uncommitted millions are being told: 'See, we told you so. Crises and unemployment are inevitable under capitalism. Communism is the only true road to social progress.' "

The CIA chief said he considered the challenge the most serious this country has ever faced in time of peace. Inasmuch as it is based largely on economic and industrial growth, he said it was one which should "concern very directly" the Nation's business leaders.

Dulles might also have directed his warnings to Washington, where the administration, the Congress, and the leadership of both political parties can't decide on methods to end the recession. Until there is some policy determination in the Government, it's difficult to see what business leaders alone can do.

Competitive Differences Between the United States and Russian Economic Systems

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1958

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed as part of the Appendix of the RECORD a statement by Nelson C. Smith, executive vice president of the Atlantic Coal Co., of Boston. This is a speech which Mr. Smith delivered before the Greater Providence Chamber of Commerce and although I do not necessarily endorse the views or specific recommendations of Mr. Smith, I do think that he has done an unusually good job of explaining some of the competitive differences between our economic system and the Russian. I

think this a very interesting approach to a problem with which we will be increasingly concerned in the years ahead.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF NELSON C. SMITH, EXECUTIVE VICE PRESIDENT, ATLANTIC COAL CO., AT A MEETING OF THE FOREIGN TRADE CLUB OF THE GREATER PROVIDENCE CHAMBER OF COMMERCE, SHERATON-BILTMORE HOTEL, TUESDAY, APRIL 15, 1958

Because social welfare as well as national productivity are involved, recessions are a major concern to the nation.

Since Americans have often demonstrated their willingness to give their lives for their country in time of war, it is inconceivable that, when an even greater peril confronts us, any Americans will permit the surrender of this nation to Khrushchev and his alien ideologies. And yet such an outcome may be forced upon us within perhaps 10 or a dozen years if Russia can continue to exploit her workers through low wages that bear little relationship to the productivity of these workers.

Furtehrmore Khrushchev, by fixing Russian consumer prices at perhaps twice the level that might prevail under an economy of free competition, can extract from his already poorly paid workers what might be considered the equivalent of a 100 percent sales tax.

With such an advantage, from the point of view of profit-making potential, as compared with competitive free enterprise, the Russian employer—in this case the Russian Government—can earn enormous profits out of the bondage labor of its people. No wonder Russia's productivity can rise at a rate of 8 to 10 percent a year, compared with the rate in our own gross national product averaging nearer 4 percent. Actually, the latter figure, as a measure of growing productivity, is much too high, for half the rise represents inflation. The expansion in American productivity in fact, tends to vanish when recessions begin to take their toll.

High wages in this country can produce a marvelous standard of living. However, unless our economy can be maintained on a profitable and productive basis, free of major economic cycles, and free from restraints to expanding productivity, such as slowdowns, featherbedding, labor-management squabbles, and resulting shutdowns, then we will no longer be able to compete with Russia and still maintain a high level of wages. Unless we meet Russia's economic threat, we may be forced into an orbit as a satellite that revolves around Moscow.

If we use our enormous talents in the field of production, and eliminate the obstacles that stand in the way of expanding our productivity, so that we can maintain our present lead over Russia, we will be able to maintain a high standard of living. But even then we may be obliged to tax all our citizens, not only the wealthy ones, at a high rate, in order that our Government can compete on a more equal basis with Russia's growing wealth, when seeking the favors of the world's uncommitted nations, or the continued friendship of nations we now consider firmly bound to us.

We are currently spending some forty billions a year to meet Russia's military might, and very little to meet the far greater danger of her new economic threat. Are we going to default on this new area of conflict? Are we to yield in this more sinister phase of the cold war? Are we going to consider only such measures as are politically expedient? Are we going to seek political advantage in the face of a crisis more acute than any military danger this Nation has ever encountered? Or shall we resolve that—no matter what the cost, we will deal effectively with this new problem?

I raise these points because the medicine required to cure our economic ills may not taste any better than do most medicines. How are we to overcome the obstacles so that our productivity will expand at the same rate or even a faster rate than that of Russia? Let us consider one of the principal deterrents to increasing American productivity—the current recession. How can it be cured without setting off simultaneously the fuse that would ignite an equally perilous inflation? Can a solution be found at a moderate cost—one that can eventually be recouped?

In looking for the causes of our recessions, we can find a hint in the behavior of some of the recent recessions and depressions in this and in foreign lands. Is there any one set of circumstances that could perhaps have accounted for the greatest depression in our history occurring during the early 1930's? Could the circumstances which prevailed at that time explain why France, England, and Germany suffered severe though much less intense depressions while our economy was prostrated? Could such circumstances also explain why Russia has been virtually free of the cyclical phenomena that have plagued the western world in varying degrees for ages? I believe there was such a circumstance—the extent of common stock holdings in various countries at that time.

America had the biggest stock market boom of all time during the 1920's. Common stocks were more widely held than ever before in any country. Common stocks represented closed to 70 percent of the total liquid wealth of the country by 1929. Could this major segment of our liquid wealth have been almost wiped out during the 3 succeeding years without some major repercussions on oureconomy? This raises the question of the hen and the egg. Was the impairment of security markets a cause, or merely a manifestation of the depression? Did not the greatest known depression follow the world's greatest rise of common stocks?

In the European countries common stock holdings among the peoples of those nations were extensive, but only perhaps half as widespread as in the United States. Would this not account for British, French, and German recessions of only one-half the intensity of that suffered in the United States? Russia, with no Moscow stock exchange, would have no fluctuating security markets to upset her economy. According to this theory, should she not be immune to our kind of cyclical convulsions? Here, perhaps, is a clue to the causes of our business cycles.

Recessions are, of course, primarily a phenomenon in the field of business—in fact they are customarily referred to as business recessions. They ordinarily begin to assume serious proportions after our security markets have taken a nosedive. We can all recall how often recessions are ushered in by serious breaks in the stock market. Such breaks in the market are frequently measured in terms of many billions of dollars of losses.

Company managements, aware of the impact on their businesses of a drastic curtailment in security prices such as that which was reducing the Nation's total liquid wealth by as much as $50 billion in late 1957, understandably start reducing their inventories, their budgets, their overtime payments, and ultimately their payrolls. It is the same kind of precaution for weathering a storm that the mariner uses when he cuts down sail as storm clouds appear.

A downturn in business, a recession, can become cumulative; a business depression can result, unless speculative forces are brought to bear with sufficient force to change the declining trend of liquid wealth represented by falling security values. Not until after security markets have turned up, are business indexes likely to follow.

If business uncertainties, the fear of insufficient future revenues to meet continuing obligations, tend to shrink the business activity of tens of thousands of corporations, no wonder that a recession develops. Conversely, if businesses see better earnings ahead, they automatically expand and create more jobs. It is essentially prosperous businesses that create jobs, and shrinking business prospects that mean falling markets—diminished liquid wealth as security prices fall—a further downtrend in business indexes, and then reecession.

The above discussion is intended as a background for the proposed action to end so-called recessions. Large reductions of personal incomes taxes have at times been proposed as a cure. This would be most agreeable to nearly all of us. But this would be an expensive and perhaps a dangerous course to follow. It would present the very real danger of inflation. It would mean that Americans would be living even more luxuriously at a time when an extreme austerity in Russia is threatening our future.

The most direct cure for recessions, since they represent business declines, is a direct stimulus to business. Here is an opportunity for a relatively small sum to restore the $50 billion or more shrinkage in the Nation's wealth. (It should be remembered that it is unthinkable that our American economy is so rugged that the striking of $50 billion from the Nation's reservoir of liquid wealth would leave no scars on our economy.)

A reduction of perhaps 10 points in the corporate tax rate, say from 52 percent to 42 percent might cost the Nation $5 or $6 billion a year. Reducing the largest single cost of doing business to corporations by an aggregate of $5 billion would restore 10 to 15 times this sum to the value of corporate securities, because common stocks usually sell at 10 to 15 times their earnings. This would tend to raise security prices at least $50 billion and bring them back to the prosperity levels of prerecession days. This would mean that as little as $4 to $5 billion of corporate tax savings should not only restore the soundness of the security markets, but would also restore to prerecession levels the earning power of the corporations which create most of America's jobs. Billions of dollars of projects abandoned or curtailed since the stock market breaks of late 1957 would once more become feasible. More jobs and more overtime would become necessary. The recession would be broken.

But how about the cost? Would this action actually cost $4 or $5 billion? A postponement of 4 to 5 billion of corporate income taxes would actually cost far less than $4 or $5 billion. Experience shows that a large portion of any increase in corporate earnings is usually paid out in additional dividends—some of which are taxed at even higher rates than the 52 percent levied against corporations.

By maintaining personal taxes at existing levels, much of the relatively small cost of reestablishing the prerecession earning power of corporations would be recaptured in the form of added revenues from personal taxes. The unemployed, returning to work, would again be swelling withholding tax collections.

But the corporate tax dollar lost actually only need to be deferred. The entire program of corporate tax reductions could be geared to the percentage of the Nation's unemployed. When the total number of unemployed reaches, say 4 percent a corporate tax reduction to the 47-percent level should become automatic. Each additional 1 percent of unemployment, as determined by Government published monthly figures, would call for an additional 5-percent reduction in the corporate income-tax rate. As unemployment figures return to normal (perhaps 2½ percent) on the following month, the tax benefits would cease and the Government loss in corporate taxes could then be added to the regular corporate taxes, payable perhaps in five annual installments. This would tend to stabilize corporate earnings and greatly limit, if it did not com-

pletely eliminate, so-called booms and busts. The cost would be low, and would ultimately be recovered. One of the most serious obstacles to the adequate expansion of American productivity would be removed. Equally important, the Russian boast of having alone conquered business cycles would henceforth lose its validity.

CLOSING REMARKS

Just why is such a talk as this, which could have been delivered at almost any type of meeting, particularly pertinent to groups such as this—a group particularly interested in foreign trade?

It is pertinent to us because Russia is our real competition abroad as we attempt to win friends and influence people and work with the other nations of the world.

Russia is our competition as we attempt to influence noncommitted nations toward our way of life in our various aid-and-trade programs.

Russia is the competition we will face more and more in the years ahead as she reaches out to dominate the world.

ou no doubt have noticed the 2-cent cut in the aluminum price. It's due to Russia. Russian aluminum monopoly undercut the price and the effect was felt throughout the world. Here is a definite manifestation of Soviet monopoly competition in action. Khrushchev has put the world on notice to take him seriously when he threatens economic war. Socialized capital of Russia can attack other commodities at any time and plague orderly world markets.

The best way that we can meet this competition is with increased productivity at home and with better and more intelligent aid-and-trade programs abroad.

Correction of Labor Abuses

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 5, 1958

Mr. PROXMIRE. Mr. President, the Milwaukee Journal has an enviable reputation for objectivity and independence in politics. It has been in the forefront of American newspapers that have called for correction of labor abuses. It has frequently criticized organized labor. It is a fair-minded newspaper however, and recently it carried an editorial entitled "Absurd Words Against Labor," which puts the remarks of Theodore R. Iserman, a New York attorney, who attacked organized labor before the chamber of commerce annual meeting in Washington, in proper perspective.

Mr. President, I ask unanimous consent that this editorial be printed in the Appendix to the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ABSURD WORDS AGAINST LABOR

Theodore R. Iserman, a New York attorney who is supposed to be a specialist in labor-management relations, made some ill-advised statements the other day in a speech at the United States Chamber of Commerce annual meeting in Washington.

Iserman told the businessmen that growing labor-union power was a more immediate threat to our way of life than the military might of Soviet Russia. The remark was reminiscent of Arizona Senator BARRY GOLDWATER'S statement a few months ago that Walter Reuther and the UAW are a more dangerous menace than the sputniks or anything Russia might do.

Iserman said further that the big labor unions could bring the country to the brink of disaster, as they have done time after time, in peace and in war. He said that in addition to economic power the labor unions have political power great enough to intimidate politicians.

The statements have little value in an honest consideration of the problems of labor and management relations. Iserman fails to accept the fact that labor unions and their 17½ million members have a permanent status. The time is long since past for considering whether labor unions should exist. The major issue today is dealing with the abuses of the union movement within the framework of a democracy, just as the abuses that arose with the rapid growth of big business in the early part of the century were dealt with.

Iserman's comparison of the threat of labor-union power with Russian military might is absurd. We have no control over the government of Russia. But the labor unions are in our own house, and if the house needs cleaning, a legislative broom can do the job.

The Milwaukee Journal and the Nation Salute the Fulbright Exchange of Scholar Program

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 5, 1958

Mr. WILEY. Mr. President, one of the very finest United States foreign policy programs, which I have been pleased to support from its very inception, has been the international educational exchange program, as originally authorized by Public Law 584, of the 79th Congress.

This outstanding program, which helps us and helps our friends so effectively, rightly bears the name of the man who conceived and brought it into being, and encouraged it step by step, our distinguished colleague from Arkansas [Mr. FULBRIGHT].

Many splendid tributes have been paid to the program, both on the floor of the Congress, in the newspapers and magazines of this Nation, and in other mediums.

I was pleased to note, however, in the Tuesday, April 29 issue of the Milwaukee Journal, one such editorial salute which deserves particular reference because it sums up so well the program's tremendous achievements.

The editorial was entitled "Thirty-three Thousand Fulbright Scholars," and I shall reprint it shortly.

Previously, I have pointed out on the floor of the Senate just what this program means in the exchange of scholars in so many fields—in the humanities, in the social sciences, in the physical and natural sciences, and in other miscellaneous fields of endeavor. I am glad to say that each week brings news of additional scholars from my own State going abroad, or additional scholars coming from abroad to my own State; particularly to the University of Wisconsin.

BASIC ACCOMPLISHMENTS

In House Document No. 164, published last April, the State Department, in its report on the 1956 operations of the program, summed up the program's achievements in 5 basic categories:

First. The constructive personal influence of grantees.

Second. The fostering of interests in the United States abroad—interest in our history, our literature, our culture.

Third. The practical exchange of knowledge and skills.

Fourth. The fostering of English language training and the general breaking of language barriers.

Fifth. The raising of educational standards.

At the present time, I will not attempt to develop any 1 of these 5 themes; each of which could be written upon at great length.

EXCHANGE OF HEALING SPECIALISTS

But I would like to point out a few illustrations of what the program has meant in just one aspect of the exchange of knowledge and skills. In this instance, I refer to the exchange of knowledge and skills in the healing arts.

I do so because, on this very day, I am commenting on another phase of science for peace.

I do so, too, because the President of the United States, Dwight D. Eisenhower, in his sixth state of the Union message so wisely referred to the tremendous opportunities available to this Nation through means of a joint attack by the scientists of the world against the scourges which afflict mankind.

1956 TO 1957 STATE DEPARTMENT SUMMARIES

And so, after the Milwaukee Journal editorial, I ask unanimous consent that several additional items be printed, which illuminate this Fulbright category of exchange of knowledge and skills.

The first consists of excerpts from the 1957 Fulbright program summary, as printed in House Document No. 164.

Included in these few paragraph excerpts are a few figures from an overall table of statistics for 1957, showing how healing experts have been exchanged.

The second consists of excerpts from a previous State Department report, that for 1956, entitled, "Swords Into Plowshares." This excerpt shows how Fulbright experts in rehabilitation of the handicapped have nobly aided the cause of therapy abroad.

But this is only the beginning. More needs to be done.

More will be done.

I say this in this particular week, when the Handicapped Committee of the People-To-People program is meeting here in Washington on this very Wednesday, to be followed on Thursday by a meeting of the President's Committee on Employment of the Physically Handicapped.

GREAT INTANGIBLE VALUES

I point out that this exchange of healing and research experts is but one

small phase of the overall Fulbright program. It is one of the tangible phases of an operation which has brought incalculable benefit, both tangibly and intangibly.

I ask unanimous consent that all of these items be printed in the Appendix of the RECORD.

There being no objection, the items referred to were ordered to be printed in the RECORD, as follows:

THIRTY-THREE THOUSAND FULBRIGHT SCHOLARS

When the first Fulbright scholarships were awarded just 10 years ago, they went to 65 Americans and 36 foreigners. It was a modest beginning for a program that since has led to the largest international educational exchange in history.

The program was founded August 1, 1946, when the 79th Congress passed Public Law 584, originated by Senator J. WILLIAM FULBRIGHT, Democrat of Arkansas, for the promotion of international understanding. Two years of patient spadework followed before the program started to roll.

By the fall of 1947, the first 2 educational exchange agreements had been signed. The Fulbright Act, as it came to be known, authorized the sale of American military surplus goods to foreign governments for their own currencies, with the understanding that part of the funds would be set aside to finance educational exchanges. The program later was augmented by Congress with further financial support.

As of this year, approximately 33,000 people have received Fulbright grants, including some 4,000 in 1958. They include Americans for whom the program has financed graduate study, advanced research, university lecturing or teaching abroad, and foreign citizens for whom it has provided travel funds so that they could come to the United States to study, teach and train.

Fulbright scholarships this year are being exchanged between the United States and 31 other countries. Since the program's inception, 39 different countries have participated. Senator FULBRIGHT said recently that he hoped there eventually would be Fulbright scholars in the Soviet Union and that Russian scholars would come here under the program.

Extending the program to Russia would be in keeping with the stated purpose of the act: "To promote a better understanding of the United States in other countries and to increase mutual understanding between the people of the United States and the people of other countries."

In just one decade the Fulbright Act has done much to widen the range of international contacts between scholars and teachers. In its second decade it could become a potent force for understanding between the United States and Russia.

EXCERPTS ON EXCHANGE OF MEDICAL RESEARCHERS AND TECHNICIANS

EXCERPT FROM REPORT ON THE OPERATIONS OF THE DEPARTMENT OF STATE UNDER PUBLIC LAW 584 (85TH CONG., 1ST SESS., H. DOC. NO. 164, P. 3)

* * * * *

C. Exchange of knowledge and skills

The nature of the activities authorized by the Fulbright Act and the requirements that these pursuits be carried out at or in connection with a school or institution of higher learning has meant that the program is conducted in an atmosphere of scholarship and academic advancement. As far as gains in international understanding are concerned, it has been found that associations between Americans and their foreign colleagues in the same field of interest become lasting ones. Furthermore, cooperation between them is advancing the frontiers of knowledge to the mutual benefit of all. A few examples will show the broad range of their study and research projects:

* * * * *

A physician from California conducted research in Italy on an improved vaccine for smallpox. Subsequently, he was asked by the Ministry of the Interior to visit Italian pharmaceutical firms to help them get started in producing the refined vaccine. He was asked to address the Second European Biological Standards meeting in Rome last June to make the final recommendations on the safety, purity, and potency of smallpox vaccine, which would form the basis for all European manufacturers for release of smallpox vaccine and its testing by state agencies.

* * * * *

A neurologist from Kansas collaborated with the Belgian director of the Neurological Service and Laboratory of Neuropathology of Bung Institute in Antwerp, in research on sclerosis. Their findings have since been reported in medical journals in Belgium, France, and the United States.

An American doctor from Massachusetts General Hospital was requested by the Vellore Christian Medical College in India to strengthen its anesthesia department and help train Indian doctors in this field. He also gave generously of his time to the clinical work of the hospital and made a lecture tour to Indian medical centers.

Excerpt from 1956 report on the operations of the Department of State

FIELDS OF STUDY AND TEACHINGS

Fields	American grantees	Foreign grantees	Total
Medical sciences:			
Dentistry		12	12
General	4	101	105

EXCERPT FROM SWORDS INTO PLOWSHARES (ISSUED JULY 1956, P. 34)

A new venture in international understanding—The story of the educational exchange program authorized by the Fulbright Act of 1946

* * * * *

2. Social Rehabilitation

Both American and foreign grantees have helped to introduce American techniques for the rehabilitation of the handicapped. One young woman returned to organize Belgium's first center for reeducation of cerebral palsied children. Aided by an eminent Belgian neurologist, who also visited the United States, she is pioneering in a field in which Belgium was far behind.

Similar work has been carried out in Norway by American specialists. The Norwegian Association for Aiding Cerebral Palsied Children noted, "There was no possibility of obtaining specialists in Norway for this particular field. We shall always be grateful to the Fulbright Foundation for its help in finding just those people who had the right instinct, imagination, and initiative to break new ground in this discipline in Norway." Occupational therapy, introduced into Italy by an American grantee, has resulted in the establishment of training centers in four Italian cities. The demand for trained therapists by Italian hospitals has since shown a marked increase.

Desmond J. O'Neil

EXTENSION OF REMARKS OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1958

Mr. MANSFIELD. Mr. President, in the Glendive (Mont.) Daily Ranger of April 30, 1958, there was published an editorial covering the life and career of an old friend, Desmond J. O'Neil. This editorial was written for the Daily Ranger by Mr. G. C. Hoole, former publisher of the Dawson County Review, and an oldtime newspaperman in Montana, as well as a longtime friend of Mr. O'Neil.

Desmond O'Neil was a great Montanan, a fine citizen and an outstanding lawyer. We of Montana will miss him; but because of his wise counsel, his great understanding and his sense of tolerance we will all be the beneficiaries of his friendship. He was a good, a kindly, and a decent man.

I ask unanimous consent that this tribute to a great Montanan be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Glendive (Mont.) Daily Ranger of April 30, 1958]

DESMOND J. O'NEIL

(By G. C. Hoole)

The editor has asked me to write an editorial appreciation of the late Desmond J. O'Neil, a most eminent citizen of our city and a good friend of mine, whose recent death saddened our community.

This is a difficult assignment as it is hard to write about our dear friends and associates.

I had the pleasure of knowing Mr. O'Neil rather intimately during my 46 years in Glendive, particularly in connection with the Glendive Building & Loan association of which he was manager for many years and I was and still am a director and officer.

Mr. O'Neil was a native of Glendive, the son of oldtimers, Mr. and Mrs. Edward F. O'Neil, who came to Glendive in the very early days of the railroad. Mr. O'Neil, Sr. was a locomotive engineer on the Northern Pacific.

Desmond was graduated from the old Glendive High School, before the Dawson County High School was created. Following graduation from Gonzaga University, Spokane, he was graduated in law from Georgetown University in 1911. For several years he was county attorney of the new county of Musselshell and lived at Roundup. I first met him in Miles City when he came down to the Cowtown with the Roundup Baseball Club.

He returned to Glendive in 1914 and opened a law office and was soon associated with the late Judge C. C. Hurley until the latter's death in 1932. He built up a fine law practice and in 1949 Thomas Cavanaugh became a law partner.

In 1916 he was married to Esther Cavanaugh, daughter of another pioneer Glendive family. Their home has ever been a center of hospitality and friendship.

Mr. O'Neil became a director of the First National Bank in 1919 and in January 1935

was elected president. He was also vice-president of the Jordan Hotel Co.

He was always very active in civic, political, and church affairs in Glendive. He served as president of the chamber of commerce; exalted ruler of Glendive Elks Lodge, No. 1324; grand knight of the Knights of Columbus, Glendive Council No. 2245, and State deputy of the Knights of Columbus in 1926.

Buffalo Rapids irrigation project owes much to the efforts of Mr. O'Neil to make the undertaking a reality.

He was very prominent in Democratic Party councils and was always active in every election. He was county chairman for many years and also represented Montana at several Democratic National Conventions.

His friends were all who knew him and all who admired business sagacity, integrity, and high ideals. He occupied a niche in Glendive's life that will be hard indeed to fill.

We salute you, Desmond, as an able attorney, a public-spirited citizen, and a nobleman in every sense of the word. Requiescat in pace.

Senator Ralph E. Flanders

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 5, 1958

Mr. PROXMIRE. Mr. President, many Americans, from all over this country, were grieved to hear that the great Senator from Vermont, RALPH FLANDERS, has decided to retire from this body at the end of this term.

In my own State of Wisconsin, Senator FLANDERS is highly regarded by many citizens in both parties. Recently the Milwaukee Journal carried a beautiful editorial tribute to this great man. I ask unanimous consent, Mr. President, that this editorial entitled "Flanders' Fabulous Career" be printed in the Appendix to the RECORD.

There being no objection, the editorial was ordered to be printed in the Appendix to the RECORD as follows:

FLANDERS' FABULOUS CAREER

RALPH E. FLANDERS, who has announced his retirement as United States Senator, has had a fabulous career. On the way from apprentice machinist to Senator from Vermont, he was engineer, inventor, industrialist, bank president, and an authority in the machine tool business and industrial economics.

It was a career in the Horatio Alger pattern. He had only 7 years of formal education, most of it in a 1-room school. His first job paid $2.40 for a 60-hour week.

Mild in appearance, FLANDERS is an outspoken and courageous individualist. A lifelong Republican, he worked with the New Deal during the depression of the thirties. In conservative Vermont, he called himself a liberal Republican. Shortly after arriving in the Senate in 1946, he challenged tradition by making floor speeches, and protocol by tangling with his party leader, the late Robert A. Taft.

He introduced the original censure motion against Wisconsin's Senator McCarthy in 1954, challenging the McCarthy way of fighting communism. After the Senate voted censure, he explained that he had acted as he did because the American people were being led in directions that were not good for the country. One factor that entered into the censure verdict was McCarthy's charge that FLANDERS was senile and that they should get a man with a net and take him to a good quiet place.

When we think of RALPH FLANDERS, however, we think of none of these facets of a full and successful career. We think of what he once said about his early years:

"My family was far from wealthy, although it was not poverty stricken. It is true that little money came in. But most fortunately I had parents who appreciated the best things in life. Not only were they deeply religious but they had an appetite for things of the mind as well. During brief periods of increased income there were always books to be bought. A thirdhand piano was purchased and music lessons provided for the girls."

Such words have pertinency in these days of deep concern about education and juvenile delinquency.

Favor McGee Bend Dam

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, May 5, 1958

Mr. YARBOROUGH. Mr. President, the McGee Bend Dam project on the Angelina River is extremely important to Texas. McGee Bend Dam promises a better life for the people of the heartland of southeast Texas and part of our gulf coast area. This vast area needs the hydroelectric power, the water conservation-flood control features, and the added recreational facilities which would result from the completion of the McGee Bend Dam project.

Recently I received a copy of a resolution from the County Commissioners' Court of Jasper County, Tex., which was addressed to the Appropriations Committee of the Senate and the House of Representatives. This resolution, unanimously passed by the county governing body of Jasper County, Tex., demonstrates the support which the McGee Bend Dam project enjoys among most of the people of the area it will serve.

Mr. President, a distinguished Texan and former Vice President of the United States, our reverend Cactus Jack Garner, often paid a high tribute to the County Commissioners' Courts of Texas. He used to tell visitors to his office, when he was Speaker of the House of Representatives and later when he served as Vice President under Franklin Delano Roosevelt, that if they really wanted to know what the people were thinking they ought to talk to their county commissioners.

Mr. President, bearing in mind John Nance Garner's high opinion of the fact that the county commissioners are close to the people and know what the people want, I think it is significant to note that this resolution points out that the McGee Bend Dam project has the support of the overwhelming majority of the people of Jasper County, and that support is stronger today than in the past.

The executive committee of the Beaumont, Tex., Chamber of Commerce recently approved a resolution which outlines in detail the need for the completion of the McGee Bend Dam. This resolution points to acute water shortage in the great industrial area of Jefferson County, Tex., and it points out that the McGee Bend Dam project when completed will ease the flood damage on the Angelina and Neches River. It also points to the fact that the project enjoys the support of the vast majority of the people in the area.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the resolution adopted by the County Commissioners' Court of Jasper County, Tex., and the resolution adopted by the executive committee of the Beaumont Chamber of Commerce.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

Whereas the Beaumont (Tex.) Chamber of Commerce has consistently and actively supported and worked for upstream development on the Neches and Angelina Rivers; and

Whereas the present development was authorized by Congress in 1945 to include McGee Bend Dam on the Angelina River, and Rockland Dam, dam A, and dam B on the Neches River; and

Whereas dam B already has been constructed and is partially valueless without a larger dam upstream; and

Whereas the Congress appropriated planning money for McGee Bend Dam in 1946, 1947, 1948, 1949, 1950, 1951, and 1952; and

Whereas the Congress has appropriated $5,500,000 in construction funds for McGee Bend Dam; and

Whereas these funds have been expended or obligated, and additional funds are necessary; and

Whereas the President's budget calls for $4,500,000 for McGee Bend Dam to continue construction on this project; and

Whereas there is an acute and long continued shortage of water in the industrial area of Jefferson County, which shortage endangers a present industrial investment whose replacement value would be in excess of $2 billion, and prohibits an expansion of an estimated $1 billion in the next 10 years; and

Whereas the present oil refineries in Jefferson County pay in excess of $90 million annually in excise taxes on refined gasoline which would be increased with major planned expansions; and

Whereas these refineries and other industrial plants in Jefferson County pay many additional millions into the Federal Treasury; and

Whereas the expenditure of construction funds for McGee Bend Dam will bring great economic benefits to the residents in the area of the dam itself; and

Whereas the project will ease the damage and suffering from floods on the Angelina and Neches Rivers; and

Whereas no evidence has even been presented that would indicate McGee Bend Dam is an unsound project; and

Whereas the vast majority of opinion in the area above and below the dam is completely in favor of building the dam at once: Now, therefore, be it

Resolved, That the Beaumont Chamber of Commerce urgently recommends the appropriation of the $4,500,000 included in the budget for continued construction on McGee Bend Dam; and be it further

Resolved, That we commend our Congressman, Hon. JACK B. BROOKS, for his efforts on behalf of McGee Bend Dam and urge him to continue his good work; and be it further

Resolved, That we commend the Honorable LYNDON JOHNSON and the Honorable RALPH YARBOROUGH for their strong support and urge them to continue giving every assistance toward success of this vital project; and be it further

Resolved, That this resolution be addressed to the chairman of the Senate Appropriations Committee, with copies to all who should have knowledge of this action.

Approved this 29th day of April 1958 by the executive committee of the Beaumont Chamber of Commerce, Beaumont, Tex.

JOHN E. GRAY, *President.*

Attest:

HOWARD J. HICKS,
Executive Vice President.

From: The Commissioners' Court, Jasper County, Tex.

To: The Appropriations Committees, United States Senate and United States House of Representatives, Washington, D. C.

"Whereas the Commissioners' Court of Jasper County, Tex., has on previous occasions passed resolutions supporting the McGee Bend Dam project, expressing the views of the people of Jasper County; and

"Whereas it has come to the attention of the Commissioners' Court of Jasper County that there is still before the Congress of the United States, the matter of appropriation of additional funds for this project, and that there will be heard opposition by a minority group to this appropriation; and

"Whereas the Commissioners' Court of Jasper County is desirous of expressing to the Congress of the United States the wholehearted support for this project in its entirety by this court, and the people of Jasper County; and

"Whereas this project is of utmost importance to not only the citizens of Jasper County, but to the entire development of southeast Texas, and to the Nation as a whole for the purposes that this dam has been proposed; and

"Whereas at public hearings held in the past, open support has been expressed by the overwhelming majority of the people, and the feeling is even stronger today in support of this project than ever before; and

"Whereas the Congress of the United States may not realize the importance of this project to our industrial development, flood control, hydroelectric power, and the vast recreational opportunities offered: Therefore be it

Resolved, That the Commissioners' Court of Jasper County, Tex., and the people of Jasper County, Tex., hereby urge the serious consideration of the Appropriations Committees, and the Congress of the United States for the continued orderly progress of McGee Bend Dam, this year and all future years in its full magnitude."

The above and foregoing resolution was passed by the Commissioners' Court of Jasper County, Tex., on the 1st day of May 1958, at a special meeting of the commissioners' court, whereupon it was moved by J. W. Jones, commissioner of precinct 4, that said resolution be adopted, and the motion was seconded by Harvy Horn, commissioner of precinct 3, and said resolution passed unanimously.

A. L. MAYS,
County Judge.
ROY ELLIS,
Commissioner, Precinct 1.
JOHN D. DUBOSE,
Commissioner, Precinct 2.
HARVY HORN,
Commissioner, Precinct 3.
J. W. JONES,
Commissioner, Precinct 4.

Attest:

EULIS HANCOCK, *County Clerk.*

GI Rejectees Consequence of Education Breakdown

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 5, 1958

Mr. PROXMIRE. Mr. President, there is an old maxim, trite but true, that chickens have a way of coming home to roost. I desire to call attention to some ugly fowls that are perching now on our doorsteps.

Bem Price points out, in an article for the Associated Press, that 1 soldier in 4 in the American armed services is rated incapable of being trained for anything but menial tasks. These men receive basic training and then are released because they cannot be taught to do anything of real use to the armed services. We are spending nearly a half billion dollars a year to draft, equip, and train, in a sketchy way, men who are unfit for military service in forces that require intelligence and skill of the citizen soldier.

Now, Mr. President, we find the result of refusing to spend money on education. Here are the products of inadequate schools and poorly trained teachers. And here is the real irony of it: The States which refuse to go along with an aid-to-education bill which equalizes educational opportunities, because they do not wish to tax their people to support schoolchildren in other States, are the States that bear the brunt of military conscription. Draftees from disadvantaged States are rejected in disproportionate numbers; draftees from other States must fill their places. The price of citizens of one State declining to support the educating of boys in another State is resulting in the manning of the military with their own sons.

Mr. President, I ask unanimous consent that the article by Bem Price entitled "'Meathead' GI's Plague Army," which appeared in the May 4 issue of the Washington Post and Times Herald, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the Appendix of the RECORD, as follows:

"MEATHEAD" GI'S PLAGUE ARMY
(By Bem Price)

Fort Dix, N. J.—By Army standards, roughly 25 percent of the Nation's young men are smart enough only to dig ditches, swab floors or polish pots and pans on kitchen police.

At a time when advances in Army weaponry require a large assortment of skills, 220,000 of the Nation's 884,000 soldiers are rated incapable of being trained for anything but menial tasks. Further, 2 of every 5 men drafted through Selective Service this year will be rejected, chiefly on physical grounds.

To obtain 136,000 ablebodied men last year, the draft boards rejected more than 50,000 others, a rejection rate of 37 percent. This year, physical requirements have been tightened and the rejection rate is expected to reach 42 percent.

And last year the Army released 44,170 men after putting them through 8 weeks of basic training because they were unable to learn anything of value to the Army.

While the Army is the only service which still resorts to the draft for manpower, the Air Force, Navy, and Marines have their troubles, too.

Of the 176,360 men in the Marines, 31,780 are classed among the mentally slow. The Navy has 634,000 men, including 101,840 in the marginal intelligence group. As for the Air Force, a spokesman said that it had never made a head count of its mentally slow, though 1 sampling indicated that 9 percent of its 998,000 men were in this group—roughly 90,000 men.

It costs somewhere in the vicinity of $1,600 to induct or enlist a man, transport, pay, feed and clothe him during basic training. This means that the Government is spending more than $470 million to train men of dubious value to the Nation's Armed Forces.

Here at Fort Dix, a ruthless weeding out process is underway—and certainly it has an effect on the morale of trainees.

Under the present law, if a man is physically fit and scores as much as 10 points out of a possible 100 on an intelligence test, he must be inducted, or enlisted.

Upon arrival at the reception center here, the new men are subjected to nine aptitude tests. On the average, 16 percent will have no aptitudes for service life at all.

(This percentage probably will run higher at other reception centers. Fort Dix draws recruits or inductees from an area where compulsory education laws are generally enforced.)

So what does Fort Dix do with men who are of marginal value? Immediately after taking their aptitude tests, the men are assigned to training battalions. Usually it takes 2 or 3 days for their aptitude scores to catch up with them.

Some of the company commanders go through the motions of training these mentally unfit men. Most weed them out of the company and assign them to menial tasks such as cleaning latrines, so that the training of others is not retarded.

First Lieutenant U. E. Webber makes an effort to train them. "These are the men," he said, "who require the most supervision. They are the ones who have to learn by automation and repetition."

Any veteran would recognize them. They are the men who, when the command "left face" is given, promptly turn to the right. They are the men who require endless practice in field stripping a rifle. At times, Webber's drill instructors have made the inept men carry stones in their left hands in order to distinguish right from left.

When the word comes that the inept are to be discharged—and their identity is learned by the rest of the company—the reaction, said Webber, among the more intelligent men is: "Hell, they ain't the dumb ones. We are. We passed."

(There is some suspicion that the word has been passed among draft eligible youngsters that the way to avoid service is to flunk the aptitude tests. The Army is considering ways to check this.)

The boss of the training regiment is Col. W. B. Edwards. He resents the fact that in the past, a good many of the marginal intelligence men have been assigned to the Infantry.

Edwards takes the long view. "If a man is going to stay 10 to 15 years in the Army and still be a private, then my policy is to get rid of him. If he is willing to study and learn, keep him." Edwards concedes that some of those going out now might be saved and used, but they've got to produce. They can't sit back and say the Army owes me a living.

Not all those rejected as inept are necessarily so. This applies particularly to the foreign born and to Puerto Ricans. All of the tests at Fort Dix are given in English. Some graduates of high schools in Europe have failed the aptitude tests, including a goodly portion of the Hungarian freedom

fighters who came to this country. Obviously language was a barrier. Fort Dix is now trying to obtain permission to give the tests in the native tongues of the foreign-born.

The fact that a man has no skills which the Army can use is no precise measure of his ability to earn a living, but it's a fairly good indication. The majority of those rejected have worked at day labor jobs when they worked at all.

Col. Jefferson J. Irvin, Chief of the Army's Retention and Promotion Branch in Washington, observed that this steady influx of the not-too-bright really hurts.

"Where there are no intelligent followers," he said, "there is no leadership. The day when you could throw anybody into the infantry went out with Frederick the Great (the 18th-century Prussian King whose army was probably the most rigidly disciplined in history). We haven't put automatons (the mindless soldier who obeys by reflex) into the line of battle for a couple of hundred years."

Is there a tendency for draft boards to select the mentally slow just to get them off the streets and out of the community?

"No," Irvin replied. "I believe the draft boards do a conscientious job. I believe they take a cross-section of the community. They get a cross-section of American manhood."

The low mental and aptitude requirements were established in wartime 1945 when the Nation was scraping the bottom of its manpower pool. On the aptitude tests, a man is considered of marginal value if he scores less than 90. The man who scores 110 is officer material.

In the 13 intervening years, no adjustment has been made by Congress to improve the quality of the peacetime services. There is now before the Senate, a House-passed bill which would permit the President—in effect, the services—to stiffen the requirement that anyone scoring a mere 10 on intelligence test be inducted. The modification would apply only in peacetime and would raise the mental requirements, thus permitting the services to build a cadre of intelligent, highly trained men around which the services could expand in an emergency.

During the House debate last August, Representative LESLIE ARENDS, Republican, Illinois, made this observation in a floor speech:

"When we consider the fact that the modern army today is made up of complex electronic devices, guided missiles, atomic weapons, intricate communication systems and exceedingly mobile transportation methods, together with the substantially higher requirements for individual initiative in smaller unit operations, it becomes quite apparent that the Army's need for higher quality inductees increases almost daily."

That's the problem for all the services in a nutshell. There was a time when strong backs and weak minds were handy to have around to perform the menial chores. Not any more.

Reorganization of Defense Department: Is Congress Getting the Full Picture?

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mr. KILDAY. Mr. Speaker, the Committee on Armed Services is holding hearings on the proposal to reorganize the Department of Defense. The committee is under the heavy responsibility of gathering all information on the subject, not only for its own information but for the information of the Congress. The reliable Army, Navy, and Air Force Journal expresses doubt as to whether the executive department is making that possible:

IS CONGRESS GETTING THE FULL PICTURE?

We hope the no-compromise attitude of the President and his advisers on Defense reorganization will not result in the suppression of any evidence or professional advice that might assist the congressional committees in making decisions on this important piece of legislation.

The administration's fight-it-out-on-this-line policy now appears so well established that President Eisenhower felt it necessary to issue a statement last Saturday from Augusta, Ga., which gave the inference that he was repudiating the conciliatory attitude shown last week by Secretary of Defense McElroy. Mr. McElroy, it is recalled, made an excellent impression on the House Armed Services Committee by his willingness to discuss differences and his offer to reword some sections of the administration's proposed law. As one of the Nation's top sales experts, Mr. McElroy doubtless was using a salesman's approach; he was avoiding sharp and open conflicts in anticipation of reaching an understanding most favorable to his side. Apparently, the President's advisers on reorganization were frightened by this technique. The final result was that both the President and the Defense Secretary issued public statements that they would hold the line on the administrations' reorganization proposals. Whatever the intent, the result has been to weaken Mr. McElroy's effectiveness.

Meanwhile there are rumbles that all the information is not getting to Congress. One significant study on reorganization is the Wheeler report (see the Journal, January 25, 1958), made last year under the direction of the Joint Chiefs of Staff. This report was not made public then, at a time when the Gather and Rockefeller reports were getting national publicity, and it has not been made public since. News Commentator Martin Agronsky recently brought the suppression of this report to the attention of the Senate Constitutional Rights Subcommittee. He also told his NBC radio audience that the Wheeler report conflicts with the administration's plan in that, while recommending some changes in the Defense Department, it holds that the President and Secretary now have adequate powers to bring about these changes.

The Wheeler committee, under the chairmanship of Maj. Gen. Earle G. Wheeler, United States Army, included ranking officers from each of the four services and its report was said to be unanimous. We think Congress should have the benefit of its study and report.

Interested Nations Should Set Up Arctic Inspection

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1958

Mr. THYE. Mr. President, an interesting article entitled "Acting Without Soviets," written by Roscoe Drummond, was published in the Washington Post and Times Herald of Sunday, May 4, 1958. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ACTING WITHOUT SOVIETS

(By Roscoe Drummond)

There is no reason, no necessity, no value in allowing the Soviet veto in the U. N. Security Council to prevent the interested nations from acting at once to set up the American-proposed international air inspection to guard against surprise attack over the Arctic.

Why should the West take the Soviet rejection as a total roadblock? Why let ourselves be stymied and put off by the Kremlin's "No"?

Let's act on our own to establish the first open-skies inspection system over the strategic North Polar route which, after it begins functioning, the Soviet Union might find compelling reasons for joining.

Obviously it would be better to have the U. S. S. R. participating in such inspection from the start. But, as the debate before the U. N. Security Council showed this past week, the Russians are interested in talking about the danger of surprise attack but not interested in doing anything about it. That's what the Soviets want—nothing done.

Let's do something about it. It would constitute a real gain, a large gain and might well prove so compulsive that the Soviets would have to join.

Isn't it worth trying?

This is what could be done:

Britain, France, Canada, Denmark, Norway—and any other interested country—could begin negotiations at once to work out the required technical arrangements, arrangements which have been studied considerably already.

They could invite the Soviets to every session of the talks in the hope that there might be a change of mind in the Kremlin somewhere along the way.

Once the technical procedures are agreed to, these nations can begin the Arctic air inspection immediately with an open-ended, daily invitation to the Soviets to join at will and thereby to extend it over appropriate Soviet territory.

Unquestionably this is only half a loaf of useful open-skies inspection. But it would be valuable in itself.

We Americans should be realistic enough to recognize that it is not the Russians alone who are concerned lest the on-the-alert United States bomber flights to the Arctic accidentally go awry. Canada has been worried. Others of our allies have been worried. Some of the neutrals have been holding their breath.

The advantages of setting up an Arctic air inspection, covering the Arctic Circle and, if necessary, without Soviet participation, would be these:

By being willing to subject our defensive Arctic flights to agreed, orderly international air inspection, the United States would gain incalculably in the confidence and trust of the whole free world.

It would strengthen the morale of the NATO alliance. It would reassure the critical segments of public opinion within our allies. It would ease the sincere anxieties of many neutrals.

It need not in the least weaken the United States defensively. It would strengthen our position morally and identify American leadership, in the cause of reducing the fears of a jittery nuclear world with positive action in a way which has been lacking.

It would make it visible to the whole world that the Soviet Union, not the Western na-

tions, is blocking a valuable cooperative action.

It would be heartening to most nations to see tangibly that all action does not have to wait on the Kremlin.

You may recall that after President Eisenhower's stirring offer of United States support for a U. N. atoms-for-peace agency, the Soviets stalled and hobbled the negotiations for months on end. Then the United States suggested that if Moscow was determined to stand out, the other nations proceed without the Soviets. Moscow soon changed its decision and quickly ratified the statute.

The Kremlin can keep the Security Council from setting up the Arctic inspection, but they can't prevent the interested nations from doing it themselves. Why not go ahead?

Effect of Government Policies on the Cost of Living

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 5, 1958

Mr. PROXMIRE. Mr. President, recently I introduced a resolution calling for a congressional investigation of the effect of Government policies on the cost of living. The purpose of the investigation would be to determine how governmental policies could foster the growth of our economy without shoving prices up to one destructive peak after another.

Yesterday the New York Times carried an excellent article by Richard Rutter analyzing certain aspects of this cost of living problem.

I ask unanimous consent, Mr. President, that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PARADOX IN PRICE: WHY UP IN SLUMP?
(By Richard Rutter)

Time was when a glass of beer cost 5 cents, a steak dinner less than a dollar, and a new car $400–$500.

Millions of Americans do remember those days, for as time goes it was only yesterday—in the 1930's, to be exact. The same people are all too well aware that working for the Yankee dollar now is not what it used to be.

The shrinkage in the purchasing power of the dollar was dramatized the other day when the latest cost-of-living index came out. It stood at 123.3 (1947–49 equals 100), or 0.7 percent higher than a month before. A year before the index stood at 118.9. It has gone up 20 percent or so in the last 10 years. That raises these vital questions?

Why have prices risen right through a recession period?

Will they ever come down?

As to the first question: Prices have been rising mainly in the fields of food and services. This has been the trend ever since 1948. There is a reason—labor costs. These, too, have been on the increase for years. It costs more to get a haircut, to have repairs made in an apartment, and so on.

But this should be put in perspective. Those good old days of lower prices were actually not so long ago. Consider the statistics about the purchasing power of the dollar. Based on the same 1947–49 level, it was 136.4 in the critical year of 1929. It did not fall below the 100-percent mark until 1948.

In the last 2 years this same purchasing power has dwindled from 78.3 to 81.1 percent. In short, inflation has not been stopped at all. This key economic problem remains. That is why both parties in Congress—and the administration—are reluctant to go ahead with a tax cut.

Concerning the second question about prices dropping: all signs say no because of past experience and current manufacturing practices. History shows that prices as a whole have fallen only twice in this century—in 1920–21 and in 1929–32. The last time was when the depression of the 1930's was at its worst. They did not decline in the two most recent recessions, those of 1948–49 and 1953–54.

No major industry has reduced prices to any major extent in the current recession—and that includes automobiles, hardest hit of all.

As Gilbert and Sullivan said in the Pirates of Penzance, "a paradox, a paradox, a most ingenious paradox."

The story of the American dollar covers more than 150 years. There are general price indices going back before the United States was the United States—to 1749. These are based on a level of 19–0–14 as 100.

The index was at 68 percent in 1749, held fairly stable and then soared in the Revolutionary War. By 1777 the index had climbed to 123 percent. It kept rising until it hit a high of 226 in 1779. Thereafter it declined, falling to a low of about 63 percent in 1791.

In the 19th century prices became firmer, with only minor fluctuations. But by the end of that era they had started to advance.

Another spurt occurred during World War I. The index shot up from 100 in 1914 to 157 in 1918. In the 1920's prices ranged between 193 and 179 on the average.

It seems inevitable that prices will continue to rise. Exhortations for labor and business to hold the line just haven't worked. This year, for instance, millions of workers will get automatic wage increases, and that's aside from others who benefit from cost-of-living escalator clauses.

This is one spiral that looks endless. And it's the general public which pays and pays.

Statement of the International Executive Board, United Steel Workers

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I wish to insert in the CONGRESSIONAL RECORD a statement of the international executive board, United Steelworkers of America, adopted March 17, 1958, Washington, D. C.:

The international executive board of the United Steelworkers of America, meeting in Washington today, expresses its real concern for the state of our national economy in general and for the state of the steel industry in particular. We agree with the statement which Iron Age made last week that: "It's no recession in the durable goods industries. It's a real depression." More than 200,000 of our members are unemployed and more than 300,000 are underemployed, working less than full time. Thus, almost half of our total membership is suffering from this depression.

The basic steel industry is operating a little more than one-half of capacity. Our Nation, and the free world, is literally losing steel at the rate of more than 60 million tons a year. By our inaction in this crisis, we are thus permitting Soviet production of this basic defense material to catch up with us.

In the economy as a whole we are sustaining a lose in real wealth—goods and services which would have been produced but for the depression—at a rate of $40 billion a year. Effective action to halt this loss, and to eliminate the hardships and suffering which are the consequences of unemployment in our industry and the economy, is overdue.

The time for action was months ago, as we said on January 6, 1958—not next month or some undefined date in the future. The course of action is clear. This is the nine-point program which will place us on the road to recovery:

1. Federal income tax cut for lower-income groups.
2. Eliminate or reduce Federal excise taxes which impede or reduce consumption.
3. Federal raising and extension of unemployment compensation benefits, as specified in the Kennedy-McCarthy bill.
4. A broad program of constructive and much-needed public works.
5. An expanded Federal housing program.
6. Passage of a Federal school construction bill.
7. Economic aid for distressed areas.
8. Increase the Federal minimum wage to $1.25 per hour and expand coverage of the act.
9. Implementation of the Full Employment Act of 1946 by other appropriate Federal fiscal and financial action.

We particularly want to emphasize the need for taking steps now—not next month—which will provide the immediate purchasing power necessary to enable Americans to buy automobiles, refrigerators, and other consumer durables, and the need for instituting programs which will permanently increase the real wealth of America by providing schools, houses, and public works, while also releasing purchasing power which will end the current depression.

Those who oppose these programs or seek to delay their institution because of their concern for a balanced budget are afflicted with a peculiar kind of blindness—they can't see the real wealth of America which lies behind the dollar signs. When we have idle factories and idle men, when our productive system is working at half speed—as the steel industry is today—we are losing real wealth every hour. We are losing the goods and services which these idle facilities could be making. When we spend money to start the wheels of industry moving again we increase the real wealth and the real strength of the American economy. If we stay where we are the Government's budget may look better but all of American will be poorer, not only in dollars but, more importantly, in the human values and in the goods and services which are our real wealth.

The United Steelworkers of America has done its part to help the economy. Under our supplemental unemployment benefit plans, the steel industry contributes when times are good and pays out benefits to unemployed workers, for a full 52 weeks of unemployment, when times are bad—thus placing additional purchasing power in the hands of those most likely to use it when the need for maintaining spending power is most pressing. We support the Kennedy-McCarthy bill for the extension and increase of governmental unemployment compensation benefits, which will provide, in part, for all workers some of the benefits which we

have negotiated under SUB. And we note the shocking fact that in a few States, such as Ohio and Indiana, reactionary State governments have prevented our and other SUB programs from operating and from paying out, without cost to the Government, millions of dollars to unemployed steel and other workers. It is ironic indeed that a Republican administration in Washington has proposed to spend tax dollars (although not enough) to extend unemployment benefits as an antidepression measure, but Republican administrations in Ohio and Indiana have prevented the steel industry from complying with its collective bargaining agreement to do the same thing without cost to the taxpayers.

In conclusion, the international executive board of the United Steelworkers of America calls upon the administration and the Congress to act now by taking all of the steps necessary to end this depression. The steps which have been taken to date are not enough. They are too little. We do not believe that in this emergency too much can be done. After all, it is far preferable to stop action if events demonstrate that it is not needed, than to permit suffering and hardship because of the failure or delay in initiating remedial action.

We endorse the proposal of President David J. McDonald for the immediate establishment of a Presidential commission consisting of representatives of management, labor, and the public to help formula and implement this program for the restoration of economic health to our economy.

Wisconsin's Historymobile Begins Its Fifth Annual Tour of Wisconsin

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 5, 1958

Mr. PROXMIRE. Mr. President, one of the most interesting and valuable of the many services to my State performed by the Wisconsin State Historical Society is its historymobile. This trailer-mounted museum tours the entire State every summer—this will be its fifth year—carrying well-prepared visual exhibits of the State's cultural heritage for the people to see in their own communities. This project is supported by individual donations from the people of Wisconsin.

I have received an interesting statement prepared by Pat McGinnis, the director of the public contacts for the State Historical Society of Wisconsin, telling of this year's Wisconsin historymobile exhibit, and I ask unanimous consent that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered printed, as follows:

THE HISTORYMOBILE, WISCONSIN'S ONLY TRAVELING MUSEUM

(By Pat McGinnis)

The 1958 historymobile exhibit is one which the State Historical Society of Wisconsin believes is of special significance. The Peoples of Wisconsin exhibition portrays a broad story of nationality groups who have settled in Wisconsin and who have contributed their cultural heritage to the greater progress of the State.

Because the historymobile is visited by thousands of Wisconsin children and adults each year—a half million persons have viewed it during its first 4 years on the road—the State Historical Society felt that the exhibit must carry not only history, visually and attractively presented, but a broader lesson in human understanding. The Peoples of Wisconsin exhibit does just that through its display of Old World traditions and customs, its story of immigrant and settlement, its presentation of the arts and skills of over 50 Wisconsin nationality groups, the traveling exhibit graphically unfolds a story of mutual understanding among all the peoples of the State.

In these difficult times, when understanding between nations is so ardently desired, the new historymobile exhibit is particularly appropriate. It is the hope of the State Historical Society, which operates the historymobile, that the Peoples of Wisconsin exhibit will carry with it the means whereby the citizens of Wisconsin, and especially the children, can reach a deeper understanding of human brotherhood and mutual respect for the peoples of the world.

Senator Hill Speaks on 25th Anniversary of TVA—An Example of Democracy in Action

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. EVINS. Mr. Speaker, 25 years ago the Congress sent to the President for his signature the legislatiton establishing the TVA which has since resulted in one of the Nation's most remarkabel achievements and the creating of one of its greatest assets—not merely in material terms but also in terms of the influence it has had on the attitudes of the world toward our Nation and toward our concept of democracy. One of the fathers of that legislation is the Honorable LISTER HILL, the distinguished senior Senator from Alabama. In the May issue of the Progressive, Senator HILL in a very fine article eloquently recounts the story of this legislation. I commend this article to all my colleagues and believing that it will add to a better understanding of the ideals and significance of this great national asset, I insert it in the Appendix of the RECORD under unanimous consent. The article follows:

TVA: DEMOCRACY IN ACTION

(By Senator LISTER HILL)

Twenty-five years have passed since the historic legislation creating TVA was enacted, and a new generation of Americans has grown to maturity. A generation is time enough to test the truth of an idea and the strength of a concept. It is also time enough for people to forget what life was like before that concept was built into our Nation's life.

An anniversary is a time for remembrance and for recognition. It is a time for reappraisal. For me TVA's arrival at the quarter-century mark is a moment of special poignance, and of peculiar obligation. My obligation to remember and to reappraise is a deep and personal one, for I was one of the sponsors of the legislation which created TVA, and of all the members of the conference committee appointed to adjust the differences between the two Houses in 1933, I am the only one who is today a Member of the Congress. I am the only one who has had the privilege of participating year by year in legislation affecting TVA, first from my seat as a member of the Military Affairs Committee of the House, later as a member of the Appropriations Committee of the Senate. Alone of all the witnesses when the President signed the act in 1933, I have seen the dreams we wrote into the statute become reality. Dreams of a better future, of a widening economic opportunity for the people, and faith that a new kind of agency of Government could help to provide it—all these are captured in the charter we wrote for TVA.

This is a good time to tell the new generation why TVA was established, and what it has accomplished. Once more a troubled world is reminded that vision is required lest the people perish, and that the great imperative of government is to offer hospitality to dreams and then to find ways to translate them into effective works. It is a good time to give to every American a sense of pride in the vitality and the strength of TVA, and to explain, if we can, why this agency has been able to survive atacks and neglect, why it continues today valiantly planning for the future, its spirit unbroken, facing its relentless adversaries with courage, faithful to the vision written in its statute.

It is important for the new generation to know that this dream of the unified development of all the resources of a great river basin for the people's benefit was not borne out of sectional interest nor parochial concern. It was born because statesmen from the Great Plains, from the mountainous West and the industrial East, saw this Nation as one and indivisible, and knew that the country they loved and served would be strong only as each region grew in strength. The great and indomitable George Norris, of Nebraska, was the leader in the Congress. A valiant band worked with him. TVA is shaped in their image, indelibly marked with their integrity, their moral purpose, and their vision of a Federal program which would never forget the people for whom it was enacted. Its survival, its growth, its strength today is their memorial.

Let me remind this new generation what life was like in the region when TVA was created. There was a great river, its tributaries rising high in the mountains of North Carolina, Tennessee, and Virginia. It flowed south through the foothills of Tennessee, turned west to meander across the sunbaked fields of Alabama and of Mississippi, swung northward to meet the Ohio in Kentucky, then to join the mighty Mississippi on its course to the gulf. It was a moody and inconstant river, changing from season to season: an angry flood in spring and winter, a sluggish trickle in summer and autumn when shoals and sandbars held it almost useless for navigation. In flood and in drought, racing or heavy with summer's languor, in every season the river was dark with the precious cargo it carried—the fertile soil of the valley, to be wasted in the sea.

For generations that soil, the priceless heritage of the people, had washed away. This was an agricultural area, one of the oldest in the Nation, an area of small farms, growing the cash crops for which the climate was ideal but which left no cover to protect the ground as it lay, bare and unfrozen, helpless against the pelting winter rains. Once majestic forests had been denuded, a sacrifice to avarice, to ignorance, and to hunger. So the rains were unimpeded. They took the soil to the river, and the river carried it to the sea, and every year the brown scars of erosion grew wider and deeper over the land-

scape. Every year more farms were abandoned. Every year fewer jobs became available, and the youth of the land was exported along with the soil and the timber. Every year the people had less hope and less faith in the future. In 1933 the people of this region had an average income only 45 percent of the national average, in spite of the wealth of resources with which nature had endowed it.

This was the region before TVA. This was the problem facing the Congress. And a heritage from World War I provided an opportunity. Then, when German submarines had halted the shipments of nitrates from Chile, the Government had built facilities for munitions production at Muscle Shoals in northern Alabama, and construction of a dam across the Tennessee was begun to supply the power required for operation of the nitrate plants. The war was over before the project was completed, and Congress had to decide what to do with the idle properties. The general assumption was that the properties were "surplus" to the Government's requirements, and should be sold. To most people the question before Congress in the early twenties was relatively simple—how to dispose of the properties most advantageously.

In the beginning only a few men had the vision to see that the properties were not surplus to the needs of the Government at all, that they were an asset which could provide the beginning of a new approach to an old problem. The fight, first to keep those properties in the hands of the Government, and then to devise a method to promote their effective use, went on for more than a decade. I came to Congress in the midst of that debate, and I shall be forever grateful that I have had a part in this great struggle throughout my whole career in public service. Twice bills to provide for Government operation of the properties at Muscle Shoals were adopted by the Congress. Twice they received a Presidential veto. It was not until 1933, under the dynamic leadership of Franklin D. Roosevelt, that the statute creating TVA was approved by Congress, the properties at Muscle Shoals were turned over to the new agency, and the President who had expanded the scope of the original proposals with his vision and his dreams signed the enabling legislation. A great concept started along the road to realization.

Twenty-five years have passed since that day. Today the Tennessee River is no longer a menace and a problem. It has been put to work for the people. A series of majestic dams has transformed it. Now a chain of lovely lakes, its bars and shoals have vanished, and commerce moves in stately sequence over a modern water highway. Last year more than 2 billion ton-miles of freight was carried on the river, in contrast to less than 33 million ton-miles which moved, mostly in short hauls in 1933. Grain comes down from the upper Mississippi, oil and sulfur move up from the gulf, automobiles, trucks, steel, and coal are carried for unloading at thriving river ports on the Tennessee. From the Great Lakes to the gulf the products of other regions come to new markets in this valley, and the river serves the people.

The new generation has grown accustomed to the interregional exchange of goods. And it is spared the terror of floods. Today the people know that when the rains come and the water rushes down in angry torrents, the same dams which control the river to create a navigation channel will stand watch through all the days and all the nights of peril, silent guardians of their safety. This is the only United States river so controlled, the only river where, under a single management, a whole system of dams and reservoirs can be mobilized in harmony to protect the people and their property.

The new generation has never known what it was like before TVA, how anxious watchers gathered on the river's banks, how desperate families moved their household goods to the hills. They do not know how often this uncertain river held the lives and health and well-being of the people in jeopardy.

The new generation does not know what life was like before transmission towers rose high from valleys and mountains to carry the lines that bring to the people power generated at these multipurpose dams and in gigantic, modern steam plants built by TVA. It was a different kind of region then. In 1933 there were only 225,000 residential electricity consumers in the entire area where power from TVA now reaches more than 1,300,000 domestic consumers, and they used small amounts of electricity in their homes and almost none at all on their farms. Only 3 percent of the farms, just a few near towns or cotton gins, were connected for electric service. All over the region the countryside was dark at twilight. Today more than 95 percent of the farms use electricity in their homes and in their barns.

The river is serving the people throughout its length today because of the act of Congress which created TVA. That is not all. The forest resource is coming back, the cycle of devastation reversed. Since TVA began, almost half a billion pine seedlings have been planted and are growing to maturity. Slowly the scars of erosion are healing. Where acres were brown and barren, now pastures lie green beneath the sun and the landscape is more beautiful, the land more productive.

Today this region has started the long road back to robust strength and abundant productivity. This is a record for every American to view with pride. There is nothing like it anywhere. This is the record which profoundly moves me as I recall the day when TVA began. This is the record which makes me salute the management of TVA on this anniversary. For in this region their performance has outstripped our dreams. This does not often happen. Every legislator grows weary with awareness of great concepts which grow meager in execution, of noble ideas corrupted in administration. TVA is different. The new generation should find out why. I cannot give a simple answer, but I believe that part of the magic lies in the kind of statute Congress drafted. We did a better job than we knew.

We were uncertain, as we strove to create this new agency to deal with old problems. Reluctant rivers had been improved for navigation from the beginning of the Nation. The problem of vanishing resources had been with us a long time. But always rivers and resources, problems and opportunities had been considered piecemeal. In TVA we tried something new and bold. The heart of the great concept lies in the fact that for the first time in the history of Federal legislation Congress accepted the unity of nature. In this one river basin the interrelationship of land and water, of trees and pastures, of men and nature, received statutory recognition. This was a more startling innovation than it sounds. For then and now the traditional organization of the Federal establishments divides responsibility for the resources of a river and its basin among a dozen bureaus and departments, each with a single purpose, a different head, working under separate statutes. We gave TVA responsibility to inaugurate a total program committed to the full development of all nature's resources for all the people.

At the same time we tried to build a bulwark against the steady tide of centralization. Even then we knew too many decisions were made in Washington on the basis of papers and reports; too much was decided by remote control. The experts were too far from the problems, the administrators too far from the people. So we told the Board of TVA to make its headquarters in the region, close to the work to be undertaken. We made it an independent agency, corporate in form, removed as far as possible from centralized control in Washington. We gave the power of decision to the men in the field.

We wanted TVA to be efficient, and we accepted the basic principle of modern management, still rarely recognized in Government. We gave authority commensurate with responsibility and we determined to judge by results. By law we freed the agency from the rigidities of the classified civil service. We told the Board to select its own employees, but barred for all time political considerations in appointments. We authorized the Board to buy or condemn the land and the equipment required in its program, and to sell whatever proved to be surplus. They could enter into contracts, and sue and be sued.

All these characteristics have proved to be essential—the unified approach, the location in the region, the accountability which is the counterpart of independence, the stern rejection of political manipulation. All have been vital to TVA's success. But greater than any one of those, I believe, is the fact that somehow the overriding purpose of the statute was clear on every page. It was clear in the legislative history of more than a dozen years. These administrative innovations were not to be ends in themselves, nor were the projects and the programs they would facilitate be objectives in themselves. Every undertaking was seen as a means to widen the economic opportunity and promote the well-being of the people. That is of course the ultimate objective of every Government program, but the purpose for which projects are built is too often obscured by the projects themselves. Construction becomes an end in itself. Somehow, in some way, some ingredient in the formula we devised for TVA has kept the overriding purpose sharp and clear. Every report from TVA reveals it. It is clear every time a witness from TVA testifies before a committee of the Congress. It accounts for the notable efficiency and the high morale of the staff of TVA. They never forget the purpose of their labor.

It was an act of faith when, after so many years of effort, Congress placed the destiny of this new agency in the hands of the three men chosen for the board. That faith proved to be contagious, and early in its history TVA took the steps which have made the people of the region a part of the great program. It mobilized their energies for a total assault on the forces of resource devastation. It was an act of faith in the people when TVA rejected such alluring proposals as the recommended purchase of great tracts of forest land, all abused and some abandoned, in order that a gigantic program of reforestation might be inaugurated on Government-owned land. It was an act of faith when TVA declined to begin the acquisition of vast acreages of wornout cropland that it might be devoted, unhampered by the need to support farm families, to experimentation in the application of the new fertilizers to be produced as Muscle Shoals. It chose the slower, the harder way. TVA determined that the people who in the period of their private ownership become trustees of the Nation's resources should themselves take part in the program.

A new epoch in Federal administration began. The experts got out of their offices, away from their papers. They went to the people, and the people joined them in a great demonstration program. Farmers joined and showed their neighbors what would happen to the land and to their incomes as they began to use the new kinds of fertilizers produced by TVA as tools to

change the management of their farms. Owners of woodlots and forest joined. Slowly the demonstrations spread over the valley and farther—demonstrations in tree planting, in selective cutting, in sawmill operations; demonstrations in fertilizer use, in new farming practices, in the development of recreational areas.

Today the average income of the people has risen from 45 percent to 63 percent of the national average. There are more jobs for the new generation. There are jobs in cheese factories and in poultry processing plants because the land has been turned from soil-exhausting to soil-conserving crops. There are jobs in the forest products industries, 50,000 of them, because tall trees stand on land that was barren in 1933, and the people plant and they plan for a stronger forest resource in the future, investing their private funds in their faith. Last year alone new private investment in wood-using industries in the valley reached a total of more than $43 million.

There are new kinds of jobs in new manufacturing establishments. There are jobs because of the development of the magnificent recreational resource which has already attracted private investment of more than $80 million, as TVA has divested itself of area after area, and turned over to the people, for public and private development, the land adjacent to the beautiful man-made lakes. In this region, as nowhere else, the people have participated in a Federal program inaugurated to promote their well-being. They have taken risks. They have had faith. They have shared the dream.

The people have had a major part in the development of the great regional power system. With the exception of direct sales to agencies of the United States and a few large industries, TVA is a wholesaler of power. Today 151 distribution systems with a total investment of almost $600 million deliver the power to the consumer. All are locally owned and managed, two privately owned, the rest rural cooperatives or municipal systems. In contracts with TVA these distributors agree to charge the rates established to promote abundant use, and to dispose of revenues in such a way as to achieve the objectives in the statute. In the beginning their participation in the program was an act of faith, too, for when TVA's resale rates were announced in 1933 no one knew what revenues those rates would provide. The experts of the private companies serving the area said the people would not use the power the dams would produce. The people of this region have proved them wrong. The high use, low rate pricing policies which the private power companies had been too timid to risk turned out to be sound. At low rates, the volume of sales did rise, and increased revenues resulted. It was a demonstration that the public interest could be served without the financial ruin predicted by the private power companies.

I am proud when I survey the financial record of TVA. My colleagues of 1933 would be proud if they could know that from the beginning, revenues from power sales have covered all the costs of operation, including depreciation, and in addition have provided for the Government, the owner, a return which has averaged 4 percent on the investment. I am proud to know that over $400 million from proceeds has been reinvested in the system, enhancing the Government's investment without requiring appropriation, and that $240 million has been paid to the Treasury in cash. But I am proud that TVA has never forgotten why it was created. It was created to serve the people, all the people of the United States, to demonstrate what happens to a region and to a power supplier when power is used as a tool to develop the economy of a region, to raise the standard of living of the people.

TVA was not conceived as a military project. But today TVA is in the forefront in the development of atomic weapons, missiles, vital light metals, and new chemicals. Almost three-fourths of TVA's power output goes to defense and defense-related industries. More than half—a staggering 30 billion kilowatt-hours in 1957—goes to the Atomic Energy Commission plants at Oak Ridge and Paducah. These plants alone use twice as much electricity as New York City, and more than is used by all the homes, businesses, and industries in each of 41 States.

The triumph of TVA is not recorded in the excellent financial reports, or in its contributions to the Nation's defense. It is recorded in the homes and farms of the region—in the installation of stoves and washing machines, refrigerators and freezers, milking machines, pumps, water systems, and hay driers. It is recorded in the increased use of electricity by the people, not only in the region it serves but all over the Nation. The symbol of TVA is not a balance sheet, no matter how impressive. The symbol of TVA is revealed when the lights go on at nightfall all over the region. They shine from barns, and kitchens, and parlors, deep in the coves and high on the hillsides.

When President Roosevelt sent his special message to the Congress urging prompt enactment of the TVA legislation, he said, "If we are successful here we can march on, step by step, in a like development of other great natural territorial units within our borders." We have been successful here. While we have not yet marched on to the creation of other valley authorites, we are moving step by step in the improvement of Federal administration of resource development. TVA has had an important impact on other Federal programs. I hear echoes of TVA when plans are now submitted to the Congress on a river basin basis, when coordinating committees are established in the field as the central agencies of Government and try to achieve the shadow of the unified approach without the substance. I see a trace of TVA when the potential recreational value to the people is included in the benefits expected to be realized from construction of new Federal projects, and small watersheds are brought to our attention. I note with satisfaction improvement in the land purchasing procedures of some Federal agencies as they adapt TVA experience to their requirements. I am aware of better personnel practices as a result of TVA's development of its independent merit system, and I see modest efforts to follow its pioneering in the adoption of effective and honest procedures of collective bargaining. I see the results of TVA's achievement when I read the advertisements of the fertilizer companies, as they begin to provide the farmer with new and better plant food for his land. I find it in the lowered rates for electricity charged by private companies today.

The spirit of TVA echoes around the world. I hear the echo from India, from Iran, from Uganda, and from Wales. Everywhere, as free men plan their future, they know their destiny depends upon the effective development of all of nature's resources for the benefit of all the people. To them TVA is a pace-setter and a symbol of hope. Its past is open for examination and for analysis. Its future lies in the hands of the new generation.

Schoolchildren Visiting Capitol Are Inspiring

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, May 5, 1958

Mr. THYE. Mr. President, there was published in the Washington Post and Times-Herald this morning, May 5, an article by George Dixon entitled "Schoolchildren Visiting Capitol Are Inspiring."

The one paragraph which attracted my attention more than all the others reads:

> The youthful visitors can't help being better equipped Americans as a result of observing Government at first hand. The impact is something that never could be generated by books.

Mr. Dixon in his article refers to the youth who have been visiting the Capitol this spring, who have come in great numbers. We are always happy to have these youth visit.

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SCHOOLCHILDREN VISITING CAPITOL ARE INSPIRING

(By George Dixon)

Every time I visit the Capitol of the United States these days I absorb a wonderful feeling of reassurance. This is because the great edifice is being overrun. But, happily, the overrunning is not being done by Members of Congress, political horse-traders, favor-seekers, and lobbyists. It is being done by schoolchildren.

Public- and high-school students swarm the Halls of Congress in such numbers that some of our most unresilient Senators and Representatives have to flatten themselves against corridor walls to let the kids squeeze past. But I have yet to hear a complaint from either side. When the compressed lawmakers sag back to normal shape they grunt approval of youth's mounting interest in the operations of Government.

Never before have students below college level shown such avid interest in the goings-on beneath the Capitol dome. Just the other day, to give a concrete illustration, more than 3,000 took the full guided tour through the double-winged structure.

How do I know that all were public- and high-school kids? Because they arrived in organized school groups and were accorded the bargain school rate of 15 cents. All others who take guided tours of the Capitol, from college students to run-of-the-mill tourists, have to pay 25 cents.

Fifteen cents doesn't seem like much in these inflationary times, but I often wish our elected representatives, who run everything in the Capitol—as well as the rest of the District of Columbia—would let the young students in free. I don't feel their interest in how the Nation's laws are made should be subject to assessment.

True, the price of Capitol tours does not represent any of the current inflation. In fact the price is exactly the same today as it was 81 years ago. There has been no increase since Grant was President. But, even so, I don't think students should have to pay for doing something that augurs so well for the future of the Nation.

The youthful visitors can't help being better equipped Americans as a result of observing Government at first hand. The impact is something that never could be generated by books.

It makes you feel good all the way down inside to observe those youngsters making their appraisals. The two places in which they manifest the great overwhelming interest, are the Senate and House Chambers. They want to hear the debates. Sometimes they hear some very bewildering oratory, but not all the time, despite a popular misconception. Frequently, our elected servants get up on the floor and make very great and good sense.

Moreover, it often seems to me that the lawmakers try to make more sense when the students are in the galleries. I am convinced that young and old benefit. I think it's one of the most hopeful things we have.

The 24 guides who conduct the Capitol tours are exceptionally well trained. They are not allowed to rattle off any old sightseeing junk. They not only must know what they're saying, but be prepared to answer some very difficult questions.

From their studies, these kids have an astounding knowledge of what they are going to see, before they ever get here. For instance, they know the history of the "whispering" spot in Statuary Hall. They know that the acoustical freak was discovered by John Quincy Adams when he was a Representative from Massachusetts. The man who was to be our sixth President thought at first that political foes across the hall were talking too loudly. Then he found that if you so much as whisper at one spot on the floor it is clearly audible at a corresponding spot on the other side of the chamber.

I want those kids to keep coming here. I don't care how much they crowd us.

Depression and Prosperity Start at the Grassroots

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 11, 1958

Mr. GWINN. Mr. Speaker, when we think this economic situation through, I feel certain that many Members of this body will agree that both prosperity and depressions originate at the grassroots and that the best antidote for the present unfortunate circumstances in which millions of Americans now find themselves is a return to the principles of economy and frugality in public as well as private affairs. I believe we have been taking too much purchasing power away from the American people for too long a time.

Now is the time to curb big government and big spending as well.

It is a cardinal principle of economics that the wealth of a nation consists of those things useful to man individually or society collectively.

In a true sense wealth can only be created by the application of labor with or without tools to the resources of the earth. For example, a tree in a forest is a natural resource. So, too, is the coal in the ground. A person can sit under a tree and enjoy the comfort of its shade. He may contemplate the coal in the ground but that will not keep him warm when wintertime comes.

However, if man, using the crudest of tools, cuts down the tree and fashions its parts into a handle for his ax or a mine prop, by this application of labor he has converted the natural resource into something useful to, or usable by, man. So having converted the resource into a useful commodity the commodity so created becomes available in trade, it now has a value and can be symbolized as wealth.

Where wealth is created over and above the normal consumptive demands in the form of capital, producer, and consumer goods, the accumulated excess serves as a deterrent to further production, and normally will cause a lowering of values.

We in the United States are now witnessing the spectacle of lowered production because of the $90 billion inventory of capital, producer and consumer goods now in the hands of the manufacturers, wholesalers, and retailers of our country. And the more than $8 billion of surplus agricultural commodities held under loan or owned outright by the Commodity Credit Corporation has acted to depress the commodity markets for American farmers.

In attempting to analyze the present depression, I have given much thought to the millions of Americans now caught in a trap of debt and taxes from which there will be no relief except by the exercise of frugality and economy in all public and private affairs. The tax burden that has been heaped upon the American people at Federal, State, and local levels takes approximately 30 percent of our national income. The more than $350 billion in known private debts, coupled with $325 billion in public debt takes nearly $25 billion of the national income for interest alone.

The inflation which has lowered the purchasing power of the dollar from 82.5 cents in 1946 to approximately 48 cents today has wrought havoc with the value of life-insurance policies, investments, and savings of practically every kind.

Burdened with taxes and wallowing in a morass of debt the people down at the grassroot are trying valiantly to get their noses above water and out of debt. So as they pay their debts, they are restricting their purchasing and business is bad and the inventories are not moving like they used to when money and credit was so easy to get and use.

Now there is another facet to this depression which deserves some attention.

During the past 12 years our taxpayers have been called upon to provide some $73,690,000,000 in foreign grants and credits. This is $20 billion more than we spent from the Federal Treasury for the benefit of our own people. And I ask, Mr. Speaker, that a table showing the expenditures for the past 12 years be included at this point in my remarks:

SPENDING FOR FOREIGN ECONOMIC AND MILITARY AID IN 12 FISCAL YEARS GREATER THAN GRANTS-IN-AID TO STATES PLUS CHECKS TO INDIVIDUALS

In the 12 fiscal years 1946 through 1957, inclusive, the United States Treasury has disbursed more of the taxpayer's dollars for foreign economic and military aid than has been spent in grants-in-aid to State and local government plus all the checks direct to individuals for economic relief, veteran benefits, and all other purposes.

As a matter of fact, this obvious preference of foreign peoples over taxpaying American citizens probably will be one of the debatable issues in the coming congressional elections which canont be soft-pedaled by political maneuvering.

The table following shows the amounts in separate columns spent for foreign aid (grants and credits) and the amounts disbursed as grants-in-aid and checks direct to individuals for the 12-fiscal-year period:

Fiscal year	Reported gross foreign aid	Grants-in-aid and checks to individuals
1946	[1] $6,904,122,806	$1,209,197,198
1947	[2] 8,523,477,612	1,604,670,695
1948	8,087,000,000	5,561,064,446
1949	7,602,029,206	5,493,710,763
1950	6,338,536,000	5,518,878,365
1951	6,624,286,000	4,890,097,620
1952	5,098,000,000	4,241,188,300
1953	7,030,000,000	4,053,941,704
1954	5,155,410,175	4,284,370,322
1955	4,380,920,377	4,306,000,220
1956	4,473,177,000	5,192,136,067
1957	4,625,000,000	6,468,469,730
Total	73,690,136,176	53,194,004,197

[1] Excluding loans to several American Republics.
[2] Including British loan for $3,750,000,000 of which only $2,050,000,000 is included in total above. (Balance not disbursed.) Excludes payments totaling $3,225,975,000 to capital of the International Bank and Monetary Fund.

This bulletin has been compiled from official reports of the Secretary of the Treasury and from reports once either confidential or restricted concerning the foreign transactions of the United States.

Much of the $73,690,136,176 in grants and credits to foreign governments had to be borrowed when our Treasury was running deficits. The cost of the interest is estimated at an additional $10 billion.

Mr. Speaker, much of the foreign aid money has been used by other countries to tool up their industries for competition with the United States not only in the markets of the world but right here at home as well.

Recent hearing before the Ways and Means Committee on the extension of the Reciprocal Trade Agreements Act of 1934, as amended, indicates that such basic industries as plywood, textiles, ceramics, glass, steel, cement, and scientific and technical instruments including clocks, watches, cameras, and optical goods have already been severely damaged by foreign imports produced with labor paid far below the American scales.

Just a few days ago, the chairman of the board of the United States Steel Co., Mr. Roger M. Blough, in an address before the Cleveland Chamber of Commerce, pointed out that the steelmakers of Dusseldorf, Germany, were able to lay down barbed wire in Cleveland for $40 a ton less than the equivalent product produced by the American Steel & Wire Co., a local subsidiary of United States Steel.

At this point, Mr. Speaker, under unanimous consent, I include 2 tables showing the value of our foreign trade in 1956 and 10 examples of specific imports which are damaging the American economy at the present time:

FOREIGN AIDERS AND FREE TRADERS WORK BOTH SIDES OF THE POLITICAL STREET

Around Capitol Hill in Washington almost daily there appears a number of prominent American industrialists and businessmen, including the representatives of boards of trade and chambers of commerce, who contact the Members of Congress and who are available to appear as witnesses for and in behalf of the President's bill for $3.9 billion in additional foreign economic and military aid and for a 5-year extension of the presidential authority to negotiate reciprocal-trade agreements which includes authority to raise or lower tariff or custom rates on imports.

One of the principal arguments for the extension of the Reciprocal Trade Agreements Act is that 4,500,000 Americans find their employment because of foreign trade. This is a specious argument which on careful analysis can be shown to be completely phony.

In the calendar year 1956 the exports of commodities from the United States were valued at $18,837,872,000 and the imports which came in were valued at $12,490,240,000, leaving a favorable trade balance of $6,347,632,000.

Assuming that a large number of American workingmen had their jobs displaced by the cheap foreign imports it cannot be shown that as many as 4,500,000 Americans could receive a living wage from the trade balance of $6.4 billion. This would distribute only $1,422.22 per capita. The table following shows the exports and imports according to classes for the calendar year 1956:

Group classification	Exports	Imports
0 Animal and animal products, edible	$398,000,000	$431,000,000
0 Animal and animal products, inedible	280,000,000	310,000,000
1 Vegetable food products, and beverages	2,017,000,000	2,771,000,000
2 Vegetable products, inedible	1,046,000,000	769,000,000
3 Textiles, cotton, wool, other	1,376,000,000	1,027,000,000
4 Wood and paper	441,000,000	1,588,000,000
5 Nonmetallic minerals	1,810,000,000	1,851,000,000
6 Metals and manufactures	2,006,000,000	2,349,000,000
7 Machinery and vehicles	6,687,000,000	631,000,000
8 Chemicals and related products	1,248,000,000	274,000,000
9 Miscellaneous	1,518,000,000	489,000,000
Total	18,838,000,000	12,490,000,000

In 1956 the Department of Commerce reports 49.8 percent of the imports came into the United States duty free and on the balance custom collections amounted to $709,690,000 an average rate of 11.32 percent.

COMMENTS UPON THE FOREIGN TRADE OF THE UNITED STATES FOR THE YEAR 1956

It was reported that American exports in 1956 were valued at $18,838,000,000 while the imports into the United States were of a declared value of but $12,490,000,000 making it appear that there was a favorable trade balance of $6,347,632,000.

In presenting the statistics on foreign trade, the Department of Commerce gave the facts only. There was no attempt made to show to what extent either exports or imports were financed by loans from the Export-Import Bank of Washington or other international banking and financing organization in which the American taxpayers have an interest. Among such organizations are the International Bank for Reconstruction and Development which has made loans for electrical generation and distribution; for transport; for agriculture and forestry and for the development of such industries as iron and steel, pulp and paper, fertilizer and chemicals; mining and for development banks. These loans totaled $3,107,966,464 outstanding as of June 30, 1957.

The Export-Import Bank loans outstanding as of June 30, 1957 totaled $2,520,000,000 exclusively to foreign governments or principals.

Another source by which American dollars are used to build up the economies of foreign nations is the development loan fund of the International Cooperation Administration for which the Congress by Public Law 279, 85th Congress, 1st session, appropriated an advance of $500 million and for which the President asks an appropriation of $650 million for fiscal 1959.

These are examples of how our tax dollars are being used to help build up other countries to ultimately use cheap labor and compete in the world markets with the products of American industry and labor.

Here are 10 examples of manufactures imported into the United States in 1956:

Electric lamp bulbs		157,051,880
Plate glass	square feet	38,754,767
Plywood	do	[1]706,523,548
Glazed tile	do	13,383,174
Binoculars	units	4,249,498
Bicycles	do	1,173,346
Cameras	do	1,034,385
Cotton shirts	dozen	1,225,578
Table cutlery	units	39,309,030
Sewing machines	do	55,156

[1] Over 50 percent of total used.

These are only a few examples of what foreign factories are shipping to the United States, in competition with American products.

Worcester Telegram Endorses Food Stamp Plan

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mrs. SULLIVAN. Mr. Speaker, I am indebted to Mr. Leslie Moore, executive editor of the Worcester (Mass.) Telegram, for sending me a copy of that newspaper's editorial page of April 29 containing an editorial discussing my proposal for a food stamp plan for distribution of surplus food to our needy citizens.

The editorial Food Stamp Plan and the Needy, endorses the idea for a food stamp program even though the newspaper points out that the taxpayers may have to pay the cost of operating such a program to end hunger.

I might say, however, that the cost of a food stamp plan would not be a significant factor at all—for this reason: the Government already buys up and stores this food and has very heavy storage costs; furthermore, it pays the cost now of shipping huge quantities of this food into many States under the present so-called distribution program; in addition, it even pays the ocean freight in many cases in shipping this food overseas to give to foreign governments for the assistance of their own people.

A food stamp plan will save many of the costs which the Government now sustains in trying to get rid of this food.

Mr. Speaker, under unanimous consent, I submit for inclusion in the Appendix of the CONGRESSIONAL RECORD the editorial which I mentioned, Food Stamp Plan and the Needy, which appeared on April 29 in the Worcester (Mass.) Telegram, as follows:

FOOD STAMP PLAN AND THE NEEDY

Two women Representatives in Congress—Mrs. LEONOR K. SULLIVAN from Missouri, and Mrs. MARTHA W. GRIFFITHS from Michigan—want the Government to revive the food stamp plan. Their argument is based on three facts: There is widespread unemployment and consequent need of help among many families; there is a surplus of farm products; the Government gives aid to needy people overseas.

Under the food stamp plan as it was applied in the Roosevelt administration, various stamps were distributed to needy families. These stamps could be used to buy specified foods and foodstuffs, at regular stores. The storekeepers got the stamps redeemed at banks.

The merits of the plan were that relief was given through the regular channels of trade, and farm surpluses were put to good use. A disadvantage was that it required grocers and banks to do extra work. The stamps were a form of money—money which could be used for one purpose only—buying certain foods.

There was no magic in the plan. The taxpayers footed the bill in the end. But apparently nobody devised a better method of bringing together the farmer who had more products than he could sell and the family lacking enough to eat.

The Traditional Role of New England in World Peace

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, May 5, 1958

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Honorable Henry Kearns, Assistant Secretary of Commerce for International Affairs. It is a very clear approach to the problem of reciprocal trade. While I do not necessarily agree with all of Mr. Kearns' remarks, I believe he states the case in a very clear and emphatic manner.

There being no objetcion, the address was ordered to be printed in the RECORD, as follows:

THE TRADITIONAL ROLE OF NEW ENGLAND IN WORLD TRADE

I am indeed grateful for the opportunity to appear before you this evening on this very important occasion to discuss with you the traditional role played in world trade by the great New England area. It has been a great honor and privilege to work with one of New England's most illustrious sons, Secretary of Commerce Sinclair Weeks. It has been inspiring for me to participate with

the Secretary in serving our country through the Department of Commerce.

Inasmuch as my residence is about as far removed from New England as you can get and still be in the United States, my principal contact with this important area has been through the history books. But in southern California we are proud of New England too. New England has a tradition of foresight, commonsense, courage, and energy. This great city of Boston has for many years exemplified the Yankee trading spirit. From the earliest days of our country, clipper ships sailed from this area to travel the seven seas and to develop foreign commerce for the United States. Boston is the center of private American investment throughout the world.

Nowhere in history has there been an indication that this area bred fear, uncertainty, or lack of self-confidence in its people. Indeed everywhere in the world, the outstanding symbol of commerce has been the intrepid Yankee trader.

There can be no quarrel with the concept that commerce, that is the exchange of goods and services, brings profit both to the buyer and the seller. Without commerce a locality, city, county, states, or nation seriously limits its ability to progress and to care for its people. The world is becoming increasingly interdependent, and at this time our country requires raw materials from the far corners of the world. More important, hundreds of millions of people in far off lands want and need products of our factories and farms.

Just as in the past when the Yankee trader had the greatest influence in the forward surge of our American economy, so today the Yankee trader is needed to keep this world free and capable of constantly improving its lot. Therefore, it is rather disturbing to observe in our industrial and business world so many examples of apparently frightened men. Representatives of business interests in New England, as well as in other areas of the country, are telling their representatives in Congress that America can no longer compete with the rest of the world, that it must have protection against encroachment of foreign goods in our stores and market places.

The textile business, which was originally centered in New England, is beset with serious problems. The evidence, however, does not point to imports as the sole cause of concern of the industry. Indeed, imports are probably one of the lesser problems, inasmuch as we actually export more finished textiles than we import. In the field of flatware, bicycles, watches, and some 26 sensitive items of domestic commerce, industry is still claiming that it must have protection if it is to live.

From the early days of our Republic the tariff battle has been waged. In the past it was believed that a price differential in the form of import duties upon goods coming into this country would give the American producer the necessary protection for him to compete with foreign producers. If those foreign producers operated at a lower wage rate, with greater access to raw materials, or generally in a more favorable productive position, high protective tariffs were demanded.

It is strange, therefore, to now see a shift in this original stronghold of free enterprise to a demand for fixed, arbitrary quotas. To me it is a completely incongruous thing to hear business and industrial leaders extolling the virtues of free enterprise, private property, and the ability to acquire it, referring to these principles as one of the bulwarks of our American economy, while at the same time denying their real belief in free enterprise by requesting and demanding strict quantitative limitations upon competitive articles.

Let me point out, if I may, some of the fallacies of the so-called quota demand.

1. Import quotas add an element of inflexibility and rigidity to world trade, tend to become fixed, and do not permit exporting countries to share in expanding markets.

2. Import quotas by their very nature must be based upon arbitrary decisions of Government; they inject far-reaching governmental intervention and control into the market place. This has always been repugnant to New Englanders in particular.

3. A quota system would require splitting up the market among exporting countries based not upon the decisions of the consumer or buyer, but upon the arbitrary decision of some governmental representatives.

4. Quotas require a huge arbitrary bureaucracy for their administration.

5. History is replete with the examples of retaliation in the form of quotas placed in reflection of our actions; quota action by this country immediately brings about similar restrictions by the countries affected. These restrictions limit with the same rigidity, exports from this country.

6. Classic examples of the early 1930's when import quotas as well as high tariffs were adopted by this country, leave no doubt that import quotas can stifle expanding world trade, destroy markets, and bring about decreasing opportunities for business, agriculture, and industry.

7. From the first days of the Reciprocal Trade Agreements Act this country has worked continuously to remove quantitative restrictions from the world trade market place. This principle was incorporated in the basic understandings of the GATT. The history of quota removal is a good one and it would certainly be turning back the clock, contracting rather than expanding business opportunity, if quotas were adopted by this country as a means of giving protection to some elements of American business.

8. Quotas have the effect of protecting the inefficient and removing the competitive impetus to new designs, the initiative to seek new techniques, and greater effort to produce in behalf of the consumer.

9. The historic tendency of business to blame its faults and shortcomings on some extraneous force leaves no doubt that if quotas are applied to a portion of American competitive imports, widespread demand for similar protection will develop within a relatively short time in any industry experiencing business difficulties.

Thus, once Government intervention is initiated it tends to feed on itself, constantly spreading to day-to-day business operations, and further curtailing the automatic market adjustments of competition. In these days of international political tension it is absolutely essential that this country retain its world leadership in the economic field. It would be an utter tragedy to adopt the most rigid, most unwise course of all, that of giving protection to American business by initiating a system of severe quantitative import limitations, namely quotas.

May I emphasize now the real stake that this country, and especially New England, has in our world trade picture. It has been well publicized, but should be repeated. More than 4½ million Americans make their jobs as a result of world trade. Last year the United States exported more than $19½ billion worth of our goods exclusive of military, much of it produced in the factories and farms of New England. Last year we imported $13 billion worth of the goods of the world. Approximatetly $10 billion of this was in the noncompetitive sector. It consisted of goods we need to keep our industrial plants operating smoothly and effectively.

Out of a total world trade in 1957 of approximately $32½ billion, it is estimated that less than $3 billion gave serious competition to any element of American business. Yankee traders can recognize a 10 to 1 favorable ratio as pretty good grounds for continuing business. It would therefore be most shortsighted to jeopardize this great factor in continually expanding business.

New England is interested in imports of petroleum and petroleum products. In 1956 this amounted to $123 million. You are interested in the importation of wool for your textile mills. In 1946 this amounted to $37 million. Then there are rubber, sugar, hides and skins, coffee, cocoa, tea, bauxite, iron ore, molasses, and hundreds of other items that move in world trade. These help build the economy of New England, secure jobs, and make it possible for this important area of the country to live a better and fuller life. And this, I repeat, is on the import side.

You are also probably aware that on the export side machinery made by the skilled craftsmen of this area goes to all the corners of the earth. Transportation equipment, in all forms, such as aircraft, trucks, busses, etc., are found traveling the world's highways and skyways. Finished textiles, wood pulp and printing, leather and shoes, primary metals, rubber products, instruments, all create hundreds of thousands of jobs in this area. These jobs are entirely dependent upon our ability to sell American goods to countries of the free world. Our great shipping business, stevedoring, processing for shipment, insuring, all these elements of your economy have a direct interest in the outcome of our world-trade picture.

How shortsighted it will be if the Members of Congress representing this vital, dynamic, courageous part of the country fail to provide the leadership to which we Americans are entitled. They must not allow a relatively few spokesmen of some industries, in selfish, shortsighted presentations of the need for severe limitations uopn competition, to cramp the expanison of world trade that will be vitally essential if we are to grow and prosper in the years to come.

Today, as never before, we must realize that this country's production capacity exceeds its ability to consume by a wide margin. Unless the products of our fields and factories are shipped to the countries of the world we will find ourselves stagnant and limited in our further development.

In the next 60 days this country will make its fateful choice. It may listen to the voices of the frightened men. Or it may listen to those who speak in confident, sure tones of the glowing, prosperous future which can lie ahead.

If it listens to the former it will surely preside over the destruction of our great world trade which has helped bring this country prosperity never before known in the history of the world. It will thus bring economic chaos upon our workers, farmers, and business people.

If it listens to those who speak with vision and courage, it will set in motion the positive forces which will build our world trade to even greater heights. Our Congress must provide legislation which will tell the world that we intend to maintain a positive, aggressive, and thoughtful leadership in the field of world trade. It will tell the anxious world that we will be in business to stay, that our policy will be constant, for at least 5 years. It will give us negotiating authority to reduce impediments to our export trade, and in return we will show our willingness to give reciprocal consideration to imports.

This country needs the courageous leadership of New England, and it needs it now.

Poles Note 350th Anniversary of First Arrival in New World

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. KEARNS. Mr. Speaker, Saturday, May 3, 1958, was the 167th anniversary of Poland's Constitution Day.

In commemoration of Poland's National Day, I would like to insert the following article by Ed Wellejus, which appeared in the Erie Morning News of February 27, 1958, pertaining to the 350th anniversary of the arrival of the first poles in America.

Approximately 30,000 of my fine constituents in Erie, Pa., and at least 10,000 more in Crawford and Mercer Counties, are of Polish extraction, and the Polish record in helping to develop this country is one of which they are justly proud.

It is my firm belief that the Polish people, long desiring their liberation from the Iron Curtain, are deserving of every consideration that our Government, through the United Nations, can give them to consummate their cherished dream of freedom:

POLES NOTE 350TH ANNIVERSARY OF FIRST ARRIVAL IN NEW WORLD

(By Ed Wellejus)

This year marks the 350th anniversary of the arrival of the first Poles in America.

Erie's Polish community is expected to stage several commemorative celebrations during the year to mark the anniversary of the arrival of the first Polish immigrants on American soil in Jamestown on October 1, 1608.

The Poles are credited by historians with:

1. Helping to save the first English settlement in America from total failure.
2. Building the first industry in the new world.
3. Saving the life of the colony's first president, Capt. John Smith.
4. Calling the first strike in America. This they won. The strike was called to gain civil liberties and not for economic gains.
5. Manufacturing the first export goods in America.

The colony of Jamestown was founded in 1607 by the Virginia Company of London under a charter from James I. One of the main obstacles to development of the colony was the lack of skilled craftsmen essential to survival.

For many centuries, Poland had been England's principal source of pitch, tar, soap ashes, rosin, flax, cordage, masts, wainscots, and glass. It was natural then that England, wishing to develop her own sources of these materials in America, turned to the Poles for help and advice. Experts were hired and persuaded to depart from Poland for America.

Thus, on October 1, 1608, aboard a ship *Mary and Margaret*, commanded by Capt. Christopher Newport, a company of Poles arrived at Jamestown. Incomplete records show the following names:

Michael Nowicki of London, expatriate Polish nobleman and leader of the group; Zbigniew Stefanski of Wloclawek, Jan Mata of Krakow, Stanislaw Sadowski of Radom, Jan Bogdan of Kolomyja. All were journeymen in desperately needed crafts and experienced soldiers as well. Captain Smith knew Bogdan personally from his visit to Poland in 1603.

The Poles immediately set to work as artisans and instructors, and within 3 weeks had roaring fires going under a glass furnace. This was the first factory in America.

Within 2 months of their arrival, they produced enough tar, pitch, soap ashes, green glass bottles and vases to load the ship Mary and Margaret on her return trip to England. This was the first export of manufactured goods from America.

According to contemporary accounts, two Poles—Zbigniew Stefanski and Jan Bogdan saved Captain Smith's life when he was ambushed by Indian Chief Papahegh.

Reorganization of Defense Department

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. KILDAY. Mr. Speaker, under leave to extend my remarks, I include a column by Constantine Brown which was published in the Washington Post of May 2, 1958:

EISENHOWER AND REORGANIZATION: SOME CAPITOL LEADERS FEEL PRESIDENT INJECTS HIMSELF TOO FAR INTO DRIVE

(By Constantine Brown)

The consensus of Senate and House leaders is that President Eisenhower has been placing undue emphasis and has gone too far in injecting his own personality into the campaign to put through the Pentagon reorganization program—essentially a product of his White House advisers.

According to responsible legislators, there will be a reorganization bill this year, but it will resemble only vaguely that offered as a "must" by the Chief Executive. That some of the increasing fat in our military establishments has to be trimmed is not being argued. At least 5 percent of our huge defense budgets represents waste.

The armed services need streamlining—as do most of our executive departments which have become topheavy with well-entrenched bureaucrats. But the fundamental opposition to the President's bill is based on the small print which the heads of the armed services committees are reading closely.

Despite the assurances of White House spokesmen that the idea of creating a single chief of staff is as alien to them as it is repulsive to Congress, the legislators who have examined the bill carefully are convinced that the ingredients for such a step do exist in the pending project. They feel certain the present administration will not take advantage but they fear the uncertain future.

Germany, from the time it became a world power after the Franco-Prussian War of 1870 to Hitler's short-lived regime, had a general staff with an omnipotent chief responsible only to the head of state. The Reichstag in the pre-Hitler days appropriated vast amounts for the Armed Forces but had little—if any—control over them. And when the showdown (for which the military forces had been trained for years) came, the single chief of staff system failed the German people.

The German chief of the general staff was selected by the emperor or the dictator, not necessarily because he was the best available man but because he was the most pliable. This cannot happen in this country, it is pointed out, not only because President Eisenhower does not favor this alien system but also because any promotion in the armed services must be approved by the Senate. This is true, say the opponents of the bill who look at the fine print. But they add that it is very rare when the Senate refuses to confirm an appointee of the Chief Executive, especially when the appointment is made in his role as Commander in Chief.

The project offered by the White House is not intended to last only for the next 2 years. It is likely, if passed by Congress, to remain on the statute books for years. Despite the assurances from the White House and from Defense Secretary McElroy that the traditional services (Army, Navy, Air Force, and Marine Corps) will not lose their identity by a merger, there is no saying what another President, acting on his own or on the advice of his single chief of staff, may do in the future. This merger power is not actually specified in the law, but according to the testimony of the Defense Secretary, himself, it could be so interpreted.

Legislators remember too well that President Truman, while in office, described the Marines as policemen. This caused a furore in the country. Mr. Truman explained that he did not mean what he was supposed to have meant. But, actually, it was known by those close to the Pentagon that there was a serious drive at that time to do away with the Marine Corps and integrate its divisions into the Army where, it was said, they actually belong.

The advocates of suppression of our elite corps pointed out that the Marines had an important role in the early days of the last century when they fought from aboard ships or were used as a landing force in such places as the shores of Tripoli. But in these modern days, it was said, they no longer belong to the Navy and should not be kept as a separate entity from the Army. In theory this appeared correct, but in effect the Marine Corps has proven its mettle and has become an almost legendary force because of its tradition and the fierce pride of its men in their uniform.

The present administration, if given the power by Congress, would not interfere with the Marines. But there are even today many who scoff at tradition and there is no saying whether in the future we may not have a Defense Secretary of that type.

A Cheer for Miss Knight

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, May 5, 1958

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Cheer for Miss Knight," which deals with Miss Frances G. Knight, head of the passport office of the Department of State.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A CHEER FOR MISS KNIGHT

(By Lyle C. Wilson)

There isn't much good news going these days, so how would it be to hear a word of cheer from Miss Frances G. Knight?

Miss Knight is the director of the passport office of the Department of State. She

succeeded the fabulous Mrs. Ruth B. Shipley who was a civil servant of great charm and stature in the Federal hierarchy.

The good word from Miss Knight is that she has revamped the methods and modernized the equipment of the passport office to the considerable relief and convenience of the United States taxpayer. The Government's General Service Administration estimated that these savings last year amounted to $386,000 which is not a great sum when posed against the multibillion dollar spending which appears now to have been saddled on the taxpayers until the end of time.

Neither is it hay, however, and the conserved sum looks even more attractive by reason of Miss Knight's informal explanation that additional savings were obtained because the passport office averaged an increase of 5.5 percent in work productivity per employee in 1957.

Moreover, Miss Knight expects her employees to absorb a 5-percent additional increase in their workload during the next 2 years.

News of such administrative economies is scarce here in Washington despite assurances from the top executive officials that waste shall be wrung from the operation of the Government. The top brass either does not mean it, or the top brass is unable to plug the comparatively small leaks as Miss Knight plugged that one in her office.

While she was about it, Miss Knight modernized and improved the conditions under which the citizen can obtain a passport. For example, the citizen applying for a passport no longer need be accompanied by a witness to testify to his identity. And, if he desires, the citizen may pay his passport fee by personal check.

The passport office now will accept for identification purposes about what a bank would accept in cashing a check, such as driver's license or a Government security pass. Miss Knight explained that anyone who would fraudulently apply for a passport would not hesitate to produce a phony witness, so why clutter the counters and corridors of passport issuing agencies with two persons for each passport involved.

Miss Knight's methods have reduced from many weeks to 4½ days the time necessary to issue a passport.

Of personal checks, she contended that if the Government accepts them for income tax payments it also should be willing to take them in payment for a passport fee.

Miss Knight's reforms and modernization of the passport office make a lot of sense. A taxpayer might think it a good idea to expose other agencies of Government to Miss Knight, especially any in which the productivity per employee has diminished instead of increased.

This bold and efficient woman is even trying to improve passport pictures; promoting the idea that they should be relaxed and happy, smiling portraits. To that end, she permits color photos and reports that her program to make passport pictures look like something other than rogue's gallery shots is coming along fine.

Conservation Goes Out the Window

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mr. BARTLETT. Mr. Speaker, something that needs to be said over and over again until a change is made has been related in an article recently published in the Scripps-Howard newspapers. It is concerned with Federal mismanagement over the years of a vital Alaska resource—salmon. Mr. Albert Colegrove, staff writer for these newspapers, has recently been in Alaska and in this particular article written at Petersburg, whose very existence is dependent on the vitality of the fishing industry, has prepared a telling indictment of bureaucratic government. He tells how the advice of Alaskans has been disregarded year after year while the overlords of Alaska who exercise their control in distant Washington have created a situation in which there is grave danger that the salmon industry may be destroyed.

I regard the article as factual and the comments of Alaskans quoted therein to be truly representative of the views of most residents of the Territory.

Mr. Speaker, before calling the attention of my colleagues to Mr. Colegrove's article I should like to insert an accompanying editorial comment which appeared with the article in the Washington Daily News:

FISHING MESS IN ALASKA

One of the most popular foods in this country is salmon—fresh, smoked, dried, and canned. Much of it comes from Alaska. But less in recent years.

The salmon catch off Alaska has been declining. One of the reasons: Piggishness. The bigger commercial outfits don't fish for salmon. They trap 'em. Salmon are trapped on the spawning runs. And if it is overdone, pretty soon the spawning diminishes, and hence the salmon diminish.

In the 48 States of the Union, such things as fishing regulations primarily are legislated by the States themselves. They best know the conditions, and State officials, being nearer at hand, are more responsive to public opinion.

But in Alaska, a Territory for 89 years, the fishing rules are laid down by Washington. To get anything done, Alaskans have to go to Congress, or to the bureaucrats in the executive departments, where the play of every other lobby takes its toll. This not only is cumbersome and timewasting—it frequently doesn't get results.

For the story of how this indirect system doesn't work in the case of salmon traps, take a look at the dispatch on this page from Scripps-Howard's staff writer, Albert M. Colegrove, written from Alaska.

This is just another sample of how this huge, resource-laden, potentially rich area is being hogtied because it can't run its own affairs. Statehood would open it up, encourage enterprising Americans to go up there and make it flourish. And if you don't think this would have an impact on the national economy, consider this one point:

Salmon is high priced now. But if the Alaska salmon industry (plus the Japanese and the seasonal non-Alaska trappers who reap big hauls from Alaskan waters) runs out of fish because of inadequate controls, salmon will go a lot higher, if not out of reach.

Now, Mr. Speaker, for Mr. Colegrove's article:

PETERSBURG, ALASKA, May 1.—It is almost impossible to exaggerate the dislike most Alaskans feel today for the Federal Government overlords who rule this Territory's lifeblood industry—fishing.

They believe Washington's experts have all but ruined them.

Ruin will come inevitably, they think, unless Alaska can get statehood, then take fishing matters into its own hands and save the salmon.

This is a bitterly personal matter for the fishermen and canners who live along Alaska's coastlines.

COMPLAINT

This is their grim complaint:

Twenty years ago, Alaskan waters were giving up 6.5 million cases of salmon a year. The catch has dropped steadily. This year they'll be lucky to get 2.5 million cases.

The Federal Government must accept responsibility for the mess. It has had complete control of fishing regulations, and has made its own rules with little heed for Alaskans.

There are other villains in the case of the vanishing salmon—namely the fishing industry moguls of Seattle and the Japanese. But they play secondary roles.

To understand this situation, keep in mind that there are two main types of fishery workers:

The 10,000 boatmen and canners who come up here from the States in May and go home in the fall with their year's wages. Most of them don't give a hoot, one way or the other, about Alaska or its statehood bid.

The 15,000 Alaskans who depend on fishing for a living, and live here the year round. Almost 1 out of 3 working Alaskans is in this group.

CONCERN

The disappearing salmon are of great concern not only to this second group but to the entire Territory. For sick as it is, the fishing industry will put about $65 million worth of seafood into cans and frozen packages this year. About $20 million will be paid to those who live here. This is far and above the money Alaska will get from any other single business.

Typical of the year-rounders are those in Petersburg, a community of 850 persons, mostly of Scandinavian descent. Their spokesman is Lew Williams, Jr., 33 editor of the weekly Petersburg Press. He thunders every Friday against the United States Government's Fish and Wildlife Service.

And if the Government is the villain, the symbol of its villainy is the trap.

The fish trap is, in the words of the Petersburg Fishermen's Union, "the most efficient fish killer ever devised." Briefly it works like this:

A fence is built in the water, extending up to 1,000 feet out from the shore. Salmon, swimming near the shore on their way to streams where they would spawn, reach the fence. They start swimming out to sea, to get around it.

Instead, they pass through a series of funnel-shaped corrals, eventually arriving in a huge, fenced-in, underwater room from which there's no escape.

A fishing boat comes along. Its crew raises the room right out of the water and dumps the thousands of trapped fish into the boat's hold. End of the fish.

ILLEGAL

Fish traps have been outlawed in every State of the Union.

But not in Alaska. (States of the Union control their own fisheries; in Alaska the Federal Government has complete control.)

It is odd, but true: Alaskans, whose lives depend on the amount of fish they catch, time and time again have voted overwhelmingly against the fish trap. And the Fish and Wildlife Service—supposedly dedicated to conservation—time and time again has ignored Alaskan voters and permitted the fish traps to continue.

"What's more," said Lew Williams, "our fishermen have pleaded with the Fish and Wildlife people for many other conservation measures.

"Few of our pleas have been heard.

"We want conservation because Alaska is our home. We're not intersted in making a quick buck and then moving on."

In Juneau, Fish and Wildlife officials proudly told me they had drastically cut the number of fish traps operating in Alaska in recent years.

"Sure," said Lew Williams. "They horse-trade with the big canners. For example: A cannery will have two fish traps in 'played-out' locations. So the owner will offer to remove those two traps—if the Government will let him put just one in a new location. At the one new location, he catches three times as many fish."

SIGN

Ernie Haugen is mayor of Petersburg. He also runs the Pastime Cafe, Petersburg's only restaurant. Prominently displayed there is a can of salmon packed by one of America's best-known companies. On it is a sign: "This salmon was caught by Japanese fishermen." The implied message is clear: Don't buy it.

Most fishermen with whom I talked had nothing personal against their Japanese colleagues. They simply feel our Government was out-slicked in its dealings with Japanese officials.

In the North Pacific Fisheries Treaty a line was drawn which was supposed to separate the areas of origin of North American and Asian salmon. It now appears that the areas to which the Japanese have access contain many salmon of American origin and the Japanese have been catching them in quantity.

Further, we have not been able to get the Japanese to agree to conservation rules which our fishermen obey, such as having nets whoses meshes are large enough to let the younger, smaller fish escape. The State Department is now negotiating for changes in the treaty to remedy these situations, but no one seems to know whether it will be successful.

Big-time canning companies in Seattle defend their purchases of Japanese-caught salmon by saying:

"We have to keep our canneries operating. If Alaskans could furnish us enough fish, we wouldn't buy from the Japanese."

They use the same argument for fish traps—that traps provide an almost guaranteed supply of salmon.

OPPOSITION

It's no secret, here or in Seattle, that the biggest opposition to Alaskan statehood comes from Washington State business interest, mainly salmon packers.

They are making money from Alaska. They have supported politicians who have opposed Alaska statehood and who have opposed efforts to get rid of the fish traps. The salmon packers want no change. They also fear "revenge" measures, such as higher fishing license fees for non-Alaskans if the territory becomes a State.

Certainly, they stand to lose certain privileges if Alaska makes it. The fish traps are bound to go. So are some other types of fish-catcher devices.

"But there'll be no 'revenge' action," said Lew Williams. "It'll be because we aim to stay here and make this land a better place for our kids and their kids. We want to live in Alaska, not ruin it."

Government Estimates a Bumper Wheat Crop

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1958

Mr. THYE. Mr. President, there was published in the Christian Science Monitor of April 29, 1958, an editorial dealing with the question of farm surpluses. I ask unanimous consent that the editorial be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BANE OF ABUNDANCE

Government estimates of another bumper wheat crop evoke no rejoicing either in Washington or South Dakota. Secretary Benson had been making some slight headway in reducing surplus stocks. But favorable weather and extra planting threaten to replenish the burden he has been trying to reduce.

The Department of Agriculture now forecasts a winter wheat crop running close to a billion bushels. Spring wheat is expected to add more than 200 million bushels. This year farmers are putting only about 5 million acres of wheat land into the soil reserve—less than half the amount taken out of production last year.

This is the opposite of what city folk might have expected. For the support price this year is down from last year's level of $2 a bushel to $1.78. But farmers can't operate like the producers of steel and automobiles—they find it hard to cut production to hold prices up. Indeed, they usually increase production—hoping to make up with more units for the loss of income per unit.

There are too many of them to form a cartel to limit production. And the limits put on by Government—acreage allotments—don't really work. Many growers simply raise more on an acre. Others take their chances outside the allotment (and price support plan).

So once more the Nation faces a probable crop carryover of more than a billion bushels. Farmers and Government find abundance a bane rather than blessing. Surely this situation is fundamentally wrong—as wrong as the feast-or-famine rule in the steel industry. Surely it is not beyond the ingenuity of Americans to right both these wrongs—and not merely palliate them with price supports, unemployment compensation, and tax cuts.

Free Enterprise Versus the Welfare State

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Monday, May 5, 1958

Mr. BUTLER. Mr. President, America's high standard of living and its position of leadership in the world in my opinion may be attributed to our constitutional republican form of government together with a free enterprise economy which provides the maximum incentives for each individual to develop his God-given talents.

There are 2 unique features in our economy. First, what shall be produced is decided by the consumers of America who are free to spend their incomes as they wish. Secondly, producers with the incentive of profit are free to produce goods they believe consumers want.

During the years since World War II, our private enterprise economy has been burdened with many Government controls and a tax structure which curbs incentives. Proponents of the welfare state justify their position, as they believe the average citizen will benefit from more and more Government intervention. It is usually difficult to disprove arguments categorically concerning economic policy. Unlike the physical sciences in the social sciences, we do not often have a chance to experiment and prove our theories.

During the period immediately following World War II, the economies of 2 of the leading countries of Europe were directed along entirely different lines. Great Britain embarked on a welfare state with serious curbs on individual initiative and the rewards for enterprise. Western Germany although ravaged by war liberated the energies of its people. It established a free market economy with the lowest possible taxes consistent with the revenue needs of its government. The results for the average citizen under these 2 diametrically opposite economic courses are now plain for everyone to see.

The March issue of the monthly letter prepared by the First National City Bank of New York contrasts the economic developments in the United Kingdom and in Western Germany during the period following World War II. I believe that this analysis is of such significance that I ask unanimous consent to include it in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Prof. David McCord Wright, of McGill University, has made a close study of comparative policies and results in West Germany and the United Kingdom since the war. In a pamphlet published in December by the American Enterprise Association, he notes:

"We have a most interesting test case of the effect upon the condition of the poor of a relatively free market economy as against one heavily paternalistic, controlled and subsidized.

"Offhand, the deeper conceived labor socialists and to some extent of the present United Kingdom economy with the condition of the poor would seem to be the fastest way to raise the income level of the lower income groups. But it hasn't worked out that way."

THE GERMAN MIRACLE

The economic choice faced by West Germany, after the currency reform and granting of substantial autonomy in 1948, was a basic one, according to Professor Wright:

"Had she followed the prevalent European and United Kingdom labor pattern she would have gone in for heavy control, rationing, state directed investment, sharply progressive taxation, tremendous emphasis on equality.

"Instead her policies were entirely different. Emphasis was placed upon incentive rather than literal equality, upon a free market rather than planning, upon modernization rather than routine."

The decision to adopt the Marktwirtschaft—the free-market economy—has paid off handsomely. West Germany, phoenix-like, has risen from the rubble of World War II to economic and financial preeminence in Western Europe—a rise that has been aptly called the German miracle.

This particular miracle lends itself to statistical measurement as can be seen in the charts.

West German workers' real wages (adjusted for price increases) advanced 99 percent between 1948 and 1957. In Britain

real wages went up only 11 percent measured from 1946, 2 years earlier, when its postwar expansion began. Industrial production in Germany in 1948–57 soared 254 percent while in the United Kingdom (1946–57) it went up only 70 percent. Per capita output of goods and services (1949–57), in constant prices, rose 115 percent in Germany as against 15 percent in the United Kingdom.

In the early postwar years, of course, West Germany's level of production was small in relation to Britain's so its percentage increases would naturally be larger.

But it is significant that Germany has kept right on progressing at a more rapid rate. Betweeen 1954 and 1957, gross national product, in real terms, rose more than 25 percent in Germany—as against only 4 percent in the United Kingdom.

HOUSES, CARS, AND SHIPS

In the field of particular industries, there has been similar dramatic improvement. West Germany in the past 7 years has built more housing than the United Kingdom built in 11. Since the population in both countries is the same—about 51 million—per capita housing output in Germany has also run well ahead. Starting from scratch in 1948, West Germany last year had moved up to third place among the world's shipbuilders. In 1948 some 328,000 autos rolled off assembly lines of British factories while only 30,000 were produced in West Germany. Last year German auto output amounted to 950,000 cars—some 100,000 above the United Kingdom's.

In the field of world trade, German exporters, combining high quality with attractive prices, have been able to acquire a growing share of world commerce. While the United Kingdom's share of world exports slipped from 12 percent in 1949 to 10 percent in 1956, Germany's share advanced from 2 percent to 8 percent.

The success of Germany's export drive enabled it to nearly triple its imports between 1950 and 1957 and still make solid additions to its gold and foreign exchange holdings. Starting from practically nothing in 1948, these reserves at latest count amounted to $5.7 billion—well over double those of the United Kingdom.

The German mark has become one of the world's most respected currencies. An important reason for this has been Germany's application over the postwar period of orthodox financial policies to contain inflation—i. e., restraint on government spending to produce an overbalanced budget and tight credit policies to limit borrowing and encourage saving. Moreover, German labor leaders, unlike their British counterparts, haxe exercised restraint in wage demands. Thus, while the cost of living has gone up 44 percent in the United Kingdom since 1950, it has increased only 18 percent in Germany.

LOWER TAX RATES SPEED EXPANSION

What made this economic miracle possible? Professor Wright gives a major share of the credit to a sharp reduction in West German personal income tax rates.

In 1948 West German tax rates went as high as 95 percent. However, an elaborate system of special exemptions for saved and invested income largely nullified the impact of these high rates. Beginning in 1950 the rates themselves were gradually revised downward until now the top rate is 55 percent. This compares with a maximum rate of 92½ percent or higher maintained in Great Britain over this period.

Capital investment is the sine qua non of economic expansion. The amount of investment, in turn, depends on incentives and savings—both of which are heavily influenced by the tax system. High tax rates not only blunt the desire to work and to take risks for profit, but they siphon off funds that could otherwise be available to launch new ventures. The figures tell the story: investment in West Germany, in constant prices, nearly tripled between 1949 and 1950. In the United Kingdom in the same period it increased only about one-half.

Dr. Robert G. Wertheimer, of Babson Institute, recently completed a 5-year study of the postwar German tax structure. His statement last month before the House Ways and Means Committee concisely spells out what was accomplished by the German tax reforms:

"Not only did the economy grow more rapidly than ever in a climate of stable prices but total public revenues also expanded and secured a balanced budget. Income-tax reductions set free entrepreneurial initiative which created a flexible economy providing full employment (in spite of the influx of 10 million destitute persons), steadily rising standards of living and a rapidly growing domestic and foreign investment.

"Taxpayers again could show their incomes and profits without the fear of seeing most of them taxed away. The lowering of the tax rates rapidly increased the ability of all classes to save. Institutionalized saving, for example, increased from 4 percent of the disposable income in 1950 to 8 percent in 1955. Business saving in the form of retained profits and depreciation allowances rose even more rapidly. These savings made possible the financing of the German reconstruction without inflation.

"The lesser dependence of the federal government on personal income taxation as source of tax revenues also solved the plight of the small businessman by permitting him to keep most of his gross profits as seed capital for expansion. The lower income tax burden stimulated the general willingness and ability of people to take risks and to establish new business or to expand existing ones. Wage earners and the professions also became more productive and were eager to work longer hours, overtime, and on outside projects to expand incomes that would accrue to themselves."

OUTPUT AND LABOR ATTITUDES

The huge sums poured into new factories, machines, equipment, and processes (gross investment of $50 billion in Germany between 1949 and 1956 as against $43 billion in Britain) played a big role in the phenomenal increase in German worker productivity. Output per man-hour in Germany between 1948 and 1957 increased 116 percent—as against only 37 percent in Britain between 1946 and 1957.

Increases in worker productivity, while heavily influenced by the flow of investment, also depend on other factors—e. g., the rate of modernization of tools and equipment and the general attitude of labor.

Professor Wright found sharp differences in worker attitudes toward modernization and strikes in the two countries:

"With a few exceptions union sabotage of new methods has been at a minimum in West Germany—in startling contrast with the frantic job consciousness and routine-mindedness of labor in the United Kingdom."

Noting that West Germany has suffered but a fraction of the time lost from trade disputes that the British economy has since 1949, he added:

"The sense of crisis felt by the whole of West Germany and the intense desire of all classes to rebuild the country created a public opinion, both inside and outside the unions, that would not have tolerated anything like the degree of slackness put up with in the United Kingdom."

ARMAMENT BURDENS

One objection often made to the comparison of West Germany and the United Kingdom is the presence for the United Kingdom of a great armaments burden. It should be noted, however, that Germany had more reconstruction to do, relatively speaking, than the United Kingdom.

Professor Wright's assessment of these burdens is closely tied in with the different labor attitudes in the two countries:

"While the presence of an armament burden would have made the West German economy start from a lower level, a nation whose labor force was so much more cooperative and so much more willing to accept change would have had about an equally rapid rate of increase of output.

"Had the unions of the United Kingdom followed the behavior pattern of those in Germany, the United Kingdom would have borne its arms burden and continued to expand relatively easily."

Peter Thorneycroft, who resigned in January as Chancellor of the Exchequer in a dispute over a continued rise in government spending, lists the defense burden as only one of the reasons for Britain's financial troubles. The New York Times of January 24 carried this account of Mr. Thorneycroft's penetrating analysis:

"First we have sought to be a nuclear power, matching missile with missile, and missile with antimissile and with large conventional forces in the Far East, Middle East and Atlantic.

"At the same time we have sought to maintain a welfare state at as higher a level, sometimes even at a higher level than the United States. We have been trying to do these things against a background of having to repay debts abroad during the next 8 years at a total equal to the whole of our existing reserves.

"It was not a mean thing to have attempted these things but no politician should be under any illusions as to what it has meant.

"It has meant that for 12 years we have slithered from one crisis to another—sometimes a balance of payments crisis, sometimes an exchange crisis, but always it has been a crisis. It has meant a pound sterling which has sunk from twenty shillings to twelve shillings.

"This is not a picture of a nation we would wish to see. It is a picture of a nation in full retreat from its responsibilities. It is the road to ruin."

IMPLICATIONS FOR UNITED STATES POLICY

A number of important lessons can be drawn from the sharply-contrasting German and British postwar experiences.

One is the vital role of free enterprise in providing the incentives and the competitive effort which deliver a growing and widely-diffused prosperity while preserving individual freedom.

Ludwig Erhard, Germany's economics minister and a staunch supporter of the free market economy, pointed this up in the October 28 issue of Time:

"The most successful means for the achievement and retention of prosperity is competition. Only by competition can an economy expand to serve all people, especially in their capacity as consumers, and dissolve all advantages which do not result directly from higher performance. Free competition thus leads to progress and profits for the whole social order."

Another lesson is the clear impetus given to production and workers' rewards by labor policies which do not impede technological progress. German labor's receptive attitude toward industrial innovation has paid off in rapid wage increases many times over.

Yet another lesson can be drawn from the differences in what Professor Wright calls "social attitudes" in the two countries:

"A famous English scientist once summed up the difference between a Socialist and a Capitalist in the following terms: 'A Capitalist,' he said, 'is a man who, if he himself is living well, doesn't mind if others are living better. A Socialist, on the other

hand, is a man who doesn't car how badly he himself is living as long as nobody else is allowed to live better.'

"Possibly, in the difference in the two attitudes indicated here, one may find something of the basic reasons for the German miracle."

Finally, there is a lesson for socialist planners who, in striving for income equality, use extortionate tax rates to take away income from the gifted, hard-working individual and spread it around to the less fortunate through various government welfare schemes.

Germany, as we have seen, has chosen a different route—one that has yielded more income for everybody. With sharply reduced tax rates and heroic work effort, Germany has achieved unparalleled prosperity.

Germany serves, thus, as a prime example of what Prof. Henry C. Wallich, of Yale University, pointed up in the autumn 1956 issue of the Yale Review:

"If we try to even up income distribution by means of progressive taxation, we reduce savings and curtail inventment incentives and so slow down growth. If we want to accelerate growth, we have to accept inequality of income.

"From a dollars-and-cents point of view, it is quite obvious that over a period of years, even those who find themselves at the short end of inequality have more to gain from faster growth than from any conceivable income redistribution. A speedup in real output of only 1 extra percent per year will soon lift even the economically weakest into income barckets to which no amount of redistribution could promote them."

Disposal of Agricultural Commodities Under Public Law 480

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a very comprehensive and informative statement made by Assistant Secretary of Agriculture Don Paarlberg before the House Committee on Agriculture on May 5, 1958, relating to the disposal of agricultural commodities under Public Law 480:

DISPOSAL OF AGRICULTURAL COMMODITIES UNDER PUBLIC LAW 480

(Statement by Assistant Secretary of Agriculture Don Paarlberg before the House Committee on Agriculture, May 5, 1958)

Mr. Chairman and members of the committee, I appreciate this opportunity to discuss with you operations under Public Law 480 and to present our views on extension of the program. The program has made it possible for us to make constructive use of our agricultural surpluses at home and abroad.

First of all, I wish to make it clear that our major emphasis is on sales for dollars, not on sales for foreign currency. Last year about 60 percent of our agricultural exports were for dollars. We intend to keep that percentage as high as possible, and to keep our total exports as high as possible.

To permit continuation of a high level of exports we recommended: That foreign currency sales under title I be extended for 1 year through June 30, 1959; that the authorization be increased by $1.5 billion; and that title II which authorizes the use of food for emergency relief abroad, also be extended for 1 year. Balances available from the current $800 million authorization for title II, however, are sufficient to permit continuation of operations for the additional period. Title III, which provides for donations through voluntary relief agencies and for barter transactions, does not have an expenditure limitation or an expiration date under the act.

SUMMARY OF TITLE I OPERATIONS

The current $4 billion authorization to make foreign currency sales under title I is virtually exhausted. Signed agreements have committed over $3.8 billion and the small remaining balance is being used to meet emergency situations. We urge, therefore, that prompt consideration be given to the extension.

The agreements already signed provide for the shipment of 586 million bushels of wheat, 3.2 million bales of cotton, 26 million bags of rice, 1.9 billion pounds of vegetable oils, 146 million bushels of feedgrains, 192 million pounds of tobacco, 150 million pounds of meat, 220 million pounds of lard, 212 million pounds of dairy products, 186 million pounds of fruit and vegetables, as well as other commodities.

In 1955–56, the first full year of operation of title I, foreign currency shipments totaled $440 million at export market value. During 1956–57, title I shipments amounted to $900 million.

Agreements signed to date will result in foreign currency payments of about $2.7 billion. About 55 percent of the total will be used for economic development purposes in importing countries, 10 percent will be used to support the defense forces of our allies and the remaining 35 percent is planned for meeting United States expenses overseas and expanding certain United States programs. Currency uses will be discussed in more detail later in this statement.

NEED FOR EXTENSION ACT

Public Law 480 was passed with the primary purpose of aiding in the disposal of large accumulated surpluses. When the act was passed, the Commodity Credit Corporation's investment in agricultural commodities was valued at $6 billion. This investment continued to rise in the next 2 years and totaled $8.2 billion on June 30, 1956. As disposal programs, including CCC exports for dollars at world prices, began to have full effect, this rise in investment was arrested and a downward trend was started. CCC's investment in agricultural commodities on June 30, 1957, was $7.3 billion. It is estimated that CCC's investment in commodities as of June 30, 1958, will be reduced to about $6.8 billion. These reductions, resulting mainly from disposals of wheat and cotton, would have been greater except for the extremely large harvest of feedgrains last year. It seems likely that United States agricultural production will continue at a high level and CCC will continue to take over production in excess of domestic use and commercial export outlets. Emphasis has been given to export sales for dollars and these sales have reached extremely high levels in the last 2 years. But under any foreseeable circumstances dollar sales will not be sufficient to move the surplus which may accumulate in CCC hands.

Originally (we had planned to program part of the new authorization before June 30 if the extension had been granted soon enough. It would be particularly desirable to negotiate large programs during the next 2 or 3 months to yield best results in terms of orderly export shipments and direct benefit to farmers. In the title I program, orderly programing and shipping is extremely important. These are dependent on continuous programing without time out between utilization of separate authorizations. We have run into periods when title I programing has come to a standstill; for example, the development of new agreements virtually ceased in January 1957 when our authorization was almost exhausted. The availability of funds during the following months would have avoided a backlog of program requests from interested countries. This backlog resulted in the necessity to scale down, delay, or exclude country programs, and in erratic shipment performance. Shipments were running about 800,000 tons a month last spring—these dropped off to less than 400,000 tons and increased to about 600,000 tons in January as shipments were being made against fiscal year 1958 country programs.

EFFECT OF EARLY EXTENSION

Obtaining an extension of the act soon would prevent a slump in shipments during this summer and fall. Considering the $700 million in commodities unshipped as of June 30, 1957, and the $1 billion authorization we are now committing, it is estimated that an additional $1.5 billion would result in shipments as follows:

1956–57	$1,400,000,000
1957–58	1,200,000,000
1958–59	1,400,000,000
1959–60	600,000,000

The extension would thus allow us to maintain title I exports in fiscal year 1959 at about the same level as 1957.

PROGRAM RESULTS

Title I originally provided for an authorization of $700 million in terms of cost to the Government of commodities supplied under the program. The value of these commodities at current world prices, of course, is considerably less. This authorization has been raised three times and now is $4 billion. Over $3.8 billion of this limit has moved or will move under more than 100 agreements signed with 35 friendly countries. Most of the balance is in negotiation or earmarked for specific countries. Agreements totaled about $475 million in the year ending June 30, 1955; about $975 million in 1955–56; about $1.5 billion last year; and about $875 million this year.

The increase in title I shipments from year to year has been one of the major factors leading to the rise in our total agricultural exports. In 1954–55 our agricultural exports had a market value of $3.1 billion. Title I shipments were small that year, accounting for 3 percent of the total. In 1955–56 our agricultural exports rose to $3.5 billion. Title I accounted for 12 percent of the total. In 1956–57, the year ending last June 30, agricultural exports rose to an alltime high of $4.7 billion. Title I shipments made up almost 20 percent of the total, or about $900 million.

The rise in total exports was the principal reason that the direction of surplus accumulations was reversed last year. During 1956–57, CCC investment in price-support commodities declined almost $1 billion with the principal reductions being in wheat, cotton, and rice, commodities for which there were heavy movements under the title I program. I would like to mention some of the individual commodity performances.

Wheat: Wheat has been one of our greatest surplus problems. Stocks in Government hands increased in each of the 5 years prior to last year; last year, however, wheat exports reached the record high of 550 million bushels. In other words, last year we exported almost as much wheat as we consume domestically in an entire year. About 200 million bushels of this total moved against sales for foreign currencies under the title I program. The record shipment resulted in a reduction of about 125 million bushels in the carryover of wheat. It is expected that exports this year will be about 400 million

bushels; in order to achieve this total more than 40 percent is being moved under title I.

Soybean oil and cottonseed oil: Exports of soybean oil and cottonseed oil have established new record levels during the past 3 years and will continue high this season. In each of the 3 years the major reason for the increase was shipments made under the title I foreign currency program. Last year, for example, we exported nearly 1.4 billion pounds of these oils. Almost 50 percent of the total moved under the title I program. The title I program has been helpful in keeping soybeans out of price support trouble. Despite a record harvest this year, the impact on the market has been relatively mild. Although the carryover of soybeans by CCC is expected to be larger than last year, the carryover will be only a small percentage of the crop.

Cotton: The major reason that our cotton exports expanded so markedly in 1956–57 was the stability and confidence given to world markets by the CCC export program. Exports last year reached 7.6 million bales, the highest total in a quarter of a century; nearly 20 percent moved under the title I program. The expanded exports have made possible a reduction in CCC cotton stocks for the first time in 6 years. Instead of adding to the existing surplus carryover, stocks this past season were reduced by more than 3 million bales. Additional reductions will be made this year with total cotton exports expected to remain relatively high at about 5.7 million bales. About 15 percent will be moved under title I.

Rice: A substantial reduction in surplus stocks of rice resulted from a record export year in 1956–57 which totaled about 26 million bags, of which 18 million bags moved under foreign currency sales. The title I shipments went to India, Korea, Pakistan, and Indonesia where increases in consumption would be obtained without affecting world markets. These movements have disposed of surpluses which had accumulated since the 1953 crop and have greatly improved domestic marketing conditions.

USES OF FOREIGN CURRENCY

Foreign currencies received in payment for commodities are deposited to the account of the United States overseas and are used for purposes authorized in section 104 of Public Law 480 and specified in the sales agreement. Several departments and agencies have responsibility for administering the expenditure of these currencies. For example, the Department of Agriculture is concerned with the use of currencies for agricultural market-development purposes; the International Cooperation Administration for currencies loaned back to importing countries for economic development purposes; and the Export-Import Bank of Washington for currencies loaned to private business firms.

About $45 million in currencies has been tentatively earmarked for agricultural market development under existing agreements. To date, approximately $10 million of this is being obligated for approved projects together with contributions by private trade organizations cooperating in these projects of over $3 million. Results of these promotion efforts are already evident. Cotton promotion projects undertaken in 21 countries have been a factor in the free movement of cotton overseas and should continue to encourage exports for some time to come. The title I poultry sale to the Republic of Germany plus a promotion project resulted in dollar purchases by that country of more than 4 million pounds of poultry in 1957. Thus far in 1958, West Germany has allocated dollars for an additional 3 million pounds of poultry. Particularly good results have been obtained in Japan in maintaining United States wheat and tallow exports, and increasing the use of United States leaf tobacco. Commercial supermarkets have been opened up in Italy and other countries following a supermarket exhibit held in Rome in June 1956. We believe that as more projects are undertaken and more products exhibited at trade fairs our export markets for many commodities will widen considerably.

About half the foreign currencies expected to accrue under existing agreements will be loaned back to importing countries for use in economic development projects agreed upon with the International Cooperation Administration. Considerable emphasis is placed upon coordinating plans for the use of these funds with the overall development programs of these countries. In approving loan projects for agricultural purposes care is exercised to avoid encouragement of production which would result in reduced outlets for United States agricultural commodities.

The extension of Public Law 480 granted in August 1957 provided for relending of foreign currencies, largely to United States firms and their affiliates, to assist in the development and expansion of private business in foreign countries. The equivalent of about $65 million will be reserved for these purposes in agreements negotiated this fiscal year with Colombia, Finland, Formosa, France, Greece, Israel, Italy, Korea, Mexico, Pakistan, Peru, and Turkey. These funds will be made available to private business firms through the Export-Import Bank of Washington when commodities under these agreements are shipped and paid for and proceeds assigned to the bank.

Currencies are also being used for the payment of United States expenses abroad; for the procurement of military services and equipment for military assistance; for education exchange programs; for assistance to American-sponsored schools, libraries, and community centers; for the translation, publication, and distribution of books and periodicals; and for the purchase of goods for other friendly countries.

PROGRAMING OF COTTON PRODUCTS

Senate bill 3420 to extend Public Law 480 contains an amendment which would require that products manufactured from upland or long staple cotton be made available for sale under the program so long as cotton is in surplus supply. We oppose this amendment.

Public Law 480 furnishes ample authority to finance exports of cotton products when this is justified and desirable in the judgment of the Department. However, we now conduct the cotton products export program which protects the competitive position of the United States cotton industry in relation to the sale of cotton products manufactured abroad from United States cotton purchased at world market prices. The program provides for equalization payments based on the raw cotton content of the product exported. These payments have been averaging about six cents per pound so far this season; they permit the price of cotton products to reflect the export price for the raw cotton content of the products exported.

In addition, the sale of cotton products under title I would more than double the cost of financing the exportation of the cotton content of such products. We estimate that the value of raw cotton in cotton textile products is less than one-half the value of the textiles. In some fabricated products, the cost of manufacture is many times the raw cotton content. We would have other problems resulting from the proposed amendment. These include the fact that we normally supply raw cotton under title I to countries which have processing capacity to meet their own needs for manufacturing cotton products.

BARTER ACTIVITIES AND TITLE II

Public Law 480 served to emphasize and strengthen barter operations authorized by previous legislation. Since July 1954, exports of agricultural commodities from CCC stocks through barter have totaled about $900 million at market value.

In May 1957, the barter program was revised to assure that each barter contract results in a net increase in United States exports of the commodity involved and to require the payment of interest by barter contractors taking delivery of agricultural commodities before they deliver the materials to CCC. Program procedures were also simplified this past December.

We are concerned that there is considerable sentiment to amend the law to require the Department to revert to the barter program in effect prior to May 1957. We believe this would be a serious mistake. The Secretary now has the discretion to determine whether or not barter transactions protect the funds and assets of CCC. This means that he will barter whenever the same commodities cannot be sold for dollars. To make it mandatory that the Secretary barter when he is offered strategic or other materials will require him to displace dollar sales.

The purpose of Public Law 480 is to increase the disposition of agricultural commodities. The act provides that title I foreign currency sales should be in addition to usual commercial marketings. This same provision should apply to barter transactions. Under a barter transaction where the exporter sells the commodity to a foreign importer for dollars and the materials received by CCC come from a third country, CCC is merely accepting materials in lieu of dollars unless the transaction results in a net increase in agricultural exports.

I would like to make it clear that the Department favors the movement of agricultural surpluses through barter. For example, we are now discussing barter deals to send about 450,000 tons of food grains, principally wheat, to India in exchange for some of her strategic materials; 22,000 tons of wheat to Norway for Norwegian-produced ferrochrome; and 70,000 tons of corn to France for French-produced ferromanganese. These transactions will result in exports which would not otherwise take place. If they were made without protecting sales that could otherwise be expected we would merely be accepting materials rather than dollars for these exports. We would like to record our strong opposition to enactment of legislation which would remove the discretionary feature of the barter program which enables us to protect the funds and assets of the Corporation.

Our recommendations include extension of the title II program which permits the President to act quickly to relieve distress abroad caused by famine, flood, and other emergency conditions. I understand that representatives of ICA are here in the event information is needed concerning these activities or other Public Law 480 operations with which they are concerned.

PUBLIC LAW 480 AND OTHER FARM LEGISLATION

Although we favor extension of Public Law 480 to permit us to use our surpluses in a constructive manner, this disposal program needs to be part of a farm program that will effectively bring the supply of farm products into better balance with market demand. The program should not be allowed to become a device to postpone needed price support and production adjustments. Public Law 480 is desirable within the overall objective of expanding markets. However, maintaining a range of support prices which is too narrow to permit the commercial growth of markets needed to absorb our production prevents the needed expansion.

TABLE I.—*Commodity composition of programs under title I, Public Law 480, agreements signed July 1, 1957, through Apr. 30, 1958*

[In millions of dollars]

Country	Wheat and flour	Feed grains	Rice	Cotton	Tobacco	Dairy products	Fats and oils	Other	Market value	Ocean transportation [1]	Market value including ocean transportation	Estimated CCC cost including ocean transportation
Fiscal year 1958 agreements:												
China (Taiwan)	7.5				1.7		1.3		10.5	1.6	12.1	15.4

[1] Amounts shown in this table are subject to adjustment when actual purchases and allocations have been made.

[2] Unspecified amount for possible procurement for 3d countries. Amounts shown in this column indicate a specified amount in the agreement for this use.

[3] In order to provide flexibility in the use of funds, many agreements provide that a specified amount of local currency proceeds may be used under secs. 104 (a), (b), (f), (h), and (i). In some instances, possible uses under sec. 104 (d) are also included in this category. Therefore, estimates based on the best information now available are indicated above under subsecs. (a), (b), (h), and (i). Balances not otherwise distributed are included under subsec. (f). This distribution is subject to revision when allocations have been completed.

The Honorable Will M. Whittington: A Tribute on his 80th Birthday

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1958

Mr. McCORMACK. Mr. Speaker, I wish to extend my warmest and most sincere congratulations to an old colleague and friend, Will M. Whittington, on the occasion of his 80th birthday. This distinguished legislator from Mississippi spent 13 faithful and fruitful terms in Congress. His achievements during those 26 years were of incalculable value to his district, his State, and his country. He compiled a record in this House which remains the envy of every man who aspires to the heights of public service.

Assuredly, Judge Whittington's name will always be associated with the great flood-control legislation enacted during the past half century. From 1937 through 1946 he served as chairman of the House Flood Control Committee and under his guidance the Mississippi River plan was repeatedly reviewed, modified, and improved. This, plus his leadership in the general flood-control program through which the Government came to recognize flood damage as a national problem, earned for him the well-deserved title of "Father of Flood Control."

His activities were not restricted to this field. The major credit for the passage of the Government Coporation Control Act in this House belongs to Will Whittington. In 1946 he carried the greatest burden in helping to bring forth, and assure passage of, the Employment Act of 1946. He, more than anyone else, was responsible for the authorization in that law of the Council of Economic Advisers. These enactments, and many others, are eloquent memorials to his services.

But we, who toiled with him in this body for so many years, remember him not only for his legislative achievements but also for the genuine courtesy of his manner. To us he personifies that courtliness for which southern gentlemen are justly famed. I wish Will Whittington many more years of life and happiness.

As chairman of the Committee on Public Works, he continually amazed me with his eminent grasp of the overall water resources problem, the question of flood control, and the protection of our rivers and harbors. No detail seemed to escape him. On many occasions all of us witnessed his marvelous ability to correct men who were testifying before the committee on matters in which they had but one responsibility, against the great multitude of facts which the chairman had to keep in his mind. Veritably he knew the history of every stream, large and small, in the United States.

As author of the Flood Control Act of 1936, he placed for the first time flood control on a national basis. Through the direct control of the Corps of Engineers, he became known as the author of all fundamental flood control legislation. In subsequent years his bright mind brought into law the changes made necessary by the passing of time.

Judge Whittington is a man of very strong character, with an integrity unimpeachable. His word has always been his bond. He has been successful in business to a very marked degree.

At 80 he will be about the youngest man mentally and physically for those years that I have ever known. His devotion to his family, and the devotion of his children and his charming and cultured wife to him is refreshing. He speaks of Mrs. Whittington with a glint in his eye and a ring in his voice as Miss Anne Ward. Their long association has been one of complete happiness, and neither of them will ever realize the blessings they have brought to so many in so many places.

Hon. William M. Whittington

EXTENSION OF REMARKS

OF

HON. CLIFFORD DAVIS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1958

Mr. DAVIS of Tennessee. Mr. Speaker, I should like to join with my esteemed colleague FRANK SMITH, of Mississippi, in wishing for his predecessor in the Congress, the Honorable William M. Whittington, all of the happiness possible as he celebrates his 80th birthday on Sunday, May 4, next.

No man, who has served the House of Representatives has left a more profound imprint upon the national life of his country than has Judge Whittington.

Mrs. Davis has always felt that Judge Whittington and Miss Anne Ward are two of the finest and most helpful influences we have ever had in our lives and she joins me in all of the good wishes we can bundle together for more years of activity and happiness on the Judge's birthday, and that the two of them may continue to enjoy the full blessings of life which they have already experienced and to which they are so justly entitled for many long days ahead.

Hon. William M. Whittington

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. ABERNETHY. Mr. Speaker, over the years Members of this body come and go. Some are long remembered and leave behind a record of service and accomplishments for the good of mankind that will live like stone monuments to their memory. One of those is the Honorable William M. Whittington who reached his 80th birthday on May 2. Mr. Will, as we all know him, had no equal in his chosen field, that of flood control and the improvement of our rivers and harbors. Today American commerce is enjoying good harbors and miles upon miles of navigable rivers, all because of the long service of this great man. Because of his service there are thousands of others who are tilling fertile farms and living in homes secure from dangerous flood waters which in previous years washed away their lands and destroyed their homes and business houses. He was concededly the greatest authority on flood control ever to serve in the Congress of the United States.

Since his retirement from the Congress a few years ago, he has continued to be the same busy man. It is pleasing to know that he is enjoying good health and living his usual active life.

On reaching this great day in his life, his 80th birthday, it is a pleasure to join with my colleagues in extending congratulations and wishing him many more years of active living, good health, and happiness.

Hon. Will M. Whittington

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. COLMER. Mr. Speaker, I desire to join with my Mississippi colleagues in felicitating the Honorable Will M. Whittington, a former and long-time Member of this House from Mississippi, on the occasion of his 80th birthday yesterday.

Will Whittington was a Member of this body when I came here in 1933. My friendship with him grew and profited until his retirement some 6 years ago.

In the quarter of a century that I myself have served in this House, I can truthfully say that in all of that service I never knew a Member who was more consistently dedicated to his work as a legislator. Moreover, I might add that in all of those years I have never known a Member who was more studious of the legislative proposals or devoted more hours to the job of legislating itself. In fact, he was a veritable encyclopedia on the contents and proposals of not one, but all bills pending.

His meticulous analysis of the various legislative proposals was amazing indeed.

Will Whittington was not only a man of knowledge and industry, but more than that, he was a man of high and unimpeachable integrity and character. So, Mr. Speaker, on this the 80th anniversary of the birthday of former Congressman Will M. Whittington, I should like as his long-time friend to salute him and his charming and intelligent lady; and to wish for them many more years of useful life in behalf of their community and Nation.

Mr. Speaker, I would like to join with others here today in congratulating the Honorable William M. Whittington, a distinguished fellow Mississippian, on the occasion of his 80th birthday, and in paying tribute to him as an outstanding Mississippian and one of the ablest, most honest and courageous men who ever served in the Congress.

Mr. Whittington was first elected to serve the people of Mississippi in the 69th Congress, and remained in the House for the succeeding 26 years. At the end of this time he voluntarily resigned from Congress, but he has maintained his interest and active participation in the affairs of our State and Nation since his retirement.

Mr. Whittington enjoyed the friendship, esteem, and respect of every Member of Congress who served with him, and he has carried with him into his retirement the admiration and high regard of all of us. He was not only a man of unusual ability, but one who devoted his time and energy to the task at hand, finding no time to waste but ample time to counsel and advise with fellow Members, both young and old, on matters in which they were interested or needed help. It was my privilege to serve with him for several years, and our association was always most pleasant and his counsel most helpful. His career and notable contributions to the laws of our country remain as an example and inspiration to all of us. I sincerely wish for him many more years of happiness and contentment.

The Full Story

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. HÉBERT. Mr. Speaker, elsewhere in this RECORD I have inserted the statement made by Adm. Arleigh Burke, Chief of Naval Operations, before the Committee on Armed Services of the House in connection with the proposed reorganization of the Defense Department.

Here I insert the remarks of Gen. R. Mc. Pate, the commandant of the United States Marine Corps.

I believe it significant and interesting to direct your attention to the fact that on Saturday night last in an address before the Reserve Officers Association of the Washington area, General Counsel Robert Dechert of the Defense Department, took occasion to severely criticize the Navy and the Marines, particularly the Marines, for the position taken by them through Admiral Burke and General Pate. Mr. Dechert explained that he was proud of the Marines and a former Marine himself and then he set about chastising them and using language which was most inappropriate and shocking.

This was a clear demonstration of the effect of the Pentagon "gag" rule. Here an official Pentagon spokesman was allowed to attack two honored branches of the armed services without either one of them being allowed to defend themselves.

In my limited capacity I attempted to put forth the true story in a television debate with Mr. Dechert Sunday on "Celebrity Parade" conducted by the able commentator Joseph McCaffery.

"It is not so," was in substance the only defense of Mr. Dechert, although I repeatedly made statements based on the public record of the hearings, Mr. Dechert flatly denied the facts. I would not have been surprised had he said: "That is not true," if I had said "there are Ten Commandments."

In one instance I pointed out to him that the Defense Department, through the technique of withholding appropriated funds, had reduced the fighting combat strength of the Marines from 200,00 to 188,000. He replied that the Navy Department and not the Defense Department had made the reduction. I insisted that it was the Defense Department and not the Navy.

Following the debate I checked with the proper authorities and was informed that it was the Defense Department and not the Navy Department which had reduced the combat strength of the Marines.

I could go on ad infinitum but let General Pate tell the story here, because he cannot speak outside the committee

room under instructions from the Defense Department.

STATEMENT OF THE COMMANDANT OF THE MARINE CORPS, GEN. R. McC. PATE, UNITED STATES MARINE CORPS, BEFORE THE HOUSE ARMED SERVICES COMMITTEE

Mr. Chairman and gentlemen, I am appearing before you today in both of my capacities—first, as a participant in the Joint Chiefs of Staff; and second, and chiefly, as head of one of the services, as Commandant of the Marine Corps.

At the outset, let me say that I applaud and support the general objectives and, with only a few reservations, the principles stated in the President's message to Congress of 3 April. Certainly, for example, "separate ground, sea and air warfare is gone forever." This has been so since 1942. We have realized it in the Marine Corps for many years, and I am sure you need no reminder that today, as in the past, we are the service which above all, is at home in all media, in the air, on land and on the sea.

Equally necessary the authority of the Secretary of Defense must be clear and direct. So far as I can discover, no one has ever quarreled with this.

Let me say, however, that important as they are, I do not consider organization and reorganization as panaceas. You have already heard this often; let me repeat it. No amount of organizational tinkering can take the place of good men, wholeheartedly determined to make the system work. Moreover, in the words of Ferdinand Eberstadt, who is something of an authority on Defense organization:

"Fighting spirit is not primarily the result of a neat organization chart nor of a logical organizational setup. The former should never be sacrificed to the latter."

Now, having given these brief general observations, let me comment on some features of the proposed legislation.

First of all, there are a number of aspects of the bill which I endorse wholeheartedly.

The proposed provisions for efficient centralization of defense research and engineering under the immediate control of the Secretary of Defense seem to me to be wise and forward-looking.

Such centralization gives the Secretary of Defense breathing space and means to explore dispassionately the likely capabilities of new technological developments before he assigns them to the appropriate service. If, on the other hand, a service is allowed to pursue research along a given line from the very outset, regardless of where it may lead, any suggestion that the fruit of such development may not belong properly to that service meets with understandable resistance. To avoid such frustrations and to assist the Secretary in carrying out his duty to make decisions as to what service or services will use the various new weapons as they become operational, this feature of the bill is certainly worthy of consideration.

Another proposal which I support completely is that which would facilitate transfer of officers among the services. This can be accomplished today, and sometimes is, but needless redtape obstacles exist. They should be eased, and I believe the proposed provision would effect this. On the other hand, I should regret to see advantage being taken of this or any similar enactment, in such a way as to encourage interservice "raiding" through offers of preferment intended to induce particularly desirable officers to transfer. Possibly it might be wise to insert language in this portion of the bill to insure that any officer so transferred to another service would do so only with his existing seniority.

There are, to be sure, some general features of the proposed bill which, although they do not touch the Marine Corps explicitly, I view with reservation. Perhaps they go further than was really intended. I have no doubt you will recognize these if you have not already done so.

Among these general features are elements of the proposal which relate to the unified commands. While their purpose is not clear to me, so far as I know these commands are operating satisfactorily today.

In addition to these matters which are of general concern, a few of the changes are of immediate interest to the Marine Corps. As your primary witness on the Marine Corps—I view them with real apprehension. I am sure that the Secretary of Defense does not intend to take advantage of these proposed changes to impair our usefulness. But this is a government of laws not of men and we cannot make the laws on the assumption that we will always be blessed by men of today's high caliber. As the committee knows well, the Marine Corps has undergone—and happily, survived—several attempts to reorganize it into nonentity.

With such hard-earned consciousness of history, we recognize the danger of having the answer to whether the Marine Corps shall be a truly effective force or simply a ceremonial unit dependent upon the whim of a single individual rather than the considered judgment of the body which called it into existence nearly two centuries ago. I would certainly hate to think that some future Secretary of Defense might misread the enactment of some of the proposed features of this bill as a mandate from Congress to rationalize the Marine Corps out of a job, or, as General Vandergrift put it somewhat less abstractly, in his testimony before Congress in 1947, "to give the Marine Corps the bum's rush."

To be specific, the feature of this bill which causes me very grave concern as Commandant of the Marine Corps, is the proposal to repeal sections 202 (c) (1), (2), and (3) of the National Security Act as it now stands. These three sections prohibit the transfer, reassignment, abolition, or consolidation of the combatant functions which Congress has assigned to the respective services elsewhere in the National Security Act. Since the history of these prohibitions in section 202 (c), is not well known, you will perhaps excuse me if I retrace my steps to 1949 when the so-called Tydings amendments to the National Security Act were under consideration by Congress.

You will note that, both then and today, the law has treated quite carefully the combatant functions of all the services. With respect to the larger services, the prescription is quite broad, but with regard to the Marine Corps, these combatant functions have been very carefully delineated by Congress. Some of them, as a matter of fact, go directly back 160 years to the Marine Corps Act of 11 July 1798, and have held up to this very day.

That Congress has spelled out the combatant functions of the Marine Corps in this precise language is no accident, as I am sure members of this committee are well aware. It was specifically to insure that the United States Marine Corps would continue to make an effective contribution to national security that the detailed combatant functions enunciated in section 306 (c) of the National Security Act were written into law.

Ours is a specific task, involving something of the land, the sea, and the air. It does not respond to generalization as do the functions of the other services, and our continued usefulness is dependent on the specific language as it exists in the law today.

Moreover, this language has never in any way interfered with our ability to serve effectively with the Army, the Navy, the Air Force, or in a unified command.

Thus, any tampering with these functions—or with the safeguards of section 202 (c) which, in turn, now protect them—could be a most dangerous change insofar as the Marine Corps' future ability to fight is concerned.

In 1949, you will recall, your committee queried the Secretary of Defense as to whether he had plans under his general powers to assign marine aviation to the Air Force, an action which would have impaired the combat effectiveness of the Marine Corps by a stroke of the pen. In the same year there were authoritative proposals which actually reached the Joint Chiefs of Staff that service responsibilities for airborne and amphibious operations be canceled by the Secretary of Defense and made the common responsibility (nobody's responsibility in reality) of all the services. I leave it to your conjecture just how much the amphibious art could or would have suffered.

These are only examples, but you will see that real dangers existed, and that Congress' reservation to itself of the power to make changes in the combatant functions of all the services, was no abstraction but a real safeguard against hasty or ill-considered decisions going to the heart of our military readiness. I consider these safeguards today as one of the principal assurances in law that the Nation can continue to have useful armed services all capable of a continued contribution to the military readiness of the United States. And I find it difficult to imagine how the present law, which, as I have said, insures the continued usefulness of the Marine Corps, can be regarded as unduly restrictive, other than by some future Secretary of Defense who intended sooner or later to alter the marines' status and functions.

After all the Congress is as interested in the effectiveness of the Armed Forces as anyone else. Indeed, it has frequently taken the initiative to improve their effectiveness—sometimes against the opposition of the military services themselves. If a merger, consolidation, transfer, or elimination has sufficient merit to earn the unqualified support of the Secretary of Defense the Congress will certainly give it a most careful hearing.

From the viewpoint of the Marine Corps, I therefore strongly favor retention in law of section 202 (c) (1), (2), and (3) of the National Security Act as it now stands.

As a sequel to this discussion of the possible effects of the proposed legislation upon the combatant functions of the Marine Corps, I believe it would be useful to reexamine just what the Marines contribute to national security, in order to insure that they are actually meeting a real need. Irrespective of any useful contribution which the Marine Corps has made in the past, its preservation cannot be based upon sentiment. It must be based upon unquestioned requirements.

While technology has narrowed the oceans, the United States is still an island nation, and North America is the last great world island. Our potential enemies are separated from us by the seas. Our military history reflects a recognition that we must try to meet our military problems overseas and not wait until they come to our shores. The Marines have done a lot, in years past, to make this military philosophy a success by taking part in emergency overseas expeditions for the specific purpose of deterring little wars or terminating little wars before they become big ones. That is what Marine forces were doing in 1950 when they went to Korea on such short notice. It is what they were prepared to do when they were dispatched to the Mediterranean and the Persian Gulf in the Suez crisis of 1956. And it is what they are ready to do now.

Are crises like Korea and Suez less likely to happen in today's nuclear/missile age than they were in years past? The consensus is they are actually much more likely so long as the Communist orbit and the free world have the capacity to destroy each other

totally, should either trigger the holocaust of total nuclear devastation.

It is because of this hydrogen standoff that the Communist regime, the regime which would bury us, has refurbished its techniques for achieving its ends through lesser war—by fomenting troubles which fall somewhere between the exchange of diplomatic notes and the exchange of intercontinental missiles.

This is the so-called limited war which the Soviets know so well and which they have employed so effectively. In its military aspects it is certainly nothing new. Indeed, it is the very kind of war that has consumed the time and energies of the Marine Corps for most of its two centuries. It is because of today's limited war that the demand is more pressing now than ever before for the ready, flexible, balanced, Marine expeditionary forces prescribed in the National Security Act.

That act prescribes that there shall be 3 combat Marine divisions and 3 Marine Aircraft Wings and that they shall be prepared for expeditionary duty beyond the seas. We have the units, and they are ready to do the job for which they were designed. They are on a war footing and within the limits imposed by the state of the art and by the budgetary restraints, they meet the requirements of today's warfare. If a Marine expeditionary force is needed today—we can meet that requirement today.

It is my conviction that the usefulness of these ready forces is fully recognized. Neither the President's message nor the responsive draft legislation implies any reduction in the requirement for these ready Marine air-ground task forces. And only last week General Twining advised this committee that the mission of the Marine Corps, as expressed in the National Security Act, is completely valid.

From all this, it seems fair to conclude that the proponents of the present reorganization do not visualize it as a lever to reduce the Marine Corps' capacity to make a continued contribution to national security. Nevertheless, as I have pointed out earlier, present good intentions are no insurance against future damage to our usefulness; only in the law can we find such insurance.

You will note that, although I have sometimes used words as "safeguards," and "insurance," I have tried—and hope to keep this point clear—to relate these expressions to the guarantee of a useful, effective Marine Corps. In our view, the present functions of the corps, spelled out in law, do just that. Moreover, in a maritime nation such as ours, someone, whether he is a Marine or not, will always have to perform such functions. If anyone else, any other service, feels capable of doing these things which we have always done, better and more efficiently than we do and have done them, we not only welcome the competition but are perfectly ready to step aside for performance which excels our own. In other words, to use Justice Holmes' phrase, the Marine Corps is always prepared and willing to submit to the test of the open market.

As I conclude, I think I should say that my relations with the Secretary of Defense—and with his predecessor, for that matter—have been direct and cordial. He knows my feelings about the current proposals to change the law. My reactions to those features which directly affect the Marine Corps come from a realization that all legislation has, or surely ought to have, a purpose. If so, and if certain of these proposals are enacted in their present form, it seems to me that some future Secretary of Defense might well feel entitled to believe that Congress had written him a blank check by the repeal of the first 3 subparagraphs of section 202 (c) in the National Security Act.

I have no fear as to the intentions of those now in high office, but the future prospects for preservation of the Marine Corps as a useful, ready, fighting, national expeditionary force, must be the Commandant's constant concern. It is my conviction that the question of whether the Marine Corps shall be a truly effective force capable of making its unique and significant contribution to the national security or simply a ceremonial unit is of such importance to the national security as to warrant the considered judgment of the Congress itself.

And finally, Mr. Chairman, I do not have to assure you, the members of this committee and the Congress, that whatever law Congress may enact, the country will find that the Marine Corps, now and in the future, will carry it out wholeheartedly and without reservation.

Reorganization Defense Department: What Aims?

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. KILDAY. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Army Times of April 26, 1958.

The Army Times is an authoritative and competent military publication. Its editorial views are important:

WHAT AIMS?

High-ranking witnesses called to testify before congressional committees on the worth of the President's reorganization plan are expected to operate under some restraint, imposed by the word from still higher up. Nevertheless, enough vagueness lingers about the proposals—despite all the interpretations published in the past few weeks—to make it imperative that a body of expert opinion be built up around a number of important points. To that end, we hope Congress will be tenacious and the witnesses frank.

Many people wish to know, for example, whether the plan's concentration on the need for unification has not been unduly heavy. Nowhere in the President's message is there a critical word for the centralization of power already existing in the Defense Department hierarchy—a power which, fenced in by numerous assistant secretaries, boards, commissions, and committees—has cost us much in wasted effort, indecision, and confusion. Very little reorganization on this level has been proposed.

On the other hand, at the very top, the Defense Secretary and the Chairman of the Joint Chiefs of Staff would be brought into a close and constant relationship. On its face, this is not a bad thing. But, under the proposal, these two men (with the President) would command all operational units of the Armed Forces. The service Chiefs of Staff would be divorced from their services and operate as advisers to the Chairman and the Defense Secretary. Their present assistants would run the housekeeping units, under the service Secretaries. And these would be called upon to serve the logistical needs of the combined fighting arms, formed into joint commands and commanded only by the Defense Secretary and his Chairman.

The Chairman thus becomes, in fact, if not in name, a superchief and all-powerful. With the legal authority voted him to act in this post, one wonders how long the separate Departments of the Army, Air Force, and Navy can endure. (Mr. Eisenhower says this dissolution, or merger, will never occur. With the best intentions on the part of everyone concerned taken for granted, it is hard to see how it can fail to occur.)

If the plan is adopted in its entirety, it is possible that within a few years we will possess a monolithic system of defense depending on 1 or 2 men to make it work. In that space of time, the Joint Chiefs may lose much of their usefulness as their experience with operational activities grows more and more remote. The unified commands, 6 or 8 of them scattered over the globe, will meanwhile have been building "empires" as they competed for men, equipment, and money. Their logistical demands upon the services will be compounded in Washington. And the commands themselves, which had been set up originally to carry out certain objectives, may well be frozen in place around missions which no longer conform to the national needs.

Whatever else our present system does not have, it does possess a certain flexibility. We would do well not to toss it lightly away.

Instead, it might be well at this point to go a little slowly. (We are sure the controversy will drag out in Congress for some time, anyway.) Why not, meanwhile work at defining clear national objectives on which the Joint Chiefs of Staff can base a positive strategy? This has never been done; its delineation might help us form a better idea of the ways and means of putting it in effect.

Spotlight on Pentagon

EXTENSION OF REMARKS
OF
HON. CARL VINSON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. VINSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Hanson W. Baldwin, of the New York Times:

SPOTLIGHT ON PENTAGON: HOUSE HEARING ON REORGANIZATION SEEN AS VITAL EFFORT TO CLARIFY BILL'S SCOPE

(By Hanson W. Baldwin)

The House Armed Services Committee continued yesterday to probe into the details of the President's plan for reorganization of the Pentagon.

The hearings, under the chairmanship of CARL VINSON, Georgia Democrat, are in the best traditions of the congressional function. They are intended to develop the meaning and the intent of the legislation, as well as to determine how the projected bill would alter the established order and affect the security of the Nation.

The detailed questions being asked and answered in the hearing rooms are particularly needed. This is so because most of the official and unofficial comment about the reorganization plan had been extremely general until these hearings started.

Much of the comment has consisted of military platitudes to which no one could take exception but that shed no light on the problems of the Nation's security organization.

The committee members have repeatedly expressed, in questioning witnesses, fears about the actual and implicit powers granted by the projected legislation. Some of the extreme fears, such as the danger of a "man on horseback," are unrealistic or envision highly improbable events.

The committee members, however, are not creating strawmen. Their honest concern about the powers granted by the legislation

and about the intentions of its sponsors is based on solid fact and on a long history of attempts to convert our security organization into a closely centralized monolithic structure.

WIDE POWERS CONCEDED

The question already has elicited, for instance, the admissions that the projected legislation would grant the Secretary of Defense power, without any congressional veto, to eliminate Marine aviation; to merge the Army's Corps of Engineers with the Navy's Bureau of Yards and Docks; to abolish or alter service functions, and to permit the de facto merger of the individual services.

Witnesses have conceded that certain provisions of the law could tend toward the establishment of a kind of general staff in the Pentagon.

All these changes may or may not be desirable; there is sharp difference of opinion about them. The point is, the projected law does not purport to authorize or advocate such sweeping changes, but its legal phraseology makes such changes permissive.

All the witnesses, especially Secretary of Defense Neil H. McElroy, have stated emphatically that such sweeping changes were not intended.

INVESTIGATORS SKEPTICAL

But members of the committee, most of them with long years of experience in military matters, are still skeptical. They are not doubting the truthfulness or sincerity of the witnesses, but are wary of the grants of power conveyed by the legislation. The honest intentions of the present officials in the White House and the Pentagon will not necessarily guide future incumbents.

The reasons for the committee's skepticism are based solidly on experience since World War II. There have been persistent efforts to achieve just what the witnesses say the projected legislation is not intended to achieve: That is, a monolithic Department of Defense with a very powerful Secretary, a single chief of staff, a greater general staff and more or less merged services.

President Eisenhower became quite angry at a recent news conference when he was asked if his reorganization bill would not make it possible for some future incumbent in the Pentagon to establish a "kind of personal army." The question was extreme. Nevertheless, the President, when a general, did favor the monolithic concept of defense organization. He also advocated the changes witnesses now say the projected law is not intended to achieve.

As Chief of Staff of the Army, the President is on record as favoring a single professional Chief of Staff for all the armed services. In 1945 he declared that "if I had my way, we would all be in the same uniform."

He also approved, while as general, a memorandum that, if it had been adopted, would have reduced the Marine Corps to combat units no larger than regiments. It also would have made the Marines' primary function the guarding of naval stations and bases and the provision of lightly armed units to protect United States interests ashore in foreign countries.

In 1944 a War Department proposal for unification, envisaged the establishment of a Chief of Staff, with full budgetary powers, and a Secretary of Defense, without any budgetary authority. Later, in 1945, a Secretary with more powers was advocated, together with a single Chief of Staff over all the armed services.

The concept of a defense structure with a powerful Secretary and, particularly, a powerful Chief of Staff with a greater general staff over all the armed services had been advocated, pushed and urged in one form or another by President Eisenhower and some of his present advisers for more than 13 years.

Congress has always been suspicious of this concept, yet the history of Defense Department organization has been one of a slow drift toward such a centralized consolidation of power.

The current hearings, therefore, are covering familiar ground. At times, the testimony may appear to be shadowboxing, since all the witnesses deny an intent that the projected law appears to permit.

But experience indicates that the congressional fears are not bogeymen. In some respects, but not in all its provisions, the proposed law would seem to dress up in more palatable form the old proposals of 1944 and 1945.

Independent Phone Company Is Important Segment in Economy of a Community

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein the following article as it appeared in the Lancaster, S. C., News, on April 10, 1958:

INDEPENDENT PHONE COMPANY IS IMPORTANT SEGMENT IN ECONOMY OF A COMMUNITY

The 4,100 independent (non-Bell) telephone companies of America, of which the local telephone company is one, and which serve 11,000 communities and two-thirds of the geographical area of the country, now operate 9,671,500 of the 63,912,500 telephones in the United States, its Territories and possessions, and have a total plant investment of $2,760,214,723.

According to T. Carter Thomasson, manager of the Lancaster Telephone Co., figures released by the United States Independent Telephone Association, reflect the continuing growth and progress of the industry, which has been expanding at an accelerated pace during the past 12 years to meet the unprecedented demands for telephone service occasioned by population growth, increased usage, and a prosperous economy. While the country's population increased 36 percent during the 22-year period from 1935 to 1957, the number of independent telephones soared from 3,185,000 to 9,771,500 or 204 percent, the association said.

The independent telephone industry, through its operating companies, equipment manufacturers, and suppliers, serves approximately 11,000 communities in the United States, which is twice the number served by the Bell System. However, because Bell companies operate in most of the larger metropolitan areas, they have by far the larger number of telephones (54,241,000).

The independent industry has introduced a number of major technical advances in the telephone field, including the first practical dial switching system, which was invented by Almon Brown Strowger, a Kansas City undertaker. Its first commercial application was made more than 61 years ago in an independent exchange at La Porte, Ind. A few years later, the independents introduced the first dial telephones in a number of exchanges in various parts of the country. Today, many independents are installing direct distance dialing whereby the customer dials his own long distance numbers without the assistance of an operator. About 75 percent of all independent telephones are now dial operated.

At the turn of the century, independents introduced dial telephone systems in such large cities as Chicago, San Francisco, Los Angeles, and Omaha, which cities are now served exclusively by the Bell System. Some of the cities in which the independents operate include Tampa and St. Petersburg, Fla.; Jamestown, N. Y.; Long Beach, Santa Monica, and the entire suburban area of Los Angeles, Calif.; Fort Wayne and Terre Haute, Ind.; Durham, N. C.; Erie, Pa.; and Lexington, Ky.; Sumter, S. C., and Lancaster, S. C.

The Nation's long distance service is furnished primarily by the Bell System toll network. All long distance facilities are interconnected with indepdent telephone company lines. Long distance traffic between the two segments of the industry is freely interchanged. Agreements are in effect covering routings and divisions of revenues. Many independent companies themselves own and operate a large mileage of toll lines, mostly regional in character, all interconnected with the Bell network and with the toll facilities of neighboring independent companies.

President Challenged on Pentagon Changes

EXTENSION OF REMARKS
OF
HON. CARL VINSON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. VINSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by one of the most distinguished military analysts in the country, Mr. Hanson W. Baldwin, of the New York Times:

PRESIDENT CHALLENGED ON PENTAGON CHANGES—CRITICS SAY HE IS ASKING TOO MUCH IN ADDITION TO PRESENT POWERS

(By Hanson W. Baldwin)

The President's program for reorganizing the Pentagon encountered increasingly rough sledding last week before the House Armed Services Committee as a parade of witnesses registered increasing degrees of dissent.

Ghosts of past organizational plans stalked the committee rooms and complicated the hearings. Before the week was out it was obvious that many of the reluctant witnesses—and the committee itself—were more worried about the intent of the administration and the broad permissive powers the new law might convey to this and future administrations rather than about the avowed objectives of Secretary of Defense Neil H. McElroy.

The present powers of the President as Commander in Chief of the Armed Forces and the authority of the Secretary of Defense under existing law, and just how these powers would be broadened under the proposed legislation, were under critical and searching examination.

BUDGET AUTHORITY

There was general agreement that the President and his Secretary of Defense already possess the power to accomplish legally some of the objectives outlined in the administration's message to Congress (and to accomplish others de facto). Executive orders have set the wheels in motion in some areas. The Secretary of Defense has issued a memorandum to the service Secretaries which stated that future promotions of admirals and generals to three- and four-star rank would have to be approved by

both the Secretary of Defense and the Joint Chiefs of Staff, and those promoted would be selected in part because of "their capacity for dealing objectively—without extreme service partisanship—with matters of the broadest significance to our national security."

The President and the Secretary of Defense also have present power to reduce, eliminate, or merge the public-information sections and legislative liaison sections of the individual services. The President had indicated publicly that these agencies tended to exacerbate interservice rivalries and should be curbed—although it has always been within his power or that of the Secretary of Defense to curb them. Only exploratory studies have been conducted to date.

CHANGES BY ORDER

The President has also issued an Executive order, reversing one he issued 5 years ago, which alters the chain of command in the Pentagon, eliminates individual services as "executive agencies," and removes the service Secretaries from the command channel. This order, however, is still inoperative, since part of the President's new chain of command contemplates the establishment of a "Pentagon command post"—an operations division within the Joint Staff of the Joint Chiefs of Staff—and this would probably necessitate an increase in the size of the Joint Staff, now limited by law to 210 officers.

Another recommendation of the President, that the Secretary of Defense be granted greater budgetary flexibility by Congress and that a new appropriations system be adopted which would enable the Secretary to shift funds from project to project or service to service, has been postponed for implementation until next year and plays no part in the present hearings.

PRESENT POWERS

The Secretary already possesses some of this budgetary power. Congress has granted him, for instance, a sizable emergency fund to be applied as he sees fit, and the Secretary can, de facto, eliminate, reduce, or even increase project and service requests for funds to Congress. The President's plan contemplates still greater financial authority for the Secretary, an issue which involves detailed congressional control of the purse strings.

Further grants of power conveyed by the projected legislation are the subject of some dispute in the hearings; nearly all of them center around the authority of the Secretary of Defense.

That authority today, according to a legal opinion—written for the Defense Department in 1953 by a committee composed of H. Struve Hensel, Rogert Kent, and Frank X. Brown—"is complete and supreme."

"Congress," this opinion declared, "has delegated to the Secretary of Defense not only all the authority and power normally given the head of an executive department, but Congress has, in addition, expressly given the Secretary of Defense even greater power when it made [him] the principal assistant to the President in all matters relating to the Department of Defense."

MEANING OF THE LAW

This opinion explicitly stated that "there are not separately administered preserves in the Department of Defense." The phrase "in the present law"—a phrase which the President is seeking to repeal—that the "Departments of the Army, Navy, and Air Force shall be separately administered by their respective Secretaries" simply means, the opinion continues, that "the Secretary of Defense cannot exercise his supreme power so as to destroy the separate entities of the three military department."

The 1953 opinion also pointed out that despite the overriding authority granted to the Secretary of Defense, Congress has explicitly written into the present law certain limitations upon that authority, some of which the administration is now seeking to eliminate. Perhaps the most important and controversial limitation was the specific assignment by Congress of combatant functions or "roles and missions" to the services. The Secretary is explicitly forbidden from "transferring, reassigning, abolishing, or consolidating" such functions. He cannot accomplish the same purpose by detailing or assigning personnel or directing the expenditure of funds. He cannot merge the three military departments, nor can he establish a single military commander of supreme general staff over all the services.

He may, however, after first reporting his intention to the Armed Services Committees of the Congress, change or transfer from one section of the Pentagon to another functions which are not expressly frozen by law. And finally, as a check upon his authority, any Secretary of an individual service or member of the Joint Chiefs may take his case to Congress "after first so informing the Secretary of Defense." This clause, too, is repealed by the new legislation.

The administration's proposed changes would eliminate most of these restraints upon the Secretary's power. The new law would specifically permit the Secretary to alter combatant functions or roles and missions.

REDUCTION OF SERVICES

The separate services would be retained de jure, but de facto might be reduced to training, supply and housekeeping units. The power of the Chairman of the Joint Chiefs of Staff and of the expanded Joint Staff under him would be increased. A director of defense research and engineering with broader powers than any prior Assistant Secretary of Defense would be created to control service research.

The command functions exercised tacitly or de jure by the military heads of the various services would be limited to such forces as the service secretaries might determine—not including any forces assigned to unified commands.

There may be—in fact there still was—last week, legal debate about exactly what these new grants of authority would mean. But there was no doubt that they broadened considerably—in legal terms—the already great authority that is resident in the Secretary of Defense.

No 5-Cent Post Stamps

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Camden Chronicle, Camden, S. C., of April 30, 1958:

NO 5-CENT POST STAMP

As predicted here a long time ago, first-class postage will be no more than 4 cents, whether your letter is going across the street or across the continent. The administration request for 5-cent postage (4 cents locally) which was passed by the Senate, was killed in conference by 2 of the 3 Senate conferees, Chairman OLIN D. JOHNSTON of South Carolina, of the Senate Post Office Committee, and Senator MIKE MONRONEY of Oklahoma.

Subsequently, the Senate and House conferees agreed on pay raises for 530,000 postal workers that will average about 9.5 percent, which is a considerable hike over the 6 percent suggested by the President.

Thus, administration supporters were quick to predict a veto, and Senator FRANK CARLSON, of Kansas, sponsor of the 5-cent stamp and the third Senate member of the conference committee, is quoted as saying: "I don't see how President Eisenhower could possibly sign this bill."

And perhaps he shouldn't. It is not a good bill in any sense. It is, at best, a stopgap measure that will increase revenues, raise pay and leave the post office in the same mess it is in now. It is unrealistic in sidestepping the establishment of a basic postal policy outlining post-office services that should be supported by postal revenues, and the authorization and financing of a long-range full-scale moderization program, as urged by Senator JOHNSTON. Both of these, as the Senator has pointed out, are essential to the formulation of proper postage rates and pay scales.

Perhaps a veto will clear the way to start over on a really constructive, forward-looking postal bill. But we still say you need not expect to pay more than 4 cents to mail a letter anywhere in the United States of America.

Retirees Who Are Alone

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. BURNS of Hawaii. Mr. Speaker, a lengthened life expectancy is a major accomplishment of our day and age. We have not, however, taken proper cognizance of the many problems encountered by our senior citizens who live the added years our science has given them.

Pending before a subcommitee of the House Education and Labor Committee, chairmaned by the very able and knowledgeable Congressman from Minnesota, the Honorable ROY WEIR, is legislation designed to place the proper emphasis on this most important subject and the many inherent problems.

Apropos to the subject, I include an editorial from the Honolulu Advertiser, April 5, 1958, which, while factually in error as to the Honolulu Board of Supervisors' action, makes a very sound contribution to the subject of the problems of our aging.

The editorial follows:

[From the Honolulu Advertiser of April 5, 1958]

RETIREES WHO ARE ALONE

This Territory, like the rest of the country, has an urgent need for housing for elderly people whose income is low. Some provision has been made by the Federal and Territorial governments for low rent dwellings for people with families, none for those who are alone in their old age. These number nearly half of the 13.5 million Americans who are over 65 years old.

Mrs. Mary Cleverley, who is here for a week representing the Federal Housing Administration, warns that institutional old age apartment housing, like that projected for the Kaneohe district, will not alone solve the problem. She finds that the great need

is for modest homes that can be rented for $50 a month. That rental is based on an estimated retirement income of $200 a month. It does not take into consideration those people who have only social security income, or pensions of $108 or less a month.

* * * * *

Hawaii Housing Authority's projects, with Federal aid, provide for some of the Island families who require low rent shelter, but has not been permitted to house elderly people who are alone. It was blocked in an attempt to do so within the past month, when the Honolulu Board of Supervisors rejected City Planning Commission approval of a building project for that purpose.

Census figures of 8 years ago, the latest available, show that of about 21,000 persons over 65 years of age in Hawaii, 11,000 were alone. National figures of the same census showed 13.5 million people over 65 years, of whom 7 million were widows, widowers, unmarried or divorced. There are many more now. Lee Maice, Hawaii's housing administrator, estimates there will be 20,000 here by 1970.

* * * * *

The plight of people who are alone in their old age actually is graver than that of those who have mates, yet for some reason, that has not been explained, they have been ignored until recently; still are receiving less attention in most places than they are given here. In Hawaii their need has been at least recognized, although efforts to assist them with shelter have thus far been unavailing.

This situation, locally and nationally, requires a practical solution. Talk of $200 a month incomes and $50 rentals is very fine, but the dismaying truth remains that there are millions of Americans who do not have that kind of money. Institutions provide an existence of sorts for some of those who do not, but institutionalizing the country's elderly people is unworthy of this Nation and of the American people.

It is shameful to condemn those who should be enjoying in freedom the comforts of what we term their golden years to confinement, which is exactly that, however much effort is made to soften its impact while they wait in hopelessness for death to overtake them.

Liberal Viewpoints of Americans for Democratic Action Stretched To Suit Circumstances

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 23, 1958

Mr. SHEEHAN. Mr. Speaker, the Americans for Democratic Action was founded with one of their main objectives being to clarify the aims of the New Deal and to work for their attainment.

Like the majority of liberal organizations, their principles are as liberal and flexible as is necessary to meet any line of reasoning they want to follow at any given moment.

The Americans for Democratic Action, being controlled by Democrats, looks at unemployment under a Democrat administration as not being an economic emergency, but approximately the same amount of unemployment under a Republican administration calls for pellmell action regardless of long-range considerations.

The Chicago Daily Tribune, in its editorial of April 28, forcefully points out the ADA's liberal double-talk as follows:

IT DEPENDS WHOSE RECESSION IT IS

Americans for Democratic Action, appropriately described the other day in a staff report of the Senate Republican policy committee as a vehicle for socializing the United States, has come up with its program for ending the recession. The chairman, Robert Nathan, summarized the contents pretty well when, in an attempted crack at the Eisenhower administration, he said, "If business is not as usual, politics is."

The A. D. A. prospectus calls for a tax cut of $8 to $10 billion. It then stacks up a pile of spending projects which would commit the government to billions of dollars in inflationary deficit spending. Among these are outright Federal grants for school construction, Federal grants for those not covered by unemployment insurance, Federal action in aid of depressed areas, and extension of jobless pay to 39 weeks at 50 percent of weekly wages.

We recently had some fun reciting what Democrats, particularly Harry Truman, had to say about the current recession and what they were saying about the recession of 1949–50, when Truman was President. The A. D. A. also invites this comparison. In a recent statement urging a crash Federal spending program, such as Nathan advocates now, the A. D. A. stated, "If this recession were allowed to run its natural course, this would cause further needless human suffering and cost the whole country additional billions."

When the Truman recession was in progress, the A. D. A. managed to remain calm, although that slump was, in some respects, wider and deeper than the present one. The A. D. A. statement of July 19, 1949, read, "We are now in no economic emergency which would make it necessary to rush pellmell into an improvised program of action that discarded longer range considerations."

The inference would appear to be that a recession isn't a recession if the New Dealers are in charge, but that the Nation is obliged to run pellmell into improvised spending programs if the responsibility can be assessed against the Republicans.

Resolution on Unemployment Compensation and Antirecession Bills

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mrs. GRIFFITHS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution on unemployment compensation and antirecession bills as adopted by local 163 of the UAW–AFL–CIO, Detroit, Mich. I join with its president and membership in urging the Congress to take immediate steps to institute legislation that will bring a halt to the recession.

The resolution follows:

RESOLUTION ON UNEMPLOYMENT COMPENSATION AND ANTIRECESSION BILLS

Whereas 5 million or more people are unemployed in the United States and over 415,000 in the State of Michigan or over 14.3 percent of the total Michigan labor force; and

Whereas currently, the labor situation is very unsettled. Many manufacturing concerns are working an average of below 32 hours a week, and many are staggering work schedules with no definite work pattern, causing additional loss of working days and purchasing power; and

Whereas hundreds of thousands are completely unemployed in the State and are existing on the present standard of unemployment compensation and have had to resort to direct relief for the bare necessities of life, and other thousands of unemployed are ineligible for unemployment compensation; and

Whereas these hundreds of thousands of persons who have exhausted their claims must rely on public assistance which is being flooded daily with new requests for direct relief; and foreclosure and evictions are staring them in the face, with the future holding no promise of improvement; and

Whereas an immediate program to relieve the hardships of unemployment is needed. In addition to extending unemployment compensation benefits, there should be a moratorium on house payments, subject to Federal legislation, during periods of unemployment with no interest accruing for that period. The Federal Government should offer to refinance mortgages and land contracts for homeowners facing eviction due to unemployment. Such refinancing should provide reasonable interest rates, deferment of payments, and waiver of interest during periods of unemployment; and

Whereas the antirecession bills now before the United States Congress should have the full support of all organizations. These bills are:

Unemployment Insurance, S. 3244, H. R. 10570, Kennedy-McCarthy bill.

Housing, S. 3373, Senator John Sparkman bill.

School construction, H. R. 1 and S. 777, Kelley-Neuberger bills.

Hospital construction, Hill-Burton Act (extension).

Old-Age, Survivors and Disability Insurance, H. R. 9467, Forand bill.

Minimum wage, S. 1267, H. R. 4575, Morse-Kelley Bill, and S. 1853, Kennedy bill.

Area Redevelopment Act, S. 964 and H. R. 6215, Douglas-Spence bill: Now, therefore, be it

Resolved, That local 163, UAW–AFL–CIO go on record calling upon Congress to do all in its power to support the passage of this legislation and take immediate action to alleviate the hardships created by unemployment; and be it finally

Resolved, That copies of this resolution be presented to Congresswoman MARTHA GRIFFITHS at this membership meeting, Sunday, April 27, 1958, and mailed to United States Senators PAT MCNAMARA and CHARLES POTTER, and all Congressmen from Wayne County, Mich.

The Impression We Leave at Brussels

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. CURTIS of Massachusetts. Mr. Speaker, under permission to extend my remarks I include a thoughtful article about the American exhibit at the Brussels Fair by Miss Dorothy Thompson, which appeared in the Washington Star of May 1, 1958, entitled "The Point of Our Brussels Exhibit—Basic American Mes-

sage Preferred to Models as the Center of Focus."

I feel sure that many will agree with her that the American pavilion should include an exhibit emphasizing the American heritage of freedom.

The article follows:

My column suggesting that we ought to have something better to serve visitors to the Brussels Fair than a cuisine centered around the hot dog found some spirited opponents and defenders of the hot dog. I never suggested there should be no hot dogs but that the canines should be kept on a leash and that we should have one restaurant to appeal to gourmets. It's not un-American to like a little refinement.

In the fashion parades, we are showing mink coats and original models by our top designers as well as cheap and pretty cotton dresses from the jobbers.

I haven't seen the fair, but an editor friend who has, complains of more fundamental things. He says the United States pavilion of Architect Edward D. Stone, a light, airy design in concentric circles, is beautiful, but that the exhibit as a whole presents an aspect of restless confused movement without a focus, a picture of a civilization that is going hectically toward no discernible goal.

The circles gather around a pool, actually the center of the show. Down a ramp to a raft in it models parade—making girls and clothes the focal point of American culture? The background is dominated by a mural of the cartoons of Steinberg whom I find amusing without understanding the prominence. Everything, my friend told me, is so contemporary and transient as to suggest that America has neither past nor future but lives wholly in the present.

But America is tradition as well as movement and change. And America has a focus. That focus is belief in the high destiny of humanity and in the American mission to help realize it for ourselves and all mankind. Maybe it's difficult to express that focus in a show, but it's expressed in all our great monuments to the heroes who have believed in it and recorded their faith in immortal words. Of these the greatest is the Lincoln Memorial.

How many millions of Americans and others have mounted the long flight to the room where the homely, ungainly somber President sits, unposed, in bronze? The face wears no photogenic smile. Loneliness, even tragedy, emanate from the figure.

But more impressive than the statue are the words of the Gettysburg Address and the Second Inaugural carved tall in stone. Once I heard Charles Laughton repeat them in a reading. He spoke without any inflection of his voice or change in facial expression. He told me afterwards, "I thought of stone speaking. I wished to absent myself."

Words are more immortal than stone, steel or bronze. They live in minds and hearts for milleniums, if they speak truth to the soul.

Somewhere in this exhibition the great continuity of the American message should find expression. The words of Jefferson, Lincoln, the first Roosevelt, Woodrow Wilson, the second Roosevelt, Wendell Willkie, and of the American poets forever singing her song. They might move as news dispatches are presented in moving lights, silently, above the movement and clamor.

Surely people would pause, reading with wonder, learning that America is more than electronics, atomic reactors, great manufactories, but that past, present and future, it is the home of great souls.

What has happened to us that we shrink from displaying this, dismissing as corny anything that inspires and aspires? Great nations do not live by bread alone, and above all America has never so lived.

Even if foreigners did not read, Americans would, and reading, remember. And that, of itself, would be a good thing.

Scholarship Programs for Adult Citizens

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. OSMERS. Mr. Speaker, in emphasizing the establishment of scholarship progams for our youth, we must not ignore the development of another great potential in our population.

There are many adults who, for one good reason or another, did not complete their formal education. Certain responsibilities—mainly financial—have prevented them from renewing and completing their educational pursuits.

Given facilities and financial assistance, however, these adult citizens would have an opportunity to develop their full possibilities. Their subsequent contributions could be of tremendous value to the Nation, especially in the fields of science and research.

Suggestions regarding scholarship programs for these undereducated Americans are contained in a thought-provocative letter I received from Richard E. Gordon, Jr., M. D., of Englewood, N. J. Dr. Gordon has an outstanding reputation in the field of mental health and education.

His thoughts on the matter are so timely and well-expressed that I ask unanimous consent that his letter be inserted in the CONGRESSIONAL RECORD, as follows:

ENGLEWOOD, N. J., *April 3, 1958.*

Representative FRANK OSMERS,
House of Representatives,
Washington, D. C

DEAR MR. OSMERS: Thank you for giving so much of your time and attention to the subject I raised regarding educational opportunities for mature students. I shall elaborate briefly in this letter what I suggested.

Mrs. Gordon and I have for some time been aware of the large relatively untapped potential of partially educated adults in the population. We have wondered should not an omnibus educational program take this group into consideration, as well as the untapped reservoir of capable high-school students, Certainly many adult men who must work to support families and women who cannot attend full-time classes because of domestic responsibilities would receive the stimulation and incentive to finish their studies and prepare themselves for careers in science and education if they also would be eligible for financial assistance.

The educational opportunities afforded veterans under the GI bills have taught us all in government, science, and education that the mature student is a better student on the average than his younger colleague just out of high school. These bills wisely included provisions for the serious part-time student in a bona fide program to receive educational benefits. There can be no doubt that this assistance provided the extra incentive to many veterans to make the sacrifice of time and effort to continue education.

Thus we are suggesting: (1) That education bills include provisions for adult as well as younger students; (2) that they assist part-time students; (3) that adult women as well as men students be eligible. Regarding the latter, married women are enormously important as educators and in certain sciences. As their children grow older fully educated women themselves usually reenter full-time teaching and research.

Mrs. Gordon's and my own specialized studies in this area have naturally been in the area of mental health. Although such factors are not primary in an educational program, nevertheless the mental-health implications have some importance. We have found that persons with an incomplete education have a greater sense of frustration. They have a greater tendency to emotional disorder than the general population and those who have completed college.

We would suggest that educational benefits include scholarships and grants-in-aid to certain eligible adults. Additionally we suggest that educational expenses of all college student members of the family be tax deductible—including not only expenses of children in college but also those of the adults.

Thank you again for your thoughtful consideration.

Sincerely yours,

RICHARD E. GORDON, M. D.

We Can Cure Our Economic Ills by Effective Action in Using Good Sound American Commonsense

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. JENSEN. Mr. Speaker, the best advice to all public servants is that you cannot fool the American people, and that doing the right thing and the best thing for the people over the long pull is always the best politics. Far too often political expediency is practiced by public servants, irrespective of its results on the future welfare of all the people, especially in an election year.

If a Member of Congress, for example, is swayed by the flood of letters from the many pressure groups who generally think only of the immediate welfare of their own segment of our population, then he is bound to be in trouble with many other people in different vocations. The only answer is to study the overall, longtime effect of proposed legislation to determine whether it is good or bad legislation, and does it or does it not square with the principles which have made America big and fine and strong and free. Then after making such a study vote your honest convictions, which you can defend before your constituents face to face.

In my remarks in the House on last January 20—see CONGRESSIONAL RECORD, page A387—I urged that Congress reduce the budget by at least $3 billion, and then give an across-the-board reduction in in-

come taxes. Had Congress done that we would by now have had the recession whipped. But no, the Democrats in control of Congress embarked on a pump-priming, reckless spending spree full speed ahead, which has scared the individual and business with money in the bank to the end that they are holding onto their dollars, which now will do little to cure unemployment. We should have learned a lesson from the last pump-priming spree which took place between January 1933 and Pearl Harbor. After spending 47 billion tax dollars, there were sill according to the records 11,369,000 Americans unemployed, or about the exact number as were unemployed 7 years previous. Then came Pearl Harbor and over 12 million Americans were soon put to work, in uniform, and hundreds of thousands never returned. In 1945 World War II ended and shortly thereafter the unemployment rolls again began to mount; and again, at the time our boys were sent to war in Korea, approximately 5 million Americans were unemployed; and again millions of Americans were put to work, in uniform, and thousands of them never returned.

Now it may be that we have been on the brink of war several times during the past 5 years, but the facts are that not one American mother's son is being shot at any place in the world today and there is more money in our banks today than at anytime in the history of our country. Why? For the very simple reason the owners of those dollars are fearful of what this liberal Congress might do, and they have good reason for their fears as they know what liberal Congresses have done in the past, but I say in all sincerity that there is nothing so wrong with our economy that good American commonsense cannot cure, for certainly all this Congress has to do is to begin now, even at this late date to prove to the people with money to spend, that they can safely spend for themselves and families and for business expansion.

You ask how can it be done? I say just as many other conservative Members of Congress and most thinking Americans are saying today, which is that by the simple procedure of Congress beginning from this day to the very last day of this session prove conclusively to the American people that this Congress is primarily interested in keeping our United States Treasury solvent, and the people's personal investments protected.

The people know that since this session of Congress has already spent over $2 billion more than should have been spent up to this time, little if any tax relief can be expected or hoped for, but they certainly have a right to demand that this spending spree be brought to a halt in order at least that another burdensome tax increase will not be imposed upon them.

The thing that will give people employment and keep them employed, and thus save this Democrat controlled Congress from their own follies, is for them to act promptly to return confidence to the people as I here recommended. By so doing, private spending will replace this ineffective Federal pump-priming spending which must all sooner or later be paid back with compound interest, or else repudiation with its resulting aftermath, socialism.

Yes, Congress must do that and more to make sure of the people's confidence in their Government. Before this session comes to a close, legislation must be passed to curb the powerful union bosses who have so unjustly imposed on their own members, and on many Members of Congress, such unreasonable demands to do their bidding, or else, and which to a major degree has caused this recession and the loss of employment and frightened the people from spending their own dollars. Congress years ago had the courage to adopt an antimonopoly law and that law has kept business corporations from becoming too large and powerful and that law has proven to be good for all the people. Let us now have the courage to do likewise in respect to the huge powerful labor unions. I am sure most of the union members would welcome such a law today. We must not, we dare not fail in our responsibility as representatives of the people in this critical hour regardless of all pressures brought upon us daily just to please a few at the expense of the best future welfare of all.

Roads and Highways Our Greatest Need

EXTENSION OF REMARKS

OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial, "Roads and Highways Our Greatest Need," which appeared in the April 17, 1958, issue of the Hancock Clarion, of Hawesville, Ky.

The editorial is as follows:

ROADS AND HIGHWAYS OUR GREATEST NEED

From the beginning of recorded time, trails, roads, and highways have had the attention of men all over the world. The broad highways of the Caesars throughout the Roman domain were largely the reason that the then known world was conquered and held by the Roman Empire. Their chariots required good roads to be able to travel and overcome the enemy countries.

Napoleon also constructed good highways for France that gave the Napoleon dynasty advantage over other countries and was thus able to resist aggression. Roads have played an important part in the history of the world and wars have been fought and won or lost because of the roads or the lack of them.

Roads in America have long been the great need for the expansion of our country. The famous old Santa Fe trail to the west in the rough and rugged days of our pioneers who sought to wrest that great domain west of the Mississippi and build the great Nation that this country is today, played an important part in the settlement of the West. At first only as a buffalo trail, later it was marked by the prints of the wheels of covered wagons, and in many places by the whited bones of those who fell by the wayside.

All down the centuries roads have been important in the advance of civilization. Man's first invention—the wheel—made it important that roads be built and from that time on to now the building of roads has commanded the attention of man and their needs multiplied many times over as time progressed and improvements of travel came into being.

With the slow moving ox or the plodding teams of horses or mules that powered the covered wagons of our forefathers needed roads over which the pioneers might seek and find the better places of habitation and by them the course westward was marked and wound their uncertain ways to the eldoradoes that our pioneers sought in that unknown and the dangerous land toward the Pacific coast. Gold in California, silver in Colorado, the great stretches of grasslands where cattle could graze and grow fat for the slaughter were the incentives of those hardy men and women who braved the dangers to find new homes in the West and roads were needed to lead their way.

With the advent of the motor car and the truck, and with the advanced production of fuel to power them the building of roads became an increasingly important achievement and a necessity that could not be denied. The few poorly constructed roads and highways of the late years of the 19th and the beginning of the 20th centuries soon came inadequate and the demand was present to build hard roads that could be traveled with greater assurance and greater safety. Gasoline and the auto became identical twins in the advance of progress, and to meet the demand for their use the building of more and better roads became a must in the way of our Nation.

In the early years of the present century the first appropriation of any extent by the National Congress called for the expenditure of $75 million for road building among the States. What a tremendous sum that seemed to be and much argument was waged for or in opposition to its expenditure. That was the beginning of the wedlock of the Federal Government and the States in the construction of roads and highways in our Nation. It was the beginning that skyrocketed into the billions that have been spent in the less than half a century since that time.

The rugged trails and roads that marked their crisscross pattern across the Nation became well constructed and surfaced highways that led to all parts of our country. Their need was so great that haste made waste in many instances and too narrow or poor grading soon took their toll of the money spent and the waste was magnified and the system degraded. Safety had given way to speed and hurry, and with the planning in many cases poorly organized, the work of that early day was largely a loss and a waste.

Today we recognize that there seems no limit to the demand for more and better roads and highways, and the ingenuity of our people is taxed to devise better and safer road construction. Broader and more accessible roads are the needs of the day if we are to be able to meet the demands of the foreseeable future. Not only must we consider the needs of the traffic to carry the transportation loads that are and will be required, but the safety of our people are the needs that must be taken thought of and action taken to work to the better safety of all on our highways.

During the year that has passed we have had improvements in our roads and highways that presage an even greater momentum in the months ahead. Hancock County has had some improvement in road building during the past few years but a greater need is before us. How that need can and will be met will largely depend upon the wisdom and foresight, as well as the

initiative taken by our public officials. It is theirs to carry on and work diligently toward more and better roads for Hancock County. The fine new bridge across Yellow Creek and the fine State highway being constructed between Patesville and Easton that were secured for our county in the year that has passed should be just a beginning to what we should and could have in the months ahead. But we can't just stick in our offices and expect that they will come to us without effort on the part of our officials. It will take work and concentration and if Hancock County fails to get its share of road building during the next 2 years other counties with more progressive officials and those with initiative will reap the rewards that we should have.

Millions of dollars will be spent on roads and highways in Kentucky during the next 2 years and their planning is now in the process of making. To tarry and loaf on the job now may mean an irreparable loss that will never be overcome in the years ahead. What our County will acquire is now in the process of arrangement and to dillydally without progressive thought and action will surely mean a staggering loss to our people. What shall we do about it?

Modern Courts Grew From Lawless Lands

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Stroudsburg (Pa.) Daily Record of May 1, 1958:

MODERN COURTS GREW FROM LAWLESS LANDS

(By Hon. Chester H. Rhodes, president judge, Pennsylvania Superior Court)

As I previously stated, before the Norman Conquest in England in 1066, there were no lawyers, and justice was administered in a manner similar to that on the continent.

During the occupancy of England by the Romans, the Roman system was undoubtedly present. It appears, however, that when Rome abandoned England in the 5th century its system was no longer followed.

For 200 years thereafter the Angles, Saxons, and Jutes extended their conquest over most of England, and their systems were essentially those of tribal law and custom, with justice administered by the leaders of the tribes.

As the conquests were consolidated by the Anglo-Saxons, a basic feudal system was evolved with land as the most important of the economic mediums. After the Norman conquest there was no immediate or drastic change in the system which had been established subsequent to the fifth century.

William the Conqueror gradually extended his personal rule over most of England. Ultimately, under his feudal system, all land was held either directly or indirectly under him.

Criminal offenses were no longer considered merely offenses against the local lord but against the king himself, and the criminal could be tried for treason. The criminal law was administered in the name of the king's peace. Although William the Conqueror allowed the local courts to remain, he created the king's court, the curia regis, which had extensive power derived directly from him.

The realm was divided into districts, and circuit justices presided over the courts when they happened to be in the region. At all other times the sheriffs presided over the local courts.

A distinction was made between those matters which were within the jurisdiction of the king's courts and the church courts. Christianity had come to England as early as 597, and it brought with it some of the developments from the Continent. The church courts had jurisdiction almost exclusively of matters involving the canon law. Such matters as wills, marriage, and divorce were solely within the church's domain. Church courts also had jurisdiction over crimes involving members of the clergy.

It is to be noted that wills involved only personal property, and, in fact, the distinction in the separate administration of personal property and real estate of a decedent was not finally abolished in Pennsylvania until 1949.

During the reign of Henry II, in the 12th century, many significant legal advancements were made in England.

A court of exchequer was established to handle matters of a financial nature. A court of common pleas was developed to hear controversies between the King's subjects of a civil nature; the King's bench handled criminal matters.

During this period the foundation for what we term the "common law" was developed. The common law is a law of precedent—the decisions of the judges in prior cases are applied either directly or by analogy to later cases. In fact, it is the law common to the realm. Pennsylvania is still considered a common law State.

In 1215 King John was forced to sign the Magna Carta, with which we are all familiar. By its execution, King John recognized that the law, and not his personal whim, was supreme.

Among the provisions to be found therein is that guaranteeing to an accused the right to be judged by his peers, or, as is commonly referred to, trial by jury. In view of the complexity of writs issued in civil cases and the resulting abuse, the chancery or secretary of the King began recognizing the requests of persons desiring equitable justice when the common law provided no remedy through the established writs.

Today equity jurisdiction is exercised in our courts in unusual situations where there is no adequate remedy at law. In Pennsylvania, until 1836, there were no separate equity courts, but the law courts administered equitable principles on the law side.

By the act of 1836, Pennsylvania received a separate equity court; and, although the same judges who sit in the common pleas court also sit in equity court, the two are separate and distinct tribunals from the standpoint of the principles applied and the remedies available.

By the time America was colonized, the English system of courts was fairly well established. The King's bench had criminal jurisdiction, the common pleas had general civil jurisdiction, and, to some extent, there was equitable jurisdiction in the chancery court, although the common pleas court had not relinquished its complete equitable powers.

In 1644, King Charles II granted a charter to the Duke of York covering the land occupied by the Dutch. In due time the English obtained possession of this territory along the Delaware River, and the laws of England were applied so that public welfare and common justice would be accomplished.

On June 14, 1681, William Penn assumed possession of the colony by virtue of a royal charter which gave him power to appoint and establish judgeships, justices, magistrates, and to make ordinances for the preservation of peace and the better government of the people according to the laws agreed upon in England.

These laws provided, among other things, "that all courts shall be open, and justice shall be neither sold, denied or delayed * * * that in all courts all persons of all persuasions may freely appear in their own way, and according to their own manner, and there personally plead their own cause themselves, or, if unable, by their friends. * * * That all trials shall be by 12 men, and as near as may be, peers or equals, and of the neighborhood and men without just exception."

Where the life of an accused was in jeopardy, it was provided that a grand inquest or a grand jury composed of 24 persons be held, at least 12 of whom had to agree that the accused should be brought to trial.

From the time of William Penn until the Revolutionary War, there were a number of statutes enacted which related to the administration of justice, and there was some dispute between the English government and the colonial government concerning these laws and the system of judicial administration.

The struggle was not resolved until the Revolution made the colonies free from the control of the English government. It was during this formative period that our present system of courts began to develop and take on the form they have today.

Under the Federal Constitution of 1787, Congress has set up Federal courts inferior to the Supreme Court of the United States. Consequently, in addition to the local and appellate courts of the Commonwealth of Pennsylvania, there exists a system of Federal courts for the administration of justice when Federal law is involved.

In many instances the legal relationship between persons, including corporations, depends upon State laws, and this is determined generally in the State courts. In other instances their legal relationship may involve the Federal law, and this generally is determined in the Federal courts.

In some instances a matter may involve both State and Federal law and be determined in either or both courts. The criminal law provides an example.

If a person unlawfully produces or sells alcoholic beverages or narcotics, he may be tried in both the State and Federal courts, and it is possible that he may be sentenced to imprisonment by either or both.

The Federal system is similar to that of the Pennsylvania courts. Those with local characteristics are called district courts in which most cases are initiated. In Pennsylvania there are three Federal districts—eastern, middle, and western. Each district has a chief judge with one or more associates.

Above these courts is the court of appeals which hears from the decisions of the district courts. From the circuit court, appeals may be had to the United States Supreme Court by special allowance.

The United States Supreme Court may allow appeals from a final State adjudication if it considers that a substantial question of Federal law is involved. In addition to this system of Federal courts of general jurisdiction there exists in the Federal Government a number of specialized courts such as Court of Claims, Tax Court, and others.

Cherish the Federal Credit

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. COLMER. Mr. Speaker, a very interesting and timely editorial appeared in a recent issue of the American Banker, "the only daily banking news-

paper" in this country. It was called to my attention by an outstanding banker and friend, Mr. M. E. Cooper, president of the Bank of Wiggins, Miss.

Because of the soundness as well as the timeliness of the editorial, I submit it herewith for the RECORD. The editorial is as follows:

CHERISH THE FEDERAL CREDIT—FAILURE TO DO SO COULD TURN RECESSION INTO DEPRESSION

There is one way that we can really make this readjustment and recession period into a full dress depression. Deficits and spending that dissipate the Federal credit will do it if we lose our heads and our guts.

How much deficiting and spending it will take to create fear where there should be confidence cannot even be guessed. But there is a breaking point for the credit of the United States. Congressmen who are being glibly importuned to cut taxes and add to United States spending should not forget this very important fact in attempting to control our economic future by the deficit method.

How could a breakdown of the credit of the United States come about? It could happen at any point that our foreign creditors get the idea that Treasury deficits and guarantees have piled up to such a point that another devaluation of the dollar is inevitable. Simultaneously, very likely, economically sophisticated people with money in savings institutions might very likely begin hoarding or sending their money abroad. Foreign holders of deposits in American banks, in such a set of circumstances, would begin to withdraw them. Foreign holders of United States Treasury certificates would become sellers, transferring the proceeds overseas.

Net result would be a vicious spiral of contraction of bank credit, pressure on the reserves of the Federal Reserve banks and epidemic loss of confidence in our money and credit system. It happened in 1932 and 1933, when the program of the Reconstruction Finance Corporation became interpreted as a commitment by the United States Treasury to underwrite the liquidity and refinance the losses of the American financial system, banks, insurance companies and, indirectly, big business. The breaking point then was much closer than realized by anyone who favored the RFC in February 1932. We were off the gold standard and into dollar depreciation by March 1933.

We can ill afford to risk approach now to a repetition of similar undermining of the Federal credit in the guise of a recession cure. In the 1930's the cure was so evanescent, the aftermath so lasting, that we wonder that people have forgotten so easily the almost 10 years of lack of faith in our economy which followed dollar devaluation in 1933. The number of unemployed remained in the millions; industrial investment for expansion almost stagnated. World trade stayed in a slump and efforts to bring about international economic cooperation as a foundation for peace were torpedoed because of the insecurity of American business and politics. How long this depression cycle then would have lasted had we not let Europe blunder into World War II and get dragged in ourselves is anyone's guess.

Confidence is a big and important word in our economy today.

But in no area is confidence more necessary than in the soundness of our Federal credit, the value of the United States dollar, and the stability of prices.

ABA President Welman, in his Georgia bankers' convention address, counseled "forbearance and willingness to do with less profits and wage and salary increases" to assure stability of prices, adding: "One thing which the public would understand clearly and to which it would respond quickly would be a cessation of the seemingly never-ending rise in the cost of living and the bringing about of some reasonable price stability."

Other observers have voiced like views; i. e., that a buyers' strike against constantly rising prices is at the root of this recession, and people will begin spending again when they feel they are getting their money's worth for their not so easily earned dollars.

Stability of prices is the reward of the saver. Without it, savings are not worth saving. Stability of prices is also the best guaranty of stability of the dollar and of maintenance of that international and national confidence which is so essential to keeping our recession from deepening into a depression characterized by worldwide fear of collapse in our credit and in the value of the United States dollar.

"Cherish the Federal credit," said George Washington in his Farewell Address. True in 1798, our first President's advice is as true and timely today as it was then.

Baths for Arabs, Nothing for Guards

EXTENSION OF REMARKS
OF
HON. HUGH Q. ALEXANDER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. ALEXANDER. Mr. Speaker, under leave to insert my remarks in the Appendix of the RECORD I include the following editorial which appeared in the Mooresville (N. C.) Tribune of April 10, 1958, entitled "Baths for Arabs, Nothing for Guards":

BATHS FOR ARABS, NOTHING FOR GUARDS

Perhaps we're too close to the trees to see the forest. But some of the things our National Government does leaves us dumbfounded, bewildered and, usually, stripped of our cash for things that don't appear to make sense at all.

Take, for instance, the expenditures for so-called foreign aid. We are in the process of shelling out nearly $5 billion for half the world in the hope that the money will buy us friends in time of need.

And at the same time, hundreds of thousands of these same citizens who are being called upon to cough up part of this money are being denied things they need while they offer both their money and their time in the interest of national security.

Last week, the lead story in the Tribune said that there would be no Federal funds for the construction of a National Guard armory in Iredell county this fiscal year.

The State, county, and town have all put up their share of the money required to build an armory for the local unit of the National Guard. The town has even bought a sit which it will turn over to the State just as soon as our armory is built.

More than 100 local citizens are members of the National Guard. They devote one night a week to preparing themselves for service in defense of their country, should circumstances arise that demand it.

But the powers that be in Washington say we cannot have the money for an armory here even though the building now being used by the National Guard was long ago condemned as a fire hazard.

The building is unfit actually even for storage of equipment. Yet, the guardsmen make the best of it and do little complaining.

And at the same time, we are spending millions of dollars abroad to build shower baths for camel drivers, modern highways across an arid desert in a country that has no automobiles to speak of, and other such nonsense.

Like we said, we may be too close to the trees to see the forest. But we cannot understand how a shower bath for a camel drived in Egypt can be more useful in defense of our country than a local armory for training of our citizen-soldiers here at home.

It's Now Time for the House To Act

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks, I include an editorial from The Flint Journal, Flint, Mich., for May 2, 1958, entitled Demand Grows for Union Curbs. The editorial urges House action on the Senate-passed bill to place stronger safeguards around union pension and welfare plans.

The Flint Journal's editorial reflects also the sentiment of the Sixth Congressional District as expressed in the results of my recent questionnaire survey. To a question concerning the President's Labor-Management legislative recommendations, 87 percent of the respondents were in favor, with only 6 percent opposed and 7 percent giving no opinion. I believe this is indicative of a strong public sentiment for legislation to eliminate the abuses that have been revealed by the Senate Select Committee. It is now clearly up to the House to act.

The editorial follows:

DEMAND GROWS FOR UNION CURBS

The Senate this week passed a bill designed to protect millions of Americans now covered by pension and welfare plans.

At present it is uncertain whether the House will act before Congress adjourns this summer.

It is a good bill. It requires detailed reports on administration and financing of welfare and pension plans, and is designed to eliminate the flagrant abuses which Senate committees have uncovered in recent investigations. Some of the worst abuses have been disclosed in union-operated plans. They include embezzlement, improper insurance commissions and service fees, and collusion between management, union, and insurance representatives.

The importance of such legislation is underlined by the fact that more than 60 million people are now covered by such plans involving about $35 billion.

There has not been much opposition to the legislation from labor leaders. Most leaders approve of such protection for themselves and their followers. And it is recognized that opposition to such obviously constructive legislation would immediately make them suspect by the members of their organizations.

But there is another reason for the absence of serious opposition from labor leaders. They are willing to submit to such regulation as a means of strengthening their position in opposing other, stricter regulation.

More and more people in this country are becoming convinced that it is necessary to

curb the monopolistic power of labor unions. These people feel that unions should be subjected to the same kind of restrictions which the antitrust laws put upon business. Many union members are fed up with what they call dictatorship from their leaders, and undemocratic practices in their organizations. Some members are even calling for right-to-work laws.

Union leaders are deathly afraid of this growing demand for action to curb their powers. They unloose their biggest propaganda guns against it, labeling every such move as "antiunion" or "union busting."

It is easy to see the strategy involved in not opposing strongly the legislation designed to protect welfare and pension funds. Union leaders will point out that they were willing to submit to such legislation, and therefore are not opposed to regulation as such—but only to "union-busting" laws. They will claim that they welcome reasonable curbs, but they will dub any further restriction "unreasonable."

And if they shout loud and long enough, which they will, the strategy probably will be effective.

The enactment of further remedial laws to curb labor-union abuses in an election year is not to be expected.

This week, for example, on a proposal to require labor unions to conduct elections by secret ballot at least once in 4 years, only 1 Senate Democrat voted with 36 Republicans in favor of the amendment. Ten Republicans, of whom five are up for reelection next fall, voted against it.

But there is a groundswell of public opinion developing in this country for greater regulation of unions. It is not an anti-union or union-busting sentiment. Most people regard unions as necessary for the protection of workers. It is similar to the sentiment which developed against the abuses of business which resulted in the passage of regulatory legislation years ago.

Adding to this groundswell is the growing opinion that labor unions, by constantly pushing up wages and thus prices, in what economists call a wage-push spiral, are largely responsible for inflation and the current business recession. One economic analyst, Dean Charles C. Abbott, of the University of Virginia, stated recently that historians may label this recession "the first union-made depression in our history." His view is supported by others.

And the attitude and actions of labor leaders like CIO President Walter Reuther in demanding ever greater wage increases and fringe benefits—even in the face of a business slump which has hit the automobile industry hard—are adding momentum to the growing demand for remedial action against such irresponsibility. Reuther this week demonstrated his arrogant unconcern for the economic well-being of the general public, including his own union members.

It may take some time, but legislation to curb union abuses is coming. The public will demand it.

Recording Proving Red Jamming of Broadcasts Sent Soviet Ambassador

---

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks, I wish to include the following texts of two press releases from the American Committee for Liberation.

RADIO LIBERATION REFUTES ENVOY'S DENIAL WITH SAMPLES OF NOISE EFFECTS AIMED AT LISTENING INSIDE U. S. S. R.

NEW YORK, April 30.—Radio Liberation has mailed Soviet Ambassador Mikhail A. Menshikov a tape recording of the various sounds and noises produced by Soviet jammers, designed to prevent the anti-Communist station's round-the-clock broadcasts from reaching the peoples of the Soviet Union.

"We have mailed the tape to the Ambassador in Washington, because in a recent television appearance Mr. Menshikov had declared he had no personal knowledge of Soviet jamming, said Gene King, Radio Liberation's programing chief in New York.

Mr. Menshikov had denied knowledge of Soviet jamming when he was questioned on ABC–TV's College News Conference last Saturday.

Mr. King said the tape had been prepared at Radio Liberation's principal studios in Munich, Germany, where the noises and eerie sounds produced by farflung Soviet jamming installations were recorded specifically for Ambassador Menshikov's benefit.

"Since Mr. Menshikov, of late, has been preoccupied with learning 'bourgeois' mannerisms for use at Washington cocktail parties," Mr. King observed, "it is conceivable that the Ambassador may not be as informed about Soviet jamming as one would have supposed. Perhaps our tape recording will correct his faulty knowledge of this subject."

According to Mr. King, Radio Liberation, which is the free voice of former Soviet citizens, has been jammed 24 hours a day from the moment it began broadcasting to the Soviet Union on March 1, 1953. Today Radio Liberation, with infinitely more powerful equipment, transmits programs to all parts of the U. S. S. R. in Russian and 17 other Soviet languages via transmitters in West Germany and the Far East.

"Naturally," added Mr. King, "our engineers have been conducting extensive research on Soviet jamming operations. Our monitors have identified, through their call-signals, hundreds of different jamming stations in the Soviet Union. Undoubtedly there are many more jamming stations, but their signals are beyond the range of our monitoring equipment. For example, the so-called ground-wave jammers which cover small areas in cities cannot be heard in the West. Evidently there are several of these in each large Soviet city."

Mr. King, however, declared that Radio Liberation's round-the-clock broadcasts were getting through to the target audience in the Soviet Union.

"Despite the incredible amount of rubles expended on preventing Western broadcasts from reaching the Soviet peoples," he said, "we know that Radio Liberation's broadcasts are being heard in the Soviet Union."

Mr. King said that "positive evidence" of Radio Liberation's "ofttimes remarkable evasions of Soviet jamming" lies in letters received from Soviet listeners from behind the Iron Curtain, from testimony of defectors and from returning tourists.

MOSCOW CHARGES "FORGERY" IN REPORT ON KHRUSHCHEV'S BLAST AGAINST SOVIET JEWS—RADIO LIBERATION DISCERNS ATTEMPT TO TAKE PREMIER OFF HOOK FOR INTEMPERATE REMARKS

NEW YORK.—The Soviet Union has accused a leading French newspaper of manufacturing a "provocative forgery" in quoting Nikita Khrushchev's uncomplimentary views towards Soviet Jews.

And Radio Liberation, in disclosing this surprise development, observed that this was still another effort "to take Khrushchev off the hook for his intemperate remarks."

Moscow Radio accused Le Figaro, a widely-circulated daily in Paris, of having launched an anti-Soviet hullabaloo which, in turn, was "snapped up in Israel, where with plenty of additional spice and further slander it was published by the entire Israeli press and has served as an excuse for a further campaign of slander against the Soviet Union."

According to Radio Liberation, the free voice of former Soviet citizens which broadcasts round-the-clock to the Soviet Union in Russian and 17 other Soviet languages, Moscow Radio's latest charges were broadcast in Hungarian on its European service last Thursday (April 24).

"Once again an effort is being made by Moscow to take Khrushchev off the hook for his intemperate remarks," Radio Liberation commented. "The trouble is that Khrushchev very often says what he really thinks, no matter what the consequences. Witness his remarks to western ambassadors, 'We will bury you,' which the Kremlin soon after was forced to claim was 'misinterpreted.'"

According to an article published in Le Figaro on April 9, Khrushchev had told its Moscow correspondent in an exclusive interview on March 19 that the Soviet's 30-year experiment aimed at establishing an autonomous Jewish homeland in the Soviet Far East region of Birobidzhan had been a thorough failure. And the Soviet ruler contended the reason for the failure was the fact that the Jews were too individualistic and overly intellectual; so much so they could not get along together in collectivized projects.

Khrushchev's remarks, considered offensive by Jews in the free world, were sharply assailed in Israel by Prime Minister David Ben-Gurion and aroused considerable editorial denunciation in the Israeli press.

All of which, Moscow radio contended last Thursday, was aimed at "casting a shadow on the Soviet Union as the country of socialism, to weaken the effect of the Soviet peace policy on world opinion.

"This aim is served, among others, by that anti-Soviet hullabaloo which certain Western circles started about the falsification in connection with the so-called Jewish problem recently published in the French Figaro. This provocative forgery has been manufactured in connection with the well-known interview of Nikita Khrushchev with a Figaro reporter which was published in Pravda on March 27."

Significantly, as Radio Liberation had pointed out at the time, the Pravda version of the interview completely omitted Khrushchev's remarks about Soviet Jews. To make up for Pravda's dereliction, Radio Liberation had beamed the remarks back to the Soviet Union for the information of its listeners.

Moscow Radio's recent broadcast was bitterly anti-Israel, which, of course, was no surprise. Its broadcast assailed a "mass meeting of former Soviet Union subjects held recently in Tel Aviv organized by the Mapai administration," claiming the speeches consisted of "confused nonsense."

"The aim of every single speech was to slander the Soviet socialist state and to present in a distorted light the Leninist policy on nationalities followed by the Soviet Union," Moscow Radio contended.

The Moscow station claimed "it is well known" that Israel's leaders, "claiming to be the protectors of Jewry, have been waging for a long time a campaign for the concentration in Israel of the Jewish population of various countries, among them the Soviet Union."

Radio Liberation observed that the U. S. S. R. has traditionally refused permission to Soviet Jews to emigrate to Israel

or anywhere else. Attempts by Zionist leaders to negotiate with the Kremlin on this issue have been constantly frustrated.

However, Moscow Radio cryptically observed that "there were such people who were taken in by the Israeli-American propaganda and have emigrated to Israel. But their disappointment was a bitter one."

Apparently, this was a reference to Polish Jews who, having been permitted to return to Poland after years of forced residence in the U. S. S. R., immediately emigrated to Israel, a practice frowned upon by the Kremlin.

The Moscow Radio broadcast quoted from letters purportedly received from "misled people who became victims of Israeli-American propaganda" and had emigrated to Israel. "These people became capitalist forced laborers concealed by the figleaf of the Jewish national state," Moscow Radio declared. "These people were confronted by hunger, misery, and unemployment."

"These letters of misled people are documents which expose the dirty slanderous character of the allegations of the inspirers of the new anti-Soviet propaganda campaign on the so-called Jewish question," the Moscow station continued. "This invented problem does not exist in the Soviet Union, where the Jewish population enjoys the fruits of the Leninist policy on nationalities in the same manner as all other peoples of the Soviet Union."

Truth and Power

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Norman Cousins which appeared in the Saturday Review for April 5, 1958:

TRUTH AND POWER

A hair-raising situation now exists in which a small group of men who are not part of the elective process of government have nevertheless assumed unprecedented powers for shaping national policy outside their designated functions.

The group is the Atomic Energy Commission. It is the only agency of Government which can embark on programs that affect and even dominate economic policy, military policy, and foreign policy. It is the only agency of Government which can decide how much it is willing to let the American people know about its operations. It is the only agency of Government than can evaluate its own performance, exempt itself from the consequences of its own errors, and shield these errors from public scrutiny.

Some of the implications of these powers have been brought into focus as the result of a recent incident.

First, some background. The danger of a runaway nuclear arms race culminating in continental explosions is no longer a remote one. Momentum has a way of making its own decisions. The nuclear arsenals now contain weapons that have gone far beyond military requirements. The use of these weapons will produce not victory but mutual suicide. The situation is similar to what would happen if occupants of the same building decided to wage war against one another by setting fire to the building after sealing themselves in. If victory in the contest between democracy and communism is to be found, therefore, it will have to be outside a nuclear war.

Devising a policy that can achieve both peace and freedom is the most important and most complicated business in the world. Yet a start must be made somewhere. It makes sense to expect that such a start should be in the field of arms control. Not that arms control by itself will give us enduring peace. Nothing short of effective world law can create a basis for enduring peace. But arms control can at least remove some of the fuse points of a nuclear arms race. And one good place to begin on any arms control program is with a ban on further nuclear test explosions.

The Atomic Energy Commission, which manufacturers and tests the nuclear explosives, has been opposed to any ban on testing and, for that matter, to any agreement on nuclear arms control. The AEC has taken the flat position that such agreements are unenforceable. It would be difficult and perhaps impossible, spokesmen for the AEC have declared, to detect nuclear explosions if the Soviet were intent on keeping them secret. By way of proving this point, the AEC pointed to its own underground nuclear test experiment recently conducted in Nevada. Despite the devastating underground effects, the explosion could not be detected at a distance greater than 235 miles, the AEC officially announced.

If this were true, then the hope for nuclear arms control would be a dim one indeed. But congressional initiative established that the AEC statement is not true and indeed never was. The Nevada underground explosion was actually detected more than 2,000 miles away, and the AEC was so informed at the time.

Confronted with the actual evidence that it had falsified vital information, the AEC said that the error was "inadvertent." What members of the AEC did not explain, however, was why they had used information to support a public position even though the information was false. Even after the AEC apparently knew that the underground test had been detected at great distances, it continued to tell news commentators and television producers that underground tests could be carried out secretly.

Errors, inadvertent or otherwise, are understandable. What is completely irresponsible and indeed reprehensible, however, is the use of false information in connection with the advocacy of national policy. For the AEC did not merely circulate a report it knew to be false. It used that false report as the basis for an attempt to win the American public opinion over to its own point of view.

Equally serious is the fact that the AEC has been using its authority and influence to block any program for world control over nuclear weapons. And Dr. Edward Teller, who is prominently associated with the Atomic Energy Commission, has been attempting to reassure the American people that nuclear testing can go on indefinitely without danger—a proposition that the AEC's own reports do not support.

What is involved here is not merely a matter of public confidence in a Government agency. What is involved here are real and specific issues concerned with the safety of life on earth. Circumstances have contrived to make of the Atomic Energy Commission one of the most powerful agencies in our history. We should no longer delay bringing the AEC into the same framework of checks and balances within which the rest of the Government has to operate. Certainly, a separate agency should be charged with the responsibility for evaluating the results of nuclear testing, whether with respect to radioactive fallout or the question of detectability.

The fact that men of science are connected with the AEC is not by itself sufficient assurance that wisdom and sanity will prevail. The theory on which this Government was set up was that good government depends less on good men than upon good laws. Indeed, the easiest way for good men to turn bad is to give them a privileged position where their power can be used beyond their own designated functions.

Nuclear bombs are the quintessence of raw power in the modern world. They call for the severest controls—not only over the bombs themselves, but over the men who have the authority to make them. N. C.

Congress and the Bureau of the Budget

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. REUSS. Mr. Speaker, many of the Members of the Congress are becoming increasingly alarmed by the seemingly endless expansion of the powers of the Bureau of the Budget, and the Bureau's exercise of those powers in contradiction of the will of the Congress.

The Budget Bureau's freezing or impounding of funds appropriated and authorized to be spent by the Congress raises a serious question—a basic constitutional question—concerning the powers of the Congress and the powers of the President and his agents in the executive.

Here is a controversy that will arise time and again. It is important, and I commend to the attention of my colleagues the following article, written by George W. Oakes and appearing in the Washington Sunday Star of April 20, 1958, which accurately describes the basic problem:

HOLDBACK ON FUNDS WORRIES CONGRESS

(By George W. Oakes)

Congress is becoming increasingly concerned over a conviction that the administration, through the Budget Bureau, has been withholding funds the lawmakers have voted to be spent. A power struggle on the issue has sharpened during the current session, and White House resistance to Democratic demands for large Federal spending to fight the recession may intensify it further.

Many Democratic Members of the Senate and House are making this point: Even if the Democratic-controlled Congress should pass any antirecession public works bills such as that approved last week by the Senate, and the President should sign them, recent experience suggests that the money won't necessarily be spent. During the past year especially the Executive has exercised and can continue to exercise various powers to delay the rate of spending and to withhold funds already appropriated, including those requested by major Government departments.

Among those being heard on this subject are Senators LYNDON JOHNSON and MIKE MANSFIELD, the Senate majority leader and the Democratic whip. They have cited as an example the fact that the administration, in order to live within its expenditure ceiling, last year froze $22,300,000 out of $32,300,000 in Federal funds voted by Congress for the construction of National Guard armories.

Current congressional pressure for antirecession spending is likely to bring about the

release of those particular funds, but Members claim there are other examples and that more are expected.

BILLS INTRODUCED

Congressional opposition to fund withholding has risen to the point that last month Senator MANSFIELD and Congressman HÉBERT, Democrat of Louisiana, a member of the House Armed Services Committee, introduced bills to deny any official or agency the right to prevent appropriated funds "from being promptly used * * * for the purpose designated."

Congressional critics do not question the legality of the administration's action as much as they blame Congress for having drafted legislation that gives the Executive an opportunity to carry out a method of indirect financial control over the intent of the Congress. Some of them declare that this is one way in which Congress is abdicating its constitutional control of the purse.

Currently a congressional committee is holding closed hearings on this subject in order to determine how Congress can reduce the opportunity for the Executive to hold up funds that Congress wishes to have spent.

What is this Executive control exercised by the Budget Bureau on behalf of the President? To a great extent it derives from the general powers of the Presidency and from the fact that a congressional appropriation is an authority, not a mandate, to spend up to a certain amount of money. Also many appropriation acts not only give the President discretionary power over the rate of spending of voted funds, but also provide that the money need not be spent in any one fiscal year.

There is even more specific legislation that authorizes the Budget Bureau to establish reserves and effect savings of appropriated funds in order to promote efficiency of operation on the basis, among other reasons, of "developments subsequent to the date on which such appropriation was made available."

The latitude of this law permits a broad interpretation—too broad in the view of congressional critics. Under it, the President can hold up spending of funds after they are voted despite the intent of the Senate and House. This control has been extremely effective and useful during Government economy waves such as the one the administration put into effect last year.

APPORTIONMENT PROCESS

The Budget Bureau procedure of reviewing the spending of appropriated funds is known as the apportionment process. After Congress votes the money for a certain department or agency, and the President has approved it, that agency must request the Bureau to make the money available not later than 15 days after the appropriation act is passed.

In 1933 this function was transferred by Executive order to the Budget Bureau from the various agencies. The apportionment procedure is intended to achieve the most effective and economical use of funds made available by Congress and, for appropriations available for a definite period of time, to prevent the necessity for supplemental or deficiency appropriations.

Frequently conditions change between the time the agency originally requested Congress to vote the funds and the date when the appropriations were enacted. Without some such reviewing procedure money could be spent on projects no longer required because of altered circumstances. But congressional and other critics of the Bureau claim that these powers have often been carried too far, especially during the current fiscal year when the Bureau slowed down the rate of spending in line with the economy drive.

TWO MILLION DOLLAR CUTBACK

For example, Congress voted over $250 million last summer for certain types of domestic military construction. The Defense Department in October requested the Budget Bureau to release the money. Less than a month later the Bureau made reductions totaling more than $2 million on specific items. The end of the economy wave hasn't reversed this situation for there are reliable reports that appropriated funds in the amount of several million dollars which the Defense Department wants now for military construction are being held up by the Budget Bureau.

Not only is it argued that the total amount requested by the Defense Department and authorized by Congress should have been spent but many believe that the Defense Department should be the agency to determine what military funds are required and where any necessary cuts should take place. This point of view is heard from high officials of executive departments as well as in Congress.

It is further argued that the Bureau not only holds up funds but slows down the rate of spending of "line items" in military construction appropriations after they have received congressional and Defense Department approval.

ANOTHER EXAMPLE

Here is another example being cited on the Hill: Federal housing representatives gave a Wisconsin builder the impression that he would receive Government loan insurance if Congress would appropriate $100 million for a cooperative housing program to fulfill the need for moderate rental housing. The money was voted in July but only $30 million was committed in accord with the economy program then in vogue.

The Budget Bureau contends that limitations of the debt ceiling as well as administration policy, supported by a Congressional resolution urging economy, was responsible for the withholding of the mortgage money.

Representative REUSS, a Wisconsin Democrat of the House Banking and Currency Committee protested in November the Budget Bureau's action, stating that "Budget Director Brundage asserts that he, instead of the people's duly elected representatives, should decide what the Nation's housing needs are." In December an additional $20 million of mortgage funds was released. As a result, the Wisconsin builder was finally able to go ahead with his planned construction program.

In introducing his bill to curb these powers of the Executive, Senator MANSFIELD said that Congress faces "a Constitutional problem which we will have to meet some day if we do not want to see our power steadily eroded and our Constitutional position as a coequal branch of the Government reduced still further." The current Congressional pressure for large public works spending can be expected to stimulate efforts to gain greater Congressional control over appropriated funds.

Nuclear Power for the Navy

EXTENSION OF REMARKS

OF

HON. JOHN F. BALDWIN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mr. BALDWIN. Mr. Speaker, the fascinating and heartening story of the development and prospects of our nuclear powered Navy has been recounted in an article in the May 1958 issue of United States Naval Institute Proceedings. The author is our own colleague and member of the Joint Committee on Atomic Energy, the Honorable CRAIG HOSMER, of California. However, as noted in the byline, the Congressman writes in his capacity as a commander in the Naval Reserve, rather than as a Member of this body. He obtained much of his background material for the manuscript during a recent tour of active training duty with the Navy.

I am sorry that it is not possible to reproduce in this RECORD the informative illustration of a typical naval nuclear propulson plant referred to in Commander HOSMER's article and accompanying it in the proceedings.

The article follows:

NUCLEAR POWER FOR THE NAVY

(By Comdr. CRAIG HOSMER, USNR)

Fast becoming a reality is a powerful new nuclear-powered United States Navy—a Navy backboned by atomic-bomb-carrying 85,000-ton supercarriers, fast-striking guided-missile cruisers and destroyers, and specially designed submarines for high-speed attack, hunter-killer, radar-picket, guided-missile, and other new missions.

Already more than $2 billion have been spent or programed for research, development, and construction of such a Navy. The following table sets out what is on hand and what is on order. Another $500 million a year for at least 8 years ahead will be needed to bring it into full being.

It began in 1948 with a small but ambitious joint Navy-Atomic Energy Commission program aimed at submarine nuclear propulsion and later expanded to include design and development of a full spectrum of naval nuclear propulsion plants for new naval construction from small submarines to the largest aircraft carriers.

By early 1954 the basic question of feasibility of naval nuclear propulsion was affirmatively answered by successful completion of all critical tests of the *Nautilus* land-based prototype plant. That answer made possible continuous cruising at top speeds, unlimited crusing, radii, and practically absolute freedom from fuel logistics. It has revitalized the role of seapower and geopolitics.

At the beginning of naval reactor development 10 years ago, even the most imaginative nuclear propulsion enthusiasts hardly foresaw such a future. Nor did even the most practical amongst them envisage the full scope of difficulties ahead. Neither the technical problems nor their solutions were well understood. In fact, many of the problems were not even known.

The task was to devise a safe, reliable plant within naval space and weight limitations. It began with an examination of various possible reactor cycles. Gas-cooled reactors were discarded as involving too much space and too many technical problems. Other types were in turn rejected for various reasons. Finally left as promising to meet naval requirements were but two: a reactor utilizing liquid sodium as its coolant, or one utilizing pressurized water.

Liquid sodium seemed to offer the best approach because it permitted high steam temperatures and pressures, with consequent greater efficiency. But the physics and chemistry of liquid sodium were little known and insurmountable development problems might be encountered. Although pressurized water involved lowering steam temperatures and pressures, more was known of the characteristics of water. That could mean fewer problems of basic research and faster development of the plant.

Decision was made to pursue both approaches and preliminary design began. So dissimilar are the physics and chemistry of water and sodium that in effect two simultaneous but essentially independent projects were involved. Both were carried successfully through land prototype and shipboard installation stages.

Liquid sodium leakage problems appeared in the *Seawolf's* land prototype plant which were not in themselves insurmountable. However, they were considered in combination with other factors in an eventual decision favoring the *Nautilus'* pressurized water type reactor system as the accepted approach to practical naval nuclear propulsion.

The men who carried on the work had no experience or rules of thumb to guide them. No power reactor had ever been designed before. They had no science of reactor technology to apply to the job. They created it as they went along.

From the beginning they applied a "can of worms" description to their work, for each component and function of a nuclear power plant, from the reactor vessel through the turbine and all auxiliaries, are wholly interrelated and interdependent.

Naval nuclear ships and reactors

Ship	Purpose	Builder	Completion	Reactor [1]	Remarks
SSN571 *Nautilus*	Attack	Electric Boat	Sept. 30, 1954	S1W	Land prototype, Arco, Idaho.
				S2W	1st nuclear-powered ship.
SSN575 *Seawolf*	do	do	Mar. 20, 1957	S1G	Land prototype, West Milton, N. Y.
				S2G	Preliminary account for limited service.
SSN578 *Skate*	do	do	Dec. 3, 1957	S3W	Twin screw, conventional hull.
SSN579 *Swordfish*	do	Portsmouth	1958	S4W	Do.
SSN583 *Sargo*	do	Mare Island	1958	S3W	Do.
SSN584 *Seadragon*	do	Portsmouth	1959	S4W	Do.
SSGN587 *Halibut*	Guided missile	Mare Island	1959	S3W	Hull modification for Regulus.
SSRN586 *Triton*	Radar-picket	Electric Boat	1959	S3G	Land prototype, West Milton, N. Y.
				S4G	Twin screw and twin reactor.
SSN585 *Skip Jack*	Attack	do	1959	S5W	Single screw, *Albacore* hull.
SSM588 *Scamp*	do	Mare Island	1960	S5W	Do.
SSN589 *Scorpion*	do	Electric Boat	1960	S5W	Do.
SSN590 *Sculpin*	do	Ingalls	1960	S5W	Do.
SSN591 *Shark*	do	Newport News	1960	S5W	Do.
SSN592 *Snook*	do	Ingalls	1960	S5W	Do.
SSN593 *Thresher*	do	Portsmouth	1960	S5W	Do.
SSGN594 *Permit*	Guided missile	Mare Island	1961	S5W	Fiscal year 1958 program, Regulus.
SSGN595 *Pollack*	do	Portsmouth	1961	S5W	Do.
SSGN596 *Plunger*	do	Unassigned	1961	S5W	Do.
SSN597 *Tullibee*	Attack	Electric boat	1961	S1C	Land prototype, Windsor, Conn.
				S2C	Fiscal year 1958 program, small hull.
SSGN(P?)598	Polaris	do	1960 (?)	S5W(?)	Fiscal year 1958 supplemental.
SSGN(P?)599	do	do	1960(?)	S5W(?)	Do.
SSGN(P?)600	do	Mare Island	1960(?)	S5W(?)	Do.
CLG(N)9 *Long Beach*	Guided missile	Bethlehem (Fore River).	1960	C1W	2 reactors.
CVA(N)65 *Enterprise*	Supercarrier	Newport News	1961	A1W	Land prototype, Arco, Idaho.
				A2W	8 reactors.
DLG(N)	Frigate			D1W	AEC Knolls Laboratory assigned lightweight design.
				D2W	Not yet authorized.

[1] In naval reactor code 1st letter indicates ship type, numeral indicates precedence in design series, 2d letter indicates developer: W, Westinghouse; G, General Electric; C, Combustion Engineering. All are of pressurized, water-cooled, water-moderated types except S1G and S2G, cooled by liquid sodium and moderated by beryllium.

For example, raising turbine exhaust temperature or back pressure in a conventional plant is felt primarily in fuel economy. Such a reduction in thermal efficiency in a nuclear plant affects each of its complex components. The necessary increase in heat output requires size, capacity, and weight increases in the condensate, feedwater, and heat-generating systems and equipment. Size of the reactor, steam generator, coolant system and auxiliaries is increased. Proportionate increases in radiation shielding must follow. These in turn affect the size, design, and characteristics of the hull into which the plant is to be placed, or, as a practical matter, thrust back upon the plant designer the necessity of selecting every characteristic of design in relation, not only to each function and component of his plant, but in relation to hull space and weight limitations as well.

Development of the two original naval nuclear reactor plants, and to only a slightly lesser extent today's plants, involves creation not only of the total concept, but individually of each of its components. It demands tremendous and concurrent basic research into unexplored fields of the new science. Maximum assurance that all parts individually will work and that they will work as a unit when coupled together, and function with a high degree of safety, dictates what might otherwise be wasteful overdesign and overtesting.

Few, if any, off-the-shelf items exist which can be incorporated into nuclear plants. Canned pumps are but one entirely new concept brought into being to make nuclear power possible. Prolonged successful effort to develop as complex a component as this often has to be discarded when efforts fail to develop another, which is interdependent. Fresh starts must be made on the problems of both.

Reactor design develops the need to know undiscovered properties of common substances under conditions of reactor chemistry and irradiation. Requirements are generated for rare metals and alloys concerning which the full spectrum of chemistry, physics, and metallurgy need be researched and industries found or formed to produce them in quantities required. For example, such diverse enterprises as the Carborundum Co., National Distillers Corp., Wah Chang Corp., and National Research Corp. had to be persuaded to engage in large-scale zirconium production.

Not only has the naval nuclear reactors program faced mountainous technical problems, but it has been burdened from the beginning with a continuing necessity to seek answers to a variety of nontechnical questions affecting its ultimate success.

Wholly new and workable administrative and funding relationships, to be discussed later in detail, had to be evolved and must be continuously perfected between the Navy and the AEC, amongst naval personnel in and outside the reactors program, and between the Government reactors group and industry.

As operations expand, new personnel must be brought in; techniques must be developed for their rapid specialized training; and new facilities established for the basic research, design, and engineering functions involved in the work. Progress from design to construction of plants involves large-scale training of industry personnel. The design and construction of new ships for the new plants brings in a whole new group for specialized instruction; manning those ships brings in another.

During the process a basic philosophy on security of information had to be evolved, continuously adapted to an ever-increasing body of knowledge, and the mechanics of implementing it amongst public and private groups engaged in the program kept efficiently in motion. The approach has been to distinguish between specific designs and dimensional characteristics which are classified, and technology as such which is unclassified. Communicating the latter has involved the writing of up-to-the-minute technical handbooks by scientific personnel engaged in the work concurrently as they do it. Six such handbooks have been published and another 8 are currently in preparation.

Another essential task of those engaged in the program has been to translate difficult scientific concepts into information meaningful to the layman. It is fundamental to obtaining policy decisions from legislative and executive leaders of Government underlying financial support of the naval nuclear program. It is also vital to the public, which in a democracy ratifies those decisions at the polls.

The foregoing enumerations barely hint at the multiple technical and nontechnical problems involved in the naval nuclear reactors program from the beginning and which will continue to plague it for years ahead. Yet they are ample testimony to the outstanding devotion and qualities of the officers and civilians who carry it forward. Within 6 years from the start they produced the basic pressurized water nuclear propulsion plant illustrated on the following page which is now standard for all new nuclear naval vessels.

The plant arrangement shown approximates that developed for submarine propulsion, and it will vary only in details for the supercarrier with four dual reactor powerplants, and the cruiser *Long Beach* and submarine *Triton*, each with dual reactors.

The naval nuclear propulsion plant consists of a nuclear reactor core contained in a pressure vessel; a primary coolant system utilizing fast-flowing pressurized water to remove the heat generated by nuclear fission in the core and transfer it via a steam generator to the secondary, or steam system; a steam machinery plant for propulsion and auxiliary electric power generation; and radiation shielding.

The reactor consists of a pressure vessel housing a core of enriched uranium fuel encased in a protective metal, such as zirconium, which passes heat to the coolant; a moderator, in this case the coolant itself, to slow down neutron emissions to efficient fission speeds; and rods of a neutron absorbing metal such as hafnium, together with machinery to insert and withdraw them from

the core, to control rate of fission and thus amount of heat produced.

The primary coolant system consists of one or more loops, each having one or more coolant pumps; a steam generator (boiler); a pressurizing vessel; and connecting piping with appropriate valves.

Since the coolant water becomes radioactive in passing through the reactor core, shielding is required around the portion of the plant containing the coolant in order to protect personnel from radiation. A separate reactor shield surrounds the pressure vessel. It affords sufficient protection against radiation from the reactor core to allow access to the reactor compartment when the reactor is shut down. All shielding designs incorporate enough protection to meet civilian radiation exposure tolerances established by the AEC.

The steam produced in the separate secondary circuit by the steam generator is nonradioactive, and the steam propulsion machinery need not be shielded. This machinery and the necessary auxiliaries for electric power are arranged in a conventional way in the engineroom. However, arrangements within the reactor compartment must of necessity be strongly influenced by considerations of accessibility in relation to radiation and the continuous necessity of removing heat even after the reactor has been shut down. The latter phenomenon, known as radioactive decay heat, results from the constant breakdown of radioactive materials even under normal conditions.

Penetrating to all parts of naval nuclear powerplant design are intensified requirements for ruggedness, reliability, and easy maintainability dictated by safety, the extreme endurance of nuclear plants, and higher average sustained ship speeds.

These various special nuclear plant considerations also complicate the work of designers of hulls into which they will fit. Gone are the days when minor weight allocation errors can be overcome by pumping fuel between tanks. Crew living and working spaces must be allocated with radiation hazard in mind. Stacks are eliminated, but vertical free spaces must be arranged for removal and renewal of reactor cores. Stowage space for consumable supplies and ammunition must be enlarged to take full advantage of the ship's longer range cruising capabilities. Many other specialized considerations are involved. A byproduct of tackling them has been experimentation with novel hull configurations that may substantially increase speed/power ratios of future ships.

Another byproduct of naval nuclear propulsion has been the evolution of a unique, hybrid military-civilian research and development organization that may well set administrative patterns for successful missile research and development and any similar future large-scale Government projects. Without it, there would probably be no nuclear powered naval ships in existence today.

Its antecedents are in the Atomic Energy Act of 1946 assigning responsibility for research and development in the theory and production of atomic energy, including processes, materials, and devices related to such production, to the newly created Atomic Energy Commission.

Soon after passage of the act, Navy communications to AEC began setting out potential nuclear propulsion requirements in connection with the submarine program as defined by a small, cross-sectional group within the Bureau of Ships. AEC's response, in part, was to turn back to the very BuShips' group that generated the requirements for manpower assistance in meeting them.

By 1949 the Commission's activities in this field were sufficient to justify inclusion of a Naval Reactors Branch in its Division of Reactor Development established that year. Also by that year it had become apparent in BuShips that the activities of the cross-sectional group were sufficiently unique and unconventional to warrant special treatment. A period of organizational experimentation began, culminating in formal establishment in 1955 of BuShips Code 1500 designated as the Nuclear Propulsion Division and headed by a new Assistant to the Chief of the Bureau for Nuclear Propulsion.

Code 1500, however, did not mean a separate Navy reactors program paralleling the AEC's program, because Code 1500 had by this time also developed into the Commission's Naval Reactors Branch, unofficially referred to as the headquarters organization by both Navy and AEC. Naval officers ordered to the program report to both AEC and Bureau of Ships. Navy and AEC civilian employees are utilized interchangeably. Rear Adm. H. G. Rickover, United States Navy, is both Assistant Chief of the Bureau of Ships for Nuclear Propulsion and Chief of the Naval Reactors Branch, Division of Reactor Development, United States Atomic Energy Commission. So complete is the Navy-AEC integration in this two-hat organization that neither AEC nor naval personnel need switch headgear during the course of their work.

Possibly the only persons who can distinguish the military from the civilian characteristics of headquarters organization are the Government accountants who must assess its cost of operations between the AEC and the Navy. Even here the line of demarcation is often blurred; but, in general, nuclear research and development costs, including construction of land prototype powerplants, are paid for by AEC, while the Navy pays for research and development on steam parts of the plants and construction of nuclear ships. During the current fiscal year 1958, research and development money amounts to around $86 million from the Commission and around $11 million from the Navy. The prototype aircraft-carrier propulsion plant has consumed the lion's share of these current funds.

Inherent in the headquarters organization setup is a flexibility and freedom in both administrative and funding action essential to rapid progress in complex scientific operations. This has speeded civilian as well as naval reactor development. No new group had to be organized from scratch to develop the $110-million civilian pressurized water reactor at Shippingport, Pa. Naval Reactors Branch, long experienced in that type of reactor, was assigned the job and went to work without delay. Additionally, the organization's dual nature avoids duplication of effort and facilities, such as purchasing offices, inspection groups, and so on. For example, purchase of nuclear cores on competitive bidding for which the Navy pays is done through AEC purchasing offices.

The organization is unique in a number of other respects and bears substantially the image demanded by its strong-minded chief and founder, Admiral Rickover.

In discussing the qualifications of some 90 officers and civilians assigned to headquarters, Rickover told the Joint Atomic Energy Committee:

"By qualification I do not mean, necessarily, their technical ability, but their desire to work long hours and to be dedicated to the job as well. We adopted the procedure of getting only young people. If we get in people with more experience, it takes too long to have them unlearn the bad things they know. We haven't got time for that. We don't try to get top-flight scientists. A lot are top-flight scientists by reputation only. We can't afford to have people around who have reputations who don't work hard. We would rather have people who work hard and don't have reputations."

New recruits for headquarters organization come from a number of engineering and scientific schools which recommend their best graduates. After a series of 5 interviews, about 1 in 4 is accepted. A similar procedure applies to naval officers. Some 40 engineering duty officer applicants are screened annually and 4 or 5 finally accepted. Several Naval Reservists selected have stayed on in headquarters as civilian employees on completion of their duty tours.

Once selected for headquarters duty, officers as well as civilians are given at least 6 months' special training at schools and on projects, followed by assignments on the basis of ability, not rank, and irrespective of military or civilian status. "The best qualified man gets the job," Rickover states, "and in my opinion it is the only way you can run any kind of technical organization."

The organization also operates on a principle of retaining major control rather than assigning substantial areas of responsibility to contractors. This in effect draws contractors into an integration with headquarters which expands the naval nuclear propulsion program from the "two hat" Navy-AEC concept to a "three hat" Navy-AEC-contractor concept. Headquarters control extends even as far as employment decisions on contractor personnel. "Anyone responsible for a reactor program," Rickover explains, "must take on the problem of seeing that his contractors hire the right sort of people and train them. Unless he does, he is in for trouble."

The centralized method of headquarters operation eliminates considerable redtape and memorandum writing. It permits quick decisions. But it violates generally accepted sound management criteria by overburdening key personnel with a large volume of both technical and nontechnical minor decisions. Justification for it is claimed not only from the inherently complex design interrelations within the power plant itself, but in another circumstance explained to the Joint Atomic Energy Committee by Commander R. V. Laney, United States Navy:

"Each naval reactor project has a specific end in view. It is intended to be installed in a definite ship at some definite time. Because the building time for a ship and that for a reactor and the reactor plant components are different, the ship is partly built when the reactor and reactor equipment are still being designed. Its characteristics, its length, beam, its speed—all are determined, frozen. The task is very sharply defined, and there is a very high premium on success. The reactor designer must conceive, develop, design, and produce a reactor, which, when delivered to the ship, will fit into the reactor vessel which it has never seen before. That reactor vessel is resting in a ship which is a stranger, and the reactor, the vessel, the pumps, the heat exchangers, and the intricate control equipment must, the first time they operate in unison, operate correctly, so the ship will have the necessary amount of power to produce the speed for which she was designed."

Projects such as Laney describes, together with necessary basic research, are presently carried on under close headquarters organization control at 3 development centers, 2 (Bettis Plant and Knolls Laboratory) operated for AEC by contractors and 1 privately managed.

The Commission maintains Bettis Plant at Pittsburgh, operated by Westinghouse Electric, employing some 1,300 scientists and engineers, and Knolls Atomic Power Laboratory at Schenectady, operated by General Electric and employing another 500. Combustion Engineering, Inc., operates its own center near Windsor, Conn., employing approximately 200.

The centers, together with headquarters personnel, and close to 1,000 scientists and engineers on contractor payrolls, total nearly 3,000 highly skilled technicians at work on naval nuclear propulsion. Another 250 to 300 BuShips personnel engage in closely interrelated work.

Today bringing a new reactor concept into being takes about half the 6 years needed to produce the original *Nautilus* and *Seawolf* plants. A year is consumed by preliminary analysis and design studies to fix the essential nature of the project; another year is needed for detailed design and analysis, including mock-up critical experiment in the physics, chemistry, and metallurgy of the reactor. During the third year engineering construction and installation of the core, components, and machinery completes the work.

Throughout such a project weekly lists of critical items delayed, in trouble, or needing help is submitted by the development center to headquarters for priority attention. Detailed monthly reports on each phase of the project assist overall coordination. All major design and technical decisions in a program are made by agreement among the principals, that is, AEC, the Navy, and the development center. If there is strong dissent from any party, it is talked through until essential agreement is reached. Lesser technical decisions which derive from major ones, extending even to the contractor level, are made in somewhat the same way by being referred back to headquarters, the principal technical source of direction.

This pattern of vertical relationships between the development centers, contractors, and headquarters in its capacity as the AEC's Naval Nuclear Reactors Branch, does not, however, pertain to its intra-Navy relationships as Code 1500. These are substantially horizontal, particularly with the Preliminary Design Branch and with the Hull and Machinery Design Branches of the Bureau of Ships, where discussions are informal and close.

In general, Code 1500 is responsible for research, development, engineering, and installation of an entire nuclear plant of a new type. Reactors for subsequent plants remain a Code 1500 responsibility, but repeat machinery now comes under cognizance of BuShips Machinery Branch, the same as machinery for conventional ships. This shift back to conventional from task group administrative procedures as the program progresses from its research and development to production is a wise one.

Just as the development of naval nuclear propulsion created demand for special ships to utilize it, so has it created demand for specially selected and trained men to man them. The intricacies involved inevitably drew BuShips into this field as a technical adviser to the Bureau of Naval Personnel. Large numbers of submariners have received the training and already some 200 men and 12 officers are being trained in anticipation of commissioning nuclear-powered surface ships.

Nuclear ship enlisted personnel are selected by forces afloat, but in accordance with strict standards of intelligence, ability, and conduct. So outstanding is this group that about 6 percent are further selected each year as officer candidates—20 times the overall Navy rate. Officers submit to a series of comprehensive interviews by Admiral Rickover and others before final acceptance for training.

Following selection both officers and men undergo 6 months' intensive schooling in physics, mathematics, and various nuclear subjects, followed by another 6 months' further study and practical operation of prototype plants at the National Nuclear Reactor Test Station, Arco, Idaho.

Officers are more intensely trained than enlisted men. All officers must, and a number of enlisted ratings do, qualify as nuclear plant chief operators before completing the course. Qualification establishes proficiency in all phases of reactor operation, particularly in everything pertaining to safety. It requires at least 1,000 hours practical work on a prototype plant and is said to be several times as difficult as qualifying for submarine command.

In addition to regular training, prospective commanding officers are assigned several months' duty at headquarters organization and in the development centers. Each is placed in contact with the designers and developers of the powerplant destined for his command and acquires the same intimate knowledge of its capabilities as the men who created it.

The policy of building a land prototype of each naval nuclear plant type pays dividends, not only during development, but during the careful and meticulous training program as well. Crews go aboard ship fully experienced in operating a plant identical to the one which they must safely control to protect the lives of themselves and their shipmates. These factors, as well as care in design, are responsible for the excellent safety records of presently operating nuclear submarines.

The advent of naval nuclear propulsion has, indeed, brought about as major a change in naval men, material, and methods as it has in concepts of naval tactics. It has placed on naval policy planners the difficult burden of allocating available naval funds to costly commitments for seapower in being to meet the crises of today and at the same time carrying forward the bold nuclear research, construction, and training programs needed to meet the crises of tomorrow.

But if Congress appropriates hoped for funds, by 1966 the Nation will have in being 5 or 6 superflattops, half a dozen guided missile cruisers, the beginning of a destroyer fleet, and some 45 submarines, all nuclear powered.

The substantial shift over from steam to naval nuclear power will have been made during a brief 18 years, compared to more than 50 years needed for the shift from sail to steam.

A Parable for Our Time

EXTENSION OF REMARKS
OF

HON. FRED MARSHALL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mr. MARSHALL. Mr. Speaker, there has been a great deal of speculation about the farmers' attitude toward the succession of profound statements on agricultural policy which have been made by the Secretary of Agriculture and the President. Some light may be shed on the subject by a parable which appeared in a recent issue of the Benton County News, of Foley, Minn., one of the leading rural weekly newspapers of my State. Under unanimous consent, I include an editorial entitled "A Parable for Our Time," from the April 23 issue.

The farmers of my district are also pleased to note that the Secretary of Agriculture is contemplating a visit to the Soviet Union. They hope that he will advise the Russians on farm policy. If he is as successful there as he has been here, it will be a real victory for the free world:

A PARABLE FOR OUR TIME

It came to pass that a scourge was upon the land.

The tillers of the soil brought forth the fruits of the earth in bounty.

The waistlines of the people bulged and users of the abundance were found wanting.

The nakedness of the people was covered with many-colored garments from the weavers of cotton and wool.

Farmers, who were given no share in this abundance, were sorely tried and left their lands to seek other labors. The happy firesides rang no longer with the joyful laughter of little children but were cold and empty. Sadness prevailed upon the land.

The great leader of the people forsook his game of golf and put out of mind for a moment the tribulation of squirrels on the putting green to take counsel with the patriarch in the Temple of Agriculture:

"I say unto you, Elder Ezra, lead us out of our despair. The people are sorely tried and their cries of anger are troubling my games and destroying my scores."

The great elder bowed his head in humility like unto martyrdom and after great deliberation spake thus:

"It is the evil Democrats in the land who have heaped this misery upon us. They gave unto the tillers of the soil laws which provided rewards for their labors. In some instances as much as 90 percent of that received by others. It is in the tents of the Democrats that these tillers have been misled.

"Verily, I say unto you, they must be brought to look beyond the dollar sign, which is the emblem of our tribe. Only then will they come to know true freedom, and to love it more than gold, and be content to leave the laws of reward to those among us who have knowledge and understanding of such things.

"It is sad that their corruption is upon us. These sons of the soil have come to believe that a fair reward is their right by law. I am sorely beset by their claims. We cannot long hope to multiply the reward to the handler and the merchandiser of the tiller's fruit, if they persist in this lack of understanding. Woe to us if they do not cease to press their claims. Then would we be sorely tired to fill the coffers of our campaign to carry on this great crusade.

"I have dreamed, but a new vision cometh not. It is wise that we hold steadfast to the course we have laid. Though the mission I have come to fulfill falters, and the spur of insecurity becomes dull, we must not weary."

Thus spake Elder Ezra, and with scarcity a pause for breath he spake again, saying:

"The freedom we have given the sons of the soil to make debts, to bear great costs, and to labor without reward has taught them not humility, but has aroused them to anger. The fierceness of their anger riseth surely, and we must cause their anger toward us to cease. We must turn their eyes to other paths.

"When the workers cry out against the great costs which we have caused to be raised against them, we must find new words to speak that our glory may again dwell in the land. Say unto them, great leader: 'Farm prices are not made in Washington. A government warehouse is not a market. Farm products have been priced out of the market. Surpluses are inevitable unless support prices are lower.

"Sing aloud these words, O Leader. Send out the 17,000 additional tongues with which I have supplied you, and make joyful noises that the people may hearken unto thee for yet another season."

The great leader of the people clapped his hands in joy, and he heaped praise upon the head of the great patriarch from the temple of agriculture. He called together the scribes of the land and spake unto them

great praise of the elder in whom he remained well pleased. Then he went back to the game called golf well satisfied, and the tribulations of the squirrels were forgotten for a time.

Days and nights passed, the rumblings of anger were heard in the land, and again the great leader was called from his games. At the other end of the wide avenue called Pennsylvania, in a citadel of strength, fashioned by the hands of the master builder Jefferson, there sat a great counsel of the people dedicated to the service of the people that they might walk in honor and dignity and freedom as befits man made in the image of God.

From this citadel there stormed spokesmen for the tribe called Republicans. Like an army of locusts they descended upon the great leader, and he was not pleased. Yet the spokesmen of the tribe Republicans were so sorely burdened that he let them come before him. And they poured out great streams of woe.

"The cries of the farmer are even louder," said the spokesmen. "In the cities great unemployment has arisen. We know that all will be well if left to thee. But the lowly worker who has no job lacks true belief, and the old ones talk of Hoover. It is the prophet Ezra who has brought these troubles. Though he has spoken true, the people have no belief in him. Cast him out, leader, lest we all are lost."

And the leader turned his ear from them, and a great rage descended upon him, and took hold of him, and shook him, and he cast the spokesmen from him. For was it not well known, even among the multitude, that he loved the patriarch of the temple of agriculture, and believed in him, and called him wise and true? And he called the patriarch before him and spake to him, saying:

"The glad words we have spoken in many slogans have failed to end the curse of abundance in the land, and have not stilled the anger in the hearts of the people. We must act in all haste to put down this disturbance among the workers in the vineyard, for, lo, this is the year of decision. It is in November, of the year of 1958, that our disciples in the citadel of the Congress must come before those who now raise their voices in protest, for an accounting."

Elder Ezra had no fear, for he knew the power he held over his leader, and he sayeth: "Verily I say unto you, great leader, these disciples belong to us in name only, for they have strayed from the true way. Thou knowest that many who have come to thee have begged that thou turn thy ear from me and cast me out. I would set an example for these and tell them that they may go the way of the wicked in November.

"It is the Democrats who are the real cause of these troubles. It was they who brought lamps to the homes of the farmers, and caused them to read, and to learn the meaning of many things. It was they who made broad highways across the land, and built temples in the cities, and caused jobs to be created and wages to be paid such as never had been known. The people have waxed fat, and have become confused, and believe that all things should be kept as before.

"O great leader, we shall burn books that do not speak the true word. We shall speak again in new words of efficiency, and of rural development, and of new markets. And we shall send forth even greater numbers of disciples from the temple of agriculture, and tell those who are unable to find sufficient employment upon the land to sell off their oxes and their asses and find work as servants in the houses of our towns and cities.

"And if they say 'What work—and servants of whom?' we shall say unto them that in our land of freedom we will not make a decree that will be imposed upon those forced from the lands of their fathers, but shall leave it unto them as to which of the city dwellers they would be servants to.

"We shall speak to the people in strange tongues that they may hear of the wonders of utilization research. We shall teach new things to which they may turn the skills of their hands and the fruits of their lands.

"Bamboo shoots and wondrous weeds from which the alchemists and healers may distill their drugs will blossom where wheat and corn are turned beneath the soil. And the Safeway stores and the other food emporiums and all those who reap the rewards from all who must eat and drink will remain and prosper to fill the campaign coffers of our true Republican disciples."

Thus spake the elder to the great leader, and he was well pleased. And he ordered done what the elder had told him, and he called together the scribes, and he told them liquidation is more priceless than solidification, and he decreed a thaw rather than a freeze. And he told the scribes and all others to go from him, for the time of the singing of the birds again had come, and the voice of the turtle was heard in the land, and the great leader showed much impatience at being kept away from his realm of golf. For was not he the great leader who is imbued with the spirit of modern Republicanism, which is to procrastinate, to delay, to remain without decision.

Law Day, 1958

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 22, 1958

Mr. KEATING. Mr. Speaker, May 1 was celebrated all across the Nation as Law Day, U. S. A. Led by members of the legal profession, this was a day of national dedication to the principles of government under laws. Special ceremonies in schools, churches, courthouses, and civic and social organizations marked this day. As a lawyer, and as an American, I applaud all who participated in the birth and promulgation of this splendid observance.

We in America are particularly aware of the contribution the rule of law has made to our social and economic and political growth. In the larger concept, peoples everywhere are coming to realize the force and influence of the rule of law on world affairs. It may very well be that worldwide adherence to the rules of law represents the sole chance for the survival of civilization.

A number of editorials from our country's leading newspapers chose the occasion to emphasize various aspects of the law and its impact on our life and progress and future. The concepts of world peace through law, of the importance of fair and equal justice in all courts of our land, the magnificent leadership of American Bar Association, Pres. Charles S. Rhyne and his coworkers in conceiving and carrying forward with Law Day—all these and other thoughts are voiced in these editorials.

Under leave previously granted, I insert at this point two outstanding editorials on Law Day, 1958.

The articles follow:

[From the New York Herald Tribune of May 1, 1958]

TO WORLD PEACE THROUGH LAW

"Justice is spontaneous respect, mutually guaranteed, for human dignity, in whatever person it may be compromised and under whatever circumstances, and to whatever risk its defense may expose us"—Proudhon.

"Equal Justice Under Law" is chiseled in stone above the Supreme Court Building. It is a fitting motto, not only for the court, but for the whole American Nation. For it is the law which bred us, led us, and fed us.

Today is Law Day, the first in our history, so proclaimed by President Eisenhower. He did so at the urging of Charles Rhyne, the 45-year-old North Carolinian who is president of the American Bar Association. Ever since he took office last summer, in a London meeting where he dedicated the American bar's monument to Magna Carta on the historic field of Runnymede, Charles Rhyne has devoted his time to spreading a single concept: world peace through world law.

It is a noble concept. Man has groped, imperfectly, toward it from the beginning of time. It finds expression in the Decalogue of Moses. Leviticus tells us, "Ye shall have one manner of law, as well for the stranger as for one of your own country." Three centuries before Christ, Aristotle defined it in Athens: "The law is reason free from passion." Christ himself preached it in his Sermon on the Mount. Five centuries later the Romans spoke it in the Institutes of Justinian: "The precepts of the law are these: to live honorably, to injure no other man, to render to every man his due."

From this Judaic-Greco-Roman seed came the stirrings which expressed themselves at Runnymede when the English nobles forced King John to sign this pledge: "No freeman shall be taken, or imprisoned, or disseized, or outlawed, or exiled, or in any way harmed, nor will we go upon or send upon him, save by the lawful judgment of his peers or by the law of the land." Kings were tyrants long after that, but the flames of Runnymede spread; Sir Edward Coke could fling in the face of James I these words: "The king ought not to be under man, but under God and the law."

And when other lawyers came together in a New World, to proclaim a new Nation conceived in liberty, they drew their propositions largely from Aristotle's "natural law" and from Blackstone's commentaries on the English common law. "I pray God these principles may be eternal," wrote Thomas Jefferson. And as the new Nation emerged, a great Chief Justice, John Marshall, by the force of his decisions and his strength of mind, left a legacy of living law—of growing law, adaptable to vastly changed situations—which is still today our strength as it is our refuge.

Only as the whole world comes to accept a rule of law, and agree on its common principles, will there be hope for a lasting peace. The progress is slow; nevertheless it exists. President Eisenhower himself appealed to such a concept in opposing the British-French attack on Egypt. Moreover, his use of the United Nations to stop that attack has now borne some fruit in a peaceful settlement by Egypt of the claims of the canal stockholders, embodied in a formal legal contract. The now pending United States proposal in the United Nations for international inspection of the Arctic is an attempt to extend the concept of international law. Significantly, it has such appeal that Secretary General Dag Hammarskjold momentarily stepped out of his role of impartial referee to make an eloquent appeal for the Soviet Union to accept it. The moral force of all humanity is a rising pressure for a rule of law.

Of course, the Soviet Union has a legal code of sorts, more honored in the breach

than in the observance. Khrushchev in his famous speech against Stalin's crimes talked much about the "socialist legality" which he said Stalin violated by imprisoning and executing men without trial, by decrees which bypassed the courts. No Communist has much respect for legal codes. And already Khrushchev is beginning to attack his legal opponents in Stalinesque phrases; their lives or their freedom may soon be at hazard. All this flows from the two most glaring defects in Soviet law: (1) No provision for the election and legitimate succession of state rulers, which causes an inevitable and endless power struggle; and (2) no habeas corpus to provide universal protection against arrest and punishment without jury trial.

Our own law, and the Supreme Court itself, must fight off recurring attacks. Nevertheless, as in desegregation, we continue to move toward the ideal set by Solon long ago: "That city is the best to live in, in which those who are not wronged, no less than those who are wronged, exert themselves to punish the wrongdoers."

[From the Washington Post and Times Herald of May 1, 1958]

LAW DAY

It was a happy thought on the part of Charles S. Rhyne, president of the American Bar Association, and his associates to choose May Day as an occasion for emphasis of the importance of law in the lives of free people. The Communist world celebrates its triumphs and its military might on May 1. In many other lands the first day of May is a special occasion for revolutionaries and anarchists. In this land of stable government through law there is much to be said for using the same date to celebrate the marriage of order and liberty.

We live in a world that is desperately in need of law. General acceptance of the great idea of individual freedom under law would at once end the cold war and set at rest mankind's greatest fear of nuclear destruction. As practical men, we do not expect this concept, which means so much to us, suddenly to leave the wide gulf that separates the free world from communism. But ideas that give men promise of justice, equal rights, and freedom in an orderly society are more contagious than either tyranny or bombs. In the long reach of history the ideas that underlie "Law Day—U. S. A." may be more potent than any military force.

It is well to remember also on this occasion how far we are from achieving the hallowed concept of equal justice under law in the multifarious human relationships within our own country. The struggle for equal protection of the laws must go on in Chicago, Washington, Little Rock—throughout the Nation—ever day in the year. It is a never-ending process. The fact that human performance falls far short of the ideal only underlines the necessity of reminding ourselves of the vital role that law plays in any free society.

Milwaukee Committee for a Sane Nuclear Policy

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1958

Mr. REUSS. Mr. Speaker, no one can know the thoughts that come into the minds of millions of individual Americans, and the other peoples of the world, each time the great powers launch another missile, test another nuclear device, or add another hydrogen bomb to stockpiles already large enough to destroy civilization.

I have no doubt, however, that every day thousands more Americans, Europeans, Asians, and Africans are thinking seriously—and fearfully—about our common future, and where we are going. We all live in an atmosphere not only clouded by radioactive dust but heavy with the worry of mankind.

Some of our most respected citizens have formed the National Committee for a Sane Nuclear Policy, to stimulate public thought and discussion of these great problems which concern us all. Sponsors of the Milwaukee Committee for a Sane Nuclear Policy are:

Carolyn E. Allen, Mrs. August Backus, Richard Black, Mrs. Karl Bostrum, Mrs. E. R. Droppers, Carrie B. Edmondson, Mr. and Mrs. Jack Eisendrath, Lawrence F. Giese, Rev. R. H. Huenemann, Robert Krahn, Mrs. Wallace Lee, Mr. and Mrs. Willis Leenhouts, Mr. and Mrs. Reed MacBain, Marion G. Ogden, Alfred S. Reindl, Mrs. Walter E. Rilling, Corneff Taylor, Rev. Herbert E. Zebarth, and Leonard S. Zubrensky.

Under leave to extend my remarks in the RECORD, I commend to the attention of my colleagues on both sides of the aisle the first of a series of statements for Americans in a nuclear age, published by the Milwaukee Committee for a Sane Nuclear Policy in the Milwaukee Journal of Sunday, April 27, 1958.

The statement follows:

We are facing a danger unlike any danger that has ever existed. In our possession and in the possession of the Russians are more than enough nuclear explosives to put an end to the life of man on earth.

The same propulsion device that can send a manmade satellite into outer space can send a missile carrying a hydrogen bomb across the ocean in 18 minutes.

Meanwhile, our approach to the danger is unequal to the danger.

We have been living half a life. We have been developing our appetites, but we have been starving our purposes. We have been concerned with bigger incomes, bigger television screens and bigger cars—but not with the big ideas on which our lives and freedoms depend.

What the world expects of America is not just bigger and better intercontinental missiles and hydrogen bombs. The world is looking to us for the ideas that can make this planet safe and fit for human habitation.

Indeed, the test of a nation's right to survive today is measured not by the size of its bombs or the range of its missiles, but by the size and range of its concern for the human community as a whole.

There can be no true security for America unless we can establish and keep vital connections with the world's people, unless there is some moral grandeur to our purposes, unless what we do is directed to the cause of human life and the free man.

Just in front of us opens a grand human adventure into outer space. But within us and all around us is the need to make this world whole before we set out for other ones. We can earn the right to explore other planets only as we keep this one from becoming an atomic furnace.

There is much that America has said to the world. But the world is still waiting for us to say and do the things that will in deed and in truth represent our greatest strength.

What are these things?

First, as it concerns the peace, America can say that we pledge ourselves to the cause of peace with justice on earth, and that there is no sacrifice that we are not prepared to make, nothing we will not do to create such a just peace for all peoples;

That we are prepared to support the concept of a United Nations authorized and empowered under law to prevent aggression, to enforce disarmament and to settle disputes among nations according to principles of justice.

Next, as it concerns nuclear weapons, America can say that the earth is too small for intercontinental ballistic missiles and nuclear bombs and that the first order of business for the world is to bring both under control.

That the development of satellites or rocket stations and the exploration of outer space must be carried on in the interests of the entire human community through a pooling of world science.

As it concerns nuclear testing, America can say that because of the grave unanswered questions with respect to nuclear test explosions—especially as it concerns the contamination of air and water and food and the injury to man himself—we are calling upon all nations to suspend such explosions at once.

That no nation has the moral right to contaminate the air that belongs to all peoples, or to devitalize the land, or to tamper with the genetic integrity of man himself.

That while the abolition of testing will not by itself solve the problem of peace or the problem of armaments, it enables the world to eliminate immediately at least one real and specific danger. Also, that the abolition of testing gives us a place to begin on the larger question of armaments control, for the problems in monitoring such tests are relatively uncomplicated.

As it concerns our connections to the rest of mankind, America can say that none of the differences separating the governments of the world are as important as the membership of all peoples in the human family.

That the big challenge of the age is to develop the concept of a higher loyalty—loyalty by man to the human community.

That the greatest era of human history on earth is within reach of all mankind, that there is no area that cannot be made fertile or habitable, no disease that cannot be fought, no scarcity that cannot be conquered.

Tobacco Heading for Trouble

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mr. DORN of South Carolina. Mr. Speaker, the United States tobacco farmer has been reduced to an average of 4.5 acres per farm. The foreign tobacco grower is planting more and more with the aid of our Reciprocal Trade Program as presently administered. This in addition to our foreign aid which teaches them how to fertilize, cure, and market a competitive leaf.

Now is the time for the tobacco farmer and the tobacco industry to support a new foreign trade bill. We must defeat a 5-year extension of the present trade law. Next year may be too late.

Mr. Speaker, the following information is available from the Department of Agriculture:

TOBACCO—INTERNATIONAL TRADE LEVELS AND TRENDS

World exports of unmanufactured tobacco reached a new high of 1,585 million pounds in 1956. Little change is expected in 1957. United States exports in 1957 are expected to be 20 million pounds below those of 1956, while exports of foreign countries are expected to rise by a similar amount.

This downfall trend in United States exports is expected to continue, because of: (1) sharply rising production of foreign cigarette leaf, particularly flue-cured and oriental; (2) improvement in quality of foreign leaf; (3) increasing use of bilateral trade agreements; (4) recent sharp increases in import duties and excise taxes on tobacco by some countries; (5) expected continuing increases in prices of United States burley and flue-cured leaf; (6) expected continuation of dollar- and gold-reserve difficulties in some tobacco-importing countries.

The major problems facing United States tobacco exports arise from actions taken by other countries.

Over three-fourths of all foreign tobaccos (excluding United States imports) entering international trade are covered by bilateral agreements, guaranteed purchase arrangements, preferential import duties, or other controls which virtually exclude United States leaf. The use of these bilateral arrangements to cover tobacco exports of foreign countries, mostly in exchange for manufactured items, have increased greatly since World War II.

In some countries, including Japan, Australia, and the Philippines, prices of domestic leaf are well above those received for comparable qualities of United States tobaccos. Self-sufficiency policies of these areas do not permit greater imports of United States leaf. Other countries limit imports of United States tobacco through foreign-exchange controls.

An important factor in the declining United States competitive position is the recent sharp increases in prices of United States burley and flue-cured. The rises in cost of the heavier popular export grades are due chiefly to increasing United States demand for filter-tip cigarettes. These rising prices encourage both foreign production and use of lower priced foreign tobaccos.

In 1956 some of the United States flue-cured crop was undesirable varieties. To improve this situation, the United States Government took measures which practically eliminated production of these in 1957.

FOREIGN PRODUCTION INCREASING MUCH FASTER THAN THAT OF UNITED STATES

World production at 8.3 billion pounds in 1957 was the third highest on record, being slightly below the 1955 and 1956 levels. Foreign production continued its rise, reaching an all-time high of 6.68 billion pounds. During the 20-year period from 1937 to 1957, world production increased about 1.25 percent per year. United States production rose about 35 percent from 1937 to 1947 while foreign production increased 25 percent. However, since the 1947–51 period United States production has decreased and foreign production has expanded 30 percent.

FOREIGN EXPORTS CONTINUE TO RISE AS UNITED STATES EXPORTS DECLINE

During the 1947–51 period total exports of foreign countries were about the same as prewar, while United States exports were about one-sixth above prewar. Since 1950, international trade in tobacco rose about 400 million pounds. All of this increase was due to larger foreign exports. In 1957, United States exports were about 490 million pounds, or one-sixth above the prewar level. Total exports of other countries are estimated at 1,095 million pounds, or 52 percent above prewar. This increase was due to greater exports of flue-cured and oriental tobaccos. Nearly all of the increase in flue-cured exports came from the Federation of Rhodesia and Nyasaland, India, Canada, and China mainland. Practically all of the exports of oriental were from Turkey, Greece, Bulgaria, and Yugoslavia.

The United States tobacco export problem is not a new one. It started before World War II, but recently has become more acute. United States leaf tobacco prices have long been above foreign prices. Superior quality of United States flue-cured and burley delayed the day of reckoning. However, recent increases in United States prices have made the competitive position worse.

The unfavorable competitive position of the United States is further shown by the fact that foreign tobaccos are available for purchase without using scarce dollars which are often used primarily to buy United States manufactured items rather than tobacco and other agricultural products.

The important unpredictable element in the future of United States exports is the change in cigarette blends resulting from shifts in consumer demand.

Most flue-cured tobacco from foreign exporting countries is more or less neutral in regard to flavor. Nearly all neutral leaf has been used in cigarettes; however, with the increasing use of filter-tip cigarettes, there is greater demand for tobacco with more flavor.

Nearly all of the recent increases in foreign exports of flue-cured except from Mainland China have been from British Commonwealth countries. A high proportion of this has been sold under preferential tariffs to the United Kingdom, Australia, Union of South Africa, and British territories. Recently there has been a decline in use of straight, oriental-type cigarettes. Demand has shifted to blend cigarettes except in a few countries of East Europe.

Import duties and excise taxes in some countries have always been serious deterrents to United States tobacco exports. Duties increased in some importing countries in recent years, particularly in 1957. Impediments to United States tobacco exports have increased sharply since World War II. Bilateral trade agreements, preferential import duties,[1] licensing arrangements, and foreign exchange controls are among the most important. In many countries the policy of reducing the expenditures of dollars for the purchase of tobacco has encouraged foreign production and exports.

The United States is now feeling the full effects of these factors and foreign production is rising faster than foreign demands. United States cigarette leaf is still superior in quality, but United States prices are higher than those for foreign growths. Many foreign importers have a wider choice of areas from which to buy leaf and are willing to buy and use the lower quality foreign leaf to keep down manufacturing costs.

[1] Import duties that are lower on tobacco from dependent territories or members of special currency-clearing arrangements.

Law Day, U. S. A.

EXTENSION OF REMARKS
OF
HON. WILLARD S. CURTIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mr. CURTIN. Mr. Speaker, under leave to extend my remarks in the appendix of the RECORD, I wish to insert an article which appeared in the Allentown, Pa., Morning Call, under date of May 2, and which is a very excellent résumé on our laws and the lawyers' responsibilities to the same:

LAW DAY, U. S. A.

(EDITOR'S NOTE.—Following is substantially the text of the principal address, delivered yesterday by Attorney Orrin E. Boyle before members of the Lehigh County Bar Association, at their first annual observance of Law Day, U. S. A.)

At no time in the modern world in which we live has it been so important that we pause, even if it be for a single day, to nationally and rationally evaluate the tremendous importance and effects of the law upon the life, liberty, happiness, and property of every American.

Until 1958, this day, May 1, has only been celebrated as the advent of spring, a day of joyful celebration with dance and song around a Maypole, or a time when the distorted ideas of communism were displayed with the military might with which the Soviets seek to conquer the world.

Tomorrow we are certain to read about such repeated celebration around the Red Square of Moscow and in other cities behind the Iron Curtain.

But today we in America and the free nations of the world will come to better understand that the God-given concept of law and human justice shall and will ultimately prevail against the tyrannies of men, as they have always in the whole history of mankind.

The progress of government by law has been slow, but it has been sure in securing us in our lives, our liberties, and our properties. In America these guaranteed possessions are not merely ideals. They are realities we have enjoyed as blessings for 170 years; and which we have undertaken in many ways to vouchsafe for the rest of the world.

The Founders of Our Republic, many of them colonial lawyers, were well aware of the unbridled tyrannies to which they and countless millions for centuries before them had been subjected. Being wise and determined men they for the first time in human history designed a Constitution with its amendments as a Bill of Rights, that fundamentally made the seemingly most obscure and unimportant citizen the equal of every other person before the law in securing his rights to life, liberty, and the pursuit of happiness.

This may have been an experiment in free government under constitutional law in 1789, but in 1958, it is no longer an experiment. It is today the most valuable heritage of 170 million people born out of the bone and sinew of almost every race, and nation of the world.

Freedom of religion, freedom of speech, freedom of the press, freedom against unreasonable searches and seizures, the right of trial by jury and the right of assembly and the right to freely elect those who are to govern us. These are but a few of the rights assured us under both our Federal and State Constitutions. There are many more which command the respect and adherence of every citizen and resident in the United States.

Because these rights are an almost sacred ever present possession of every man, woman and child we have come to take all of them for granted.

But let us be keen enough on this first nationwide observance of Law Day, U. S. A. to realize that the parchment upon which these constitutions have been written, the books in which our laws have been printed, and the countless volumes in which judicial opinions have been reported are not enough to protect the rights to life, liberty, and the pursuit of happiness they are intended to preserve. These are destructible. Their votaries are expendable.

One of the greatest, if not the greatest

achievements of our experiment in free and representative government during the past 170 years has been the fulfillment of these needs by our courts, our lawyers and our citizens.

That we may retain inviolate this priceless heritage for ourselves and posterity it is important that we as lawyers constantly remind ourselves and our fellow citizens of the manner in which our Government of law has been attained and how it can best be preserved. Our schools, colleges, and universities must place greater emphasis upon teaching our youth the history, civics, and political and social sciences of the United States. The cynics, debunkers, and political crackpots will need to be submerged more than ever with the logic and realities of what we have and what we are here in America.

The armed forces which are today marching before their Soviet masters in the streets of Russia and its satellites, the masses that may be gathered there to watch their threatening spectacle; not one of them not even the tyrant masters themselves, possess a single one of the rights vouchsafed us here in America under our constitutions and our laws. Not one of them is clothed with the dignity and individuality which their Creator designed for them. Everyone of them is the fearful, cringing, servile victim of a brutal tyranny more vicious than even a Romanoff Czar imposed upon his subjects.

Ponder your condition in a nation such as the Soviets have fashioned for their millions, and you will better understand the solemn duties imposed upon you as lawyers. To our profession and our practices, as to no other, the people of America must and will look for the fair and impartial administration of their laws. To our interest and zeal in defending their freedoms they will look with increased anxiety as the sinister gloom of Soviet slavery threatens them.

As lawyers, our duties now, more than ever before in the history of our Nation are not only to represent our individual clients in their individual problems under the law, but to stand up courageously as the champions of our constitutions, our laws, and our courts in administering them.

Doing so, I am confident that we and our fellow citizens will continue to enjoy the blessings of freedom under law as we have for more than a century and a half; and that "government of the people, by the people, and for the people will not perish from the earth."

Know Your Congressman—Legislative Record, Duties and Responsibilities of Congressman Gordon L. McDonough

EXTENSION OF REMARKS
OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mr. McDONOUGH. Mr. Speaker, it is the desire of all Members of Congress to become intimately and personally acquainted with all of the people they represent and likewise for the people they represent to know their Congressman.

This is not always possible as much as the Congressman and the people he represents try to become personally acquainted.

However, through correspondence, the press, radio, TV, and other means of communication, all Congressmen try to inform their people what they are doing; the bills they sponsor, introduce and promote; the committees they are assigned to; the major issues they have voted for; and their duties and responsibilities.

In order to properly inform the people of the 15th District, I am submitting the following summary of my legislative record, my duties and responsibilities, and some of the important bills I have introduced and promoted.

MAJOR ISSUES CONGRESSMAN M'DONOUGH HAS SUPPORTED AND VOTED FOR

The McDonough record speaks for itself. But the record of achievement in legislation initiated by McDONOUGH is but a small part of the total record of accomplishment built by the consistent and vigorous efforts of the Congressman from the 15th District in behalf of his constituency.

McDONOUGH has supported legislation to establish a strong adequate national and civilian defense to meet any enemy attack.

He has urged legislation to outlaw the Communist Party in the United States and to combat communism both within the United States and abroad.

He stands firmly opposed to the admission of Red China to the United Nations.

He has consistently supported new and improved veterans' hospitals and necessary increases in pensions for service and non-service-connected veterans and war widows and dependents.

McDONOUGH has supported lower downpayments on new homes and liberal loans for alterations and repairs of existing homes, and for slum clearance under housing legislation.

He has supported increased social security payments that would provide adequate pensions to our senior citizens.

McDONOUGH believes in economy in Government through elimination of waste, extravagance, and duplication of services. He also believes in providing maximum service to our citizens for every dollar spent by Government.

He believes in tax eduction, if such reduction can be achieved while we at the same time maintain our national defense and meet the technological challenge of the Soviet Union in the field of scientific achievement.

LEGISLATIVE RECORD OF CONGRESSMAN GORDON L. M'DONOUGH

The record of achievement attained by Congressman GORDON L. McDONOUGH during his term of service to the people of the 15th Congressional District is outstanding. It is a record of action rather than words—of accomplishment rather than promises. It is the result of his consistent efforts to act and work in the best interest of all the people in his district as well as for the Nation.

During the six complete Congresses in which McDONOUGH has served, McDONOUGH has introduced the following major bills which have resulted in ultimate action and public law in each Congress.

Now let's have a look at the McDONOUGH record.

California ownership of tidelands: A bill to establish the title of the States to tidelands areas was introduced by McDONOUGH in the 79th Congress. McDONOUGH's fight to establish California's ownership of tideland property which is so important to the citizens of our State culminated in enactment of Public Law 31, 83d Congress, which recognized California's ownership of tideland property.

Los Angeles post office expansion: A bill for the expansion and remodeling of the Terminal Annex Post Office was introduced by McDONOUGH in the 80th Congress. The improvement and extension of facilities at Terminal Annex which included an additional floor on the building was necessary as this post office handles the bulk of ingoing and outgoing mail for the Los Angeles area, and the tremendous population increase in the Los Angeles area since World War II resulted in a corresponding increase in the mail load handled at Terminal Annex. The expansion and remodeling of Terminal Annex has been completed as a result of Public Law 238, 81st Congress, and efficient mail service in the Los Angeles area has been maintained.

Federal buildings for Los Angeles: Congressman McDONOUGH introduced a bill in the 80th Congress for the constuction of a new Customhouse and Federal Office Building to meet the increased need in the Los Angeles metropolitan area, and to afford greater service and convenience to the public. Congressional action providing approval of this building was completed July 19, 1956, and construction on the new Los Angeles Customhouse and Federal Office Building will soon be underway.

Los Angeles harbor improvements: Los Angeles Harbor is one of the largest harbors in the United States, and with constantly increasing commerce, facilities for the loading and unloading of vessels must be expanded with channels extended and enlarged to provide more space for vessels and to assure adequate channels for larger vessels to make port at Los Angeles.

Congressman McDONOUGH introduced bills to improve the east basin of Los Angeles Harbor by dredging and enlarging, and to improve the west basin including the removal of a drawbridge, and these harbor improvements were authorized in Public Law 641, 84th Congress.

McDONOUGH also obtained reimbursement to the city of Los Angeles for funds which had been expended on the East Basin Harbor improvement for necessary immediate work prior to the congressional authorization.

Air pollution control—smog: Recognizing the serious threat of smog to the health and welfare of every citizen of Los Angeles, McDONOUGH introduced a bill in the 84th Congress to provide for research by the Federal Government into the causes of air pollution, its control and prevention.

The Federal program for research on air pollution now in progress under the direction of the Department of Health, Education, and Welfare was inaugurated with enactment of Public Law 159, 84th Congress.

Marina Del Rey project: The McDonough bill introduced in the 83d Congress provided for authorization of the Marina Del Rey small craft harbor, a project

urgently needed to supply a base for the the United States Coast Guard Air-Sea Rescue Unit, and which also will provide additional small-craft facilities and a useful recreation area. Authorization for this project was included in Public Law 780, 83d Congress. Congressman McDONOUGH's vigorous efforts also obtained the following appropriations for the Marina Del Rey project: $25,000, Public Law 163, 84th Congress; $355,000, Public Law 641, 84th Congress.

Repeal of taxes: Congressman McDONOUGH introduced legislation in the 80th Congress to repeal the excise tax on theater admissions. Partial repeal of the admission excise tax was enacted under Public Law 324 of the 83d Congress and Public Law 1010, 84th Congress.

Veterans: In the 79th Congress, McDONOUGH introduced a bill to extend National Service Life Insurance for 5 additional years thereby assuring life-insurance benefits for all men in service which otherwise would have terminated. The extension of National Service Life Insurance was established under Public Law 118, 79th Congress.

McDONOUGH introduced a bill in the 83d Congress to extend the 3-year presumption of service connection to veterans in all types of tuberculosis. This bill was designed to bring relief to many veterans with types of tuberculosis other than pulmonary, which were contracted as a result of service. The 3-year presumption of service connection was extended to veterans in all types of tuberculosis under Public Law 241, 83d Congress.

Armed services: The McDonough bill introduced in the 82d Congress fixed the personnel strength of the United States Marine Corps to assure full efficiency of the corps, and also gave the Commandant of the Marine Corps a place on the Joint Chiefs of Staff. This was accomplished with the enactment of Public Law 416, 82d Congress.

Air Force Academy: A bill to establish an Air Force Academy to provide the highly specialized training necessary to provide competent and efficient officers for the United States Air Force necessary for the defense of our Nation was introduced by McDONOUGH in the 81st Congress. The United States Air Force Academy, now located in Colorado, was authorized with enactment of Public Law 325, 83d Congress.

Post graduate Naval Academy in California: The McDonough bill to establish an additional Naval Academy in California and McDONOUGH's fight to improve and extend facilities for the technical training of officers for the United States Navy resulted in establishment of the Post Graduate Naval School at Monterey, Calif., December 22, 1951.

United States flag: McDONOUGH introduced House Joint Resolution 167 in the 80th Congress to assure that the flag of the United States always shall receive proper respect and be placed in its proper position by providing that no foreign or supranational flag shall be displayed in a superior position or in place of the flag of the United States.

This protection of the flag of the United States was established with enactment of Public Law 107, 83d Congress.

Scientific research: In the 80th Congress, McDONOUGH introduced a bill to provide a research program to develop economical methods to convert sea water to fresh. This program is of vital importance to Southern California, as a practical economical method which will convert sea water to fresh for industrial, agricultural, and domestic use would help solve the all important problem of contniuous adequate water supply to meet continuing needs of an increasing population and industry. The McDONOUGH bill also provided for establishment of demonstration plants.

The research program now in progress by the Federal Government to convert sea water to fresh was initiated under Public Law 448, 82d Congress.

McDONOUGH also introduced a bill in the 80th Congress to provide for Federal research into the causes and treatment of multiple sclerosis. This program was initiated under Public Law 835, 84th Congress.

Recognition of the American schoolteacher: A bill introduced in the 82d Congress by McDONOUGH provided for the issue of a special postage stamp honoring our American schoolteachers who receive so little recognition for the service they render to our Nation.

The special stamp honoring the American schoolteacher was issued July 1, 1957.

Equal rights: A bill introduced by McDONOUGH in the 82d Congress provided naturalized citizenship rights to all immigrants having the right to permanent residence in the United States, and provided quotas for Asian and Pacific peoples. The provisions of this bill were included in Public Law 414, 82d Congress.

M'DONOUGH BILLS UNDER CONSIDERATION BY 85TH CONGRESS

House Joint Resolution 61: A resolution to revise the status of forces agreement regarding jurisdiction of foreign nations over American servicemen stationed within those nations, or the withdrawal of the United States from the status of forces agreement.

H. R. 1193: A bill to increase the pension of Federal and postal employees under the Civil Service Retirement Act.

H. R. 4797: A bill to establish a Federal policy concerning the termination, limitation, or establishment of business-type operations of the Government which may be conducted in competition with private enterprise.

H. R. 1176: A bill to exclude from gross income for income tax purposes all amounts up to $2,400 per annum received as annuities, pensions, or retirement benefits.

H. R. 4403: A bill titled the Self-Employed Individuals' Retirement Act which will extend social security retirement coverage to attorneys, dentists, and other self-employed individuals not covered by the present Social Security Act.

House Joint Resolution 4: A proposal to amend the Constitution of the United States to provide that no treaty or international agreement shall nullify or abrogate any of the civil rights guaranteed to citizens of the United States by the Constitution.

House Joint Resolution 62: A proposal to amend the Constitution of the United States to guarantee equal rights for women.

H. R. 3635: A bill to allow certain small business corporations an exemption of $25,000 for income-tax purposes, and to provide that the combined normal tax and surtax rate of 38 percent shall be applicable to corporations having taxable incomes of less than $50,000.

H. R. 331, H. R. 1175, H. R. 1177, H. R. 1178, H. R. 1182, H. R. 1198: Bills to repeal the excise tax on admissions to rodeos held for charitable purposes; the excise tax on purses, handbags, and certain other leather articles; the excise tax on admissions to motion pictures; the excise tax on cosmetics and toilet preparations; and the tax on certain other events conducted for charitable purposes.

H. R. 1195: A bill to permit the taxation by local, State, county, and city governments of the private interest in personal property and work in process, and inventories of material acquired by the Federal Government for military security and the national defense but in possession of contractors with the Federal Government. This bill is of vital importance to Los Angeles County tax revenue.

H. R. 5391: A bill to provide that the Secretary of Commerce shall furnish weather reports to certain air pollution control agencies. These weather reports would assist in the important research now in progress to determine the causes of smog and methods for its control and elimination.

H. R. 6459. A bill to allow a deduction for income tax purposes of certain expenses incurred by a taxpayer for the higher education of a dependent.

H. R. 9686: A bill to create a United States Foreign Service Academy to provide an efficient trained force for the Foreign Service of the United States.

H. R. 10179. A bill to protect the right of the blind to self-expression through organizations of the blind.

H. R. 12312: A bill to amend the Social Security Act to allow a person receiving State old-age assistance to earn $50 per month without any reduction in the amount of assistance received.

H. R. 12313: A bill to provide Federal funds up to 98 percent of the cost of cooperative housing projects to be occupied by elderly persons only at low rents under a cooperative nonprofit plan, and authorizing the FHA Commissioner to advance up to $100 million on 50-year mortgages for this purpose.

IMPORTANT DUTIES AND RESPONSIBILITIES OF CONGRESSMAN GORDON L. M'DONOUGH, CHAIRMAN OF CALIFORNIA CONGRESSIONAL DELEGATION

Congressman McDONOUGH is chairman of the 30 member California congressional delegation in which all the Congressmen from California work together in behalf of many issues of great importance to our State. California's congressional delegation is the second largest—New York is first—in the House of Representatives.

Very few of the larger State delegations meet together as bipartisan bodies

to consider and act upon problems of general interest to their respective States. The California delegation, however, has done so for many years, and acting as a unit, the delegation has made notable contributions to the solution of California problems.

As chairman of the delegation, Congressman McDONOUGH appoints committees of the delegation to deal with problems of particular interest to California. Committees have been appointed by McDONOUGH on agriculture, air-pollution control, forest-fire prevention, resource development, and California industry.

A successful undertaking of the delegation under McDONOUGH'S chairmanship was that relating to the granting of permission by the Mexican Government for service by an American airline between Mexico City and Los Angeles. It had been agreed by the two governments some years ago that such service would be introduced, but the necessary formal permission as contemplated under the agreement had never actually been granted by the Mexican Government. In February 1957, the California delegation conferred as a group with officials of the Department of State and the Civil Aeronautics Board concerning the matter and expressed strongly its desire that energetic steps be taken to complete the matter. Within a few weeks, the granting of the necessary permission was announced.

An important problem which also engaged the attention of the delegation was the proposed closing of the naval hospital at Corona, Calif. The proposed closing would involve a severe limitation on the availability of medical care for service personnel, and with the delegation interest in the matter, the closing was postponed.

Among other duties as chairman of the California delegation, Congressman McDONOUGH appeared before the House Committee on Appropriations when it held hearings on public works matters in the 1957 session to introduce the presentation by California witnesses of the California requests for appropriations for flood-control projects.

Besides his duties as chairman of the delegation, McDONOUGH is also active in district affairs, and is regarded as an effective representative of his constituency. For several years he has sought the construction of a new customhouse and Federal office building for Los Angeles, and this project has made progress in the face of many difficulties, and should be under construction this year.

He has also been for many years an energetic supporter of general Los Angeles and southern California interests such as forest-fire prevention and flood control, and played a major part in the creation of the Playa del Rey small-boat harbor and recreation development, as well as in the initiation of Federal aid for air-pollution research and the conversion of sea water to fresh water.

BANKING AND CURRENCY COMMITTEE

McDONOUGH is a ranking member of the powerful and important Banking and Currency Committee which has jurisdiction over the Federal Reserve Board, the Federal Home Loan Bank Board, the Export-Import Bank, the International Bank for Reconstruction, the International Finance Corporation, all legislation concerning the financing and rehabilitation of homes, and military housing.

HOUSING SUBCOMMITTEE

He is also a ranking member of the House Subcommittee on Housing which has made a specific and detailed study of the need for all types of housing throughout the United States, which includes multiple housing, individual homes, slum clearance, and rehabilitation, and reconstruction of blighted areas in the cities throughout the Nation.

JOINT SENATE AND HOUSE COMMITTEE ON DEFENSE PRODUCTION

He is also a member of the Joint Senate and House Defense Production Committee, which has the responsibility of making a continuous study of the programs authorized by the Defense Production Act and of reviewing the progress achieved in the execution and administration of these programs for the defense of our Nation.

SELECT COMMITTEE ON ASTRONAUTICS AND SPACE EXPLORATION

He is a member of the Select Committee on Astronautics and Space Exploration, a new committee of the House which has the duty and responsibility to pioneer the study of interplanetary travel and communication, and outer space exploration. This committee will conduct a thorough and complete study and investigation with respect to all aspects and problems relating to the exploration of outer space and the control, development, and use of astronautical resources, personnel, equipment, and facilities.

VOTING RECORD AND ATTENDANCE

With the multiple duties and responsibilities required by the foregoing committee assignments and delegation responsibilities, Congressman McDONOUGH has one of the best records for being present and voting on important and vital issues debated and voted upon in the House of Representatives.

He is also a member of the Inter-Parliamentary Union by appointment of the Speaker and approval of the House.

He was a United States delegate to the 46th conference of the Inter-Parliamentary Union, which was held in London in September 1957, which 700 delegates from 46 countries attended.

Hon. Thomas J. O'Brien

SPEECH

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 30, 1958

Mr. HAYS of Arkansas. Mr. Speaker, I am glad that our friend the gentleman from Illinois [Mr. YATES] has called attention to the fact that this is the 80th birthday of our beloved colleague, the Honorable THOMAS J. O'BRIEN. His is a unique career and such a notable one that we should not let this milestone pass without expressing our profound appreciation for his friendship and for his contribution to the public service. In his quiet, but remarkably effective, way he has served his district, his city, his State, and his Nation over a long period, and we, his friends, are happy that his health and vigor have been preserved. Paraphrasing an old saying, TOM O'BRIEN can't grow old; time only decorates him.

Restore Sound Money and Conversion—Stop Inflation and Further Dollar Depreciation

EXTENSION OF REMARKS

OF

HON. J. EDGAR CHENOWETH

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mr. CHENOWETH. Mr. Speaker, I am sure the House will be interested in a speech made on April 30 before the Denver Mining Club by Mr. Merrill E. Shoup, president of the Golden Cycle Corp., of Colorado Springs. Mr. Shoup is an outstanding industrial leader of Colorado. In addition to being interested in the gold mining industry, Mr. Shoup is president of the Holly Sugar Corp., and of several banks in our State.

In this speech Mr. Shoup calls attention to the importance of gold in the world economy. He states that Russia is preparing to back the ruble with gold. He feels that the time is here when the United States should take steps to raise the price of gold, which would encourage the production of gold in this country and cause many of our gold mines to reopen.

Mr. Shoup urges that the price of gold should be raised to $100 an ounce, from the present price of $35 per ounce. He also advocates that the restrictions on the ownership of gold should be lifted, and Americans should once again be permitted to own gold.

Mr. Shoup has given a great deal of study to this subject and is recognized as an authority on gold. His speech is thought provoking, and will no doubt precipitate a great deal of discussion. I am happy to include his remarks herewith:

RESTORE SOUND MONEY AND CONVERSION—STOP INFLATION AND FURTHER DOLLAR DEPRECIATION

HISTORY REPEATS ITSELF

Since the dawn of mankind, history has always repeated itself. There are five distinct steps in the economic cycle which every nation at some stage has passed through, and the United States is no exception. Steps are:

1. Currency debasement.

2. The issuance of irredeemable paper money which is followed by great government and consumer credit expansion, leading to higher prices, higher costs, spiraling inflation and a steady decline in the purchasing power of money.

3. When inflationary forces become too great to be controlled, a collapse of the economic structure built upon inflated prosperity.

4. Depression.

5. The return to sound currency which brings a drastic shakeout with attendant misery and suffering.

Today we are well into the fourth step—depression. The United States is confronted now not only with a depression but spiraling inflation and further dollar depreciation.

WHAT TO DO

To add to all of our other problems, reports persist from informed sources that Russia is preparing to get back her ruble with gold and get the jump on us by launching a "Golden satellite." Our Nation cannot ignore the possibility of a gold-backed ruble and must immediately take all steps necessary to cushion and prevent any shock which would result from Russian initiative, since, if the ruble is established as a basic currency with the dollar and the pound, it will have far-reaching effects not only in our Nation but all the world. Our position abroad would quickly be undermined, our prestige delivered a shattering blow, and our Nation caught without gold as Russia caught our military and airplanes without missiles. This must not happen. Such patriotic and thinking citizens as B. F. Pitman, of San Antonio, Tex., interested in our Nation's welfare have proposed the following program, which has already been sent to outstanding Members of our Congress.

Reiterating again, the Russians are planning to get the jump on us again by launching a "Golden satellite." Persistent reports from informed sources state Russia is preparing to get back her ruble with gold. This would be a blow more devastating to our economic and financial leadership than sputnik, and we cannot brush this threat off lightly. While we have been foolishly discouraging gold production in the United States, Russia has been putting forth a herculean effort to increase it. If the ruble becomes a hard currency backed by gold, it is entirely possible, if not probable, that it will be on a parity or better with the United States dollar through all he world.

The wholly inadequate gold reserves backing the United States dollar have already created grave misgivings as to strength in international monetary circles. Many people consider both the Swiss franc and the West German mark as sounder currencies than the United States dollar, and the premium that persists on the Canadian dollar indicates that it, too, is held in more esteem than the almighty United States dollar. Moreover, gold denied the United States citizen is readily obtainable in unlimited quantities in Switzerland, Germany, and Canada, as well as other parts of the world thereby encouraging at least a mild "flight from the (United States) dollar" into currencies deemed stronger.

To thwart Russia, and at the same time arrest the depression, the United States dollar should be promptly devalued and restored to full convertibility. What will be accomplished?

1. Hundreds of closed and marginal gold mines in the United States will be quickly reopened, thereby putting back to work thousands of miners thrown out of work by the closing of the lead, zinc, and copper mines or curtailing their operations. There is no reasonable possibility that unemployed men formerly engaged in nonferrous mining will otherwise get off the mounting unemployment rolls in the visible future.

2. An official devaluation of the United States dollar, fixing the price of gold at $100 an ounce would strengthen the sagging price of all commodities, particularly farm products and nonferrous metals.

3. The high cost of labor has priced our manufactured products, and to a large extent our farm products, out of world markets. Devaluation of the dollar would quickly restore our competitive position in world markets, clear out our astronomical surplus of farm products, and stimulate manufacturing, conceivably to boom proportions.

4. Corporations are struggling with inflexible costs and diminishing volume, which are apparently gaining momentum on the down side. A devaluation would quickly cause a resurgence of buying, with the result that capacity operations would be resumed, improving profit margins. As a corollary, the diminishing flow of taxes to the Treasury would swell back to former levels and could even exceed them.

5. Buying in the United States by foreign countries has been alarmingly reduced. A devaluation of the dollar would permit foreign countries, particularly the so-called backward nations, to step up purchase in the United States, which in turn would permit a sharp reduction in the billions of giveaway money which we have been capriciously squandering.

6. The intolerable burden of the gigantic national debt (and taxes) would become bearable.

7. A new price of $100 per ounce on gold would create a surplus of around $41,000,000,000, which would permit a sharp reduction in taxes for many years to come.

8. If deemed advisable, the increment created by the new gold price could be used, at least in part, to reduce our national debt rather than treat it as nonrecurring income.

9. There is probably not a single informed economist in the world who believes the United States can measurably reduce its national debt, let alone pay it off in full, unless and until the dollar is devalued in terms of gold. Ultimate devaluation is as inevitable as night following day. Why not do it now?

10. Restoration of full convertibility, both internally and externally, would block the Russians in what apparently is their scheme to replace the United States dollar with the ruble as the foremost world currency.

11. The hysterical grasping for straws to arrest the downward plunge in our economy suggests a repetition of ineffectual cures tried in the early 1930's. The one move that was ultimately successful in the last depression again holds more promise than all other economic nostrums put together—a long overdue price increase in gold.

The threat of forced devaluation hangs over our head like the sword of Damocles, and the thread holding it is getting thinner by the moment. Foreigners have claims which could be converted into gold to the extent of an estimated $14 million to $16 million. Any day the apprehension which foreign countries have with regard to our ability to redeem in gold may start a run on our Fort Knox reserves. If, for example, Germany should convert some of its United States Government obligations into cash and demand $1 million in gold, a run of catastrophic proportions might be immediately started. Now that the bill rate is down from around 3½ to 1¼ percent, the inducement to foreigners to keep dollar balances in short-term bills is much less impelling.

Now is the crucial time—economically and politically.

This program may seem extremely revolutionary and will cause much controversy. Despite the "prosperity just around the corner" emissions from Washington, we either are in a drastic recession or a depression, depending upon the school of economists consulted, which can easily spiral downward. Frantic efforts to stimulate the economy by renewed profligacy in Washington may arrest the downtrend temporarily, but a revival of lasting confidence cannot be generated with the Government engaged in an irresponsible spending spree.

We expect to have introduced in the Congress a bill to increase the $35 statutory price of gold to $100, permit Americans to own gold, and to do all necessary to place this program in effect. If you agree with us, you can help by—

1. Furnishing press releases to newspapers and periodicals.

2. Working with radio and TV stations to carry this message to millions of listeners and viewers.

3. Writing your Senators, Congressmen, friends, and stockholders urging them to write their Senators, Congressmen, friends, and stockholders urging them to pass on this message.

4. Initiating a broad letterwriting campaign to anyone who can help the campaign to goin momentum.

Action is necessary now.

This Is America

EXTENSION OF REMARKS
OF
HON. S. WALTER STAUFFER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. STAUFFER. Mr. Speaker, I should like to submit for the RECORD an editorial by Frank E. Masland, Jr., which appeared in the March edition of The Shuttle, a publication of C. H. Masland & Sons, Carlisle, Pa.:

I stood at the corner of 42d and Broadway, where every square inch had been trod by millions of feet, where no bare land was visible, where people walk solely on an artificial surface. Around me were stores and places of entertainment and restaurants. People jostled each other, and automobiles screamed and moved bumper to bumper. Men in uniform, possessing authority, directed vehicles and herded people like sheep. Just below me in the canyons of Wall Street, the fiscal affairs of the world were pondered and decided.

A week before I had stood on Hill 5014. It has no other name. It is called 5014 because that is how high it is. With me were 2 white men and 3 Indians. In all probability we were but the second group of persons ever to make the climb. To the north our eyes beheld a barren wilderness of rolling rock that extended for mile upon mile. We were in northeastern Arizona, in the land of the Navaho, in a country so wild it is unmapped. The sun-baked, wind-polished land that lay before our eyes was so bare and barren, so difficult of entrance that, insofar as the Indians knew or we knew, no man, red or white, had ever entered.

This is America.

We are a new Nation, a young land. We are but 4 generations from the day of discovery, but 2 generations from the carnage of conquest.

The land we inherited was pure and undefiled with a wealth of resources far beyond the dreams of a conquistador, a God-created treasure chest held in trust through the millenniums for the advent of intelligence and the miracle of the hand of man. What have we done about it? Shall we admit first that we lied and cheated, tortured or murdered to attain it? We should, for that is the inescapable foundation on which we built whatever we have. Our Founding Fathers, annihilating with one hand the in-

digenous culture, with the other laid the cornerstone for a civilization built on the concept of individual freedom of equal opportunity.

From the ashes of an ecology, in which man was a part of the pattern and in tune with all things, animate and inanimate, there arose a way of life built upon the earth but not of it, artificially created in its every fiber, changing the nature of man and leaving but few of the vestiges of nature.

With seemingly inexhaustible resources, with more land than people, with adequate reward for effort expended, with a need to conquer or be conquered, a tough, God-fearing, restless race of have-nots created overnight a way of life that affords the highest standard of living the world has ever known and where now, to find a "have-not," we must needs return to "Hill 5014" and the guides who took us there. Or do we find them there? Only by our standards, not by theirs, and which are the standards that are best and true and steadfast.

In that land, humble hogan homes are still the family castle, doors remain unlocked, murder unknown, and children, who spend the day tending their flocks in the field, present no problem of delinquency.

I suppose it is not the form that matters. It is what we do with it. And what we do with it is determined by the conceits we have acquired. Therein I think lies the cause that has destroyed past glories and is a very present threat. Forty-second and Broadway is what it is because of Hill 5014. We are what we are because we were a race of have-nots in a barren land of plenty. We possessed no superior technological mentality. We conquered to live and achieved to enjoy the reward. Have we modestly and objectively evaluated our achievements?

During the 200 years in which we built our western empire, those of our contributions, which will take their place in the library of the ages, are few indeed. Might we perhaps limit them to one and one alone—the concept of mass production. Is that too cynical? In medicine and the law and the sciences, we have done no more than keep abreast. With unlimited resources at our disposal, we conceived and utilized and endlessly developed the process of mass production. From that concept, all that we have has sprung. On that foundation rests, uncomfortably at times, our boasted "standard of living." Is it rock or is it perishable?

What to date are its products? Among them we must list leisure, softness, mature irresponsibility and juvenile delinquency, rackets, political corruption, atheism that builds a church a day but avoids the atheistic fray, yachts, and atom bombs.

And what we like to call the spirit of America. What is it? Is it 42d and Broadway or Hill 5014? It is both. Will we be able to preserve it? Not unless we reappraise the material and accent the spiritual. Not unless we preserve the wilderness—as well as the city.

Hon. Will M. Whittington

EXTENSION OF REMARKS
OF
HON. JAMIE L. WHITTEN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. WHITTEN. Mr. Speaker, I am pleased to join with my colleague, Hon. FRANK SMITH, and other Members, in paying tribute to Hon. Will M. Whittington, former Congressman from Mississippi. I join with them in wishing him a most happy 80th birthday, and for both him and Mrs. Whittington many years of happiness.

Mr. Speaker, the Honorable Will M. Whittington is an outstanding man. His long years of service in Congress were devoted to hard work which, coupled with real ability, made him not only an outstanding representative from Mississippi but a national figure. While a specialist in the field of public works, by reason of his ability and his industry, Mr. Whittington was well informed on all matters in the Congress, as much so as any Member it has been my privilege to know.

Congressman Whittington ranks with the great men in Mississippi history who have served in the Congress. Truly, whatever our local, national and international problem may be, improvements to our own country which were brought about largely through his efforts are a monument which will last through the centuries.

Mr. Whittington is blessed with a wonderful wife and fine family, all of whom have many friends here. Mrs. Whittington, a most charming, intelligent and capable person in her own right, has been a great and major factor in the success that this fine couple has achieved in life.

Again, Mr. Speaker, we are pleased to join in these expressions of appreciation to Congressman and Mrs. Whittington; and we join in wishing them many happy years to come.

The New Encirclement

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks, I wish to include the following text of an article by George E. Sokolsky which appeared in the May 2 issue of the Washington Post and is entitled "The New Encirclement":

THE NEW ENCIRCLEMENT

(By George E. Sokolsky)

In a significant interview with Le Figaro, Khrushchev, as usual, made many side statements of far-reaching significance. We Americans tend to oversimplify the Russians and their development until we are caught short by some stride that they have taken.

In the Le Figaro interview Khrushchev raises the question that few of us are willing to recognize, but which some of our thinkers such as Herbert Hoover and Hugh Gibson spoke of even when World War II was in process, namely that the United States could be isolated involuntarily.

I quote from the Tass report of the interview; that is, the official Russian report:

"Speaking about the possibility of building communism in the U. S. S. R. in the conditions of capitalist encirclement, Khrushchev called the interviewer's attention to the circumstance that at the present time the very concept of 'capitalist encirclement' needs serious qualifications. Now it is hard to tell, Krushchev said, who encircles whom. Is it the capitalist countries that encircle the Socialist countries or vice versa? The Socialist countries are inhabited by one billion people out of the 2.5 billion total world population; with the establishment of the world system of socialism the world situation has changed radically and not in favor of capitalism. Consequently capitalist encirclement in the old meaning of this word is out of the question."

The most recent techniques employed by Soviet Russia are economic and might be regarded as capitalistic. They have to do with the movement of goods, the use of gold as a common denominator of currency and the substitution of Russian for American economic and military aid to countries which cannot stand on their own. The most recent economic invasion by Soviet Russia is into Latin America.

From the standpoint of the United States the most dangerous operations of Soviet Russia are in Brazil and Chile. Brazil is suffering economically from an excessive coffee crop, dependent upon an American market which is appalled at the high and even unreasonable cost of the commodity. By a pulverizing method the various "instant" brands have come into existence, have been popularized and are in wide use. Economically, the importance of the "instant" coffees is that it is possible to get more cups of coffee out of a pound this way than by cooking ground beans.

Be all this as it may, the United States cannot absorb all the coffee that Brazil wishes to send to this country or at the prices that Brazil wishes to charge. Therefore, the Russians, who do not drink much coffee, preferring tea, drunk hot in glasses, are ready to buy the Brazilian surplus on a barter deal.

Obviously, the Russians cannot consume this surplus coffee crop, but would ultimately dump it either among coffee-drinking satellites such as the East Germans, the Czechs or the Hungarians or would dribble it into the world market slowly enough not to ruin the price. The Russians can undoubtedly make a profit on this transaction.

Another deal involves Chile copper. This has become a political issue in Chile. Chile is one of the world's greatest producers of copper. On the other hand the copper market in the United States has slumped.

These conditions seriously affect the economy of Chile and there is talk of Soviet Russia buying the Chilean copper production.

Again the point must be made that Soviet Russia could accumulate stocks of surplus copper, could pour it into world markets, thus affecting the price.

The use of the economic tool is rather recent in the Soviet's effort to control the world.

It Is Time for Congress To Act in Order To Curb the Southern Bombings and Other Interstate Criminal Conspiracies

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. KEATING. Mr. Speaker, a very serious situation has recently been spotlighted in our Nation which demands the urgent attention of Congress. That is the dire threat posed to many of our citizens as a result of the concerted crimi-

nal conspiracy which in recent weeks has resulted in six vicious bombings or attempted bombings involving Jewish centers and synagogues in the South.

Our information concerning these outbreaks of lawlessness is sketchy and incomplete. But a certain pattern is emerging, which indicates there is at work a coordinated interstate effort to intimidate Jewish citizens and others concerned with upholding the law of our land.

We do know that within the last 6 months there have been bombings and attempted dynamitings in 6 cities. A synagogue in Charlotte, N. C. A synagogue in Gastonia, N. C. A Jewish center in Miami, Fla. A Jewish center in Nashville, Tenn. A center-synagogue and public school in Jacksonville, Fla. And a synagogue in Birmingham, Ala.

It is significant to note that the latest outbreak of violence—the dynamiting of a Jewish center and a Negro school in Jacksonville—apparently followed the exact pattern of earlier incidents in Nashville and Montgomery.

In addition, it is significant that the abortive attempt to dynamite the synogogue in Birmingham, had it succeeded, would have coincided with the blast at the center and school in Jacksonville.

These are not coincidences. They are evidences of an interstate conspiracy to coerce and intimidate those who are in good faith and honesty attempting to carry out the Supreme Court's decision concerning school integration. Leaders of the "Confederate Underground"—the group apparently behind the campaign—have boasted in their threatening phone calls that they are members of a widespread conspiracy. It is my opinion elements of the Ku Klux Klan form the hard core of this nefarious organization.

It is commendable that local authorities have taken stern and vigorous action in an attempt to round up the hoodlums perpetrating these dastardly deeds. It is commendable that the great majority of the local citizenries in these communities and their vocal leaders have spoken out against these outbreaks. But that is not enough. The interstate nature of the plots—the ability of the bombers to flee swiftly across State lines—prevents an effective crackdown. For example, the only witness to the Jacksonville bombing reported seeing a car with Georgia plates pulling away from the scene of the blast. Jacksonville is close by the Georgia border.

It is, therefore, incumbent upon the Federal Government to step in and crumble this pattern of lawlessness. I have been in touch with officials of the Justice Department, inquiring as to what can be done to assert the interstate powers of Uncle Sam to curb this conspiracy. Right off the bat comes the suggestion that the FBI step in and conduct one of its famous and effective investigations. Unfortunately their hands are tied, under the status of our laws today.

Upon the evidence thus far presented to the Justice Department, there simply are no indications that Federal laws are being broken. The bombings break only State and local laws, in spite of the conspiratorial overtones involving several States. The FBI therefore cannot exert its considerable investigational powers, and enforcement must be left entirely to local and State officials.

The answer to this problem lies in bringing our laws up to date to meet the challenges posed by interstate conspiracies of this type. With the advent of modern transportation and communication facilities, the day of the merely statewide criminal organization is pretty much gone. In their place have come clever and well-heeled conspiracies operating across State lines in order to avoid effective investigation and prosecution by officials of any one State.

By making full use of State jurisdictional barriers, these conspiracies, which cover a wide range of activities from black market babies, narcotics, and gambling to bootlegging, have in many cases been allowed to operate with impunity, free from direct checks on them from any source.

A bill which I have introduced, H. R. 258, would close the gap in our Federal laws and permit the FBI to step in whenever interstate conspiracies were working to break State felony laws. The terms of this measure are simple. They would be effective in curbing a wide range of conspiracies across State lines. Particularly, enactment of this bill would give the FBI the green light to put an end to this dynamiting conspiracy in the South.

Simply stated, this measure would make it a Federal offense for two or more persons to conspire to commit any organized crime offense against any State if any facilities of interstate commerce were used in furtherance of the conspiracy. Any violation of a State felony law threatened by such an interstate conspiracy could come under the scrutiny of the FBI if this bill were enacted. It is the single most effective means for curbing these vicious criminals.

If this law had been on our statute books when these bombings took place, investigative powers of the Federal Government could have been brought to bear immediately. The hoodlums involved could not run and hide behind State jurisdictional lines, as they are apparently doing now.

In the past, efforts to have Congress pass such a measure have lacked the support of the Justice Department, which has felt it would place too great a burden on their agents and facilities. To my way of thinking, this admission that there would be a great deal of work to be done is the strongest argument possible for enactment of such a bill.

My conversations with Justice Department officials last week, in the wake of the spate of bombings in the South, indicate there may be a change of attitude within the Department. I am hopeful they are coming around to my way of thinking and that they will soon support my proposal or a similar one which would achieve the same ends. If the Department will support such a measure, I am confident the Congress will respond speedily in passing it.

We should, without further delay, put such a law on our statute books. It would enable the FBI to do what local officials simply cannot do—step in and prevent and prosecute bombings such as we have witnessed in recent months. It would prevent intimidation of citizens whose only fault is that of trying to carry out the law of the land. It would put an end to the utter disregard for law and order with which a few hoodlums have infected certain areas of the South.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. ROBERT P. GRIFFIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. GRIFFIN. Mr. Speaker, the Ninth Congressional District of Michigan, which I have the honor to represent, includes thousands of fine Americans of Polish descent. I am very pleased to join with them and with my colleagues in Congress in observance of the 167th anniversary on May 3 of Polish Constitution Day.

The Polish Constitution of 1791 was designed to reduce the autocratic powers of the monarch without impairing the necessary authority of the central government. Under that document, the Polish Government was transformed to a limited, constitutional monarchy. The constitution eliminated certain class distinctions and class privileges and added guaranties of religious freedom for the Polish people.

Down through the years, the Polish Constitution has remained a cherished declaration of belief in justice and free expression.

Despite almost constant encroachment and domination by hostile powers, Poland has a long and glorious history. It outlasted the rule of czarist, Hapsburg and Hohenzollern empires, and it will also outlast enslavement by Soviet international communism.

Although Poland still is a prisoner of the Soviet system, the Polish people have proved during the Poznan uprising in June 1956, and in the bloodless revolt of October 1956, that they are not willing prisoners of Soviet communism. The spirit of freedom and liberty continues to burn brightly in the hearts of the Polish people.

More than 7 million Americans of Polish descent throughout our country are joining with Polish people all over the world in the observance of Poland's Constitution Day. The people of Poland have a right to be proud of their tremendous achievements against great odds, and of their recent progress along the difficult path to liberty.

It is our sincere hope and prayer that the brave Polish past will be a source of constant encouragement which will lead to a brighter Polish future.

Two Polish heroes, Pulaski and Kosciusko, helped America to win our own

cherished freedom, and our Constitution later became a model for the Polish constitution. Throughout all the years of our freedom, Polish brain and brawn have contributed mightily to our literature, science and art, as well as to our farms and factories.

In 1939, after just a few years of independence, Poland made the world's first stand for liberty against the onslaughts of naziism. Shortly after Poland was overrun by war machines of Germany and Russia, Winston Churchill said, "The heroic defense of Warsaw shows that the souls of Poland is indestructible and she will rise again like a rock."

For the long-suffering people of Poland, Constitution Day is a day of hope. For us in America, it is an appropriate occasion to pay tribute to the freedom-loving people of Poland who continue their brave and determined effort to lift the heavy yoke of Communist oppression and to restore their proud mantle of freedom.

The Columbus Boychoir of Princeton, N. J., Was a Distinguished Good-Will Ambassador to South America

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 25, 1958

Mr. THOMPSON of New Jersey. Mr. Speaker, the Columbus Boychoir of Princeton, N. J., recently toured 17 countries of South America and distinguished itself as a good-will ambassador. Led by its director, Donald T. Bryant, the 26 boys of the choir sang to more than 40,000 people, not counting radio and television audiences. The great artists of Europe and South America come to the United States, and our own artists, such as Marian Anderson, Jascha Heifetz, and the young American pianist, Van Cliburn, have enraptured audiences overseas in a people-to-people program of cultural exchange. The Columbus Boychoir, like the Westminster Choir before it, carried to other nations the true story of America's cultural and artistic triumphs, just as our greatest individual artists have.

Former Senator Herbert H. Lehman warned recently of the danger of mankind becoming "enamored of technological progress." Aside from the obvious danger that "we will abuse our new technological knowledge, and in a single error destroy the world," Mr. Lehman said, we should also be concerned about technological progress that has no humane direction. Our newly discovered technological potential must be related to our eternal hopes and dreams of a better world, a world which will utilize all available human resources toward peaceful ends. Surely this world will someday be at peace, and music and the arts will exert their healing influence over the hearts of men and women everywhere. Viewed from this long-range perspective, it is clear that the Columbus Boychoir and the Westminster Choir have made major contributions to our country's foreign policy and have served our Nation well. I include some material on the South American tour of the Columbus Boychoir for the information of my colleagues:

DEPARTMENT OF STATE,
Washington, D. C. April 29, 1958.
The Honorable FRANK THOMPSON, Jr.,
House of Representatives.

DEAR MR. THOMPSON: In answer to your letter of April 17, 1958, requesting that a letter of commendation be presented to the Columbus Boy Choir for its tour of South America in the fall of 1957, I am pleased to send you herewith a copy of such a letter, which has just been forwarded to Mr. Donald Bryant, the director of the Boychoir, at Princeton.

The Columbus Boychoir did indeed make a fine contribution to the feeling of good will between this country and the South American nations that it visited, and the Department of State is glad to acknowledge its gratitude for the choir's services during this tour.

The enclosures which you sent with your letter are return herewith, as you requested.

Best regards.

Sincerely yours,
WILLIAM B. MACOMBER, Jr.,
Assistant Secretary.

DEPARTMENT OF STATE,
Washington, D. C.
Mr. DONALD BRYANT,
Princeton, N. J.

DEAR MR. BRYANT: The Department of State is pleased to commend the Columbus Boychoir for the contribution it made to good relations between the United States and the South American countries it visited during the fall of 1957, under the auspices of the President's Special International program.

The purposes of the President's program were carried out in a very effective manner by the group. Many of our Foreign Service posts have commented in enthusiastic terms on the favorable impression the boys made, both personally and professionally. The Department is grateful for their services to this program and to their country.

Please accept our very best wishes for the Boychoir's continued success.

Sincerely yours,
ANDREW R. BERDING,
Assistant Secretary.

COLUMBUS BOYCHOIR IN SOUTH AMERICA

From the Trinidad Chronicle, October 4, 1957, Port of Spain, Trinidad: "The Columbus Boychoir under the direction of Donald Bryant came to Trinidad, saw and conquered. The concerts given by this choir of 24 boys, who were joint in the two one-act operas by some talented adults, were a tremendous success * * * and played to packed and enthusiastic houses. This is an exceptional choir, drilled and disciplined to the nth degree."

From La Nacion, San José, Costa Rica: "An opportunity to hear a musical miracle * * * to understand the infinite capacities of the human voice under intelligent direction."

From El Tiempo, Bogotá Colombia: "These boys possess most notable individual aptitudes and above all a sense of teamwork which it would not be just to attribute merely to discipline."

From El Siglo, Bogotá, Colombia: "The discipline that is sensed through the gesture, the emphasis, the attention to the director, the manner of bowing * * * shows gracefulness, character and the most through understanding. These boys won for themselves, in addition to the public's love and sympathy, interminable and warm applause."

From a dispatch from the American Embassy, Quito, Ecuador: "The Columbus Boychoir visit to Ecuador was one of the best attractions which have come to Quito and to Guayaquil, from the point of view of audience appeal, artistic excellence and general public relations impact."

From La Nacion, Santiago:

LITTLE MESSENGERS OF PEACE

"These children sing joyfully and with youthful enthusiasm. They sing indissoluble pacts for the future peace of the world."

From El Colombiano, Medellín: "One of the most magnificent musical events presented in this city in many years (and) one of the most extraordinary and exciting experiences of our musical life."

From El Independienti, Bogotá: "It was something divine; something I never would have believed existed."

Geneva Conference

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 13, 1958

Mr. PELLY. Mr. Speaker, the Members of the House who represent congressional districts with coastal areas and fishing and seafood industries, will find the following editorial hits the nail on the head in regard to the recent Geneva Conference on the Law of the Sea. This is an observation of the Seattle Times as of April 29, 1958:

SEVERAL BLUNDERS WERE MADE

From the point of view of Pacific Northwest fishermen, it was a good thing the Geneva Conference on the Law of the Sea broke up without reaching an agreement on the controversial question of territorial waters.

The 12-mile limit proposal of Canada which was supported with variations by the American delegation would have deprived American fishermen of historic fishing rights. The proposals of other nations defining territorial waters and exclusive fishing rights ran against the same deadlock.

It was less fortunate that the conference failed to decide a still larger and more important issue. It did not affirm the abstention doctrine originally promulgated by the United States State Department. This principle holds that when a Nation and its fishermen have developed, conserved and utilized an ocean fishery historically, the fishermen of other nations must abstain from invading it.

The affirmation of this doctrine by the Geneva Conference would have strengthened the hand of the United States in its dealings with Japan over the Bristol Bay and other Alaska salmon fisheries.

From this distance and on the basis of information supplied by news dispatches, it is possible to note several blunders that were made at Geneva.

It may be necessary eventually to reach some inclusive international agreement on fishing rights in territorial waters. At Geneva, that proved to be impossible. It is possible, however, for neighboring nations to settle these questions by mutual agreement on a regional basis, as has been done successfully by the United States and Canada in the past.

We think it was a mistake for the conference to attempt a worldwide code when it has been demonstrated that regional agreements work so well.

Allowing the conference to get all snarled up on the controversy over territorial waters, before attempting to secure affirmation of the abstention doctrine, was putting the cart before the horse. In our view, the State Department and the American delegation were less than attentive to this country's interests when they did not insist on the priority of the abstention principle.

The original American support of the Canadian 12-mile limit proposal was another incomprehensible giveaway blunder made at Geneva. When the United States delegation at the 11th hour switched around without notice and reintroduced a 6-mile variation of this proposal, even the Canadian delegation was angered. The United States was accused of "underhand methods" by both Canadian and Russian delegates.

What effect all this futile disputation will have on the future fishery relations of the United States and Canada remains to be seen. Perhaps an even more important speculation is what effect the failure of the conference will have on fishery relations with Japan.

If, as seems evident here, the official United States representation made a botch of this phase of the Geneva proceedings, it should be noted that the Pacific coast was not represented on the delegation. This region's representatives were there only in an advisory capacity, without votes or seats in the committees. On many important issues it is obvious their counsel was disregarded.

TVA: Democracy at High Tide

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. EVINS. Mr. Speaker, this month will mark the 25th anniversary of one of the most significant policy decisions ever made by the Congress. At this time, 25 years ago, the Congress sent to the President the bill to establish the Tennessee Valley Authority. The wisdom of that action has been spectacularly demonstrated in the intervening years not only by the history of the TVA's achievements but in the influence the TVA has had on our Nation and on the people of the entire world. In its May issue, the Progressive magazine reviews the accomplishments and significance of the TVA in a series of articles and in a cogent editorial which latter I insert in the Appendix of the RECORD herewith under unanimous consent and commend to the attention of my colleagues. The editorial follows:

DEMOCRACY AT HIGH TIDE

We are devoting nearly all of this May issue of the Progressive to commemorating the 25th anniversary of the social achievement that represents, for us, the high tide of democracy in our century—the Tennessee Valley Authority.

It will be 25 years ago May 18 that President Franklin D. Roosevelt, in those first, frenzied days of the New Deal, signed the TVA Act that was not only to tame a wayward river and regenerate an ailing valley, but was to become celebrated the world over as a shining example of democratic planning.

The extension of the TVA idea, in our judgment, is an indispensable ingredient in any program for a resurgent progressivism in America. The middleway TVA idea makes a shambles of the doctrinaire nonsense of both Karl Marx and Adam Smith. It has come to symbolize a deeply democratic alternative to both the law of the jungle and the tyranny of totalitarianism. The TVA idea, with its concept of national planning, regional administration, local participation, and individual freedom, has brought us a giant stride closer toward fusing two of the great goals of the American Constitution as expressed in the preamble—individual liberty and the general welfare.

The very essence of the TVA idea is the partnership of the Federal Government with the people of a great river valley to plan the unified development and maximum use of all the resources for the benefit of all the people. Countless experts from almost every country on earth have come to study TVA's extraordinary record of achievement. It isn't the dams that attract them, for there are bigger dams elsewhere. It isn't the public development of power, for this is the rule rather than the exception abroad. Nor is it TVA's remarkable record in flood-control navigation, reforestation, soil improvement, the minerals program, and the development of recreational facilities that draws them to the valley.

It is the unity of these in one all-encompassing planning operation that captures and parallels the oneness of nature—this is what has beckoned so many visiting statesmen and technicians hunting for new and creative methods of resource development. Mostly they come to see and study the physical plant, but they stay to be inspired by the unprecedented extent to which planning is possible without the surrender of freedom to an all-powerful bureaucracy.

For this is one of the glories of TVA—that it achieved so much by demonstration and inspiration, and not be command and regimentation. The seven States of the TVA basin, and the countless communities within them, have found their rights and privileges undisturbed by the Federal agency planted in their midst 25 years ago, although many were fearful at first that TVA might be sent them from Washington as a superstate. As a matter of policy, TVA has worked closely with State and local agencies and has encouraged them to assume new duties and responsibilities. Again and again TVA officials have seen clearly what needed doing, and have had the legal power to do it, but they have preferred to wait until the idea caught on with the local people who then went ahead and did it. This is democratic planning in action.

Stuart Chase, in an article in the Progressive more than a decade ago, wrote: "A commercial civilization throws on the scrap heap the most constructive element in human nature: the instinct to cooperate with one's fellows in building up the community. The biological fact that man is a social animal is neglected, and a great storehouse of energy and enthusiasm wasted."

TVA has reversed this cheerless characteristic of commercial civilization without in any way undermining the system itself. Far from throwing cooperation on the scrap heap, it has made cooperation the heart of its way of doing things. Far from wasting energy and enthusiasm, it has recognized man for the social animal he is, or can be, and proceeded to harness his neglected instinct for cooperation in a great program of community building.

TVA was an experiment in its infancy. Never before in American history, or the history of any other nation for that matter, had a public agency been assigned the task of developing all the resources of a great river system. How successfully that experiment has proved itself is clearly presented in the documented articles that make up this special issue of the Progressive. They tell a graphic story of physical achievement and material success, but they emphasize, too, how it was done—which is part of the spirit of TVA.

From its very beginnings TVA was blessed with unusually able and dedicated officials and staff who caught and kept alive the vision of a great human enterprise. Their task has not been an easy one. They were faced from the outset with the relentless opposition of the power trust, which continues even now. During the past 7 years they have been obliged to contend with the ill will of the Eisenhower administration, which has made their task doubly difficult and has taken its toll of able personnel and struck at the morale of those who stayed on.

But TVA, we are confident, will ride out the present storm, just as it has fought its way over rough waters so many times in the past. When inexorable events lift this Nation out of the swamps of conventional conservatism and put us on the highroad to a progressive program of democratic planning, TVA will be there to provide guidance and inspiration for the unified development of the other great river systems of America.

Navy Secretary Thomas S. Gates, Jr., Explains the Navy's Position on the National Defense Team

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. HOSMER. Mr. Speaker, this month, May, Navy, the Magazine of Sea Power, official publication of the Navy League of the United States, the civilian arm of the Navy, came into being. The lead article of volume 1, issue 1, was written by the Honorable Thomas S. Gates, Jr., Secretary of the Navy. Secretary Gates lucidly defines the Navy's position on the national defense team as follows:

THE NAVY'S POSITION ON THE NATIONAL DEFENSE TEAM

(By Thomas S. Gates, Jr., Secretary of the Navy)

Everyone feels the urgency of the times.

Action is needed—especially in the field of missiles, in the realm of space and in scientific development. But the action must be related to our national military needs.

Our national policy and the compelling requisite that the United States be strong demand that we build and maintain power sufficient to make it unthinkable to any aggressor to risk all-out war, power sufficient and of the right kind to deter limited military aggression (if necessary, sufficient to fight successfully any limited war), and power and prestige sufficient to support our foreign policy and the civilization of the free world throughout the long, difficult struggle toward peace with justice.

Our Nation is not confronted with the problem of deciding whether we should have an adequate deterrent or sufficient limited war force or the capability of winning the cold war—the problem is how to have all three.

Nor are we faced with the question of whether it is better to have adequate forces for today or to make sure that we will have

the forces required for tomorrow—the problem is how to do both.

This is the background with which the Navy approaches its decisions about the advanced weapons and programs of the future.

Our country must be able to use the seas for two paramount purposes: First, to link together all the free nations of the world and, second, to use the high seas as a springboard for offensive operations and as a vast maneuver area for the defense in depth of ourselves and our allies. Exploitation of this potential of the sea will remove any enemy hope that our ability to strike back could be eliminated by a surprise attack.

We must be able to use mobile naval power to protect our interests in areas where we do not and cannot maintain permanent bases.

We must have the power of choice which naval power gives us. Our Government needs a choice of action when confronted with a dangerous international situation. It is as true today as ever that military forces with many capabilities are an absolutely vital tool to provide needed alternative methods to protect United States power overseas in cold, limited, or all-out war.

Many bases from which the Pacific war was once fought, today lie abandoned or dismantled. They are in the wrong places for today's problems. But we have World War II mobile base aircraft carriers, though old, standing guard today at new frontiers in the western Pacific and in the Mediterranean.

New importance is attached to bases which can themselves move, hide and disperse over the surface of the globe. The nature of the enemy threat demands a change in emphasis—a deployment of much more of the national striking capability from land to the high seas—on, over, and under.

Carriers were constructed for preatomic warfare—and they can still fight it or deter it. But they have seen the H-bomb come, and their planes can deliver it; they have seen supersonic aircraft come, and they have adopted them. Missiles of all types are being incorporated in task force ships which continue to stand ready today, and will for years to come.

These are some of the fruits of a flexible posture. The same posture is inherent in our antisubmarine forces, and in our amphibious forces and marines. Today's Navy is not—nor should it be—designed for only one type of war, to be fought in one predetermined arena.

This flexible approach matches the reality of the Communist threat—a threat that is total, across the board, not solely a menace of a hydrogen weapon shower on the United States on some given Sunday morning.

Whatever kind of power you look for in the Soviet armed forces, you discover it easily. You see powerful armies with the most advanced equipment, large air forces of modern jet aircraft, and large naval forces. There are highly modern surface fleets, and the largest submarine fleet in the world. And we must assume that they are developing atomic submarines with guided missile capabilities.

Communists at home and abroad are constantly reminded of this. Only recently at Moscow during the celebration of the Soviet armed forces' 40th anniversary, Defense Minister Marshal Malinovsky emphasized that the Soviet Union has the most modern naval forces capable of destroying enemy naval forces on the high seas and of delivering powerful blows against targets inside continents. The free world cannot for a moment ignore nor underestimate such capability.

The Soviet Union also had a growing merchant marine—any nation's lifetime on the sea in time of war. There is now even a Soviet fleet of oceanographic research ships busily surveying all the earth's oceans. The forces of other Communist countries are similarly expanding on land, in the air, and at sea.

If this threat is total—across the board—as it most definitely appears, then it also is total up and down. There is no scale of warfare—from guerilla and local brushfire of every size up to all-out war—for which the Soviet bloc nations do not have formidable and growing capabilities. They also have powerful machinery for establishing political climates favorable to the particular scale of limited aggression they may wish to employ. It is most erroneous to assume they have but one type of war in mind.

In our own Navy, we see four major areas in which action for improvement must be continued: Sea-based striking power, antisubmarine warfare, advanced research and development, and combat readiness.

We need also to accelerate the submarine ballistic missile systems, and to improve the carrier striking forces with their integrated aircraft and surface and airborne missiles.

Antisubmarine warfare is a Navy responsibility with which we live 24 hours a day. We have made great progress, but it would be false to say we have the problem licked.

Many weapons are required to work together against enemy undersea craft—it takes surface ships, our own nuclear submarines, aircraft (including nuclear aircraft) and advanced detection systems, as well as weapons yet to be developed.

We need to undertake many projects in connection with combat readiness. We expect the Navy and Marine Corps—operating on the sea, on land and in the air—to always be faced with the task of providing an immediate force necessary in world trouble spots, as they have in the past. And we must be prepared in other naval tasks. Al though the Navy believes in strong-armed services, in a strong economy, and in a strong country, we are mindful we must not default the goal of peace while building and maintaining that strength.

It is especially necessary that we continue and broaden research and development of things we know about—missiles, electronic warfare, undersea warfare, nuclear propulsion—and at the same time search out and develop many other things we do not know about, but of which we must and will learn.

The Navy has a long tradition of imaginative leadership in military science. It has played a foremost part in the age of steam, the ironclad, the screw propeller, oil burning, diesel power, computing machines, radar, and advanced electronics, nuclear propulsion—atomic energy itself.

But the Navy has no ambitions to go it alone. We do not pretend to know all the answers, and we look for them openmindedly. The Navy is an integral member of the defense team of this Nation. Its responsibilities are worldwide in scope. Its tasks are thoroughly coordinated with those of the Army and Air Force. And the Navy has an excellent working relationship with those services—we use their research, they use ours; we adopt their developments when they meet our requirements, and they adopt ours.

In missiles alone, for example, we will supply the Sidewinder, Talos, and Polaris to the other services.

How does all this apply to the conquest of space?

Some people regard exploration of space as mankind's greatest adventure. Surely, space vehicles potentially have tremendous military significance for reconnaissance, communications, weather forecasting, and innumerable other purposes of which we have not yet thought. We certainly have some specific naval requirements in this field and a good deal to offer to the national program.

Technological development is a long, hard business. Behind each spectacular achievement are years of painstaking and at times frustrating work. We are but at the beginning of a long series of tries in a field of applied science that has hardly been touched. In such pioneering, failures are normal and to be expected, but we benefit from all endeavors, whether successful or momentarily unsuccessful. No important scientific achievement has ever been consummated without more failures than successes.

We in the Navy take considerable pride in our scientific record. We have not been last to recognize and support advanced science in the national interest. We have long supported and have recently greatly expanded in the technical education of officers and especially of young enlisted men.

Dedicated young officers and men, young scientists and technicians, young sailors, Marines, soldiers and airmen are in fact our greatest military resource. It is imperative to the future of our Nation that all aspects of military service be raised to and sustained at a level sufficient to induce such personnel to make the Armed Forces their career.

We have projected our future Navy forces, for long-range planning purposes, based on our present estimates of technology and threat.

Our fleets will be agumented by new and modernized ships, aircraft and weapons systems incorporating the latest technological developments, which will contribute significantly to our readiness and offensive capability.

Our plans follow the principles of maximum flexibility against all manner of threats, and maximum use of technical advance.

By following these principles we can contribute to the future by continuing to support national policy with strength based on the sea.

We can make great strides in missile warfare, in antisubmarine warfare, and in control of the seas. We can improve naval power and readiness.

The Navy, in the national interest, must play its position on the defense team to utmost capacity.

California State Senate Unanimously Adopts Resolution Relating to Air Space Control and Memorializes Congress To Take Necessary Action

---

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 17, 1958

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present to your attention and of my other distinguished colleagues, the text of a resolution adopted by the senate of my native State of California:

"Senate Resolution 10

"Resolution relating to air space control

"Whereas in recent months the Nation has been shocked by a series of tragic aircraft accidents resulting in the loss of many lives, culminating in the collision on April 21 of a military jet plane and a civilian airliner near Las Vegas, Nev., with the loss of 49 lives; and

"Whereas these accidents are apparently due to the concentration of air traffic within the narrow confines of air lanes; and

"Whereas the problem has been made more acute by the appropriation of large areas of the air space for the operation of military aircraft; and

"Whereas the problems caused by the great increase in air traffic, both civilian and mili-

tary, and in the speed of aircraft have not been met by our present methods of air space control and regulation: Now, therefore, be it

"Resolved by the Senate of the State of California, That the members of this senate respectfully memorialize the Congress of the United States to consider the subject of air space allocation and control and take whatever action is necessary to alleviate this problem; and be it further

"Resolved, That the secretary of the senate is directed to send copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States, and to the Civil Aeronautics Administration."

I hereby certify that the above resolution was unanimously adopted by the Senate of the State of California at the 1958 second extraordinary session of the legislature.

F. A. BECK,
Secretary of the Senate.

Porkless River and Harbor Bill Is Favored

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. MACK of Washington. Mr. Speaker, the Portland Oregonian, one of the most substantial and influential newspapers on the Pacific coast, favors enactment of a river and harbor flood-control bill by the present Congress, but it wants one with the pork omitted from it.

A recent Oregonian editorial said:

GET THE PORK OUT

The congressional dilemma among Democrats is whether to separate the pork from the beans in the omnibus rivers and harbors bill vetoed by President Eisenhower, or to let the veto stand so they can denounce the Republican administration in the coming elections.

Only a major revolt against the President by Republicans would assure repassage of the same bill over his veto. This is unlikely.

The $1,500 million authorization bill, similar to one vetoed last session on about the same grounds, contains many items which have been studied and approved by the Army Corps of Engineers, including the Yaquina and Siuslaw Harbor projects in Oregon. These, the President would approve.

But it contains others slipped in by Congressmen without adequate fact-finding. Some pork was put in the bill in exchange for members' votes for other projects, hence is difficult to delete. But the dirty work should be done, and the bill redrafted.

It is first necessary to authorize projects before funds can be appropriated. These projects are not recession stoppers. But they are sound, long-range investments which should not be tied up by congressional politicking another year.

Mr. Speaker, the river and harbor-flood control bill recently passed by Congress and vetoed by President Eisenhower authorized 140 new river and harbor-flood control and beach erosion projects. These 140 projects, it was estimated, would cost $13,409,000.

The President objected to 28 of the 140 projects on the ground that some had not been adequately surveyed, that others had been declared economically unsound by the United States Army Engineers, the Secretary of the Army and the Budget Bureau and that some others did not provide for adequate local cost sharing where heavy benefits went to private landowners instead of to the public.

The President in his veto message recommended that of these 28 objected-to projects that 10, estimated to cost $179 million, be deleted from the bill entirely and that the other 18 be modified to conform with recommendations of the Army engineers, the Budget Bureau, or the Secretary of the Army with a saving of about $25 million to taxpayers.

The recommendations made by the President in his veto message thus would eliminate the "pork" from this bill with a saving of about $201,635,000 to taxpayers.

I have introduced in the House a "porkless" bill that conforms to the President's views. If enacted by Congress, my bill is assured of the President's approval.

My bill and the vetoed bill in addition to the specific new projects carries an additional authorization of $913 million for river basin developments to which no objection has been made.

The total cost of all projects in by bill, therefore, is about $1,473,874,000 compared to about $1,675,000,000 in the vetoed bill.

Situation of Retail Gas Dealers in Oregon

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, May 5, 1958

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an item, published as release number 401 of the National Federation of Independent Business, dealing with the situation of retail gas dealers in Oregon, under the heading "Washington and Small Business."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON AND SMALL BUSINESS
(By C. Wilson Harder)

Some economists hold that 1 out of 7 jobs in the United States are based on some phase of the automotive industry.

If such be true, then a good share of the present business decline can perhaps be traced directly to the machinations of big oil in making it unprofitable for independent operations to succeed in this industry.

Aspects of this situation are brought out in the recently published report of the hearings held in Oregon by the Senate Small Business Committee with Senator EDWARD THYE and Senator WAYNE MORSE present.

J. S. Baker, partner in a service station operating firm in North Portland, Oreg., and representing the Oregon Gasoline Dealers Association, gave some very interesting testimony.

Among other things, he said in 1950 he was paying 22.2 cents per gallon for gasoline, and selling it for 27.9 cents per gallon, or a gross profit of 5.7 cents. At the time of his testimony, he was being forced to pay 27.4 cents per gallon, and sell it for 29.9 cents.

What does this mean? he asked. Merely that the consumer is paying 2 cents more per gallon while the service station made 3 cents per gallon less profit.

He also pointed out that the major oil companies are making millions from forcing the sale of specified brands of batteries, tires and other accessories through the stations.

"Today," he said, "I could sell you a battery at retail price from which I would make a reasonable profit and have this price be below the wholesale price of an equivalent battery by my major oil company supplier. Under what conceivable justification is it that last year one tire manufacturer paid one major oil company a kickback of tens of millions of dollars for sales of tires the oil company had never handled and never had a cent invested in, but merely provided a more or less willing chain of retail outlets with the practices I have just described?"

He said there is no doubt major oil companies realize it is illegal to insist on exclusive contracts, yet through financial coercion applied indirectly, they keep the station operators in line.

Some of the other witnesses reported that the major oil company representative has complete control over setting the prices in any station.

If competitive situations of a price war make prices necessary that are lower than the station can operate on without a loss, a subsidy will be granted.

But these subsidy agreements are never in writing, always given verbally, and often operator waits for long periods for payment while in meantime his family is in want.

All in all, the testimony taken by the Senate Small Business Committee did not present a very pretty picture of how things are going in the land of the free.

As a result, it is quite possible that this session of Congress will vote extra money to carry on intensive investigation and possible prosecution in the sphere of major oil. It very much appears the situation cannot be permitted to continue.

The Slump in Our Economy

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, May 5, 1958

Mr. JOHNSTON of South Carolina. Mr. President, I send to the desk an Associated Press article, originating from New York City, which shows that the so-called slump our economy is now faced with is much more serious than some administrative spokesmen would lead people to believe.

This article shows that net profits after taxes for nonfinancial businesses, large and small, are running 33 percent behind similar earnings of 1 year ago. Three out of four corporations are falling behind, and more and more such firms are now using red ink.

Such a situation cannot be allowed to continue to exist. The administration should stop using pretty phrases to cover up the economic mess, and had

better start getting down to the business of doing something about conditions.

I ask unanimous consent that this article be printed in the appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EARNINGS DECLINE 33 PERCENT IN QUARTER

NEW YORK, May 2.—The limp in business profits is more pronounced today as big and little companies report on how they are making out in comparison with last year.

About 3 out of 4 are falling behind. And the total of net profits after taxes is trailing the booming first quarter of 1957 by 33 percent.

The number operating at a loss instead of a profit is rising. Of the first 580 nonfinancial corporations to report on their January through March quarter, 57 are using red ink as against 20 last year.

Some industries go counter to the trend. Tobacco company earnings are up 32 percent over last year; utility profits are up 66 percent; food and beverages up 2 percent; and drugs are up by about the same. The telephone and telegraph companies and the shipping industry are breaking about even with a year ago.

The hard-hit auto manufacturers and their suppliers were down 88 percent; farm equipment off 64 percent; steels down 58 percent; airlines 51 percent; mining and metalworking firms off 47 percent; textile and apparel down 45 percent; machinery and tools off 40 percent; rubber companies off 33 percent; and oils down 32 percent.

Of the total of 580 companies to report, 404 show declines: Combined they made $1,997,654,000 in the first 3 months, against $2,985,375,000 the year before.

Cut the Tax and Aid Rails and Coal

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial, Cut the Tax and Aid Rails and Coal, which appeared in the April 30, 1958, issue of the Madisonville Messenger, of Madisonville, Ky.

The editorial is as follows:

CUT THE TAX AND AID RAILS AND COAL

Beyond question, the railroads of America are in difficulties, and one of the fears of some of the top economists and business analysts has been that a collapse of the railroads—or some similar financial tragedy—might plunge this Nation into a depression similar to the 1929 collapse.

Anyway, a number of eyebrows were lifted when the Eisenhower administration asked Congress to underwrite with the public Treasury $700 million in loans to railroads. The thought is held by many, inside and outside the railroad industry, that more borrowing is not the solution to the railroad question—an angle which has a lot of commonsense to support it.

Not long ago the Messenger published an editorial on the subject of the excise tax on freight and passenger traffic and the need for removing this wartime impost. The excise tax was put on in the first place as a means for discouraging use of overcrowded railroad facilities, but now the need is to encourage such use, and the lifting of the tax would work in that direction.

Our recent comment had to do with the effect of the tax on the coal industry, for the cost of shipping coal over railroads has increased so much in recent years that coal's markets have been shrunk seriously thereby. Shrinkage of coal's markets means less running time at the mines, of course, and this means less take-home pay for men who produce coal. So the question of an excise tax on freight traffic comes close to home to Hopkins countians and their fellow employees in the coal industry in our part of the State.

As far as the $700 million of loans to the railroads are concerned, they would have to be paid back within 5 years, and it is a thousand-to-one shot that they would be paid back by increasing freight rates still further, which would shrink coal's markets again, affect the coal industry adversely, and reduce the tonnage of coal hauled by the railroads.

Would it not be wiser to kill the 3 percent tax on freight and the 10 percent tax on whatever passenger tickets are sold these days, and thus stimulate use of rail transportation?

There are other proposals for the railroads, such as revising rate-making policies, allowing roads to drop services which are unprofitable, and to bring truck competition under rate regulation on the same basis as the railroads. These are under study, but first things should come first.

Senator SMATHERS' committee investigating the crisis in the railroad industry heard from railroad men and shippers and public witnesses that repeal of the World War II taxes on freight and passenger traffic would do more than anything else to promote use of rail transportation.

It is so simple it is a wonder that there should be so much hesitation about it. A big loan to a railroad is nothing more than a crutch—a crutch which later will be financed by soaking the shipper—the coal industry, for example—still more.

Seapower and Security

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. HOSMER. Mr. Speaker, writing in the initial issue of the Navy League's new magazine, appropriately entitled "Navy, the Magazine of Seapower," Adm. Arleigh Burke, USN, Chief of Naval Operations, tells why our naval forces are so vital to the Nation's security. The Burke article is as follows:

THE SEA CARRIES SECURITY ON ITS BACK

(By Adm. Arleigh Burke, USN, Chief of Naval Operations)

Ever since the dawn of civilization the sea has grown progressively more important in the affairs of mankind.

As the world has grown more populated, as the economic resources of the world have been developed, as world commerce has enriched the lives of progressive peoples, as free nations have become more interdependent economically and militarily, the sea has played an increasingly vital role in world affairs.

Today the importance of seapower is still growing as the world enters the age of ballistic missiles. The unity and strength of the free world depends, as never before, upon freedom of the seas.

The continuity of peaceful international endeavors and the integrity of combined military operations in war depend upon keeping free nations tightly tied together by the only ties that can do so—the ties of the heavy tonnages of cargo ships, transports, and tankers.

Mutual support between free nations is essential to the survival of freedom. This support can be provided only by the use of the sea. The flow of massive quantities of material and manpower, so essential in war, cannot be maintained in any way but by sea.

It is the Navy's job to insure that these ties remain strong, that the seas remain clear of predators in the air, on the surface, and beneath the surface of the seas.

The story of seapower is ageless. It will not become less important by man's probings toward the outer reaches of space. On the contrary, its importance will continue to grow as the world shrinks by the advancements of science and technology.

This is the reason why the Navy has held its course hard toward the future, probing the heights of space and the depths of the sea in basic research programs to improve naval strength. The overriding objective has consistently been to make the Navy a more effective element of American military power.

This is the reason why the Navy has worked energetically, developing a whole family of guided missiles, applying nuclear power to ships, developing new weapons systems, and adapting new technologies to the needs of naval warfare.

These things the Navy has done, and will continue to do, because it is essential that the United States exploit the seas to their fullest advantage in meeting the threat of Soviet aggression.

These efforts are paying off for the United States and for the free world. The United States Navy is uniquely adapted to operate effectively in all levels of modern war. Its aircraft carriers are presently an important part of the all-out nuclear war deterrent posture of the United States.

With the coming of ballistic missiles, the Navy's contribution will be the fleet ballistic missile system Polaris, a system which has been enthusiastically suported throughout the free world as one which can be kept hidden and moving, virtually immune to surprise enemy attack.

The integrity of this system may well make general nuclear war obsolete as a means of achieving national objectives. Today the Soviets realize that should they venture to launch a general nuclear attack upon the free world, the combined forces of free nations would destroy the Soviet Union.

With the coming of ballistic missiles, when the Navy has Polaris deployed at sea, this capability will remain intact. The situation will continue to be a stalemate, a standoff.

Therefore the United States must also continue to be ready for aggression on a more limited scale. Naval forces are uniquely adapted to deal effectively with limited wars throughout the whole spectrum of possibilities.

The United States Sixth and Seventh Fleets backed up by the First and Second Fleets, can concentrate military power quickly anywhere around the entire periphery of the Eurasian land mass.

They can assemble massive power, or they can apply a pinpoint jab where necessary to give pause to a potential aggressor.

They can be moved into an area and kept there merely by the issuance of an order. When such forces are no longer required in the area, they can be withdrawn, again by a simple order, and placed somewhere else where they are needed. The same forces can

be used over and over again in widely separated locations throughout the world.

It is inherent in the characteristics of naval forces that they are particularly effective in cold war as active, progressive and dynamic instruments of American goodwill in foreign ports throughout the world.

Naval forces can visit foreign lands to show not only the power of the United States—but demonstrate the good will and friendliness of our people. This they can do in the seaports where ships of many nations come and go, where the flags of many nations may be seen every day.

American naval ships are a most effective means of showing the power of the United States because it is not provocative.

Port visits are often an occasion for local celebration, with courtesies exchanged, and with open-house abroard our warships during which hundreds of local people are able to visit our ships, talk to our men, and become acquainted with the friendly spirit of Americans.

The American public can indeed take great pride in the manner in which American sailors represent our country in the foreign lands they visit. Naval visits are an integral part of the President's people-to-people program in many instances.

The Navy is thus an active service, in war and in peace. It is constantly on patrol, a visible sign of American determination to defend the right of freemen to stay free, and at the same time a positive instrument of international goodwill, active every day of every year throughout the world in bringing the American viewpoint to faraway places.

The Navy has many different jobs to do. It is essential that the Navy remain capable of performing these jobs effectively, for the United States has large maritime interests throughout the world.

It is important, therefore, that the public remain always aware of the maritime position of the United States and of the importance of American seapower that represents the power of peace, prosperity, and progress.

Odd Fellows Annual Pilgrimage to the Tomb of the Unknown Soldier

EXTENSION OF REMARKS

OF

HON. JOHN DOWDY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mr. DOWDY. Mr. Speaker, on yesterday, May 4, 1958, the Odd Fellows made their annual pilgrimage to the Tomb of the Unknown Soldier at Arlington Cemetery. Sovereign Grand Master James M. Elliott, of Alliance, Ohio, delivered an inspiring address to the assembly, in which he called for a revival of the four faiths which made us a great Nation of free people. The four faiths are faith in God, faith in ourselves, faith in our fellow man, and faith in our country.

Under unanimous consent to extend my remarks, I incorporate the address in the Appendix of the RECORD:

ADDRESS AT THE TOMB OF THE UNKNOWN SOLDIER, MAY 4, 1958

In memory of the dead, in honor of the living, and for the inspiration of our children, we pause in our activities of life to pay a richly deserved tribute to the one who gave his life that we might be here today. Although we know not who sleeps beneath the tomb, we do know that he sacrificed his life for us all. Once in a while a cause forces itself upon our attention so tragic and so important, that it transcends any consideration of creed or race. We know not the race or creed of the one whom we honor, and as Odd Fellows we care not. We are here because we recognize that through his sacrifice, and many others who gave their lives, we can have such organizations as ours, which stand for the richer and nobler things of life.

We gather here as members and friends of this great fraternity of Odd Fellows, to recognize a patriotism that was demonstrated by this unknown soldier, to the point of sacrificing his life for his country. We have had many demonstrations of sacrificing that we might be free. He may have come from any one of millions of American homes; some mother gave him her love and tenderness.

The Nation bows in grief over the body of this man, born to live, but who died for us. We do not known his station in life, for from every station came patriotic response.

We do not know the eminence of his birth, but we do know the glory of his death. He died for his country and greater devotion hath no man than this. He died no doubt with faith in his heart and hope on his lips, that this country should triumph, and his civilization survive. If America is to ever again lift the sword against another nation; it should be a righteous cause, and with a pure heart, for he who takes up the sword must see that his own cause is just. We in this country need a new wave of patriotism, not necessarily for a righteous conflict, but for other duties demanding our wholehearted patriotism of country. How often we see men in high places who, when put to the test, compromise or surrender. We have on the other hand seen brave men do noble deeds for the betterment of our country and communities. We must have leaders, men who will resist temptation, who will refuse to take the easy path of complying, and will fight for honesty and purity in our public affairs. We have inherited a country, the greatest in the world.

It is a country with endless shores, washed by waters of both oceans, majestic mountains and plains, great lakes and rivers, diversified climate, corn, cotton, and wheat fields, inexhaustible mines and herds as it were on a thousand hills.

It is our great factories, our highways threading our valleys, tunneling, or scaling our mountains. It is the genius in invention, and our skill in engineering. It is our respect for labor, the accounts in our savings banks, the unparalleled opportunity in every direction for all, no matter how humble the roof under which they were born. It is the American homes, our churches, complete freedom of worship, separation of church and state, our schools, our many benevolences, great fraternities such as ours, and, finally, it is the love of freedom that keeps and will keep these things for us, if we will only appreciate and maintain that love and faith in our country.

Today we live in a land of plenty, in a land of mechanical miracles and great achievements. We are the best fed, best clothed, and best housed people in the world. Our vast natural blessings have no equal in the history of civilization. The products of our farms, our factories, and our mines are the envy and future hope of other countries of the world, yet with all these things we find ourselves beset with fears, doubts, and uncertainties. Our situation is almost a frightful one. We are in a struggle with a philosophy of life which seeks to destroy everything we hold dear. We are in a struggle between slavery and freedom, and it is worldwide, thus we stand at the crossroads in our country. We badly need today the great faiths our forefathers had, and which we, too, must have if we are to survive.

I want to give you the four great faiths of our forefathers: The first is faith in God. When our forefathers landed on the shores of New England, there was practically nothing to give them aid and comfort, except their faith in God. So strong was that faith, that they caused to be stamped on our coins the words, In God We Trust. Recognition of a supreme power and dependency on that power for guidance is contained in our Declaration of Independence and in our State constitutions. What about us today? Do we have faith in God? Do the words, In God We Trust, guide us, inspire us, strengthen us? If we are worried about our future, then we should do as our forefathers did, turn more strongly to that faith that made our Nation great.

Between America of yesterday and the America of tomorrow stands our generation, to us has fallen the duty to preserve our Nation, and we must be guided by this faith if we are to survive. Many peoples of the world have a firm faith in God, and so far it has withstood the efforts of dictators to stamp it out.

The second is faith in ourselves. The Bible tells us that "As a man thinketh in his own heart so is he." We therefore cannot think in terms of failure and succeed, in terms of weakness and then be strong, in terms of fear and then be brave, in terms of doubt and have faith. Our forefathers had faith in themselves, and believed that the Lord helps those who help themselves.

The history of our country is a history of a people who had faith in themselves. It has paid off in richer, happier, and fuller lives. It has brought us the greatest outpouring of goods and services the world has ever known. Recently we have started to leaning on the Federal Government for the solution of personal and community problems. If this condition of dependence upon our Government continues to exist and grow stronger, we shall surely destroy one of the basic faiths that made our country free, strong, and prosperous, namely, faith in ourselves.

The third faith is faith in our fellow man. I believe it naturally follows, faith in God and in ourselves. Again our forefathers possessed this faith, they lived by it, fought for it, and died for it. Again the Declaration of Independence has these words, "With a firm reliance on the protection of Divine Providence, we mutually pledged to each other our lives, our fortunes, and sacred honor." These are words coined by men who faced the future with firm faith in their fellow man. When we read the newspapers, listen to the radio, and hear the many things that are being done today, it almost shakes our faith, but we still have many good people in this country who have faith in their fellow man and unless we do we cannot have the last faith of the four I want to mention, and that is faith in our country. We are the preservers of our country and the freedoms we hold dear. Again our forefathers certainly had faith in this country, they established the freedoms we enjoy. Because we have freedom is why we have been richly blessed, more than any other peoples of any other country, our country gives us so many freedoms, to work, to save, or spend, to gain power, honor and trust, to rise from rags to riches, to enjoy the fruits of our own labors, to worship God according to the dictates of our own conscience. In order that we can continue to enjoy these blessings and freedoms, we must have faith in God, faith in ourselves, faith in our fellow man, and faith in our country.

Amid such a scene as this our thoughts today alter between defenders dead and defenders living. A grateful Republic will be worthy of both. Our part is to atone for the loss of our heroic dead by making a better country for the living.

May this day mark the dawn of a new and lasting era of peace on earth, good will among men.

Tax Cuts or Tax Fraud?

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. RAY. Mr. Speaker, the content of the following editorial taken from this morning's Wall Street Journal makes clear why I insert it in the RECORD. No introductory statement is required except to say that I endorse it wholeheartedly:

TAX CUTS—OR TAX FRAUD?

All this talk of a tax cut, it seems to us, is bound to put all reflective minds in a cruel dilemma.

It is undisputable that the present tax load upon the American people is far too high. Fully one-third of the whole economic effort of the people is consumed by the Federal, State and local governments. A vast proportion of this is plainly sheer waste; that is, it goes to support governmental activities having nothing to do with the essential national defense or with the real welfare of the people.

It seems to us also indisputable that this weight is economically oppressive. There is much talk today of a recession, and one need only reflect on what the people could buy and enjoy for themselves if they had even a small part of these taxes to put to their own use. Beyond this immediate effect, although perhaps not so obvious to everyone, the weight of this tax load is a drag upon the future. Every dollar Government consumes now for nonproductive purposes is a dollar subtracted from the future economic strength of the country.

Nor is the weight of the tax burden the whole of the matter. Its structure is a jerry-built mish-mash that distributes the burden inequitably and unwisely. The excise taxes are a crazy quilt; the design is not only senseless but is an actual penalty on many lines of business and many consumers. The rules for amortizing capital investment results in a distortion of investment and, coupled with inflation, sometimes amount to a hidden capital levy.

The method of levying direct taxes upon individuals is, if anything, worse. This is not altogether a matter of the inconsistencies, injustices and complicatoins in the law, although these abound. The steeply graduated income tax is fundamentally unjust because it multiplies the penalties upon the citizen the harder he works, the more he produces and the more he earns. It is economicsally unsound because it takes its biggest bite out of the future—the savings which must provide the capital tomorrow for a growing America.

So plainly, tax reform which would both reduce and redesign the tax structure is more than overdue. The words "tax cut" which now echo in the corridors of the Capitol are thus bound to have an appeal to the mind as well as the emotions.

And yet, few of these politicians are talking about tax reform. They are talking about tax gimmicks. Some excise taxes, so we are told, must be cut on certain products just to help boost sales of these particular products; this is not reform but more political inequity. The plan is not to revamp plant amortization rates to make economic sense for all; it is to give temporary fast writeoffs in certain areas somebody thinks needs a little stimulation.

Some of these gimmicks are blatantly so. We have heard proposals to forgive a month's taxes or more, to have a 1 year's increase in the tax exemption, or otherwise to juggle the rates just to put a few more dollars briefly in people's pockets in the hope they might spend them fast. It would make as much sense for Congress just to pass a law and pass out $40 to everybody out of the Treasury.

This, by itself, is enough to put the stamp of fraud on most of the current tax-cut talk. But there is something else that makes it a dangerous fraud.

The simple fact is that the Government is now running a deficit of more than $3 billion. There is no plan whatever to reduce the Government's spending. Rather it is being increased, again under the guise of helping us out of this recession. And with this increased spending, the so-called tax cuts would increase this deficit many billions more. Some politicians have talked blithely of a $12 billion to $15 billion deficit—each year.

And on this we had best not kid ourselves. If this is what a tax cut means it means no tax cut at all. It simply means that for the political effect of 40 pieces of silver for the taxpayers to jangle in their pockets they will pay many times over not merely in future taxes but in the theft from all values.

For it is a harsh fact, an unhappy fact, a discouraging fact, but a fact nonetheless that the Government has no way of creating the real money to pay for this tax cut it would bless us with. It can give the people dollar bills all right but in the end it must carve them out of the people's hides.

This newspaper has been a constant pleader for tax reform and tax cuts. So it may seem strange now when some politician talks of cutting taxes, or of making some adjustment in a structure we have long complained of, that we should not rush to it eagerly.

Well, we plead no less than before. We are still convinced that the size of the tax burden upon the people, and the way in which it is levied, does the country an injury that is no less grievous because its effects are hidden and slow. But we are also convinced that the tax burden cannot be removed until people are aroused enough to throw off some of the weight of Government spending which makes that burden so oppressive.

The people cannot have it both ways. We would welcome tax reforms and tax reductions. We can hardly welcome tax frauds.

An Editor and a Congressman Discuss the Length of the Term of a United States Representative

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 28, 1958

Mr. PORTER. Mr. Speaker, there is considerable discussion these days concerning the length of the term of a United States Representative. In light of this, and under the leave to extend my remarks in the RECORD, I include the following April 17, 1958, editorial which appeared in the Eugene, Ore., Register-Guard, an outstanding State daily, and my letter of April 29, 1958, written in reply:

MORE LEGISLATION, LESS FENCE MENDING

Fifteen months ago 435 United States Representatives were sworn in as Members of Congress. Last week, during the Easter recess, Congressman CHARLES O. PORTER, 1 of the 435, was touring this district, fence mending, sounding out his constituents and otherwise preparing for his reelection campaign. Other Members were touring other districts, but all with the same purpose in mind—campaigning. For no sooner does a Representative take office than his attention must be diverted from his legislative responsibilities to the first chore of the successful officeholder, getting elected.

The problem in the Senate is less acute. Senators, 96 of them, are elected for 6-year terms. A Senator, sworn in when Mr. PORTER was, need not run for reelection until 1962. Last year and this year and for the next couple of years he is free of the worry that he might be fired by the voters. He can, in theory at least, devote himself fully to legislative matters. For 4 years out of his 6 he can play the role of statesman, reverting to politician only in the months before election.

Would it not be better, some have asked, if the terms of Representatives were extended, perhaps to 4 years? Do not Members of the so-called Lower House need opportunity for reflection, study and statesmanlike attitudes as much as Senators in the other wing of the Capitol? Several times it has been proposed that terms be so extended.

Such a change would require a constitutional amendment, for the Nation's basic law specifies the 2-year term. To understand why, we must understand the nature of the conglomeration of independent States that got together to form the new nation 170 years ago. States were equal in sovereignty. But some were more populous than others and demanded proportionately greater representation in the new parliament. A compromise was struck. The upper House was to represent the States, with each State having two Members, Senators. The lower House was to represent the people, with seats distributed according to population. The Members of the upper House were to be chosen by State legislatures, Members of the lower by popular vote. This was the lower House to be the people's House, responsible to the people and quickly responsive to popular will. The Senate, in the thinking of some of the Founding Fathers, was to be a brake that could prevent the popular will from being put into law too quickly. This pattern was followed by most States, including Oregon, in the establishment of two-house legislatures, an upper house with long-term members and a lower house that could be turned out every other year.

The Nation has come a long way since 1787. In theory we are still a federation of equal States. But the reality is not with us the way it was in our national infancy. Senators are no longer elected by legislatures. Suffrage has been extended far beyond that envisioned by the Founding Fathers. Both Houses now are people's Houses. Experience has shown that changes in sentiment, even in the lower House, are usually small with the balance of power rarely shifting heavily in only one election. So close is the usual division in the Senate that changes in the popular mood are reflected there as readily as they are in the House.

In the view of this newspaper the American people would be well advised to think about changing their basic law to provide longer terms for House Members. We'd get more service from them if we permitted them to tend to their knitting instead of to their fence mending. Yet the prospects for such a change are not bright, if only because the initiative must come from the Central Government and not by individual State action as was the case with direct election of Senators.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., April 29, 1958.

To the EDITOR, EUGENE REGISTER-GUARD,
Eugene, Oreg.

DEAR SIR: Naturally I was interested in your thoughtful editorial of April 17 entitled "More Legislating, Less Fence Mending." I do not deny for a minute that I was fence mending or campaigning while I toured the fourth district during the Easter recess. However, I believe that I am a better legislator by reason of my getting around the district and as long as I have the honor to represent southwestern Oregon in Congress I intend to make myself available for consultation and questions throughout the district when Congress is not in session.

A 2-year term does keep a Congressman alert to the fact that he must win and hold votes if he is to be reelected. Doing your job as a United States Representative, both in the legislative and in the errand boy functions, is the best kind of campaigning an incumbent can do.

The real trouble with the 2-year term, in my view, is not that fence mending takes time from legislative responsibilities but that campaigning costs so much money.

The Federal Government is a huge organization with tentacles reaching out and grasping each individual many times. A citizen feels better about a situation if he knows he has a Congressman who will go to bat for him if he needs help. He also likes to feel that he can make his opinions and ideas known to his elected Representative. So these trips a Representative makes around his district, whether they be fence mending or campaigning, are also an essential part of a Congressman's duties in that they overcome in part the impersonality of our Federal Government and thereby make our Union the stronger.

I personally would like to have a 4-year term, not because I dislike getting around the fourth district, but because of the financial burdens of a campaign. You are right when you say that the prospects of extending the 2-year term are at this time remote. There has been considerable talk among my colleagues of providing an additional assistant for each Congressman. This would be a tremendous help in assisting us to serve our constituents both in connection with mail and direct legislative duties. However, this being an election year, the prospects for this are not bright.

Sincerely,

CHARLES O. PORTER,
Member of Congress.

No More Than Fair

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent I include the following editorial from the Memphis Commercial Appeal in regard to the flood-control omnibus bill:

NO MORE THAN FAIR

The White House has indicated that President Eisenhower is still opposed to the Greenville Harbor project but is willing to approve the Boeuf-Tensas project and that for the White River backwater area if administration recommendations are accepted. We assume he means the Budget Bureau's recommendations to him.

The Mid-South's congressional Members ought to be able to convince their colleagues of the manifest inequity of the local interest requirements which have been set. The Boeuf-Tensas project is 90 percent complete and the same rule should be applied to the last 10 percent as was followed for the rest. The White River backwater project, we understand, involves a transfer of 5,000 acres of land to the Government.

The Greenville Harbor project involves a total expenditure of less than 3 millions—a minor amount as flood control and navigation expenditures go. It has been approved by the district and division engineers. The barrier to Presidential (Budget Bureau) approval is lack of local interest participation to a degree greater than that demanded for the Memphis and Vicksburg Harbor projects, both of which are under way.

Greenville has a right to the same treatment as Memphis and Vicksburg and Mid-South Members in the Congress are right, in turn, in demanding that she be given it. An authorization act from which the Greenvill project was omitted would be grossly unfair.

Russia Presses United States as Coal Producer

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD I include herewith an editorial, "Russia Presses United States as Coal Producer," which appeared in the April 15, 1958, issue of the Madisonville Messenger of Madisonville, Ky.

The editorial is as follows:

RUSSIA PRESSES UNITED STATES AS COAL PRODUCER

Using modern methods and giving top priority to mining, Russia is catching up to the United States in coal production, reports Coal Age, a publication devoted to the mining industry. The story goes like this:

Last year the Russians scooped about 509 millions tons of coal, while the United States netted around 514 million. The Russians claim that by the end of 1958 they should be producing 535 million tons of coal while the United States will turn out only 460 million.

Since 1952, Russia's coal production has jumped at an average close to 10 percent a year while the United States' production has averaged an increase of only one-half of 1 percent. What's more, America's coal production sank about 2.7 percent in 1957 from the 1956 level. Experts assert that if the trend continues, Soviet coal production will shoot ahead of the United States for the first time in modern history.

The U. S. S. R., it is reported, extracts 15 metric tons of coal every second, or more than the combined yield of Great Britain, France, India, and Japan. Almost 30 percent of this coal is lignite as compared to 1 percent lignite in the United States' tonnage.

Russia estimates its reserves to be around 8 billion metric tons, claiming it has the coal-richest belly in the world. Recently, the Russians announced that in the Lena Basin alone in eastern Siberia there are 2½ times greater coal reserves than in the rest of the world.

One of Russia's richest coal basins is the Karaganda, said to contain 51.2 billion metric tons of coking coal and other high quality coal. The Donets Basin in the Ural Mountain region is a top producer along with the Ukraine in the west and the Dolinsk region far to the east.

Everywhere in Russia, coal-mining experts check new techniques. Some of these are:

Bringing coal to the surface through a pipe system. Liquids of higher specific weight than that of coal are injected and the coal is floated to the surface.

Hydraulic transport of coal to washing and screen plants.

Remote control mining. One operator will control all coal-cutting machinery from a single panelboard while watching the entire process on a television screen.

Still, Russian scientists are not content to stay within their own country. Teams of experts are constantly inspecting the coal gasification plants of other nations.

El Portal Acquisition for Yosemite

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. ENGLE. Mr. Speaker, one of the most populous places in my State, and certainly the most populous in my district, is not in a city as you might expect, but in the upper end of Yosemite Valley, in the heart of Yosemite National Park. As many of you know, it is a beautiful valley of green meadow and forests surrounded by mile-high cliffs and waterfalls unequaled anywhere else on earth. It is a jewel in the crown of our scenic resources. I think it is the most valuable piece of real estate anywhere. The price does not matter because it is not for sale. It was set aside for all the people for all time back in 1864, by President Abraham Lincoln.

Although we are happy that Yosemite Valley is within the exterior boundaries of the State of California, I am not saying what I have said merely to praise my State, for Yosemite Valley belongs to the world. A million people come each year to visit this place. Future years are going to bring still more. If these future visitors are going to get anything like the experience we have the opportunity to enjoy in that valley today, we must be very careful about how we use the vital 7 square miles of the floor of that valley. Nothing much is likely to happen to the cliffs and waterfalls, but these cannot mean much if we let harm befall the place where people will want to drive, walk, rest, and look in the course of their Yosemite days and nights.

The National Park Service is greatly concerned about retaining the park experience in Yosemite Valley, and in not letting the lure of the valley, and the throngs that lure brings there, destroy the very thing the people came to see. The Park Service, and conservation groups outside the Government, have been studying long and carefully the means of rescuing for the Yosemite visitor the meaning of Yosemite Valley to

that visitor, and of relocating certain facilities and activities that will get in the way of the people who come there to see the valley, and to experience something they can find nowhere else on earth.

Theirs is an enormous task, beset by many difficulties, and I believe they have found the answer. The solution is to make sure that a very minimum of their most valuable real estate is preempted by the machinery of running the park. Warehouses, garages, shops, heavy trucking, and housing for the employees who operate them—and who year in and year out are but a few minutes from a chance to see Yosemite Valley almost anytime they want to—should make way for the park visitors who are coming in increasing numbers.

If this machinery is to be relocated, it needs a place to go. Not an isolated place, but space accessible to the main artery of transportation that must serve these facilities. The National Park Service now has the opportunity to acquire and develop just such space at El Portal, 14 miles down the all-year highway from the present location. With this property acquired, an orderly movement of this machinery can be begun, and a major conflict for space will be resolved.

I believe, the key to the solution is the acquisition of this property at El Portal, to be used and administered by the National Park Service in accordance with the program I have outlined to assure the protection and enjoyment of our world-famous Yosemite Valley.

Accordingly, I have introduced herewith H. R. 12281 and hope that it will move forward as promptly as possible, before this long-sought and widely supported opportunity is lost.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following weekly newsletter of May 3, 1958:

Legislative activity January 7 through April 30 in the House totals 217 hours of debate, 2,488 pages of CONGRESSIONAL RECORD proceedings, 3,045 measures (bills) introduced, and 348 measures passed.

The transcript of the S. M. U. meeting of John Gates, former Communist Daily Worker editor, and Herbert Philbrick, former FBI counterspy, is now a part of the CONGRESSIONAL RECORD. Members of Congress and people throughout America should enjoy the questions and answers.

Some unanswered questions remain. For example, (1) How does an atheist tell right from wrong? (2) How can democratic socialism retain the features of our constitutional form of government, as Gates says (the mixing of oil and water)? (3) Do others besides Gates believe the American labor movement to be the home of new American radicalism? (4) Is the American labor movement, whose leaders push liberal, free-spending, even unconstitutional legislation, now the result of earlier Socialists who think like Gates? (5) By what philosophy of government are now justified the many legislative bills sponsored by the AFL–CIO (as, for example, this week's socialized dole)? In AFL–CIO pressure on Congress can be found the answers to (a) the refusal of the House Democratic leadership to even hold hearings on labor legislation, long pending and pigeonholed, and (b) the Senate's refusal last week to pass any legislation curtailing labor's monopolistic position. Will success crown Senator BILL KNOWLAND'S valiant efforts to lead the fight for a workingman's bill of rights? The extortion of money from union workers' pay checks by the power-hungry labor leaders, he labeled an example of collective bludgeoning.

Maybe the dilemma in Congress is best expressed by David Lawrence in summarizing labor's monopolistic position and legislative influence. "It looks now as if only by the election of enough new Members of Congress—committed to legislation that abolishes the labor-union monopoly—will there ever be any chance of getting relief from the wage-price spiral and inflation?"

The Temporary Unemployment Compensation Act of 1958 was a real shocker, but this story had a happy ending. It had two parts: Title I, "To authorize temporary unemployment benefits for individuals who exhaust their benefit rights under existing unemployment compensation laws;" and title II, "For individuals who were employed in noncovered employment." Background (to digress): Employers pay a 3 percent tax on each employee's first $3,000 of income, 2.7 percent going to the State, 0.3 percent to the Federal Government (for administrative expense). The State pays benefits (determining amount and number of weeks) to those covered when they are unemployed. When the States' funds build up, the respective States usually limit the further payment by employers into the fund; but the Federal Government continues to receive its 0.3 percent. So the Federal fund built up to almost $900 million. The money was being spent on general expenses. Congress then limited the fund to $200 million, the rest then being returned to the States. The bill brought to the House was quite different from the administration's recommendation on which hearings were held. In title II States would be given money outright to distribute to all unemployed a sum equal to 16 times whatever the State law permits if the person was covered by unemployment insurance. Argument for was simply that the unemployed need money and should be paid by the Government. Arguments against were: (1) No bearings on substitute bill; (2) no "need" formula for dispensing money—anyone could receive it, millionaires or hobos; (3) outright "socialized dole;" (4) "temporary" legislation is seldom temporary; (5) States have $9 billion unemployment compensation on hand, the Federal only $200 million; and (6) complete violation of States' rights. A substitute bill as an amendment to strike out title II precipitated the crucial vote. A coalition of Republicans and Southern Democrats passed the House, 223 to 165 (40 not voting), this joining of conservatives a most heartening development. The substitute bill made borrowing optional to the States and permitted repayments in three ways. In final passage, the vote was 370 to 17 (42 not voting). I opposed it because I think this field is and should remain a State matter.

Urban renewal, the cleaning up of slum and rundown areas, is a problem throughout our Nation's communities. No one, surely, can disapprove the rehabilitation. It's just a matter of how best to do it to get the job done. Numerous cities are busily engaged in urban renewal right now—some on their own, some with Federal aid. Dallas' current interest has prompted my preparing a rather thorough study for the use of the mayor, city council, Downtown Businessmen's Association, and others interested in how best to solve this difficult problem. It is my hope that a careful study of the facts will be made before the referendum. Dallas received nationwide recognition in its "Little Mexico" project, the first major urban renewal propect in the Nation without Federal aid.

Churchill's Paintings Speak to United States From Heart of an Old Campaigner

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 25, 1958

Mr. THOMPSON of New Jersey. Mr. Speaker, the Smithsonian Institution is to be congratulated for its good sense in presenting the magnificent collection of paintings by Winston Churchill. A self-styled amateur, Mr. Churchill's paintings are brilliantly done. As someone said, if he had devoted himself to art as he has to statecraft he would be the greatest painter the world has known.

I include here a moving tribute to Winston Churchill from the Evening Star of Washington, D. C., written by William S. White who, until recently, reported the activities of the United States Senate for the New York Times:

"OLD MASTER" OF THE 20TH CENTURY: CHURCHILL'S PAINTINGS SPEAK TO UNITED STATES FROM HEART OF AN OLD CAMPAIGNER

(By William S. White)

On a wet May day in Washington people were circling with wary respect around 35 pictures arranged in a sort of rotunda in the Smithsonian Institution.

The paintings were strong in execution. They were stoutly traditional in form; here there was no nonsense about impressionism and all that.

Their titles were mostly both clipped and gentle—"Rock Near Cannes"; "Black Swans at Chartwell." But one title, though certainly clipped, was not especially gentle. "Bottlescape," it said, with forthright satisfaction.

And a correspondent who long ago in wartime had occasionally trailed along behind the painter in some of his missions could imagine now the gleam in the Old Master's eye when he put his brush to these works.

For this was a painting of rich bottles; brandy here, champagne there, by the look of it, and in the foreground a brimming glass if what just might have been whisky.

Nearby was mounted a chaste blue and white card announcing the name and rank and serial number, so to speak, of the artist: "The Right Honorable Sir Winston Churchill."

"Old Master" is used here of Sir Winston in awareness that some experts may reject the description as it applies to painting.

Indeed, only recently there was a grave proclamation that the Art Institute of Chicago had declined to show his pictures on the ground that he was not a professional.

Professional in the art world, maybe not; but professional in the greater world of all men—of course he was, and is.

For his painting not only looked good; they were good. Among other things, they

brought together, in 1 place and at 1 time; 1 of a dozen aspects of the personality of, perhaps, the most extraordinary whole man produced since—whom? Benjamin Franklin, perhaps, and in a way.

But Franklin, for all his versatility and charm, surely could hardly match this man of the 20th century. Franklin knew how to say what he had to say; yes. But who could possibly compare it with the unforgettable eloquence, half in lisp and half in snarl, that Churchill flung against the heart and conscience of the chaste blue and white card all but broken House of Commons back before Pearl Harbor or Stalingrad?

And here so many years later, down at the Smithsonian, was Churchill again, back in America. This time, of course, he was back only in his paintings. But these, above their lines and tints, spoke to America for him. They were the calling cards of a man who understands this country better than it understands him.

Is this piece, then, designed to suggest that all the world really needs is a bigger and better English-speaking union? No; it is mainly to recall another spring. This—14 years ago this very month—was a spring in England in which the grass was unbelievably green, as it is today in Washington.

The distinguished painter now represented here by his 35 works was busy then with more urgent affairs than landscapes. He was stumping about the British Isles—which at that time seemed to tilt a little at the water's edge under a mass of war machines.

He was smoking furiously and poking his head with his funny hat into everything. He was putting all in order, as he would have expressed it, for an invasion across the Channel that was to come on June 6, 1944.

He was quarrelsome, and he was kind. He was, in the language of some parts of our country, an ornery old cuss without the slightest self-doubt in his mission and wisdom.

He pushed everybody around. But then, in the figurative sense where the literal act would never have been possible to him, he patted everybody on the back.

He was the patriarch, The Old Man, to English-speaking assault forces gathered from everywhere.

He was sending them out to die, many of them. And, God knows, he never sentimentalized them or visibly agonized over them. Rather, his line was more or less the "Hey, hey, first of May, good hunting," kind of thing.

But he was looking after his troops—and in his grand way all of them were his troops, whether American, Canadian, or Anzac, or United Kingdom—the best he could.

This was the time when he was truly the master painter—the painter of a design that some will not forget in this or many another spring.

Hardwood Plywood

EXTENSION OF REMARKS
OF

HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mr. LAIRD. Mr. Speaker, on Thursday, April 24, the gentleman from Oregon [Mr. PORTER] took the floor and for a solid 40 minutes took after my distinguished colleagues from the Pacific Northwest, the gentleman from Washington [Mr. MACK] and the gentleman from Oregon [Mr. NORBLAD] on the problem created by the imports of plywood. I took the floor to advise the gentleman from Oregon [Mr. PORTER] of the difference between fur and hardwood plywood. In so doing, I mentioned the Friday shutdown of the Roddis Plywood Corp., a large producer of hardwood plywood in my district. The very next day one Tom Blake called the Roddis Plywood Corp. and talked to Mr. Don Gott, Marshfield sales manager of the Roddis plant. Mr. Blake was very mysterious in identifying himself to Mr. Gott. He asked if the plant was being shut down on Friday and if the company used or sold imported plywood. Mr. Blake was told that the company was shut down on Friday, April 18, the cause being the lack of orders. Mr. Gott immediately called me and informed me of the call and his concern over Mr. Blake being unwilling to properly identify himself. I decided to find out just who Mr. Blake was and what interests he represented. I found that Mr. Blake is associated with the law firm of Sharp & Bogan. Sharp & Bogan are the attorneys for the Imported Hardwood Plywood Association, the Japanese Plywood Trade Promotional Committee, of Tokyo, Japan, and other groups which are interested in increasing the imports of plywood from Japan. Quite obviously, Mr. Blake was representing the importers and the members of the Japanese Plywood Trade Promotional Committee when he called the Roddis Plywood Corp. It seems that the lobbyists for the plywood importers and this Japanese committee, are worried about the situation and will employ any means to obtain information which they hope they can use for the purpose of injuring this American industry. An industry by the way which has been adversely affected by an increase of Japanese plywood shipments of over 6,000 percent since 1952.

Mr. Speaker, I read into the RECORD at this point a letter received from Mr. Don Gott of the Roddis Plywood Corp.:

RODDIS PLYWOOD CORP.,
Marshfield, Wis., April 25, 1958.

The Honorable MELVIN R. LAIRD,
House of Representatives,
Washington, D. C.

DEAR MEL: Confirming our conversation of this morning the Marshfield mill did close down Friday, April 18, for the 1 day. It is quite obvious that when shipments exceed a slowup of orders received, adjustments must take place to have the flow of orders coincide with the flow of shipments. This is true in any business.

While there are a few other elements besides the Japanese import situation which create this readjustment the information which I obtained from Philadelphia this morning is certainly considered the present and future problem. If you recall, I indicated that our manager of the Philadelphia operation told me by phone this morning that Japanese three-fourths inch full-length basswood lumber core, 1–1 grade, in select red birch, is delivering Philadelphia at 41 cents per square foot. This compares to our delivered price for rotary natural birch at 63 cents, Philadelphia, and select red birch at 76½ cents, Philadelphia. This, plus the influx of cheap Lauan from Japan, will create more serious conditions, if allowed to continue, than shutting down for 1 day last week. Lumber core plywood, as you know, is our bread and butter at the Marshfield mill in the plywood field. I shall keep you advised as to future developments on price and product information from Japan.

With sincere regards, I remain,

Cordially,

RODDIS PLYWOOD CORP.,
DON GOTT,
Marshfield Sales Manager.

On April 28 the gentleman from Oregon [Mr. PORTER], with no prior notice to me, inserted in the CONGRESSIONAL RECORD a correction of my remarks of April 24. This is, of course, not in accordance with normal House procedure. The House on April 29 gave me unanimous consent to correct the RECORD and I will insert at this point the statement I made on April 29.

SHUTDOWN OF RODDIS PLYWOOD PLANT

(Mr. LAIRD asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. LAIRD. Mr. Speaker, on page 6408 of the CONGRESSIONAL RECORD of April 24, 1958, in the exchange between the gentleman from Oregon [Mr. PORTER] and myself, an error was made. In the paragraph on the top of the page, I stated:

"The largest hardwood plywood plant in the world is going to be shut down on Friday."

This sentence should read:

"The largest hardwood plywood plant in the world was shut down last Friday."

I regret very much that the error was made in the day of the shutdown of the Roddis plywood plant as the plant was shut down on April 18, 1958, and not April 25, 1958.

I did not have the many letters which I have received about this shutdown before me on the floor of the House on April 24, 1958, and I had assumed the shutdown was to take place on April 25, but in reading over the correspondence in my office, the shutdown date was April 18, 1958. Irrespective of what Friday the plant was shut down, it remains that the management has informed me that it was necessary to reduce hours in this plant because of a reduction in orders. I am advised that these orders have been reduced not because of the lack of consumption of hardwood plywood but because of the increase of Japanese imports. In correspondence from the management of the plant, it is impossible to estimate with any degree of finality whether additional shutdowns will be necessary. However, it is important to bear in mind that several of the plants in my district are operating on a regular schedule of reduced hours.

I ask unanimous consent that the permanent RECORD be corrected.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

This statement would have been made on April 28 if it were not for the fact that I was speaking in Wisconsin on that date.

Sharp & Bogan, lobbyists for the plywood importers, are mailing out some very interesting propaganda these days. In a letter dated April 20, 1958, they spell out their high-powered lobby technique very thoroughly. Mr. Sharp in his letter urges the recipients to write their Congressmen but tells them emphatically not to send any of his canned material. Under unanimous consent I insert at this point in the RECORD the letter of Mr. Sharp dated April 20, 1958, and the attached enclosures:

SHARP & BOGAN,
Washington, D. C., April 20, 1958.

GENTLEMEN: As you know, our firm represents the Imported Hardwood Plywood Asso-

ciation in its effort to defeat the enactment of the hardwood plywood restrictive quota bills now pending in Congress. These bills would cripple the import trade and require serious curtailment of the operations of many manufacturers who utilize imported plywood in the manufacture of doors, furniture, and other products.

One of your suppliers of imported hardwood plywood has asked us to furnish you with copies of a communication which, if you see fit, is for the information of your employees. The purpose is to induce them, if possible, to write letters to their Senators and Congressmen in opposition to the plywood quota legislation. Enclosed you will find copies of the communication and we should be glad to furnish additional copies if you can make use of them. If you need additional copies, either call, write, or wire us and we will dispatch them to you immediately.

The House Ways and Means Committee is now in executive session on the Reciprocal Trade Act and various quota bills, including plywood. It is important that as many letters as possible be sent to the Members of Congress within the next 2 to 4 weeks.

You will undoubtedly realize the importance of immediate action. Adoption of this legislation will have a direct effect upon the business of your company and the welfare of your employees, as well as the importers on whose behalf we are acting.

Yours very truly,

SHARP & BOGAN,
JAMES R. SHARP.

If you are employed in a door plant, furniture plant, or any other place of business that uses, ships, or handles imported plywood, your job is being threatened by import restrictions.

What's happening in Washington right now is more than just a general news item to you. It will determine whether you and your fellow workers can continue to hold your jobs, because those jobs are being threatened by what Congressman PORTER, of Oregon, has called a campaign of massive misinformation.

The well-heeled lobby that is trying to throttle plywood imports is threatening the very existence of your company—which means the very existence of your job. One California door manufacturer with his Congressman said that if these imports are stopped, "We are out of business." A Tennessee distributor wrote that if these imports are stopped, "We lose 40 percent of our business." Furniture makers, boat manufacturers, trailer-body producers, home-construction companies, and many others have said that if imports stop "our costs go up and our sales go down."

And what they are all talking about is your job.

Of course, to the Nation as a whole, this problem of imports is more important than your job. President Eisenhower and all the Democratic leaders have said that increased trade is vital to our own economic growth, to the strength of our alliances, and to the defeat of the Soviet economic offensive. Increased trade is not charity—it is good United States business, it is buying and selling that helps us as much as it helps our friends.

So, remember that in protecting your job you are also protecting the national interest, the peace and prosperity of America and the free world.

But these imports which are so essential to your job and so beneficial to the Nation, are they hurting other American workers? The powerful propaganda lobby fighting imports says they are. But the facts say no. And the unbiased Government experts who have investigated the effect of these plywood imports have ruled that they are not hurting the American plywood industry. (If you want more details, see the attached fact sheets.)

How can you protect your job? You are being threatened by a powerful and well-financed lobby, but you have the power to beat them.

YOU HAVE THE POWER OF THE PEN

1. Write your Congressmen and tell them to vote for a liberal trade bill and against any plywood import restrictions. Tell them, in your own words, how important this trade is to your job, your company, your community, the Nation. Don't send any of the attached material, but use any of the facts or arguments that are of interest to you.

Your Representatives should be addressed:

The Honorable ———, House Office Building, Washington, D. C.

Your Senators (remember there are two for your State) as:

The Honorable ———, Senate Office Building, Washington, D. C.

And if you can, send a carbon copy of your letters to the Washington representatives protecting this trade and your job:

Sharp & Bogan, attorneys, 1108 16th Street, NW., Washington 6, D. C.

2. Write a letter to your local newspaper, explaining the importance of this import trade to you and your community. Public interest and newspaper support are powerful weapons on the side of the truth.

YOU ALSO HAVE THE POWER OF ORGANIZATION

1. If you are a member of a union, tell your union officials to support this fight against import restrictions.

2. Your local clubs (Kiwanis, Lions, others) should be enlisted in the fight.

3. Don't forget your wife's organizations, such as the League of Women Voters, which can be most effective.

If you want to keep your job, to grow with the company, to share in its prosperity, you're going to have to fight to protect that job. And you're going to have to fight now. The next month will be decisive, because Congress is now drafting the trade program for the next few years.

Write your letters now. Get your organizational support now. Protect your job and the national interest, now.

THE PLYWOOD HOAX

The propaganda program of the Hardwood Plywood Manufacturers Committee has been described by at least one Member of the Congress as a campaign of massive misinformation, an economic hoax.

This well-financed lobby has sought congressional support for plywood import quota bills by claiming that:

1. Plywood imports are hurting the Douglas-fir plywood industry.

2. Plywood imports are made with Soviet lumber.

3. Plywood imports have shut down 28 hardwood plywood plants.

4. International diplomacy has denied relief to the United States industry.

These statements are not true. They are, at best, economic nonsense, and at worst, malicious distortion.

A summary of the facts should prevent any Member of the Congress or the public from being taken in by this plywood hoax.

THE TRUTH ABOUT PLYWOOD IMPORTS

Over 98 percent of the plywood imported into the United States is made from hardwoods, less than 2 percent from softwoods. All the plywood from Japan, the principal supplier, is hardwood plywood. More than 80 percent of the United States plywood industry, on the other hand, produces only softwood plywood, chiefly Douglas-fir.

There has been a substantial increase in imports of hardwood plywood over the past 7 years. Between 1951 and 1955 total imports of plywood increased by almost 900 percent, from 74 million to 628 million square feet. Imports from Japan alone increased almost 3,300 percent from 13 million to 429 million square feet.

Yet in 1955, after an exhaustive investigation, the United States Tariff Commission found in a unanimous opinion that imports of hardwood plywood were not injuring the United States hardwood plywood industry, or even threatening any injury to that domestic industry.

Since 1955, the increase has continued, but at a much slower pace. Total imports rose from 628 million feet in 1955 to 847 million feet in 1957, an increase of only 35 percent. Japanese plywood increased from 429 million feet to 686 million feet in 1957, an increase of about 60 percent.

Why did the unanimous Tariff Commission find no injury, in the face of such a great increase in imports? Because, in the Commission's own words, the imports were "supplemental to the domestic supply of hardwood plywood"; because "the availability of imports has helped to develop new markets" for plywood of all kinds; because "the great expansion in the production of flush doors would not have been possible if producers had been dependent entirely on domestic plywood"; because "domestic supplies would not have been adequate."

With this brief background, let's examine the newest claims in the great plywood hoax, which are for the most part the same claims already investigated and rejected by the Tariff Commission:

I. The softwood plywood hoax

The claim is made that the current economic difficulties in the Douglas-fir plywood industry are caused by imports. This is not true, it cannot be true. Douglas-fir is a softwood, used principally for cement forms and subsurface construction in homes, buildings, and furniture; while imports are of hardwood, used almost primarily for natural-finish decorative surface doors and panels. The Tariff Commission in its report pointed out that softwood plywood and hardwood plywood are not competitive, but are used for entirely different purposes.

Moreover, imported plywood costs at least $35 more per thousand square feet at the wholesale distributors' level than Douglas-fir plywood, despite the lower wages paid abroad. While one-fourth inch, AD-grade, Douglas-fir plywood has been selling from $64 to $72 per thousand square feet at the wholesale level, imported Japanese plywood of the same grade has been selling for between $101 and $112. To say that Douglas-fir plywood, used for forming and subsurface construction purposes at $72 a thousand feet, can be displaced by imported exotic panels selling for more than $100 is pure economic nonsense.

This cold fact, that imported plywood is substantially more expensive than Douglas-fir plywood of similar grade, is met by the domestic propagandists with the claim that the average price of all imported plywood, f. o. b. Japan, is lower than the price of Douglas-fir plywood. This not only ignores the costs of ocean freight, 20 percent duty, etc., that go into the United States price of imported panels, but also compares an average of dissimilar products. It is like averaging the price of Fords, Edsels, Mercurys, and Lincolns to prove that Lincolns are cheaper than Cadillacs. Comparing similar products, of the same grade and thickness, imported plywood panels are at least 40 to 50 percent more expensive than Douglas-fir.

Every year from 1951 through 1957, Douglas-fir plywood production has shown a steady growth from 2.9 billion square feet to 5.8 billion square feet in 1957. In the first 12 weeks of 1958, Douglas-fir plywood production increased 14.1 percent over the same

period in 1957, reaching the highest levels in history.

II. The Russian lumber hoax

The report that the Japanese are using Soviet lumber in producing their plywood originated with a union official on the west coast and has been repeated by several Members of the Congress. Basis of the story was no more than a news report that Japan had agreed to purchase a quantity of Russian coniferous logs. Coniferous, of course, means softwood, and no one has attempted to explain how the Japanese can convert Russian softwood into hardwood. Moreover, the news report itself explained that the logs were to be used in Japan for pulp and construction.

Not 1 foot of Russian lumber goes into any of the hardwood plywood shipped to the United States from Japan. This has been certified by the United States Embassy in Japan after a carefully conducted investigation. It has also been certified by the Japanese Government and the Japanese Plywood Manufacturers Association, and the United States customs officials have reported that they have found no Japanse plywood shipped to the United States containing Russian softwood or any other kind of softwood.

This Russian lumber story was made of whole cloth. It is being continuously repeated as another aspect of the plywood hoax, although proven utterly false.

III. The hardwood plywood hoax

When the plywood import quota bills were introduced in the Congress last year, the principal claim offered in support of the legislation was that 28 named hardwood plywood plants had allegedly been shut down by import competition, since the time of the Tariff Commission report.

This was the original plywood hoax. An investigation of these 28 mills, conducted in large part by former employees of the FBI, most of them former special agents, revealed that 9 plants among the 28 named had not shut down at all but were still operating, 3 had been demolished by fire, 3 had never existed, 2 were named twice on the list, at least 1 produced container plywood (a type which is not imported at all), 1 was closed before there were any significant imports, 4 were consolidated with their parent companies resulting in greater production, 2 failed because of undercapitalization, and the few remaining were closed for a variety of reasons, including labor trouble, depletion of timber stands, etc.

Hardwood plywood sales were down in 1957, as they were in the recession of 1954. This is a natural consequence of a sharp decline in housing starts and in industrial production, including furniture and other finished items using plywood. Hardwood plywood is also facing intensive competition from the mushrooming particle board industry in the United States and from increasing uses of hardboard and other sturdy but inexpensive building boards. Yet despite this, over the past 3 years, 1955–57, United States hardwood plywood shipments were 15 percent higher than in 1954, and at least 13 percent higher than the prior 3-year period 1952–54.

In an industry dominated by a few giants, as is the United States hardwood plywood industry, it is inevitable that some of the small marginal producers will be unable to keep pace with the large integrated manufacturers. Many of the smalls are losing out to the bigs, and the financial reports of the bigs show that they are not only competing successfully but are expending their hardwood plywood capacity to fill growing demands in this market.

IV. The injury hoax

The claim has been made that international diplomacy has denied the United States hardwood plywood industry the relief it needs from import competition. This is not true. Imports have not been curtailed simply because the Tariff Commission unanimously found that plywood imports were not injuring the domestic industry.

There are some cases where a domestic industry, having proven its claim of import-caused injury before the Tariff Commission, has been denied relief because of what the President believed to be the broader national interests. It is at least understandable that such an industry might be heard to complain. But the United States hardwood plywood industry has not been denied relief because of diplomacy or Executive discretion in the light of broad national policies. Instead, the Tariff Commission found the industry was not being hurt by imports. Unless and until such injury can be shown, there is no basis for any kind of import restriction, either legislative or executive.

THE NEED FOR PLYWOOD IMPORTS

Imports of hardwood plywood have created more American jobs than they ever could conceivably threaten. As the Tariff Commission reported, domestic supplies not have been adequate to permit the growth in the United States door manufacturing industry. Many door manufacturers have written to tell their Congressmen that if these imports are stopped, we are out of business. Substantial segments of our furniture, boat-building, trailer-body and other industries would be similarly affected. These represent thousands of American jobs directly dependent on imports of the industrial raw materials processed and consumed in American plants.

In addition, since these imports provide dollars that make Japan a major market for United States goods, and the world's best cash customer for the products of America's farms, additional thousands of jobs in our export industries and on our farms are likewise dependent on maintaining this flow of imports.

CONCLUSION

It is a sound and an established principle that import restrictions should be avoided except where congressionally established procedures have been followed and a clear need for relief has been shown. The facts here show no need for import restrictions, whether by quota or otherwise. The expert body created by the Congress to investigate such claims has found no injury caused by imports. If circumstances have changed since that decision, there is no warrant for legislative action until the domestic industry has first established its case before the Tariff Commission in a new investigation.

This letter of Mr. Sharp's, with the enclosures, is of particular interest because an examination of Mr. Sharp's statement conclusively demonstrates the source of the material for the speech of April 24 of the gentleman from Oregon [Mr. PORTER]. Indeed, Mr. Sharp and the gentleman from Oregon use the same similes, as in the mention of averaging the price of Fords, Edsels, Mercurys, and Lincolns in making a point relative to the softwood and hardwood plywood prices. This statement leads me to believe that much, if not all, of what the gentleman from Oregon [Mr. PORTER] had to say, must come from Sharp & Bogan, the Washington attorneys who represent the Japanese plywood users and Japanese producers. The insertion in the Appendix of the RECORD of April 28 clearly comes from these lobbyists.

TVA: Partner of the People

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mr. EVINS. Mr. Speaker, in this month, which marks the 25th anniversary of the establishment by the Congress of the Tennessee Valley Authority, it is appropriate that we review the history and achievements of this great national agency and particularly that we try to look at it without prejudice. In this connection, one of the things about the TVA which is not as well appreciated as it should be is the fact that the TVA is more than just an agency of the Government. In a very real sense, and to a perhaps unprecedented degree, the TVA represents a partnership between various levels of Government and the people themselves. This phase of the TVA is well recalled by Mr. Barrett C. Shelton, publisher of the Decatur (Ala.) Daily in an excellent article contributed to the May issue of the Progressive. Under unanimous consent I insert it in the Appendix of the RECORD. The article follows:

TVA: PARTNER OF THE PEOPLE

(By Barrett C. Shelton)

In this, the 25th anniversary year of TVA, many could point to its spectacular achievements—its system of great dams and unified control of a river system, its towering steam plants, the development of the largest electric generating system in the world, its tremendous contributions of power to atomic development and the national defense. My story concerns itself with people—the people of the TVA region and what they have accomplished in a quarter century of working partnership with TVA.

Years ago, in 1943, my paper, the Decatur Daily, editorially summed it up this way: "We can write of great dams * * * of the building of homegrown industry, and of electricity coming at last to the farms of thousands of farm people in the valley. Yet the significant advance has been made in the thinking of a people. They are no longer afraid. They have caught the vision of their own powers."

The best place to start a story is at the beginning and at home. For years before TVA, the progressive citizens of Decatur had tried to improve conditions, to establish a sound economy for the city and for its surrounding trade territory. The assets, the resources for growth were here, but we couldn't take advantage of them. Our agriculture was based on one cash crop—cotton, which drained soil of fertility and opened it to erosion. Past our door flowed the Tennessee River, majestically broad but largely useless. Its power was untapped, its navigation chiefly a local affair of no significance, its waters often dangerous in flood. Industry came hard, and it came for the wrong reasons—subsidies and low wages. Then came the great depression. Cotton was down to 5 cents a pound. The railroad shop, our major industry, closed down, putting 2,000 men and women out of work. Another industry, brought to the city in earlier years with a considerable subsidy, went bankrupt. Most of our banks were closed.

Then came TVA. In the beginning I was against it. Perhaps I feared the superstate which some people, mostly outside the val-

ley, had tried to call it. I knew I wanted no government control over me or my people. Others felt the same way. Into this almost frankly hostile atmosphere walked David Lilienthal, one of the TVA directors, one mid-winter afternoon. When we met in conference, our attitude was: "All right. You were not invited, but you're here. You are in command. Now, what are you going to do?"

Lilienthal's answer took us by surprise: "I'm not going to do anything. You're going to do it."

TVA had no intention of taking command. It had no powers beyond those traditional functions exercised elsewhere by the Government through other agencies. It would, Lilienthal explained, provide the tools of opportunity—a navigation channel, protection from floods, low-cost power, better fertilizers, and farm test demonstrations to show how they could be used. "What you do with these tools is up to you," he said.

Dr. Harcourt Morgan, another director, brought us the same word. He talked of the relationship of people to the land, of the need for building the soil with phosphate, lime, and legumes, of the need for farm markets and processing plants, of making the most of our own natural resources rather than reaching out into other regions for industry.

Here was a new insight into our problems and how to solve them. We looked about us, and we started to chart new courses. We saw we needed agriculture with a stable year-round income, and we induced the local ice company to install packing plant facilities to provide a market for livestock, a step toward more diversified agriculture. We scraped together the capital for a small milk plant, not hoping for a profit but simply to provide a paycheck every 2 weeks for farm families in our section. The plant was a success almost from the start. It paid substantial dividends to its rather surprised stockholders.

As the dams went up, navigation became a reality. Taking advantage of it, Nebraska Consolidated Mills Co. established Alabama Flour Mills at Decatur. Besides bringing in Midwest grain, the mills provided a market for local grain—$2 million worth in 1955. Grain barges now ply the length of the Tennessee, to mills and elevators at Guntersville, Ala., and Chattanooga and Knoxville, Tenn. Tennessee Valley Fertilizer Cooperative established a fertilizer-mixing plant serving 10 counties. The possibility of selling seed commercially led to establishing a modern seed-cleaning plant. Other industry has found the city attractive, and today, instead of a single major industry, there is a diversity of plants producing many products. The city has doubled in population, from 12,000 to more than 24,000. It feels it on a stable foundation, confident of its powers.

In all this development, the TVA has been a helpful adviser, never the dictator. It has provided technical services and facts about our resources, or about the requirements of industry, that we needed to know. "Here are the facts," has been its attitude, "and what you do with them is up to you."

That has been the story, all up and down the valley, in almost infinite variety. Far from taking the prerogatives of States, counties, cities, and citizens, the TVA has persistently urged them to take more and more responsibility to themselves. Its fertilizer and agricultural development activities has been channeled through the State extension services. TVA has operated in the confidence that once the facts and the tools were placed in the hands of the people, they would know what to do with them.

How well this yeast has permeated is perhaps epitomized by the comment of a mountain preacher who attended an agricultural extension meeting for farmers and ministers in a North Carolina county. "From now on," he said, "I'm going to preach less hell-fire and brimstone, and more phosphate and limestone."

About 50 miles upstream from Decatur, another small Alabama city, Guntersville, faced what at first seemed to its citizens an insurmountable problem. It was a trading center for surrounding farmers. When TVA began the construction of Guntersville Dam, 10 miles downstream, the people of Guntersville learned that the rising reservoir waters would cover much of the farmland on which their trade depended.

For many of the 3,000 people in the town, there seem to be only one answer to this dreary prospect. Town officials, businessmen bankers, and just ordinary citizens appealed to the TVA to buy the entire town, so they could take the cash and move.

Instead, TVA suggested the formation of a local planning commission to take a hard look at the problem and see what steps the town could take. TVA provided funds to the Alabama State Planning Commission to finance expert assistance to the local commission, and it cooperated by providing detailed maps and other data. The studies indicated that the town's income might be reduced as much as 30 percent. How could this be replaced? The answer was found in the new reservoir itself.

The commission set to work on a scheme to make the new reservoir an asset rather than a liability. It saw possibilities of industrial development and trade resulting from the new navigation channel, along with the opportunity of making the town a recreation center for a wide area. This called for detailed and careful planning in order to make the most of the waterfront. The town, after filling of the reservoir, would be on a peninsula, surrounded on three sides by water. A deep and navigable embayment on the east side of the town was set aside for commerce and industry; instead of purchasing and flood low-lying land on this side of the town, the TVA built a protective dike. West of the peninsula, a shallower embayment was planned for recreation.

When an oil company approached TVA for use of a small level area created by the dike at the north end of the town, jutting into the lake, of a bulk storage terminal, the decision was referred to the planning commission. The land, the commission decided, should be developed as a waterfront park, but it did not stop at this point. It worked with TVA and the oil company to find a suitable site on the industrial embayment for the terminal. Other similar decisions on detailed, practical matters were made.

The real test was yet to come, when Guntersville Dam was closed and the reservoir encircled the town. The doubts of all skeptics were soon resolved. In connection with the dedication of the dam, the town sponsored a program of motorboat races. It was hoped that several thousand people would be attracted to the event. More than 50,000 came. By 11 o'clock in the morning, all food and soft drinks were gone, highways were blocked with parked cars. None could miss the point of the demonstration. Guntersville's future as a recreation center was assured, and shortly its citizens were improving eating and housing facilities for guests and embarking on the sale of fishing tackle and boating gear.

Today Guntersville is a busy river port and recreation center. What seemed like impending ruin has been transformed into a prosperous present and a promising future. Huge three-deck automobile barges regularly flood the town's docks and automobiles for distribution through the southeast. An elevator receives midwest grain. Far from withering away, the town has doubled in population.

The case of Guntersville was typical of the way TVA enlisted the talents, energies, and resources of State and local agencies and of citizens. Wherever communities were faced with readjustments because of the building of dams and reservoirs, TVA urged the responsibility on State and local planning commissions, using the money it would otherwise have had to spend doing the job itself. The TVA funds helped set up the agencies. In 1933, there were no State and only two city planning agencies in the Valley. Today there are 6 State planning bodies and 65 local agencies, all operating independently and supported by State and community funds.

The same with libraries. Instead of setting up its own libraries at construction camps, TVA contracted with existing city libraries to provide service which was also open to nearby communities. When the construction jobs closed down, and TVA's support was withdrawn the libraries remained, supported by State and local funds. Moreover, they provided the seeds for expansion. Figures from Tennessee tell the story. In 1942–43, the State provided no funds for regional library service; TVA funds amounted to $13,800 and local funds a little over $4,000. Ten years later, TVA provided no funds, the State contributed $170,000 and local sources $125,000—a total of $295,000. Library service spread out to new territories.

Why this opportunity was seized is illustrated by the statement from one county facing the loss of library service when TVA support ceased: "We have 6,000 people—no telephones, no railroad, and no newspapers. The bookmobile and the grapevine are the only means of communication. Talk about country people not reading? In this county we read 4,000 books a month."

Take the forest resources. Forest and woodlands cover half the valley-land area. But in 1933 they were neglected, burned over, sometimes abandoned and eroded, seriously depleted. State forestry agencies were virtually inactive, no reforestation was going on, and protection against fire, except on Federal- or State-owned land, was practically nil. TVA moved in all these fronts. It began supplying seedlings for planting. It helped States and counties set up effective fire-prevention organizations. It made periodic and systematic inventories of forest resources.

State and local agencies pitched in. More than nine-tenths of the forests now have fire protection. Nearly 300,000 acres have been reforested. Today TVA, which once was the only source of seedlings, produces less than half of those planted by landowners each year. State forestry agencies have grown and the scope of their activities has been enlarged. Where they expended only half a million dollars in forest work in 1939, the same seven States invested nearly $15 million last year in promoting forest improvement.

This activity has paid off in better forest management and more forest income. New wood-using industries are appearing. Landowners are eager to plant trees and local bankers and businessmen are eager to help them by buying and loaning mechanical tree-planting equipment.

Full use of the forest resource also depends on other developments. The location of a multi-million-dollar paper and pulp plant by Bowaters Southern Paper Co. illustrates how the various phases of integrated development mesh together to promote industry. When Bowaters became interested in a southern location in the 1940's, TVA statistics showed that the forests and woodlands could supply a large plant in addition to the existing use. Pine plantations had reached the stage of thinning for pulpwood. Interest in forest management was gaining momentum. Electric power was available. Due to the multiple-purpose op-

tem of dams, a flood-free plant site could be found on the Hiwassee River arm of Chickamauga Reservoir, upstream from Chattanooga. Ample water was available for processing. The navigation channel offered opportunities for transportation of raw materials and finished products. In 1953, Bowaters had completed a $55 million plant which has since been expanded. It provides a market for wood over a 300-mile radius and, to round out the circle, this promotes more intense interest in forest development on the part of the Valley people.

Local pluck and perseverance, plus the tools provided by integrated resource development, have paid off in the past few years for Calvert City, a town of some 300 population in west Kentucky. The town and its trading area fell into decline after World War I, when the market for dark tobacco, the only kind that would grow well on its lands, disappeared. In 20 years, the county lost 5,000 population.

The Draffen brothers, Luther and Art, operators of the general store, kept pushing for something to be done about it. Resources were there: the Tennessee and Ohio Rivers, the Cumberland, and only 70 miles away the Mississippi formed a network of waterways for transportation and potential sources of power. Power was needed for industry to balance agriculture, but Calvert City couldn't even get electric lights until local citizens set up a generator in a flour mill. From the 1920's on, the Draffens and their fellow citizens sought, through Federal and State and private sources, for the kind of power they needed, and they plugged away at pointing out the advantages their area could offer industry. In the late 1940's, their dreams were realized. The Pennsylvania Salt Co. built a plant to be near the fluorspar deposits it had acquired in Kentucky and to take advantage of the power available from TVA. It was followed a few years later by the Air Reduction Co., and the National Carbon calcium carbide and acetylene plant. B. F. Goodrich Chemical Co. set up a plant to make basic vinyl chloride for its polyvinyl plastics from basic materials provided by the other plants.

Today Calvert City is struggling to keep abreast of the new industrial development, based on a chemical manufacturing complex it had sought so long, and it looks forward to a population of 10,000 by 1960.

So it goes, all up and down the valley region. Is it any wonder that we are sometimes astonished to learn, from outside critics, that we are obviously under the heel of an autocratic government agency, or at best, are the wards of a paternalistic socialism?

The real story of the past 25 years is a practical demonstration of the way the combined cooperative work of a forward-looking Federal agency, State and local agencies, educational institutions, and private citizens—farmers, labor, business, and professional men—can make the most out of the basic resources of a region. No State, no city, no county, no private enterprise could have developed the Tennessee River in a unified way to capture all the multiple benefits it offered, from its sources in the mountains to its mouth. Only the Federal Government, through the TVA, could have done it. At the same time, our experience over this past quarter century has shown that huge planning and engineering tasks can be undertaken and carried out without a loss of democratic values or freedoms. Quite the contrary; the combined efforts of the Federal Government and the people have opened up new and wider opportunities, have given scope to individual talents, intelligence, and enterprise. The result has been a richer, more productive region, and a richer, more productive Nation.

You Auto Buy Now

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. MINSHALL. Mr. Speaker, the city of Cleveland, Ohio, not only is, but has long been advertised as the best location in the Nation. Its citizens are among the most civic-minded and progressive people in the United States. Therefore, Mr. Speaker, it is always a source of pride to those of us from the Cleveland area to see continuing evidence that our business, commercial, and industrial leaders are determined to keep Cleveland as the best location in the Nation.

Of late, we are particularly proud that the "you auto buy now" promotional campaign, which was just recently carried on in Washington, D. C., originated in Cleveland, and because of its profound and unusual success there, it spread rapidly to over 22 other main marketing areas in the Nation, as well as Canada and Hawaii.

The 138 members of the Cleveland Automobile Dealers Association started the "you auto buy now" campaign in an effort to battle the declining sales in automobiles. They commenced their campaign late in February with the overriding theme that by buying automobiles, Clevelanders would be doing their part in giving our economy a monetary shot in the arm.

The dealer group estimated that 3,300 new cars and 3,500 used cars were sold between February 23 and March 1. The 3,300 new cars sold topped by almost 800 total new-car sales—2,565—for the first 3 weeks in February.

All of us realize that keeping high prosperity going in this country is a job for many, diverse groups, all working together. Instead of trying to make political hay of an economic downturn, it seems to many individuals that if political and business leaders would emulate the Cleveland auto dealers, there would not be any economic hesitation in the coming months, but a steady drive toward top prosperity in all fields.

A most appropriate editorial which appeared in the Fort Lauderdale Daily News, Fort Lauderdale, Fla., follows:

IMPRESSIVE EXAMPLE

Advocates of the "Let's stop whining and start selling" remedy for licking our current business slump have a real impressive example of what can be accomplished under this philosophy from what happened in Cleveland, Ohio, recently.

Like a lot of other cities across the Nation, Cleveland has been suffering from a drastic slump in automotive sales. And since a major slump in new automobile sales invariably heralds a big slump, also, in other types of sales, a group of Cleveland businessmen and civic leaders decided to see if they couldn't pump some new life into the sagging automobile business.

These businessmen and civic leaders knew that Cleveland's dragging economy wasn't due to the fact that people didn't have money to spend. There was plenty of money stashed away in Cleveland banks and savings institutions. The big problem, therefore, was enticing some of this money out of the banks and into the retail trade channels.

So what these business people decided to do was to launch a massive selling campaign to get people who needed new cars, and who had the money available, to buy them. The entire last week of February was devoted to this selling campaign and all the automotive dealers, newspapers, radio, and TV stations and other business interests joined hands to put the campaign across to the people.

During that week Cleveland's 138 automobile dealers tripled their promotional and advertising outlays. Cleveland's 3 TV stations and 8 radio stations carried thousands of announcements on the campaign and the Cleveland newspapers published 5 editorials and 27 articles on the drive.

The whole theme of the campaign was based on the point that people who were working and who had money in the bank should stop worrying about the business slump and buy a new car if they needed one. By so doing, they would not only help themselves but they would give the city's overall economy a big shot in the arm.

How did Clevelanders react to this campaign? The results were quite astounding. During this 1 week they bought approximately 7,000 new automobiles. And, proving the point that there was no shortage of money behind the business slump, some 40 percent of the new-car sales were for cash while the downpayments on the remainder were exceptionally high.

So successful was this effort and so well did it shake the Cleveland people out of their pessimistic attitude toward buying things they needed that a similar "Auto Week" campaign has now been scheduled in 20 other cities.

What's the moral to all this? Simply that we don't have to sit around and wait for the Federal Government and the politicians to bail us out of our economic troubles.

A lot of businessmen in this Nation seem to have forgotten during our many years of peak prosperity that there might come a time when customers wouldn't be knocking down their doors wanting to buy their products. We have had so many years of "easy selling" that now that it is time to shift over to "hard selling" tactics many of our business institutions just simply can't get used to the idea that sometimes it takes more than a store or a showroom full of fancy, new products to get people in a buying mood.

People today are holding onto their dollars a good deal tighter than they were in past years. This means that to get them to turn loose of their dollars they not only have to be convinced they need a product, but that they will gain by buying it now instead of waiting until some future date.

In other words people have to be given some inducement to buy and whether it is given in the form of price cuts, more and better service, or simply more attention and courtesy extended to potential customers, it is the businessmen who are prepared to give these inducements who will be making sales while their less adaptable brothers continue moaning about hard times and keep demanding the Federal Government and the politicians come to their aid.

The Cleveland example has well proved that where businessmen are willing to go to work and help themselves there's still plenty of buying power to be tapped. This Nation is far from being broke. Plenty of people still have money stashed away to purchase things they need, but unless they are encouraged and induced by good salesmanship they aren't apt to part with their money.

The vast amount of money the American people have available to them today in the form of savings accounts, Government bonds and other liquid assets of all types is the greatest protection we could have against a serious depression.

But let the Federal Government and the politicians jump in and start another disastrous round of inflation with their anti-recession remedies and soon this big "savings cushion" against a depression will begin to be evaporated.

The people can buy themselves out of this business slump far better and faster than the Government can do it. And they will do it if our businessmen will just stop whining and start selling.

JACK W. GORE.

Why Not Send Food Instead of Dollars?

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 15, 1958

Mr. SIKES. Mr. Speaker, I submit for the RECORD an article from the Progressive Farmer by Matthew J. Kust. As pointed out in the preface to this article, "America is getting short of dollars. But it has warehouses bulging with Government-owned food. Everyone would benefit from our using more of this food in helping needy nations."

The article follows:

FOR MORE OF OUR FOREIGN AID—WHY NOT SEND FOOD INSTEAD OF DOLLARS?

(America is getting short of dollars. But it has warehouses bulging with Government-owned food. Everyone would benefit from our using more of this food in helping needy nations.)

(By Matthew J. Kust)

After a recent trip through rural India, I had to admit to myself that the land was as poor, the roads as bad, the villages as dilapidated, the people are undernourished and poorly dressed, and the animals as scrawny as they were when I first went through India 5 years ago. Since India has just completed her first 5-year plan—to which America has contributed $400 million—You might ask: "Why doesn't rural India show more improvement?"

Underemployment or unemployment is the answer. That's the reason the people in India and other underdeveloped countries have such a low standard of living. Many of them don't have a chance to work full time and earn enough money to feed and clothe their families.

India can't employ all of her people fully for the construction it needs so badly because the country doesn't produce enough food and fiber. A fully employed worker would spend most of his new wages on food and cloth. And since these things are so scarce, there would be runaway inflation. At least 25 million people in India are unemployed. It would take $1.5 billion in wages, at India's average pay of unskilled labor of 21 cents a day, to fully employ this manpower for the building and construction the country needs.

Families working on farms in India spend 85 cents of every $1 they take in to buy food. Yet these workers don't get enough to eat. They lack about 25 percent of getting the 3,000 calories that make up a normal diet. In India, 60 percent of all money spent by consumers is for food, compared with 35 percent in the United States. Two-thirds of any newly created wage incomes in India would be spent on food and cloth—about 50 percent or more on food and about 15 percent on cloth. The nation couldn't safely attempt full employment of her people unless she was assured of about 15 million tons of additional food a year. As for cloth, India is already importing raw cotton to meet her present needs. She is already troubled with sharply rising food prices, despite her unemployment. During the last year of India's first 5-year-plan, food prices rose 35 percent. Price of rice went up 38 percent; wheat, 46 percent; and jower, a coarse grain consumed by the poorest people, 186 percent. This inflation has continued ever since.

While India and many other underdeveloped countries are handicapped by lack of food and cloth, America and some other nations have a surplus of food and cotton. We're already giving the underdeveloped nations assistance through our vitally important foreign-aid program. Why not send them—for a larger part of this assistance—farm products instead of money?

Foreign aid with agricultural surpluses would supply the underdeveloped countries with the food and cloth they need for full employment. An assured supply of food and cloth should be promised then, for at least 5 years, with the plan to be continued, if successful.

Ideally, a plan of foreign aid based on agricultural surpluses would involve all the countries of the free world. The advanced countries would transfer their agricultural surpluses to the underdeveloped countries on a grant basis, while the underdeveloped countries with agricultural surpluses would have to be offered something in exchange. Burma and Egypt, for example, wouldn't join such a program unless they could exchange their present rice and cotton surpluses for something they need. Countries of the free world might establish a commodity exchange union which would operate to absorb and reallocate the agricultural surpluses of the underdeveloped countries. American wheat could be exchanged for Egyptian cotton and the cotton delivered to India. In this manner, Egypt would receive a greater supply of wheat, which she must normally import, and India a greater supply of cotton.

Raw cotton could be supplied by us to Japan to be manufactured into cloth for Burma. Japan could take Burma's rice in payment for her manufacturing services. The raw cotton would be furnished free of cost to Japan under the foreign-aid program. Triangular arrangements of this sort could form the basis of the commodity exchange union.

The free world could well get rid of its existing agricultural surpluses before fully meeting the needs of all the underdeveloped countries wanting to take part in the program. Rice might get in short supply. It is also possible that the supply of cotton might become scarce. Foreign workers would eat better food and wear better clothes as the underemployed earned larger incomes. India would require at least $1 billion worth of food and fiber a year from abroad to permit full employment of her manpower.

How long can an aid program based on agricultural surpluses be expected to last? Its objective would be met when the underdeveloped country has (1) created full and permanent employment for its people; and (2) developed its agriculture to supply the food and cloth they need. Tremendous population growth would make this a long-range-goal. But in most underdeveloped nations, these objectives should be achieved within 25 years.

Using more food in our vitally important foreign aid programs could in time solve our problem of farm surpluses. And it would make our economic assistance to underdeveloped countries more effective. Surely this plan is worth a try. Boost it all you can, won't you?

United States Trade Policy

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following Summation of Conflicting Views on United States Trade Policy, written by Mr. A. U. Fox, treasurer, American Thread Co.:

A SUMMATION OF CONFLICTING VIEWS ON UNITED STATES TRADE POLICY

The House Ways and Means Committee concluded hearings on March 26, 1958, on the administration bill, H. R. 10368, to extend for a further period of 5 years the authority of the executive branch of our Government to change tariff rates. The bill, as proposed, authorizes further substantial tariff reductions and would commit us to OTC, a policing agency for General Agreements on Tariff and Trade, an international agency consisting of representatives of 37 nations dedicated to reducing tariffs. The time for decision draws near, for the discretionary authority of the executive branch over our tariffs and trade under existing laws expires June 30, 1958, unless renewed. It is time to take stock of the situation and assess the merits of the respective positions of those in favor of the administration bill and of those opposed to its enactment in its form proposed.

Proponents of continuing the trade policies of the past 10 years seem to predicate their position on fear and emotion, rather than on a reasonable interpretation of economic and historical facts.

Proponents say they are for trade. So are all of us—but the right kind of trade that does not endanger our national security and deprive our workers of jobs. Only a small portion of our trade requires regulation, and it is that part of our trade which is of concern to those who oppose H. R. 10368.

Most of our trade—all of our present export trade and from 60 to 70 percent of our import trade needs no OTC, GATT, or arbitrary authority abdicated to the executive branch by Congress. Why? First, because our present export trade is either jumping the many barriers imposed by foreign countries, or is needed by them, and such barriers as do exist do not impede its movement. Second, because 60 to 70 percent of our imports enter the United States essentially free of duty.

The kind of trade opponents of H. R. 10368 object to is the kind of trade which deprives our workers of jobs and endangers our national security. This is a small portion of our total trade. Let us open our eyes and recognize that many of our industries—essential to our welfare—simply are not and cannot be competitive with foreign produced goods when manufacturing equipment and processes are comparable, raw materials are available to others at equal or in many instances at lower prices than to our own manufacturers, and the cost of labor is a tenth to a half what it is here. Creative ingenuity and mass production methods can do much to offset these terrific handicaps, but the fact is that the productivity

gap between the United States and the rest of the world is disappearing. If we wish to avoid massive adjustments to our complicated industrial complex and if we wish to maintain—let alone raise—our standard of living, the time has come to face the cold facts of international industrial competition.

We all agree we have got to have the good will of the free world. Some of us, however, do not seem to realize that the best of good will is as nothing without national strength.

Proponents of these bills also say we must further reduce our tariffs or else suffer the inevitable alternative of increasingly high barriers against our own commerce. Well, the facts are that we have reduced our tariff rate drastically in the past 10 years, and foreign nations have responded by increasing their barriers against our trade, or have made very much smaller reductions. Also, foreign countries employ many, many measures other than tariffs to prevent us from selling our manufactured goods to them—quotas, import licenses, currency restrictions, advance deposits, exchange restrictions exchange taxes, multiple exchange rates, preferential exchange systems, preferential trade systems—and many others. All in all foreign nations have found dozens of ways to impede the entry of our manufactured goods other than by resorting to tariffs—but these other measures are equally if not more effective than tariffs.

We are assured by proponents of the legislation that minor modifications in escape procedures will provide quicker relief for United States industries faced with injury and possible extinction. This protestation is specious. The record of the executive branch speaks eloquently that this assurance is without substance. During the past 10 years, the executive branch has ignored or reversed two-thirds of the escape-clause recommendations of the professional experts of the Tariff Commission. The pangs of industry death and worker joblessness will be no less painful to those industries and workers arbitrarily selected for sacrifice because the end may come a month or so sooner. The claimed benefit is illusory, the damage and injury real.

Proponents plead for the 4,500,000 jobs they allege are dependent on continuation of the unwise trade policies followed in recent years. First, this figure is of questionable reliability according to the Randall staff papers and Assistant Secretary of Commerce for International Affairs, Samuel W. Anderson. Second, is it a singular coincidence that immediately following the end of the year in which United States exports reached their highest level in history, and the year in which our imports were their greatest, our unemployment also rose to its post-World War II peak? Even were the 4,500,000 figure correct, these jobs are not dependent on continuation of the trade policies followed by the executive branch in recent years. The fact is most of these jobs are dependent on the kind of trade which does not require OTC, GATT, or arbitrary authority of the executive branch over our trade and tariffs.

Our own Government experts tell us more than 15 million persons directly or indirectly derive their living from the cotton textile industry. In the apparel and textile mill products alone, more than 2 million are employed. The welfare of this important segment of our population should not be trifled with. And this is one one of many industries.

Peculiar results have come from this arbitrary authority so zealously sought by the executive branch. Since World War II, in respect to one industry alone, our Government has made available to the textile manufacturers of foreign countries $130 million worth of the most modern textile machinery. How much additional such equipment has been obtained as an indirect result of our grants, loans, and aid is incalculable. What has been the result? Under the unwise policies followed by the executive branch, the number of cotton-spinning spindles in the United States in the last 2 years has decreased 1,051,000 or 5 percent of the total spindles in place in our country. And what has happened in foreign countries in this respect? Well, in this industry of known worldwide excess productive capacity, the number of cotton-spinning spindles in Asia in the same 2 years has increased by 4,738,000 or 16 percent. Can anyone believe that our workers are not affected by massive changes of this kind?

It is claimed by supporters of the Trades Acts program that if we do not continue present trade policies, Russia will be able to wean friendly countries away from the free world to the Communist orbit. This appeal to fear carelessly overlooks the obvious fact that any time we wish we can resume bilateral trade negotiations with any friendly country with a view to establishing reciprocal—truly reciprocal—trading arrangements. We don't have to rely on 36 foreign nations, members of GATT, to do this for us. And the proof of this is the so-called voluntary self-imposed Japanese quota on textile exports, negotiated by the executive branch.

This horrendous mirage of fear over the inevitability of Soviet success is presented in torrid prose as a solid fact despite the fact it is well known that Soviet promises are ephemeral, their reliability always questionable, their goods shipments poor in quality, late in delivery, and often surprising in content. All nations wooed by the Soviet know the risks of matrimony with the tiger; the broken pledge, the bartered commodity, dumped in the world's market, to undermine the deluded wooed one's economy. All seem to know this except our own executive branch and the proponents of a continuation of the foolish policies of the past 10 years. The world of friendly nations cries out for bilateral negotiation and trade agreements with the United States. Of this all are aware except those who will not see. Nations of the friendly world well know the United States can do better for itself, for them, and for the free world when it looks to its own interests itself, instead of delegating this preeminent responsibility to 36 foreign nations—many not so friendly, some even Iron Curtain satellites.

The temporary legislation introduced by Cordell Hull known as the Trade Agreements Act of 1934, subsequently extended 10 times over 24 years, had as its objective the bilateral arrangement of commercial agreements with foreign countries for the purpose of expanding foreign markets for the products of the United States. During the first 14 years of the trade agreements program, 33 such bilateral agreements were negotiated by the executive branch. Since 1947, however, not one single admitted such arrangement has been entered into. Instead, the executive branch without the authority of our Congress, shifted to a multilateral system of arranging trade commitments, and since 1947 GATT has dominated our trade and tariff policies. It is during this period the most drastic reductions in our tariffs have occurred. But foreign countries have not reciprocated. Why should they? They are judge and jury, and outvote the United States 36 to 1, in the international conclave to which we have delivered the national security and welfare of the United States. Despite all of this our commercially paid for exports to foreign countries have declined steadily as a percentage of our gross national product since the enactment of this program in 1934.

As administered, the trade act program has not been productive of reciprocity. With our trade and tariff adjustments determined by those with conflicting interests contrary to ours, how could it be otherwise? Reciprocal arrangements, truly reciprocal, can only be the product of bilateral negotiations when we are on one side of the table and the other party to the contract is on the opposite side of that table.

Equally hollow are claims we cannot protect ourselves against the adverse economic effects of the European common market unless we continue the control GATT now has over our trade and tariff policies for another 5 years. How in the name of commonsense can we expect foreign nations, some of them the very common market countries we are concerned about, to protect our national interests better than we ourselves can in bilateral negotiations? The claim is so specious as to need no refutation.

We should and we do want friendly countries to be strong. We should do everything we can to be sure they are strengthened. But it is not sensible to weaken ourselves while trying to strengthen them. Other ways exist to help our friends abroad and they should be used for the purpose—grants, loans, technical know-how, private investment, military equipment, are examples. The burden of helping other countries should be borne by all Americans—not by just a few groups of workers or communities. Merely because the executive branch has found it difficult to obtain funds for foreign aid, it should not by its trade policy endeavor to obtain by indirection what it is reluctant to try to obtain directly. If we made a mistake originally in not surrounding the aid with adequate safeguards to prevent unwise use being made of it, let us not compound that mistake now by making another.

Finally, the case for a continuation of recent policies and procedures has become an emotional appeal to give the executive branch a blank check over trade policies and tariff rates, else dire results will ensue. Dire results will ensue if this program is continued in its present form. No valid factual case to the contrary has been made. Citation of imports and exports of the electrical machinery, chemical, and textile industry products is patently an attempt to obscure the facts. These are large industries with many segments, related, but independent in their struggle for survival. What we export is not the same as what we import, neither are the goods sent to or received from the same country. Small segments of our industries have been and can be all but obliterated. A continuation of the policies of the past 10 years has potential for irreparable further damage to our national welfare.

The time has come for a change. The executive branch has demonstrated no capacity to wield this great power over trade wisely. It should be withdrawn and returned to the control of our elected representatives, acting administratively through an adequately staffed and strong Foreign Trade Board.

Democrats Playing Politics With River-Harbor Bill, Says Editor

EXTENSION OF REMARKS

OF

HON. RUSSELL V. MACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1958

Mr. MACK of Washington. Mr. Speaker, the editor of the Longview Daily News, one of the leading daily newspapers in western Washington, thinks the Democrats are playing politics with the river and harbor-flood control bill that was vetoed by the President.

The Longview editor thinks the Democrats expected a Presidential veto, and now that it is vetoed that they will not override the veto and will take no action to pass a bill minus the wasteful projects.

Of the river and harbor-flood control bill situation, the Longview News says editorially:

President Eisenhower last week vetoed a $1½ billion flood-control authorization measure because some of the projects in the bill would have been wasteful or unnecessary. He has said that he will sign the bill if Congress will simply take out the wasteful projects.

Will Congress do this? Reports from the Capitol today say probably not. The reason is that the Democratic majority is more interested in allowing the veto to stand, thereby letting the blame for a lot of hometown projects not being approved rest on the White House.

Congress had a chance to make the corrections before the bill was passed originally, but refused to do so. It passed the bill fully expecting a veto, and that is just what was forthcoming. Now it could override the veto, inasmuch as the Democrats have a clear majority, but instead of doing that or amending te bill, it is expected that the veto will be left alone with the result that no new flood-control projects at all will be approved this year.

Bombings

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement issued by the Anti-Defamation League of B'nai B'rith:

The Anti-Defamation League of B'nai B'rith on April 30, 1958, placed before United States Attorney General William P. Rogers a record of 45 bombing outrages that have occurred in the South since January 1, 1957, showing "that the Federal authorities do have jurisdiction in the matter and that Federal action is evidently needed."

Henry Howard Schultz, national chairman of the league, appealed for Federal intervention "to prevent further bombing outrages" in a letter and memorandum to the Attorney General after a meeting with Assistant Attorney General W. Wilson White on Monday, April 26, immediately after the Jacksonville synagogue bombing. Mr. Schultz stressed that although local authorities have basic responsibility for prosecuting the criminals, the situation involves numerous Federal violations and calls for action by the Department of Justice to avoid "loss of life in addition to the considerable losses of property that have been sustained up to this date."

He pointed out that of the 45 bombing incidents against religious institutions, public schools, community centers and other property," 6 were upon places of Jewish worship, all occurring since November 1957. An examination of the facts in all of these instances, we believe, bears out our contention that the Federal authorities do have jurisdiction in the matter and that Federal action is evidently needed."

Mr. Schultz emphasized that "the number to which these incidents has grown indicates the probability that they are not unrelated events. Indeed, in our view, there is clear evidence that there is a virtual Southwide conspiracy of lawless elements. For example, after some of the explosions, persons who knew of them before they became matters of public knowledge telephoned to say that the bombings were perpetrated by an organization described variously as the Confederate Union or the Confederate underground.

"In other instances, before the bombings occurred, telephone calls were received by newspapers and others stating that the attacks were part of a concerted plan to warn against the continued use of religious institutions for the promotion of equal rights. Those involved were threatened with violence and death."

The operations of this terrorist conspiracy, the league added, "have crossed State lines, in itself a Federal violation. In the most recent bombing in Jacksonville, Fla., on April 28, an automobile observed at the scene of the crime bore a Tennessee license plate. In the March 16 Nashville and Miami bombings, the similarity of the dynamiting techniques justify the inference that they stemmed from the same source."

The league told Attorney General Rogers that "the 45 incidents—their elements of similarity coupled with the threatening statements—demonstrate a plot to overthrow established constitutional order by force and violence. This is a violation of the Smith Act."

Further, the league said, "the purpose of this conspiracy is to intimidate its victims into abandoning their federally secured rights to vote, to freedom of assembly and to freedom of religion. This, in our considered opinion, violates the Federal civil rights law."

Mr. Schultz declared that "these bombings in different areas of the South may well involve interstate transportation of explosives in common carriers. If this is so, the United States Criminal Code was violated. This, too, would seem to call for careful investigation of the entire matter by Federal law enforcement authorities."

The league also pointed out that "a number of the telephone calls made in connection with the Nashville bombing of March 16 included threats of violence against a Federal judge. This is a Federal crime in and of itself. If any of the telephone threats made to private persons were effected through any medium of interstate commerce, this would also be a violation of Federal law."

The foregoing facts, the league concluded, make out a clear case for Federal investigation and for Federal intervention to bring the criminals to judgment. "We urgently submit," it said, "that the cause of law and order in the South will be served by such action on the part of the United States Department of Justice."

BOMBINGS OF RELIGIOUS INSTITUTIONS, SCHOOLS, AND OTHER PROPERTY, 1957 TO DATE

1. January 7, 1957, Beaumont, Tex.: Bomb went off outside home of Dr. Ed Sprott, a Negro physician and former NAACP official.

2. January 7, 1957, Mobile, Ala.: Bomb did little damage to the home of Walter Johnson, a Negro.

3. January 9, 1957, Montgomery, Ala.: Bombs caused damages at 4 locations:

4. (a) Home of Rev. Robert Graetz, a Negro minister.

5. (b) Home of Rev. Ralph D. Abernethy, a Negro minister.

6. (c) Rev. Abernethy's First Baptist Church. (d) Hutchinson Street Baptist Church.

7. January 9, 1957, Beaumont, Tex.: Bomb was set off under the home of Mr. and Mrs. Grover Lee Myles, a Negro couple residing in a mixed neighborhood.

8. January 1957, Americus, Ga.: Koinonia Farm's roadside market was blasted by dynamite.

9. January 27, 1957, Montgomery, Ala.: Attempt to blow up the home of Rev. Martin Luther King, Jr., Negro minister, misfired.

10. January 27, 1957, Montgomery, Ala.: A bomb was tossed between a Negro home and a filling station, caused damage to both buildings.

11. January 28, 1957, Beaumont, Tex.: A bomb blew up the body of a truck parked near the county courthouse and owned by State Representative Rufus Kilpatrick.

12. January 28, 1957, Beaumont, Tex.: A blast damaged the entrance to St. Michael's Orthodox Church.

13. January 28, 1957, Beaumont, Tex.: Windows in a home near the First Christian Church were damaged by a blast.

14. February 14, 1957, Clinton, Tenn.: A suitcase of dynamite exploded in the heart of the Negro section, injuring a woman, an 11-month-old baby, and wrecking property over a wide area including a nearby restaurant.

15. February 18, 1957, Mobile, Ala.: The home of Walter Johnson, a Negro, was again damaged by a bomb.

16. February 19, 1957, Knoxville, Tenn.: Dynamite explosion reverberated through Municipal Building where Negro Louis Armstrong's band played to a segregated audience.

17. February 1957, Americus, Ga.: Second bombing of Koinonia Farm's roadside market.

18. April 29, 1957, Bessemer, Ala.: Blast at Allen Temple A. M. E., a Negro church.

19. April 29, 1957, Bessemer, Ala.: Explosion at the home of Asbury Howard, a Negro and international vice president of the United Mine, Mill and Smelter Workers.

20. May 25, 1957, Chattanooga, Tenn.: House of R. H. Craig, Negro attorney, dynamited.

21. September 9–10, 1957, Nashville, Tenn.: The new Hattie Cotton Elementary School was virtually destroyed by dynamite.

22. October 2, 1957, Greensboro, N. C.: Explosion at Negro man's home 2 blocks from white school his children now attend—Elijah Herring.

23. November 1, 1957, Bessemer, Ala.: A dynamite blast damaged the home of a Negro attorney, David Hood, Jr., who is attempting to open Bessemer's 2 public parks to Negroes.

24. November 11, 1957, Charlotte, N. C.: Bombing attempt at Temple Beth-El failed.

25. November 5, 1957, Charlotte, N. C.: Police investigating 3 dynamiting incidents in Negro section since Oct. 27; latest explosion in vacant house practically destroyed.

26. November 16, 1957, Gaffney, S. C.: Bomb failed to go off at the home of a white woman, wife of Dr. James H. Sanders, who had written an article advocating a moderate approach in racial relations.

27. November 19, 1957, Gaffney, S. C.: Another attempt to bomb the home of Mrs. Sanders failed.

28. November 20, 1957, Gaffney, S. C.: This time a blast went off at the home of Mrs. Sanders, causing some damage.

29. November 20, 1957, Cherokee County, S. C.: Blast rocked the home of a Negro tenant farmer, Lewis Ford.

30. November 26, 1957, Ringgold, Ga.: Attempt to dynamite the home of Philip Higgins, a Negro, failed.

31. December 7, 1957, Birmingham, Ala.: Two dynamite blasts shattered a home into which a Negro family (Robert Greer) was preparing to move.

32. December 31, 1957, Birmingham, Ala.: Home of Negro family which moved into white neighborhood—damaged by bomb explosion—home owned by Otis Flowers.

33. December 31, 1957, Little Rock, Ark.: Mrs. L. C. Bates, Arkansas president NAACP reported an attempt to bomb her home.

34. January 1, 1958, Charlotte, N. C.: The marquee at a drive-in theater that admits both Negro and white patrons, was dynamited.

35. January 19, 1958, Chattanooga, Tenn.: An explosion damaged Howard School for Negroes.

36. January 19, 1958, Tulsa, Okla.: A crude bomb did little damage to a home occupied by a Negro family (that of Johnny Gamble) who had moved in 2 months before.

37. February 9, 1958, Gastonia, N. C.: Bombing attempt at Temple Emanuel also failed.

38. February 15, 1958, Charlotte, N. C.: Five men arrested for attempting to dynamite a county Negro elementary school.

39. February 17, 1958, Atlanta, Ga.: A dynamite blast damaged a Negro's home in a white section.

40. March 16, 1958, Miami, Fla.: Dynamite blast did at least $30,000 worth of damage to Temple Beth El's school-recreation annex.

41. March 16, 1958, Nashville, Tenn.: Dynamite blast ripped the front of the Jewish Community Center building.

42. March 17, 1958, Atlanta, Ga.: Dynamite damaged an unoccupied house recently sold to a Negro in a predominantly white neighborhood.

43. April 27, 1958, Jacksonville, Fla.: Dynamite blast at Jewish Center.

44. April 27, 1958, Jacksonville, Fla.: Bombing damaged the entrance way of a Negro school, the James Weldon Johnson Junior High School.

45. April 28, 1958, Birmingham, Ala.: Dynamiting of Temple Beth-El misfired.

Temporary Unemployment Compensation Act of 1958

SPEECH
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 12065) to authorize temporary unemployment benefits for individuals who exhaust their benefit rights under existing unemployment compensation laws, and for individuals who were employed in noncovered employment.

Mr. ANFUSO. Mr. Chairman, I think most of us agree that unemployment compensation is a necessity at this time in helping to check the recession and in aiding the more than 5 million who are unemployed. It is over the degree of extension of these benefits that we do not see eye to eye.

The bill, as reported out by the Ways and Means Committee, seeks to provide temporary unemployment compensation to those who have already exhausted these benefits to which they are entitled, as well as to those who are not covered under the unemployment insurance law. Figures just issued for the month of April show that unemployment has not decreased to the extent as expected by the administration. Within a few weeks many college and high-school graduates will be entering the labor market, perhaps as many as 1½ million young men and young women.

It is quite clear that unless there is a successful effort to halt the current recession and to expand the economy of the country, we may shortly be faced with an unemployment of some 6 million persons. The bill reported out by the committee is such an attempt and will accomplish that purpose, namely, help to halt the recession and add to the purchasing power of the unemployed.

The cost of this program, as we already know, is estimated at $1.47 billion. I think it is erroneous to consider it a dole, as some of us unfortunately do, but rather to look upon it as an investment in an economy whose recovery we are seeking in the best and quickest way. Economic depression has a way of feeding upon itself. If we ignore the plight of the 5 million unemployed, we may be confronted with a much more serious situation in the near future which will require much more drastic steps.

By substituting the so-called Herlong amendment to the committee bill we are ignoring the plight of the unemployed in two major respects. In the first place, the unemployment compensation benefits are more limited as to the number of weeks and also because of the fact that the funds are in the nature of loans to the States, and some States will hesitate to proceed with this program if the funds are to be repaid.

The second and perhaps greater objection is the fact that under the Herlong amendment nearly 2 million unemployed workers will not be entitled to unemployment compensation because they work or have worked in noncovered or uninsured industries. In accepting this amendment we are actually discriminating against these 2 million unemployed and their families, which may mean perhaps as many as 8 or 10 million individuals. Is their degree of suffering any less than that of the other unemployed? This, to me, constitutes a clear case of gross discrimination.

Mr. Chairman, I am strongly opposed to substituting the administration bill for the much more liberal committee bill. The former is entirely inadequate. It is merely another holding act, a wait-and-see attitude. It will be of little help and it will solve nothing. Our failure to take adequate action now may cost us a great deal more later. I urge you to vote against the amendment and to support the bill, H. R. 12065, the measure as reported out by the committee.

The Dole Is Defeated

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. MINSHALL. Mr. Speaker, I should like to call the attention of my colleagues to a most excellent editorial that appeared in the Cleveland Plain Dealer on Saturday, May 3. It is encouraging to note that at least some of the activities on the floor of the Congress are deserving of editorial praise:

THE DOLE IS DEFEATED

The defeat in the House of Representatives of the Democratic-inspired measure to pay a Federal dole to everyone without a job, regardless of need or whether he had ever worked or had ever been covered by State unemployment compensation laws, should go a long way toward removing the fear that Congress might go haywire in its efforts to deal with the recession. And the removal of this fear should strengthen confidence in the soundness of our economic system, which in itself might prove to be a good antidote for the recession.

In place of the dole, the House accepted and passed the administration bill to extend unemployment compensation for 50 percent of the normal period to those who have exhausted or will exhaust their State benefits, but under State laws and regulations. In most States this would mean a continuation of unemployment compensation for 13 weeks, or a total of 39. As always, it is up to the States to make provision for the needy unemployed who are not eligible for unemployment compensation.

The Democratic measure almost certainly would have led to the destruction of the State unemployment compensation system, for once the precedent was established of paying a Federal dole to everyone out of work, it would have become virtually impossible to rescind the procedure.

State unemployment compensation funds have been amassed through a tax on payrolls paid by employers. The theory is that the funds are built up during good times and are then available to alleviate distress during bad times. Under the administration plan, the money to extend the payments would be advanced by the Federal Government and repaid later either from State funds or higher payroll taxes.

Advocates of the Federal dole evidently think a money tree grows in Washington and that it can be shaken every time a vote-catching device to spend money is proposed. What they don't realize is that the Federal Government has no money of its own to spend, but must first extract it from the taxpayers.

The West Indies

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. HOSMER. Mr. Speaker, it was my pleasure to attend the inauguration of the Parliament of the new West Indies nation on April 22 as a member of the official delegation from the United States Congress consisting, in addition, of the gentleman from Michigan [Mr. DIGGS], the gentleman from Kentucky [Mr. ROBSION], and the gentleman from New York [Mr. POWELL].

On our return from the ceremonies at Port-of-Spain, Trinidad, we dispatched the following letter to West Indies Prime Minister, the Honorable Sir Grantley Adams, K. T., C. M. G., Q. C.:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C.

The Honorable SIR GRANTLEY ADAMS,
K. T., C. M. G., Q. C.,
Prime Minister, the West Indies,
Red House Port of Spain, Trinidad.

DEAR MR. PRIME MINISTER: We, the undersigned, wish to express our deep appreciation of the warm reception and the honor which you accorded in receiving and introducing us to the members of your cabinet on that historic occasion when you were first convening. On our return to Washington, we felt called upon to report in detail to the House of Representatives our vivid impressions with regard to the West Indies and its leaders. We enclose herewith a copy of the CONGRESSIONAL RECORD of April 24 recording these remarks which are to be found on pages 6416–6419. We are sending additional copies of the CONGRESSIONAL RECORD to Mr. Walter Orebaugh, the American consul general, in order that he may make them available to the members of your cabinet and legislature.

The remarks which we have made for the RECORD reflect our appreciation of the reception accorded us as representatives of the United States and our own impressions of the statesmanship so evident to us while we were in your beautiful country. They do not, however, reflect fully the warmth of friendship which we each and everyone feels as the result of this experience.

We understand that an invitation has been transmitted to the West Indies to send representatives to Washington to explore ways and means wherein the United States may assist in meeting some of your economic needs. We look forward to that visit and trust that when the delegation is here, we shall have the pleasure of becoming better acquainted.

We look forward to watching the political and economic development of the West Indies and shall read with interest the progress of your government within the next few months as well as in the years to come.

You and your people have many close friends in our country. Therefore, you may rest assured that we welcome you to Federation status and will follow your progress toward democratic statehood.

Most sincerely,

CHARLES C. DIGGS, Jr.,
Congressman from Michigan.
JOHN M. ROBSION, Jr.
Congressman from Kentucky.
CRAIG HOSMER,
Congressman from California.
ADAM CLAYTON POWELL, Jr.,
Congressman from New York.

An informative article regarding the beginnings of self-rule in the West Indies written by Robert R. Brunn appeared in the Christian Science Monitor shortly following the inauguration. It was as follows:

SELF-RULE BEGINS IN WEST INDIES

(By Robert R. Brunn)

PORT OF SPAIN, TRINIDAD.—Government by the people of the West Indies became a reality April 22, and they stood massed along the streets of Port of Spain under a scorching sun to cheer.

Great Britain in the person of a radiant Princess Margaret inaugurated the newly elected Parliament. She drove through exuberant crowds to the Red House, the legislative chamber.

And from now on, the representatives in the federal assembly, headed by Prime Minister Sir Grantley H. Adams, who were jammed into the tiny chamber with scores of visiting officials, are in the driving seat.

PEOPLE PREPARED

They expect to move forward although it will take courage. Yet this has been shown before in the formation of this newest of all nations to be. It took 10 years of what Sir Grantley described, in replying to the Princess, as "patient study, negotiation, conference, debate, and action."

It is argued by many here that the people of the new island federation have only the haziest notion of the implications of their political move away from colonial status. This may be so in terms of political sophistication.

But standing in front of the Red House, bespangled and bannered in white, blue, and orange before the ceremony, this seemed unimportant. For the boys perched like crows in the saman trees and gaudily dressed ranks of citizens under bright umbrellas on the sidewalks were cheering one thing—the twin ideas of national entity and freedom and racial equality. They know what these are.

And inside the Red House, symbolically enough in one row of visitors, sat Aly Khan of Pakistan, Boahene Yeboah Afari of Ghana, and two American Negro Congressmen, ADAM C. POWELL, Jr., of New York, and CHARLES C. DIGGS, of Michigan.

CABINET SELECTION

All eyes were on Princess Margaret with her diamond tiara and shimmering white gown studded with gold and crossed by a dark blue order ribbon. But on this national holiday minds were on the future. A senate has been established with representatives from each island. Elections have chosen the senators.

Next comes careful policy in choosing a cabinet. Sir Grantley, himself from Barbados, apparently took meticulous care to have a wide geographic spread. Last weekend 4 ministries were assigned to the Windward Islands, 2 to the Leeward, 2 apiece to Jamaica and Barbadoes, and 1 to Trinidad. These last three are the big islands, the leaders of the federation, if you will.

But if this nation, plunked into the blue-green sea covering thousands of miles, is to be federated, all must be valued as the Trinidad Guardian put it: "The main thing was to get together the best working and supporting team that was possible in the circumstances."

Sir Grantley had no easy task in forming his government. The most prominent West Indian politicians, such as Norman Manley, Sir William Alexander Bustamente of Jamaica, and Eric Williams of Trinidad were not interested in federation office. He was naturally limited to his own Federal Labor Party. Considering the tight division in the senate with the Federals having a probable 24 seats to the opposition Democrats (Democratic Labor Party) having 20, some wonder if a coalition government might not have been better. But it was too late and Sir Grantley moved ahead.

TIME ELEMENT LOOMS

This political split in the senate raises the question whether the government will be able to stand for the 5 allotted years after which the federation will become a full-fledged dominion.

Sir Grantley has an unsafe margin, even if all the members lived on the same island.

As it stands, ministers and senators traveling out of the West Indies for any period of time put the government in political danger. Moreover, there are two fluid Federal votes nominally pledged to Sir Grantley but quite uncertain over the long pull. Another question facing the senate will be that of amendment of the federal constitution. Already the vague nature of Governor General Lord Hailes' role, as outlined, is being criticized.

The cry is going up that these powers must be clearly specified so that this 5-year interim period will test the federation. It will be the usual struggle facing any new union—how much power to give the central government. And when the constituent states are islands, some of them mere specks in the Caribbean, the problem is further complicated. Yet the hurrahs that drifted through the Red House's open windows were promising that nationalism is a resistless force.

A sample of the hopeful reception giving the newest of the world's legislative bodies by the press of the United States was found on the editorial page of the Washington Post and Times Herald on inauguration day. The editorial said:

PARLIAMENT IN BIRTH

The sun is shining with special brightness today in Port of Spain, Trinidad. This buoyant little island is the seat of government of our newest neighbor, the West Indies Federation, and today marks the formal opening of the federation's first legislature. Presiding at the festive occasion will be Princess Margaret, whose last visit to the island of calypso in 1955 was a rousing success. Thus, amid pomp and playful song, the long-cherished dream of federating the 13 British-administered islands in the Caribbean will draw close to full realization.

The Federation's first prime minister will be Sir Grantly Adams, an Oxford-educated moderate from Barbados, who was chosen by a narrow margin last Friday. (Barbados, incidentally, is an island which has boasted its own representative institutions since 1627). Sir Grantley, a member of the Federal Labor Party, will need all his energy and skill to knit into union the widely separated and proudly individual cluster of islands. Some of the immediate problems facing the new government will be the forging of a customs union and the development of a common citizenship which will permit free movement between the islands. The long-range challenge will be to meliorate the poverty which afflicts so many of the islands and to develop fully the rich resources of the area, which include bauxite, asphalt, cocoa, sugarcane, bananas—and many enviable lures for American tourists.

To be sure, the federation is not yet fully self-governing. But according to the timetable set in London, the 3 million subjects in the West Indies will arrive at dominion status in about 5 years. Surely the birth of a new parliament is a proud moment for Great Britain and for the hemisphere. Strong ties of legend and history link the United States to the West Indies—an area which Columbus explored, George Washington visited, and in which Alexander Hamilton was born. The progress of the new federation will be followed with affection and interest in the United States.

Don't Sell This Country Short

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

Mr. MACK of Washington. Mr. Speaker, the Constitution, daily newspaper of Atlanta, Ga., made a wise editorial comment recently. It said:

Perhaps we can't talk our way out of the recession. But we can talk our way in deeper.

The editorial scores the crepe hangers and prophets of gloom "who can make the patient much worse than he is." The Constitution editorial follows:

DON'T SELL THIS COUNTRY SHORT

If enough people repeatedly tell a fairly healthy person he looks sick, pretty soon he is apt to become convinced he is quite ill and will govern himself accordingly.

To a certain extent, the same can apply to the economy.

That does not mean the current recession is a figment of the imagination. On the contrary, it is quite real. Unemployment has shot upward and industry has become quite jittery.

Prophets of gloom can make the patient much worse than he actually is. Some of the results they have achieved is reflected in findings of a survey which showed that consumers express declining confidence in business and plan to reduce their own outlays. But in the same survey very few consumers expected their own incomes to diminish. Then why do they plan to cut their expenditures? The answer to a great extent (is) they have been listening to the crepe hangers. * * *

Perhaps we can't talk our way out of the recession. But we can talk our way in deeper.

If it takes a little pump-priming to chase away the recession let's have it—and let's have it administered judiciously. At the same time, let's banish fear and place more confidence in the tremendous potential of this Nation which still is the most prosperous in the world. Let's not sell it short.

THE BRIGHTER SIDE

On the brighter side, even in the midst of the recession, there are many signs that an upturn is on the way. We should talk at least as much about the good things which are occurring in the economy as the bad.

One newspaper which is doing this is the Aberdeen Daily World, of Aberdeen, Wash., which while reporting factual information daily about the recession also, at the top of its front page, each day carries a two-column box that reports an encouraging development that will add to people's optimism and faith in the future. These two-column news boxes are headed "On the brighter side." During the past 10 days these front page boxes in the Aberdeen Daily World, a city of 22,000, have reported such items as:

Contract is to be let within 3 weeks for a new $1,500,000 Aberdeen community hospital.

Aberdeen city council to open bids May 7 for $1,500,000 sewage disposal plant.

Five big construction outfits, supplied by equal number of pipe and foundry companies, will build Hoquiam's new $1,700,000 pollution and drainage control project now entering its third week of construction. (Hoquiam adjoins Aberdeen.)

May 6 is red-letter day for Aberdeen and the Twin Harbor's area for on that day four major road projects are to be let for this area at an estimated cost of $1,955,000.

Nearly $500,000 of dredging and navigation and port facilities improvements are planned by the Port of Grays Harbor for the next 20 months.

Hopes for fuller employment by Grays Harbor Chair & Manufacturing Co. are being based on a new assembly plant to start operations in Philadelphia June 1, President W. H. Schuh said today. With the new Philadelphia assembly plant in operation, Schuh said, Grays Harbor Chair hopes to keep its three plants here on a full-time basis. The firm has 350 employees here.

Four new motels will be opened this summer to tourists at Westport, oceanside resort town, 20 miles west of Aberdeen, and five other motels there are expanding facilities. New houses continue to go up.

A new alder-faced cabinet product, some retooling and additions to its crew, is in line for Major Line Products Co., Manager Gordon Goheen announces. Goheen said Major Line is bringing back some of its former crew members and will have a working force of 50 men within 3 weeks.

The State game department is spending $75,000 to redo its Lake Aberdeen fish-rearing pond and will double its capacity.

Newspapers elsewhere would render, as does the Aberdeen World, a public service by giving as much prominence to the good things that are occurring in their town as to the recession.

How a Former Page Sees Congress at Work

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 21, 1958

Mr. ANFUSO. Mr. Speaker, a very interesting series of short articles by a former page in the House of Representatives, Kenneth Warner, has come to my attention and I feel other Members of this House and our pages would like to read them. Kenneth served as a page in the summer of 1957. His articles were published in the Beacon, of Forest Hills High School, in Queens, N. Y., which he now attends.

The articles follow:

I WAS A CONGRESSIONAL PAGE

(By Kenneth Warner)

As I look back on them now, my 2 months as a page in the House of Representatives proved to be the most exciting and rewarding summers I have ever spent.

My interest was awakened by an article I read in Life magazine which described the life of a congressional page. I made inquiries and learned that every boy who is an American citizen between the ages of 15 and 18 is eligible to become a page in either the House of Representatives or the Senate. I learned also that appointments are made by Members of Congress from among boys living in their own States.

Much to my surprise, I found that, although many people were interested in the subject, very few really knew how to go about getting the appointment. Although a page may be appointed for a number of years, most Congressmen and Senators follow the practice of appointing a series of boys, each one to serve for several months, so that the wonderful experience and training may be shared by as many as possible.

Some Congressmen make appointments after personal interviews and inquiries into a boy's background, activities and scholarship. Others, including our own Queens Congressmen, make their choice after giving to all applicants an examination in which the youths explain why they would like to go to Washington as a page.

I was very happy at the thought of going to Washington, but I must admit that I was also a little scared. I had always lived at home, except for the summers spent at camp. Now I was away from my family—to be precise, 250 miles away, completely on my own, without any organized duties or activities. It was a very strange feeling. I had to live with total strangers, arrange for my own housing, transportation, meals, laundry and medical care with no supervision and without knowing anyone to whom I could turn for advice. All of my friends at home were either going to camp or hotels where their board and lodging were taken care of, and they worked full or parttime. This was anything but the case with me. In all of Congress, there were only two other pages who came from the City of New York. I knew neither one of them, nor did I know anyone else in the city of Washington.

The Congressional authorities believe that if a boy is old enough to be a page, he is old enough to take care of himself. Fortunately, I found that all of the Senators, the Congressmen, the pages and the Congressional officials were very friendly and helpful.

On their recommendation, I moved into a boarding house where seven other pages also lived. By chance, these boys were all from the Deep South, and they found my northern twang very amusing. I, of course, could not even understand what they were saying. They were all pleasant and sociable, but their ideas and beliefs were very strange to me. I developed a much broader understanding of their problems, but cannot say that I agree with their views.

On July 1 I reported for duty at the House of Representatives to the Chairman of the House Ways and Means Committee, where I was sworn in as a page.

At the very beginning it was made clear that my duties as a page had to be strictly carried out in every way. No more chinos or unpolished shoes: pages must at all times wear the official uniform—white shirt, black tie, blue trousers and black shoes.

Immediately after being sworn in, I reported to the House Chamber and was given my seat upon the pages' bench. There are two benches—one at either side of the House, where the pages sit while waiting to be called.

HISTORICAL SHOT

As soon as I took my seat, the other pages showed me a hole in the wall in back of the bench at about the height of my head. It was the bullet hole caused by a shot fired by the Puerto Rican nationalists at the time they made an attempt to kill a number of Congressmen. This hole resulted from one of the shots which went wild, and it would have struck and killed a page sitting on the bench, except that at that percise moment he bent forward to pick up a paper which had dropped to the floor. Needless to say, the pages always kept the floor in front of that bench spotlessly clean. Of course, since that date, all visitors to the House gallery are cartfully searched for weapons, but, as one page was heard to remark, "You never know."

On my first day, I was given a book which contained the picture of every Congressman, together with details concerning his State, district and length of service. As part of our duties, we had to learn to recognize on sight every one of the 435 Congressmen and to know the basic facts about each one.

Our duties were regulated by the pages' call board. This is a large rectangular board with indicators showing which Congressman is calling.

ELEMENT OF SURPRISE

No matter how often I saw the call board light up, there was always an element of excitement when my turn came. I never knew just where I would be called, whom I would see, and what I would be asked to do. It might be a routine call to carry a message to the Speaker of the House or to the floor of the Senate. It could be a request to obtain information from the Library of Congress, cr from one of the Cabinet officials, or from the Supreme Court. It would

often involve an assignment to one of the very important House committee meetings which was being televised; and then again we were very often asked to escort visitors through the Capitol.

Everything I did contributed to my feeling that I was playing an active part in assisting the Congress in making the laws for this country. When the bell in the House rang summoning Congressmen to vote, I, too, would be required to be present. When debate on a bill began, the pages were especially busy. A hundred indicators would light up at once as Congressmen called for copies of the bill, the committee reports and a great deal of other material which they intended to use.

During the debates and the votes, we always had to be on our toes (although to avoid being counted, we did not get out of our seats when a standing vote was being taken).

Life as a page in Congress was always interesting, but it became even more stimulating when bills covering controversial issues were being considered.

During my service as a page, there were a number of matters which aroused the attention and emotion of the whole country. Segregation and civil rights; federal aid to education; the President's foreign policy, and other matters were all taken up and vehemently discussed on the floor of Congress, in the cloakrooms and throughout Washington.

At those times, everything was centered around the particular bill under consideration. Everybody became involved, not only politically but personally as well. For example, when the bill to increase Federal Aid to Education was reported to the House, it seemed as if all of the visitors in Washington descended on Congress at one time. Long lines of people, interested parties and tourists, jammed the House galleries and waited for hours to get a glimpse of the proceedings. All of the members received mountains of mail, which they and their staffs carefully read and analyzed. In fact, one Ohio Congressman, who offered me a lift to work one morning told me about a 96-page handwritten letter which he had received in connection with the bill.

We felt that we were a integral part of the whole proceeding. Although we were only aids, with no part in making any decisions, we naturally, had our own personal opinions on the bill which so strongly involved discrimination and civil rights. Very often the members of Congress would discuss their own views with us and hear what we had to say, representing, as we boys did, every section of the country.

AVERAGE CONGRESSMAN

After close observation, I formed a very distinct impression of the average Member of Congress. Before I went to Washington, I had heard of Bismarck's epigram: "To retain respect for sausages and laws, one must not watch them in the making." Today I know that there is more wit than truth in that remark.

Practically every Congressman is deeply interested in the legislation which comes before him. During the 3 hours before each session began and for at least an hour after the session closed, when we pages were required to be in the Capitol, the Members of Congress were in the building hard at work. I have seen Congressmen come in to vote on an important bill when they were ill enough to be in bed. I will never forget the sight of Representative Bowler, of Illinois, who died during the session, being carried into the Chamber in a wheelchair, while wracking with arthritic pain.

Congressmen are not, as most people think, merely politicians. Listening to their conversations on the floor of Congress, in the cloakrooms, and elsewhere, we learned how much their congressional duties are a real part of their lives. They are especially interested in the views of their constituents. Any letter, if it is written by someone who shows a genuine interest, is given the greatest attention. It makes no difference whether the letter comes from an important community leader, a housewife, or a teenager; these legislators conscientiously try to discover the views and wishes of the public.

A suggestion to anyone who is going to visit Washington: look up your Congressman, and you can be assured of a warm welcome which will make the visit much more informative and inspiring. Congressmen, as I have found out, do not resent being called upon to assist citizens in their dealings with the Federal Government and in other ways. Indeed, they are glad of the opportunity to get closer to their constituents. Of course, like everyone holding public office, they wish to be reelected, but, in addition, they have a genuine feeling for the job they are called upon to do.

And among my most pleasant memories of my stay in Washington is the recollection of these very prominent and influential men of all parties, from every State in the Union, who, in the midst of their difficult and concentrated work in the last months of the session, were always courteous and considerate.

The Congress is divided along the lines of the two major parties, Democratic and Republican. For example, the House is divided into the Democratic and Republican sides. On all official lists, Democrats are indicated by Roman type and Republicans are always in italics. There are majority and minority doorkeepers (who, in spite of the title, are important officials in the House) and majority and minority Sergeants-at-Arms.

Of course, as you probably know, very important work is done in committees. There, a vast amount of research is conducted, public hearings are held at which witnesses are heard, and committee members, among themselves, hammer out a workable bill. Pages are on constant call and actively assist in the Committees' work.

CLOAK-AND-DAGGER ROOM

Actually, however, the real accomplishments of the House take place in the cloakrooms. There are Republican and Democratic cloakrooms. This is where the respective Congressmen mingle with the members of their own party. They speak freely, and discussions sometimes get very heated. The atmosphere in the cloakrooms is similar to that of a private club. Food is served and facilities for relaxing are available. The private telephones are constantly used. The pages in the cloakrooms relay confidential messages and perform other duties.

In the House itself, the atmosphere is entirely different, and strict formality is maintained. There is no institution in the world where rules are more rigidly observed. One of the most important officials in the House is the Parliamentarian, whose function it is to advise the Speaker on every question involving points of order. The Congressmen, who, in many cases, have been in the House for more than twenty years, are very quick to raise parliamentary questions on important issues.

The Congressional day begins promptly at noon, when the Speaker calls the session to order. There is an opening prayer which is sometimes offered by the House Chaplain, but is most often given by different clergymen representing the different faiths in America.

I found the work of the official reporters really fantastic. These men are so skilled that they are able to record every word spoken and can identify every one of the 435 Congressmen by the sound of his voice. Since they do not lift their heads and cannot see who is speaking, the strain on these men is so great that they work on 5-minute shifts.

Although the work of Congress is of vital importance, and the Congressmen are well aware of it, there is also a lighter side. This is most apparent as the day of adjournment approaches. Then everyone, regardless of party, joins in merrymaking and well-wishing; impromptu quartets spring up all over the House, and the atmosphere is charged with gaiety and good feeling. The pages join in the spirit of the occasion with a little entertainment of their own. I will never hear Home on the Range without seeing the Congressmen as they applauded our final number, while they ended by singing Auld Lang Syne.

Other interesting breaks occurred, too, when, for example, foreign dignitaries would be given the privilege of the floor, and well-known guests would be seen in the gallery. I remember the visit of the Prime Minister of Pakistan and his pretty daughter. The business of the House was suspended and moving pictures were taken of all the proceedings. They were subsequently shown throughout the country and overseas. On other occasions, attention was temporarily distracted from the debates when Jayne Mansfield, Sophia Loren, and Kim Novak came to the galleries. A page was always assigned to take the visitors on a tour of the Capitol, and they would give us autographed pictures, which together with those of the Members of the House and Senate now cover the walls of my room.

Many of my friends have asked me about my life in Washington aside from my activities as a page.

The first thing I can say is that it was a very different life for me there from life in New York. Of course, for the first few weeks I was like everyone else—a visitor.

My spare time, at first, was spent in seeing the sights I had always read about. I climbed the 555 feet to the top of the Washington Monument; used my amateur radio license to broadcast over the Pentagon radio station; and made the complete tour of the FBI, several of us competing on the FBI machinegun practice targets. Together with the other pages, I also visited almost all of the well-known Washington landmarks, while on weekends we made tours of neighboring Maryland and Virginia.

FINANCIAL ASPECT

I have often been asked about the financial aspect of being a page. The salary of a page is $306 a month. Since the average cost for room and board in a Washington boarding house is $60 per month, my experience as a page was not only interesting and instructive; it was also a happy one from the financial point of view.

The most complete change in my social life was the absence of my friends here at home. However, I found very quickly that the people in Washington were very hospitable. Social life there was completely different from that in New York. Although it is a large city, Washington has the atmosphere of a small town. There were no big affairs, but instead there was a great deal of visiting and general sociability.

Of course, our evening activities were limited to a considerable extent because on many nights the House would remain in session, sometimes as late as midnight. However, people in our age group in Washington understood the pages' position, and it was never considered a breach of good manners to call at the last minute and say that we could not keep an appointment.

My stay in Washington was a happy and profitable experience, and my last thought on the DC-6 flying home to La Guardia Airport was that there could be no more stimulating way for any American boy to spend a summer than by serving as a page in the United States Congress.

Crucial Issues in World Perspective, 1958

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 1, 1958

Mrs. KNUTSON. Mr. Speaker, a correspondent, Mr. William T. Genth of New York City, has called attention to an address made by the chairman of the National Planning Association at the annual meeting on March 31, 1958. Mr. Genth says:

I consider Mr. H. Christian Sonne's appraisal of present conditions under the heading "Crucial Issues in World Perspective, 1958" so illuminating that I believe you will welcome the opportunity of reading it.

I did indeed find the report illuminating and therefore ask permission to insert it into the RECORD so that many more persons will have an opportunity to read his objective discussion of these issues.

CRUCIAL ISSUES IN WORLD PERSPECTIVE, 1958

(Report of H. Christian Sonne, chairman, NPA Board of Trustees, to the annual joint meeting of the board of trustees and the agriculture, business, labor and international committees and the National Council of the National Planning Association, Washington, D. C., March 31, 1958)

In the face of the many complex and grave problems that confront our Nation, we must pursue—without recrimination—a steadfast course toward our common goal, which NPA defines as:

I. Peace in a world in which each nation is free to choose its own form of government.

II. Employment opportunities sufficiently broad to enable citizens to retain their self-respect and living standards; coupled with an economy sufficiently stable to prevent recessions from turning into depressions or millions from suffering as a result of inflation.

III. Proper appreciation of the consequences of the exploration of space.

I. PEACE AND DEFENSE

To secure peace and eventually eliminate a costly and destructive armaments race, the United States certainly would welcome constructive and sincere disarmament negotiations.

Doubt has been expressed that under modern technological conditions armaments control is feasible in practice. For these reasons, NPA appointed a special project committee on security through arms control under the chairmanship of Col. Richard S. Leghorn. From the first report of the committee and Colonel Leghorn's talk today, it appears that with goodwill the technological problems eventually can be solved—but that, for the present, it is wiser not to rely on an early result. It seems clear, therefore, that for the time being we must continue to develop military strength. The extent of our increase in armaments and military proficiency must be determined mainly by foreign policy and defense strategy. At the same time, NPA feels called upon to repeat:

First. In view of our serious and important commitments spread over wide areas of the globe, it would seem irresponsible if—while concentrating on new and modern armaments—we neglected to make increased efforts also in the development of highly mobile conventional weapons.

Second. Our civil and nonmilitary defense must be greatly improved—indeed, if well organized, it could prove to be one of the greatest deterrents to war.

It is important to note that the many constantly increasing tasks, which we are called upon to perform for the maintenance of peace, face us at a time when we have over 5 million unemployed. We should, therefore, now recognize that we have ample reserves of plant facilities and manpower to increase our efforts in both the domestic and the foreign field.

With the productive capacity of the West and with determined efforts, we should not lose the armaments race.

If, therefore, it is decided that adequate military and nonmilitary defense requires a certain level of expenditures—be it $45 or $55 billion—the preponderant majority of our citizens would undoubtedly urge that we spend that amount, and in addition 5 or 10 percent more to err on the safe side.

Adequate armaments, however, are only part of our needs. Forthcoming economic developments will be among the major factors that determine the new system of world order which will emerge in the next decade or two.

To meet the natural aspirations of the free world, the gap between our living standards and those of the lesser developed countries must be narrowed and not widened over the next decade—lest we invite disaster.

Support for international economic and social development must become a continued long-term policy of the United States.

The need for action along these lines seems now to be better understood, as evidenced by current discussions in Congress. At best, however, foreign aid or loan facilities are less important to the outside world than regular trade with the United States, which is at the same time the world's largest exporter and largest importer.

A depression in the United States might, therefore, severely cripple the economy of the free world. Hence, it is of great importance for American national interest that, in deciding on measures to counteract the recession, we avoid fumbling and act promptly and with determination. This, however, is primarily part of our domestic economic problems.

II. DOMESTIC ECONOMIC PROBLEMS

The current recession has proved more serious than those of 1949–50 and 1953–54.

We have today over 5 million unemployed, or about 7 percent of our labor force. Moreover, 2 million are working at involuntarily reduced hours.

Quite apart from the moral aspects, such large unemployment represents fundamental waste at a time when we can ill afford the paradox of unfulfilled social and economic needs on the one hand, and substantial amounts of unemployed production resources on the other.

NPA has just prepared a joint statement, entitled "The Cost of Unemployment," which points out that the current low level of economic activities is depriving our Nation of $25 billion of annual output. The statement suggests that at least $10 billion of this could be used to increase Government defense or nondefense programs.

Judicious increase in defense and certain nondefense Government programs are urgently needed regardless of whether we have a recession or not. At the same time, such measures would have a stimulating effect on employment.

Another means of stimulating employment would be tax reductions, which would also offer an effective and probably quicker way of assuring increased spending and consequent additional employment.

These two measures are not mutually exclusive.

Those who object to Government programs are apt to overlook the fact that our social and economic system, based on self-responsibility and respect for the individual, is challenged by a system based on authoritarian regimentation.

In order to meet this challenge successfully, much greater efforts are needed to encourage economic growth.

This requires increased Government action and cooperation in such fields as education, public health, conservation of natural resources, urban redevelopment, highways and skyways, and other types of what we may call social capital. These cannot nowadays be developed by private enterprise alone. A great increase in social capital expenditure is needed also because of inadequate investments over the past 17 years resulting from the priority given to national defense, industrial modernization, and residential construction, and because of our rapidly growing population.

Such Government programs, if well planned, are productive—indeed, it is as a result of social capital that private enterprise is able to function as efficiently as it does.

In practice, both approaches can be recommended to counteract the recession:

Well conceived public programs—not as a substitute for private spending but to encourage it. These programs may be relatively slow in stimulating employment but should result in strengthening the competitive capacity of our country. Failure to undertake them in the face of the Soviet challenge may jeopardize our very survival.

Tax reduction—because quick, intermediate action is needed. In this case, we should aim at such tax reductions as are useful and overdue, or would leave us with an improved tax system. Such tax reductions may be made in excise and individual income taxes. In a joint statement now agreed upon, the NPA will recommend that practically all excise taxes—except those imposed on alcohol and tobacco as well as on motor fuel, etc. (largely allocated to the highway trust fund)—should be eliminated.

Most of these excise taxes from which the Federal Government collects about $4.5 billion—were imposed during the war years for the purpose of restricting consumption and lessening the pressure of inflation. It seems logical, therefore, to abolish them now.

The statement also recommends a prompt reduction in the individual income tax—particularly in the lower income brackets.

Tax reduction is more pleasant for the taxpayer than an increase in needed public programs, but it is less beneficial for the country and for ultimate victory in the competitive world struggle.

A recession will unavoidably bring us deficits in the Government budget even if the Government would not increase expenditure programs and reduce tax rates. A deficit resulting from a deliberate increase in expenditures and/or a reduction in tax rates is preferable because it renders effective aid in overcoming such a recession.

We must move promptly and adequately, but in ways that will not lead to excess demand and inflation.

To appraise fully this problem, we must be aware that there are two kinds of inflation.

There is the well-known type of inflation resulting from too much spending power chasing too few goods. That is called the demand-pull inflation.

That kind of inflation can still be effectively met by the orthodox formulas of monetary and fiscal policy. With our abundance of modern plant facilities and labor, demand-pull inflation—except in emergencies—could not appear overnight. One would, therefore, expect to have ample time to deal with it.

The other kind of inflation is a relatively new phenomenon which results from or-

ganized upward pressures on wage rates and on prices of materials even though neither of the two are in short supply. This is often called cost-push inflation. The increase in costs of labor and materials should not, however, be confused with the increase in costs in those industries which have fixed overhead expenses and decreasing turnovers.

These two kinds—demand-pull and cost-push inflation—are likely to run side by side. However, during the last year, we have experienced higher prices in spite of slackening economic conditions. This may be due in part to an increase in the cost base of products resulting from a reduced turnover. But, we have undoubtedly also seen the cost-push inflation at work.

We have learned that monetary policy alone is not able to cope with the latter kind of inflation—not even if combined with fiscal policy.

If wages, or the prices of raw materials or semifinished products, are increased at a greater rate than warranted by advances in productivity, no increase in interest rates will or can in the long run result in lower prices of finished products. Misplaced monetary policy may have contributed to the present recession. But, the measures we take to cope with the recession are not apt to have much influence on this kind of inflation.

Turning first to demand-pull inflation, it is important to note that we have large reserves of production resources available to combat such a possible inflation that might develop in case we should overstrain our estimated productive capacity.

The manpower reserves—apart from the approximately 7 million workers who now are unemployed in whole or in part—consist of millions of people at retirement age but still able and eager to work—and also the handicapped.

Since all these people, in varied degrees, already to some extent are consumers, a large percentage of their production would constitute an addition to our available goods and services. Thus, the supply would increase more than the demand.

We can, therefore, afford to err on the safe side and spend a little too much rather than too little in our effort to cope with the recession. Any resulting inflationary pressure would be of the demand-pull type which our reserve of production resources could take care of.

The cost-push inflation—in contrast—raises more serious and complicated issues.

Two years ago, in discussing the reasonable success—until then—of the Employment Act of 1946, the NPA emphasized that America could not rest on its laurels and questioned whether monetary and fiscal policies could curb price rises that originate primarily from the cost side of production—and, if so, whether it could be done without in time creating considerable unemployment. The statement concluded, "We have not yet developed the machinery for formulating wage and related policies that are best fitted to serve the twin objectives of a reasonable approximation to sustained full employment, and a reasonable stabilization of prices." This is still true today.

It requires great statesmanship both on the part of business and labor to solve this stabilization problem which, next to peace and high employment, is the most important issue that democracies have to face.

Recent developments have persuaded me that it would be in the national interest if Congress made clear in some form or other that, while its interest in high employment remains unchanged, it has decided that the continuing policy of the Federal Government will be to aim also at a reasonable stabilization of prices; and that it is prepared to implement this objective with the necessary legislation.

A clarification of the policy of Congress would merely confirm, in itself, the views now often accepted. However, I believe the time has come when this often-stated objective must be implemented with proper legislation.

In view of the complexity of the matter, such legislation should be preceded by very careful study on the part of Congress, the executive branch, and private groups.

In the course of such study, Congress would have to look into the admittedly difficult problems confronting the trade unions and business in collective bargaining and in the determination of what may be considered as fair profit for capital and for risk taking.

Congress would also have to take a new look at such issues as tariffs, import qoutas, agricultural price supports, stockpiles, etc., from the point of view of price stability.

NPA feels that adequate economic growth and effective price stabilization must be the two major objectives of our domestic economic policy if we are to improve our living standards and cope successfully with world events.

III. THE EXPLORATION OF SPACE

It has been truly said that 1957 was the year when the Soviets put a couple of satellites up into orbit and pulled the rest of their satellites back into orbit. It seems to me, however, that at the same time they caused a bomb to explode over America containing antidotes against complacency and self-satisfaction.

The event may be fortunate for us even though we have had to face the humiliation that the Soviets were ahead of us in planning and launching a series of small artificial satellites during the International Geophysical Year.

It is not the deed itself, but the technique and scientific skill connected with it, that should cause us concern. They tend to show that in science and technology, and perhaps even in their educational system, the Russians are our equal and maybe ahead of us.

This has led to a renewal of the frequent discussions during the last few years of the shortcomings of our educational system.

We seem more likely at long last to do something about its quantitative deficiencies (more schools, scholarships, teachers, higher salaries, etc.). But qualitative problems may be even more important.

Let me mention three main aspects:

First. We must correct the mistaken interpretation of the fundamental democratic right of equal opportunity for education. This right means that everybody should have the same opportunities and facilities to acquire an education. It does not mean that everybody should learn the same things and be expected to perform equally. Children differ in their capacity for education. We must cease to hold back our brightest youths to the pace and level of their more limited classmates.

Ways must be found of giving the former a richer curriculum and better teachers if we are to develop leaders in science, the arts, and political and social life.

Second. Not only the salaries but also the standards of teachers must be raised, so that pupils can learn much more subject matter than in the past rather than taking "life adjustment courses." It is all very well to learn how to think but you must also have something to think about!

Third. It is important to achieve a proper balance of the various branches of knowledge. Today, everyone is concerned about the neglect in the past of science and mathematics. We must guard against going too far in the opposite direction. We will continue to be deficient in basic or theoretical science—upon which applied science depends—unless our scientists are better acquainted with philosophy, the social sciences, and the humanities.

Some years ago, an NPA committee on education came to the conclusion that the subject is so vast and important that it should not be tackled haphazardly. Instead, an independent group of outstanding citizens should be selected to prepare, after careful deliberation, a comprehensive reexamination of the whole American system of education.

We hope that the recent impetus given to the reevaluation of education will result in the appointment of such a top-level committee of outstanding private citizens.

The best armor in this new age of space is a good education.

New vistas begin to open up with unlimited possibilities for gaining interesting and useful knowledge and technique.

It is essential to the future peace and progress of mankind that, from the beginning, the United Nations should play a significant role in the exploration of space. Initially, the United Nations should at least be a supervisory agency to ensure that the future space exploration programs of the various nations do not become military threats.

It is not beyond the realm of possibility that some day—in the course of exploring our own or other solar systems—we may face the supreme challenge of encounters with other forms of intelligent life.

Whether that be so or not, the new impressions of the Universe and its hazards and difficulties are apt to be so overwhelming that many of the present problems and rivalries on both sides of the Iron Curtain may seem relatively small and be forgotten like the snow that fell last year.

But for a long time, we will have many difficulties to face here on earth. However, this new era is rapidly teaching us that we must not only think anew but act anew. This, and the fact that America has an extraordinary ability to respond to crisis, prompts me to summarize what NPA hopes will become increasingly apparent:

The present recession will not develop into a depression. Our builtin factors of stability, such as Federal deposit insurance, stock-exchange regulations, social-security system, etc., will prevent a crisis. Moreover, due to our understanding of and readiness to use the proper fiscal countermoves, we shall succeed in coping with the recession, with the result that world trade can rely on a satisfactory measure of stability and our foreign-investment program will continue—probably on an enlarged scale.

We have ample reserves of plant facilities and manpower to face any emergencies, and we have the additional reserve of short working hours that can and will be prolonged when necessary.

We have a pool of admirable scientists and engineers—but their energies need channeling. That is a relatively short-term problem which we shall succeed in solving pending the long-term strengthening effect of a greatly improved educational system.

Ours is a sportsmanlike nation that salutes and congratulates the Soviets on their sputnik performance. At the same time, we do not doubt that America can measure up to the challenges that history places before us.

The Errors of Hawaiian-Alaskan Statehood

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. PILLION. Mr. Speaker, the bill proposing statehood for Alaska is pres-

ently scheduled to be acted upon in the House on May 14.

On February 14, 1955, I made a statement on the subject of statehood for Alaska and Hawaii before the House Committee on Interior and Insular Affairs.

This statement contains a summary of most of the arguments on this complex problem. It is inserted for the purpose of reference and to give the Members of Congress an opportunity to more fully and leisurely examine into the facts and validity of the statehood bills.

THE ERRORS OF HAWAIIAN-ALASKAN STATEHOOD

The controversial problem of statehood for the Territories of Hawaii and Alaska continues to challenge the wisdom of this Congress. My remarks shall pertain to bill, H. R. 2535, which proposes to grant statehood to both Territories and is now under consideration by this committee.

THE IMPORTANCE AND THE FINALITY OF STATEHOOD

This momentous issue of statehood compels us to give our most serious attention to its consequences. We are confronted with a measure that has vast implications relating to the internal affairs of this Union. We must also concern ourselves with the finality of whatever decision we may make.

No other problem will, as vitally, affect and shape our future as statehood. The seriousness of this subject is transcended only by our struggle to survive the Communist holocaust.

The various domestic and foreign problems of this Congress which relate to finance, defense, health, and foreign aid, are of extreme importance. Yet, if we find ourselves in error, our mistakes can readily be rectified by congressional action or by the flexibility of executive power. With one exception, even our Constitution and its amendments may be amended to conform with changing conditions or attitudes. The most recent example of this change is the repeal of the 18th amendment.

The one exception to the right to change our Constitution applies to the present proposal. Article V of our Constitution provides that no amendment may be made to this clause: "and that no State, without its consent, shall be deprived of its equal suffrage in the Senate."

The principle that no State can secede from this Union is established. The corollary principle that this Nation cannot divorce any State from this Union or restore it to the status of a Territory is equally accepted. Thus, the grant of statehood becomes an irrevocable act.

The finality of our decision as to statehood gives us cause to approach this matter, not with a lighthearted generosity, but rather with a somber realization and precaution that any mistake will burden us for the life of this Republic.

THE EMOTIONAL, IRRELEVANT, AND MINOR ISSUES

There have been so many issues injected into this debate that it has become difficult to see the forest for the trees. Almost every conceivable argument has been presented pro and con to a degree that has confused and confounded rather than enlightened those who may be interested.

This appears a suitable time to attempt to clarify and place the arguments into their true political perspective. The leading arguments in favor of statehood which are grouped together here as being either emotional, irrelevant, or of minor consequence are (a) Americanism and military service, (b) the psychological impact of statehood upon the Asiatic peoples, (c) the references to precedent in favor of statehood, (d) partisan political considerations.

THE EMOTIONAL APPEAL OF AMERICANISM AND MILITARY SERVICE

Every informed person will acknowledge the courage and sacrifices of the Hawaiian veterans in both World War II and the Korean conflict. This Nation is eternally indebted to them and in an equal degree to all other American veterans who fought so gloriously in those wars.

The proponents of statehood have cited individual cases of heroism on the part of Hawaiian soldiers. They have made comparisons of the Hawaiian casualties and the numbers in military service as against the casualties and the number of servicemen from the United States as a whole.

The Alaska Statehood Committee has published this claim:

> In two World Wars and in Korea they have fought in number exceeding the national per capita average, and by so doing have written a war record second to none in the Nation.

The Library of Congress has furnished the following table of inductees for World War II:

State	Population, 1945	Draftees in World War II
New Hampshire	459,000	32,430
Montana	477,000	38,453
Idaho	507,000	38,612
Hawaii	460,000	28,008
Alaska	79,000	3,482

Hawaii had 8,769 additional enlistees. No figures are available for other States.

These figures do not substantiate claims of superiority in the number of citizens from Hawaii and Alaska who served in World War II.

The statements regarding casualties and bravery cannot support the inference that these soldiers were more loyal and more brave than the veterans from the other areas of this country. I defend all segments of this country from the innuendo that any group or area of our people have a monopoly upon patriotism or bravery. There is no scientific thermometer that can measure the warmth of devotion for this great country.

The sacrifices on the battlefield do not constitute legitimate political, economic or social premises for the admission of these territories to statehood. These highly emotional appeals could have been, most properly, left out of this debate.

THE IRRELEVANCE OF FOREIGN PSYCHOLOGICAL IMPLICATIONS

The proponents of statehood claim that statehood would create good will for the United States in the Pacific area and would avoid for us the stigma of colonialism.

The question of statehood is solely and wholly a domestic problem of our internal affairs. It is a strange theory that would permit foreign opinion to influence or decide the conduct of our domestic affairs. The Communist line of charging us with colonialism cannot be increased in volume nor will it be softened by any act of compliance.

We should not fear to disappoint those enemies. Our foreign friends need no explanations.

The psychological impact of statehood upon foreign peoples is irrelevant and deserves no consideration here.

The height of irrelevancy was attained by a former Governor of one of the Territories. He advanced as an argument in favor of statehood the delectation of visitors, the sweetness of Hawaiian music, and the rhythm of its dance. Certainly, the muscular gyrations of the hula dance is far afield from the crux of the statehood problem. This sentimentality borders upon the frivolous.

THE PRECEDENTS FOR STATEHOOD

The proponents for statehood rely extensively upon the use of precedent to lend validity to their claims.

The Northwest Ordinance was adopted under the Articles of Confederation in 1787. This act, providing for the admission of that territory to statehood, is cited as precedent and as the source of the inherent right to every Territory to become a State. This precedent is invalid for the following reasons:

First. The Articles of Confederation has been superseded completely by the constitutional provisions relating to the admission of new States.

Second. The Northwest Ordinance was limited in its application to the Northwest Territory.

Third. The framework of the confederacy, the division of powers, and the scheme of representation was totally different from our present constitutional government.

References by the Supreme Court to incorporated Territories as inchoate and embryo States are mere dicta and an attempted intrusion into the field of congressional legislative authority and responsibility.

The admission of other States is referred to as precedent for the admission of Hawaii and Alaska upon the basis of equal representation in the United States Senate. The last State to be admitted was Arizona on February 14, 1912.

Following the admission of this 48th State, the 17th amendment was adopted by final ratification on April 8, 1913. The mode of selection of Senators was altered from that of choice by the State legislatures to that of election by popular suffrage. This change of election of Senators has resulted in representation by the Senators of the people of the States as individuals in substitution for representation by the Senators of their

respective States collectively and in their corporate capacities.

The 17th amendment created a new concept of senatorial representation. No State has been admitted under these fundamentally altered conditions.

Thus, the admission of other States furnishes no valid precedent for the admission, today, of Territories upon the same basis of representation in the United States Senate.

PARTISAN POLITICAL IMPLICATIONS

The Democratic Party platform contains a plank favoring immediate statehood for both Hawaii and Alaska. The Republican Party platform favors immediate statehood for Hawaii and statehood for Alaska under an equitable enabling act. However, no responsible Republican Party spokesman has, as yet, given us an adequate detail explanation of the meaning of the term "equitable enabling act."

In the 1952 elections, the Republican Party retained control of the Hawaiian Territorial Legislature by the election of 8 Republican Senators to 7 Democrats. In the House there were 19 Republicans elected to 11 Democrats.

In the same year, Alaskan Republicans won the Alaskan Senate by seating 11 Republicans and 5 Democrats. In the House, there were 20 Republicans elected to 4 Democrats.

Based upon these returns, it was predicted that in the event of statehood, Hawaii would elect 2 Republican Senators and that Alaska would possibly elect 1 or 2 Republican Senators.

Two years ago the Republican administration attempted to pass the bill giving statehood to Hawaii and kill the Alaskan statehood bill. This writer opposed the immediate admission of these States either severally or jointly. The Republican Party subjected itself to the charge of attempting to gain partisan political advantage in its attempt to support the Hawaiian statehood bill alone.

In 1954, the political picture reversed itself. The Hawaiian legislature was won by the Democratic Party for the first time in the history of that Territory. The Democratic Party swept both houses overwhelmingly. The Democrats won a 9-to-6 majority in the Senate and a 22-to-8 majority in the House.

A similar sweep was gained by the Democrats in the Alaskan Territorial Legislature. There, the Democrats gained control of the Senate by winning 12 seats to 4, and in the House 21 seats to 3.

Another political factor is the successive drop in the plurality of the Republican Delegate from Hawaii. The Republican pluralities for that office are as follows:

Year:	*Republican plurality*
1948 (approximate)	52,000
1950 (approximate)	31,000
1952 (approximate)	9,000
1954 (official)	890

Based on the 1954 election returns, it appears that, in the event of statehood, Alaska would surely elect 2 Democrat Senators and Hawaii would be likely to elect 2 Democrat Senators.

It is most obvious that the passage of the joint Hawaiian-Alaskan statehood bill by the Congress would place the Republican Party in a difficult position. The President would be placed in a political dilemma. By approving statehood for both Territories, he would risk the probability that these 2 Territories would return 4 Democrat Senators. If he vetoes statehood, he assumes the political onus of defeating a measure of popular favor.

Partisan politics is a transitory consideration. This issue ought to be decided upon American principles having a true political validity. The solution should pass the test of what will be permanently just for the peoples of both majority and minority parties of the whole Nation.

GOVERNORS' CONFERENCE REJECTS STATEHOOD

At the hearing before this committee on February 4, 1955, the impression was left that the Governors' conference endorses statehood for both Hawaii and Alaska. This is not so.

Resolutions were adopted by the Governors' conferences, for 6 years from 1947 to 1952, favoring statehood for Hawaii and Alaska.

On March 2, 1953, the writer addressed communications to each of the 48 Governors indicating the prospective loss of voting power for the people of each State in the Senatorial and Presidential elections upon the grant of statehood to Hawaii and Alaska. No claim is made that the subsequent failure to endorse statehood is due to these communications.

At the 1953 Governors' conference, a resolution favoring Hawaiian statehood was presented. This resolution failed to receive a favorable report. No resolution for either Hawaiian or Alaskan statehood was presented at the 1954 conference. The Governors, perhaps, perceived the prospective loss of representation to the people of their respective States. Failure to approve statehood resolutions, under these circumstances, can be fairly construed to constitute rejection.

COMMUNISM, A MAJOR CONSIDERATION IN HAWAIIAN STATEHOOD

The extensive communistic influences in Hawaii continue to present an alarming condition for both Hawaii and the United States. A careful study of the facts does not give hope that communistic power is on the wane. Communism remains a potent force permeating the economic, political, and social structures of this Territory.

The New York Herald Tribune of June 23, 1953, reported a labor strike by the ILWU on June 22, 1953, in Hawaii. The facts, as reported there, are as follows:

Twenty-four thousand employees on the island went on strike in a mass protest against the conviction of Jack Hall and six other conspirators convicted of plotting to teach and advocate the violent overthrow of the United States Government.

Two thousand of these employees are stevedores, members of the International Longshoremen's and Warehousemen's Union—ILWU—who refused to load military cargo for Korea. Eighteen thousand out of nineteen thousand ILWU union workers on the sugar plantations joined in this strike. One thousand of these men refused to strike. Four thousands out of five thousand pineapple workers also joined the strike. One thousand of these men refused to strike.

Now, these men went on strike, not because of any legitimate labor dispute, but in protest against the conviction of these Communists for the advocacy of treason and revolution.

The fact that 1,000 men in the sugar industry and 1,000 men in the pineapple industry refused to join this strike is proof that it was possible to refuse to join in this dastardly demonstration of Communist close order drill.

Those who refused, a pitiful minority of 2,000 demonstrated their courage and Americanism. The same cannot be said for the other 24,000. The refusal to load military cargo for Korea borders upon sabotage.

If these men went on strike because of threats or pressures, then a condition exists in Hawaii, so dangerous, that Hawaii should not be granted statehood at this time. If they went on strike willingly because of their sympathy for the Communist convicts and the Communist movement, then this type of citizen does not deserve statehood. This country can well do without their voice and their vote in Congress.

This same union, ILWU, called another strike as recently as last December 1954, while members of this Territorial Subcommittee were attending hearings in Hawaii.

The International Longshoremen's and Warehousemen's Union (ILWU) has a membership of 25,000 and dominates unionism in that territory. Its president is Harry Bridges who is one of the top three Communist leaders in this country. Jack Hall is the Hawaiian spokesman for Harry Bridges and the leader of that union there.

The unions in Hawaii controlled or infiltrated by Communists have a membership of about 30,000. The names of the Communists and those persons closely related to the Communist Party who occupy positions of power in the unions, union locals and the top organization of the ILWU are contained in the hearings of the House Un-American Activities Committee for the year 1950.

These hearings regarding Communist activities in Hawaii are contained in 3 volumes and contain a startling revelation of the infiltration of communism into both the ranks of unionized labor and in the political parties. These volumes are proof that the Communist Party controls the ILWU, lock, stock, and barrel.

By means of union devices such as closed shops, union stewards and grievance committees, it is possible for the Communists to control the employment, layoffs, firings, and hiring of labor. This control, and the use of cadres of union officials and Communist stooges to propagandize, persuade and coerce, gives the Communists a tight control over the ideology and political action of its members. The individual laborer does not have a chance to earn a living or to keep

from being maimed by a premeditated industrial accident unless he complies.

It is a political axiom that each employee can be counted upon to deliver 3 votes in a political election. If the ILWU can order 24,000 men to go out on a Communist sympathy strike sabotaging United States military transport, can there be any doubt that they can deliver 50,000 votes to their political choice?

These political objectives of the Communist Party are reported in these hearings. They are:

First. Communists support statehood, page 1559, part 2 of the hearings.

Second. Development of a following in the Democratic Party to back Communist causes, page 1570, part 2 of the hearings.

Third. Establish legislative caucus to act as pressure group on Democratic Party for Communist objectives, page 1570, part 2 of the hearings.

The fact that statehood for Hawaii is supported by the Communist Party and the ILWU does not per se make this cause wrong or undesirable. However, one can be sure that their support for statehood is not actuated by the same motives for good government as those who sincerely believe that statehood is a just cause. The support of the Communists is based upon their self-interest in advancing the Communist cause and that cause alone.

Can there be any doubt that the Communist Party and the ILWU would not make an all-powerful drive to elect two United States Senators in the event of statehood? And it makes no difference to them whether they bear the Republican or Democratic label. By statehood, we not only open the door for 2 Communist influenced United States Senators, but we actually invite 2 Soviet agents to take seats in the United States Senate.

On June 19, 1953, Jack Hall, ILWU regional director and Communist Party leader was convicted of violation of the Smith Act along with 6 other defendants. A 1954 publication of the Hawaii Statehood Commission cited these convictions as proof of the unalterable and aggressive opposition of the people of Hawaii to communism. The record of the 1954 election completely refutes this statement.

In the race for the office of mayor of the city of Honolulu, Frank F. Fasi, the Democratic candidate was opposed by Neal Blaisdell, the Republican candidate. During the campaign Frank Fasi charged that Blaisdell was courting ILWU support.

On October 15, 1954, the leading newspapers carried the charge by Frank Fasi, the Democratic candidate, that the big issue of this campaign is whether a candidate for mayor can be elected without the support of the Communist leaders in Hawaii.

The Honolulu Star-Bulletin, which is an outstanding newspaper of the highest standards, reported on November 1, 1954:

He (Fasi) has struck out at Governor King and the ILWU leadership.

On November 3, this same newspaper carried the following front-page headline:

ILWU sample ballot supports Blaisdell.

During this campaign, the Republican candidate did not once deny these charges or repudiate and reject ILWU support. The following legal maxim certainly applies to this situation:

When one owes a duty to speak, silence implies consent.

The electorate of Hawaii answered Mr. Fasi's issue by proving that a mayor cannot be elected without the support of Communist leaders. Perhaps, the ILWU support was unsolicited. However, there can be no question that the ILWU support was given with Mayor Blaisdell's knowledge and was accepted without repudiation by him of the ILWU leaders or the Communist principles.

The Honolulu Star-Bulletin made a survey of the Hawaiian election of November 1954 and reported its findings as follows:

The ILWU endorsed 71 candidates. Of these, 58 won, a batting average of 81 percent.

In the senate, 5 ILWU candidates won out of 6 candidates endorsed in contests for 7 seats. There are a total of 15 seats in the senate.

In the house, 22 ILWU-supported candidates won out of 28 endorsed. There are 30 seats in the house.

In the county, 32 ILWU-supported candidates won out of 38 contests which includes Neal Blaisdell, Republican mayor of Honolulu.

The 1954 election was a complete victory for the ILWU and the Communist Party. They can now exercise either control or a considerable influence over both houses of the legislature and the mayor of Honolulu. This victory is made more impressive by the fact that the ILWU political influence can be exerted in both Republican and Democratic Parties.

Mr. Jack Hall not only directed the ILWU political activities but also claimed full credit for the victories of the Republican mayor of Honolulu and the Democratic victory in both Houses of the Hawaii legislature. Mr. Hall even offered his advice for the full use of the political power gained by that election.

The secretary of the former mayor made a practice of greeting Harry Bridges at the Honolulu airport when that distinguished Communist arrived there. He sent the Honolulu municipal band to money-raising affairs held to defray the legal defense of the Communists.

The Hawaii Statehood Commission claims that statehood would enable Hawaii to deal more effectively with communism and the ILWU. On the contrary, statehood would free the Communists and the ILWU from United States control and jurisdiction. They now have the power and could immediately proceed without Federal interference to socialize and communize that state.

The atmosphere in Hawaii is one of tolerance, appeasement and encouragement for communism. The burden of proof that it can eradicate communism properly rests with the people of Hawaii. That proof has not been presented. If there is a reasonable doubt as to an extensive communistic economic and political control in Hawaii, then the party to suffer thereby is the United States. The people of the 48 States are entitled to the benefit of possible doubt. Statehood should be rejected now and deferred for an appropriate time when communism no longer threatens the well-being of either Hawaii or the United States.

The 1954 election issues, the political maneuverings and the election results serve as a stop, look, and listen warning to us.

THE POLITICAL POWERS OF STATEHOOD

Man's struggle for liberty never stops. That goal is gained in the degree of acceptance of the proposition that all sovereign power rests with the people. Constitutional government is an instrumentality for carrying out this concept of freedom.

Under our system of constitutional representative government, sovereign power can be placed into three broad categories. First, the power inherent to the people. This power can be generally described as all sovereign power that remains after constitutionally conferring such political powers to the States and the Nation as are needed for the attainment of their purposes. Second, the power granted to the Federal Government. In a broad sense, this power is limited to the enumerated political powers granted to the Federal Government under our United States Constitution. The third category is the power reserved to the States. This consists of all the residual political power constitutionally conferred by the people and not granted to the Nation.

In the present discussion, we are concerned with the second and third categories of political power. An analysis of statehood reveals a dual concept.

First. Statehood would grant to the Territories the same sovereign and political powers as possessed by other States to conduct the affairs of these areas without Federal supervision or control.

Second. Statehood would grant to the proposed States the power of representation in the Federal Government.

THE POLITICAL POWER TO CONDUCT THE AFFAIRS OF THE STATE

Statehood is not essential for the grant of power to the Territories to enact laws relating to its property, affairs, and government. Congress has entire dominion, National and local, over Territories. It may transfer full legislative powers with respect to local affairs to legislatures elected by the Territories.

Both Alaska and Hawaii now possess general legislative power for these purposes. The major exception in Alaska is the power to legislate over public lands, fisheries, and subsurface resources. Although Congress has reserved the right to disapprove Territorial legislation, no law passed by either Territory has ever been disapproved by Congress.

The executive power could very well be transferred to the Territories. There could be no serious objection to any necessary extension of judicial powers for these Territories.

However, neither of these Territories appears to seriously want these powers. No reasonable proposal or request has been made to Congress for the reorganization or an extension of the jurisdiction of the Territorial courts.

There appears to be no sincere desire upon the part of the Territories to elect their own governors and to assume executive power.

While this committee has, over the course of years, considered many bills relating to the control of fisheries, minerals, and public lands, it has not yet approved any overall proposal to grant such power to Alaska. On the other hand, neither Territory has ever presented to Congress a comprehensive bill of particulars for an extension of legislative power to enable it to govern its own affairs.

The complaints made by these Territories of a lack of power to administer Territorial matters can be interpreted in either of two ways. Either this committee has failed to give adequate consideration to their needs for additional power or the Territories have failed to present and press for a comprehensive program designed to obtain for them the necessary power to govern. This writer believes that the latter alternative prevails.

It would appear that the concern of the proponents of statehood lies not in their desire or need for additional power to conduct the affairs of the Territories but rather in their drive for representation in Congress and in the election of a President.

THE POLITICAL POWER OF REPRESENTATION IN THE FEDERAL GOVERNMENT

The history of government is, in essence, a recital of the distributions of power. We are concerned here with an equitable apportionment of legislative and executive power. Statehood would transfer a share of these powers to the proposed States. Their participation in the Federal Government would consist of (a) the right to be represented in the United States Senate by two Senators, (b) the right to participate in the election of a United States President, (c) the right to be represented in the United States House of Representatives.

ORIGINAL BASIS FOR SENATORIAL REPRESENTATION

The problem of equitable representation in the United States Senate continues to plague this country since May 1787, when the Constitutional Convention convened.

The historical struggle has been between the smaller States desiring representation on a basis of equality for States, as corporate sovereign entities, and the larger States seeking representation in proportion to population. The plan of giving each State two Senators conforms to the pattern of a federation of States while representation in proportion to population conforms to the frame work of a national government.

We are concerned, today, with the question of the political justice and wisdom of equality of representation for newly admitted States in the United States Senate. The plan of equality of Senatorial representation by States was adopted for the protection of the States from encroachment by the Federal Government. In furtherance of this purpose, the provision that the Members of the United States Senate be chosen by State legislatures was enacted.

I cite the following statement made in the Constitutional Convention by delegate Wilson of Pennsylvania:

The leading argument of those who contend for equality of votes among the States is that the States as such being equal, and being represented not as districts of individuals, but in their political and corporate capacities, are entitled to equal suffrage.

Alexander Hamilton, supporting the adoption of the Constitution, stated in the Federalist Paper No. 62:

It (referring to appointment of Senators by State legislatures) is recommended by the double advantage: of giving to the State governments such an agency in the formation of the Federal Government as must secure the authority of the former and may form a convenient link between the two systems.

It seems clear that the plan of representation in the United States Senate was implemented by the provision that the States in their corporate capacities as States and as an organic whole be secured in that right of equality by the grant to them as States to choose their Senators by vote of the State legislatures. The provision for election of Senators by the State legislatures was an integral part of the compromise by which two Senators were provided to the States. The convention would never have agreed upon this principle of Senate representation if that right had not been secured by this mode of selection, that of choice by legislatures.

The 17th amendment of our Constitution, ratified on April 8, 1913, destroyed the reason for the provision that each State shall be entitled to two seats in the United States Senate.

STATEHOOD BASICALLY SHIFTS SENATORIAL AND PRESIDENTIAL REPRESENTATION FROM THE 48 STATES TO HAWAII AND ALASKA

Reduced to fundamental terms, statehood for Hawaii and Alaska grants representation in the United States Senate and in the election of the President. In the Senate, they would be represented by 4 Senators out of a prospective total of 100 Members. In the electoral college, they would be represented by 7 votes out of a prospective total of 535 votes.

The representation proposed for these Territories will be taken from the present representation possessed by the people of the 48 States and shifted to the people of these 2 Territories. This transfer of sovereign power seriously and correspondingly reduces the right of suffrage of the peoples of the 48 States in the United States Senate and in the election of the President.

REDUCTION IN THE SENATORIAL REPRESENTATION OF THE 48 STATES

The admission of Hawaii and Alaska under the present constitutional provision will entitle their residents, 628,437 combined, to 4 seats in the United States Senate. The average representation would be 1 Senator for each 157,000 inhabitants. The people of the 48 States, having a population of 152,572,000 represented by 96 Senators, today enjoy the average representation of 1 Senator for each 1,589,000 persons. Thus, Hawaii and Alaska would become entitled to representation in the United States Senate 10 times greater than the average representation of the people of the 48 States. Each voter will have approximately 33 times the power of the vote of the people of California in the United States Senate, 27 times the power of the vote of the people of Illinois, 32 times the power of the vote of the people of Pennsylvania, and 47 times the vote of the people of New York.

A comparison of the voting power of the voters of Hawaii and Alaska combined, with that of the people of the 48 States in the election of United States Senator is contained in schedule A of the accompanying table:

TABLES COMPARING THE PROSPECTIVE VOTING POWER OF THE AVERAGE HAWAIIAN-ALASKAN VOTER IN THE ELECTION OF UNITED STATES SENATORS AND A UNITED STATES PRESIDENT WITH THE VOTING POWER OF THE VOTERS OF THE 48 STATES

METHOD OF COMPUTATION

Schedule A: Population of Hawaii and Alaska (combined) is 628,437 with 4 Senators; 1 Senator for 157,000 residents. Population of Alabama is 3,061,000. One Senator for 1,537,500 residents; 1,537,500 divided by 157,000 equals 9.8 representing the average voting rights of the residents of Hawaii and Alaska as compared to 1 vote for the voter in Alabama in the election of the United States Senate.

Schedule B: Presidential electors for Hawaii and Alaska (combined) will be 7, or 1 for each 89,700 residents. Presidential electors for Alabama is 11, or 1 for each 278,000 residents; 278,000 divided by 89,700 equals 3.1 representing the average voting rights of residents of Hawaii and Alaska as compared to 1 vote for the voter of Alabama in the election of a United States President.

State and Territory	Population 1950 census	Number of presidential electors	A	B
			Voting power of average Hawaiian-Alaskan voter versus 1 vote for voters of other States for—	
			United States Senate	United States President
Alaska	128,643	3		
Alabama	3,061,743	11	9.8	3.1
Arizona	749,587	4	2.4	2.1
Arkansas	1,909,511	8	6.1	2.6
California	10,586,223	32	33.7	3.0
Colorado	1,325,089	6	4.2	2.4
Connecticut	2,007,280	8	6.4	2.8
Delaware	318,085	3	1.0	1.1
Florida	2,771,305	10	8.8	3.0
Georgia	3,444,578	12	10.9	3.3
Hawaii	499,794	4		
Idaho	588,637	4	1.9	1.6
Illinois	8,712,176	27	27.8	3.0
Indiana	3,934,224	13	12.5	3.4
Iowa	2,621,073	10	8.3	2.9
Kansas	1,905,299	8	6.1	2.6
Kentucky	2,944,806	10	9.4	3.3
Louisiana	2,683,516	10	8.5	3.0
Maine	913,744	5	2.9	2.0
Maryland	2,343,011	9	7.5	2.9
Massachusetts	4,690,514	16	15.4	3.3
Michigan	6,371,766	20	20.3	3.5
Minnesota	2,982,483	11	9.5	3.0
Mississippi	2,178,914	8	6.6	2.9
Missouri	3,954,653	13	11.3	3.4
Montana	591,024	4	1.9	1.6
Nebraska	1,325,510	6	4.2	2.4
Nevada	160,083	3	.5	.6
New Hampshire	533,242	4	1.1	1.5
New Jersey	4,835,329	16	15.6	3.3
New Mexico	681,187	4	2.2	1.9
New York	14,830,192	45	47.2	3.6
North Carolina	4,061,929	14	12.9	3.3
North Dakota	691,636	4	2.2	1.9
Ohio	7,946,627	25	25.2	3.6
Oklahoma	2,233,351	8	7.1	3.1

State and Territory	Population 1950 census	Number of presidential electors	A	B
			Voting power of average Hawaiian-Alaskan voter versus 1 vote for voters of other States for—	
			United States Senate	United States President
Oregon	1,521,341	6	4.9	2.8
Pennsylvania	10,498,012	32	32.8	3.6
Rhode Island	791,896	4	2.5	2.2
South Carolina	2,117,027	8	6.7	2.9
South Dakota	652,740	4	2.0	1.8
Tennessee	3,291,718	11	10.5	3.3
Texas	7,711,194	24	24.5	3.5
Utah	688,862	4	2.2	1.9
Vermont	377,747	3	1.2	1.4
Virginia	3,318,680	12	10.5	3.0
Washington	2,378,963	9	7.6	2.9
West Virginia	2,005,552	8	6.3	2.8
Wisconsin	3,434,575	12	10.9	3.1
Wyoming	290,529	3	.9	1.1

The representation in the United States Senate for Hawaii and Alaska is acquired by a corresponding reduction of the present power of representation of the people of the 48 States in that body today. The right of suffrage equal to that of 6,356,000 persons is taken from the 152,572,000 residents of the 48 States in varying percentage amounts and is transferred to the 628,437 residents of Hawaii and Alaska.

Statehood will give Hawaii and Alaska 4 votes in a Senate of 100 Members, or one twenty-fifth of the membership, although their combined population is only one two-hundred-and-forty-seconds of the population of the 48 States. This grant of one twenty-fifth of the membership in the United States Senate dilutes and diminishes by that fraction the representation in that body of the people of the 48 States.

POLITICAL POWER IN THE PRESIDENTIAL ELECTION, A MAJOR CONSIDERATION

The disproportionate advantage of Alaska and Hawaii would also apply in the presidential elections. Upon admission, these States would have a total of 7 electoral votes, an average of 1 electoral vote for each 89,776 inhabitants. The 152,572,000 people of the 48 States with a total of 531 electoral votes are entitled to 1 electoral vote each for an average population of 287,300. Thus, the voter in Hawaii and Alaska would have an average voting power in the election of a United States President 3.2 times greater than the average vote of the voter in the 48 States.

The comparison of the voting rights of the voters of Hawaii and Alaska combined with that of the people of the 48 States in presidential elections is contained in schodule B of the accompanying table.

The electoral vote of 2,011,100—7 electoral times 287,300 average population for 1 electoral vote—persons will be taken from the 152,572,000 residents of the 48 States and transferred to the 628,437 residents of Hawaii and Alaska. The disfranchisement of the residents of the 48 States applies not only to the executive branch but also applies to the judicial branch of our Government because the appointing power to the judiciary lies with the President.

The total electoral vote will be temporarily increased to 538 by the 7 electoral votes of Hawaii and Alaska. After the 1960 census, the House of Representatives would be reapportioned to reduce the temporary membership of 438 to 435. With the Senate increased to 100 members, the electoral college would be permanently increased to 535 members.

Although the combined population is only one-two hundred forty-second of the population of the 48 States, Hawaii and Alaska combined would enjoy one-seventy-sixth, or seven-five hundred thirty-fifths of the total voting strength of the 48 States in the election of a President. The right of suffrage of the 48 States in this respect is diminished by that fraction.

THE DILEMMA OF STATEHOOD

Congress is confronted with the unpleasant alternatives of continuing to withhold statehood and Federal representation for the Territories of Alaska and Hawaii or to grant statehood under terms that would unduly reduce the Federal representation of the people of the 48 States. Under present provision of the Constitution, a difficult choice must be made between the following alternatives:

A. By the denial of statehood:

First. Shall 499,794 citizens of Hawaii and 128,643 citizens of Alaska continue to be denied representation in the United States Senate and be limited to representation in the United States House of Representatives by a nonvoting delegate? and

Second. Shall these citizens continue to be denied representation in the executive and judicial branches of the Federal Government by the lack of suffrage in the election of a President? or

B. By the grant of statehood:

First. Shall the citizens of the 48 States be disfranchised to the extent of one-twenty-fifth of their representation in the United States Senate and shall that share of representation—possessed on an average by 6,357,168 citizens of the 48 States—be transferred to the 628,437 citizens of Hawaii and Alaska? and

Second. Shall the citizens of the 48 States be disfranchised to the extent of one-seventy-sixth of their electoral college voting rights in the election of a President and his appointment of the judiciary and shall that share of representation—possessed on an average by 2,011,100 citizens of the 48 States—be transferred to the 628,437 citizens of Hawaii and Alaska?

It is my conviction that neither alternative can wisely and justly solve this subverting dilemma.

POSSIBLE SOLUTIONS IN PROPOSED CONSTITUTIONAL AMENDMENTS

There have been a number of joint resolutions introduced in the House of Representatives proposing constitutional amendments to deal with the problem of statehood.

One group proposes to empower Congress to determine whether the newly admitted State shall have either no representation in the United States Senate, or 1 Senator or 2 Senators. While the intent of this resolution is laudable, the political pressures upon Congress would probably prevent a nonpartisan consideration of this determination.

The second group would provide for the admission of States by the same procedure that is required for an amendment to the United States Constitution. This proposal appears to be a procedural and not a substantive amendment. It would serve to erect an almost insurmountable barrier to statehood. The proposal has the advantage of placing the final decision of statehood in the State legislatures which represent the people affected more closely than either House of Congress. It offers no cure for the weakness of disproportionate representation.

The third, a resolution, House Joint Resolution 208, introduced by this writer, proposes a limitation upon representation in the United States Senate for newly admitted States. It would establish an inflexible standard of representation in the United States Senate on a basis proportionate to population. By its provisions, any State hereafter admitted, upon attaining a population of one-half of the average population represented by each Senator—1950 census: 794,646—would become entitled to 1 United States Senator. Upon attaining a population of 1½ of the average population represented by each Senator—1950 census: 2,383,938—it would become entitled to 2 United States Senators.

JUSTIFICATION FOR HOUSE JOINT RESOLUTION 208—PROPORTIONATE POPULATION REPRESENTATION IN UNITED STATES SENATE FOR NEWLY ADMITTED STATES

The Senate, today, in terms of power derivations, accountability and representation, constitutes another House of Representatives. Since the reason for equality of senatorial representation no longer exists, there is no further need for this constitutional provision. The only other tenable apportionment for the exercise of senatorial power is that of representation proportionate to population.

The proponents for statehood contend that Hawaii has a larger population than a number of States. They contend that it would be unfair to limit their senatorial representation as a condition to statehood. An adequate answer to this contention is that while article V of the Constitution prohibits depriving any State of its equal suffrage in the Senate, this protection does not apply to Hawaii and Alaska since they are not States and cannot be deprived of a power they do not now possess. It has been suggested that the present senatorial representation be rearranged. This is neither practicable nor constitutionally possible, since this protection of Senate suffrage is not amendable.

The farsighted statesmen who drew our Constitution were very careful to make this Constitution flexible enough to allow an amendment for the admission of States without the representation of 2 Senators.

The clause of article V of the Constitution, that no State, without its consent, shall be deprived of its equal suffrage in the Senate, carries a double connotation.

First. The Constitution cannot be amended to deprive any State of equal suffrage in the Senate, without its consent.

Second. The Constitution cannot be amended to deprive a State of its power to consent to be deprived of its equal suffrage in the Senate.

The farsighted vision of a possible gross inequality of representation in the Senate is confirmed by a study of the deliberations of the Constitutional Convention. In the considerations of the provision of article IV, section 3, that new States may be admitted by the Congress into this Union, the Convention deleted, by a 9-to-2 vote, a proposal to the effect that new States be admitted on the same terms with the original States.

The Constitution affords ample authority to justify an amendment to equalize, per population, senatorial representation for States to be admitted.

STATEHOOD POSSIBILITIES FOR DISTRICT OF COLUMBIA, PUERTO RICO, GUAM, VIRGIN ISLANDS, SAMOA

No one can accurately foretell what lands and peoples may seek statehood in future decades. The holdings of the United States, in addition to the trusteeship of the trust islands in the Pacific, are the incorporated Territories of Hawaii and Alaska, the vague Commonwealth status of Puerto Rico, the unincorporated but organized Territories of the Virgin Islands and Guam, and the unincorporated and unorganized possession of American Samoa.

The residents of these Territories all enjoy United States citizenship excepting those in Samoa who are classified as nationals.

The people of each of these possessions, and the people of the District of Columbia aspire to statehood. The Virgin Islands hints for a delegate to the House of Representatives. Delegates to both Houses of Congress have been proposed for the District of Columbia.

Each of these political entities are edging toward statehood. In the coming half century, Congress will be called upon to decide their fate without any principle to guide it in relation to representation in the Senate and the electoral college. Certainly, the determination should not rest upon the political expediencies that may exist at that time.

House Joint Resolution 208 would provide Congress with an equitable basis for the consideration of statehood and remove the problem of representation from the strains of party politics. It would establish a just and inflexible standard of equal application to all States hereafter admitted. It would lessen the clamor for statehood where it is sought primarily for the political powers inherent in two seats in the United States Senate.

OTHER ASPECTS OF STATEHOOD—ECONOMIC DEVELOPMENT

The proponents of Alaskan statehood claim that statehood would advance the economic development of Alaska. This hope does not conform to historical fact.

Hawaii and Alaska have had territorial status for about the same length of time. Yet, Hawaii has progressed at a far more rapid pace, economically, than has Alaska. Hawaii's economy compares quite favorably with that of the states. It is not the political status that accounts for the differential in the rate of their economic growth. The growth of Hawaii can be principally ascribed to favorable physical characteristics, the temperate climate and her arable lands.

THE VOTE IN ALASKA

The office of Delegate is the highest elective office in Alaska. The total vote cast for that office in the 1954 election was 26,999. This compares with the latest estimate civilian population of 132,000. No attempt will be made to analyze the reason for the meager ratio of vote to that of population.

When compared to congressional districts which cast from 150,000 to 200,000 votes, the voting differential is startling. This vote sharply and clearly shows up the fantastically excessive disproportionment of allowing 2 Senators to be elected by the choice of 27,000 voters.

LOSS OF INDIVIDUAL LIBERTIES, THE GROWTH OF NATIONAL POLITICAL POWER, THE REDUCTION OF STATES RIGHTS

The past 25 years, can be noted for the vast and alarming growth and concentration of power in the national Government. A parallel concentration continues to take place in the executive branch of our Government. These increasing concentrations of power coincide with a reduction of powers of the States, the loss of sovereign rights and liberties of the people and the deprivations of the legislative powers and responsibilities of Congress.

Statehood for these territories would accentuate the inequalities of senatorial representation. It would tend to strengthen the national concept and weaken States rights. It would increase the pace of nationalization of local government services and concentrate power in the federal government and in the executive branch.

There is no standard of measurement of political power. There is however a standard for the measurement of the exercise of power. This standard is the percentage of the national product siphoned off by our Government. The following table illustrates the increase in the Federal absorption of our national production:

Government expenditures and gross national product

[Dollars in billions]

Calendar year	Gross national product	Government expenditures					
		Amount			As a percentage of gross national product		
		Total	Federal	State, local	Total	Federal	State, local
1929	$104.4	$10.2	$2.6	$7.5	9.8	2.5	7.3
1930	91.1	11.02	2.7	8.2	12.1	3.0	9.1
1940	100.6	18.4	10.08	8.3	18.4	10.0	8.3
1950	285.06	61.2	40.9	20.2	21.5	14.4	7.1
1953	364.8	102.5	78.05	24.4	28.1	21.4	6.7

The above table indicates that Federal spending of our national production increased from 2.5 percent in 1929 to 21.4 percent in 1953. An increase of more than 8 fold. In the same period, the spending by States decreased from 7.3 percent to 6.7 percent of our national production.

The founders of our Constitution envisioned a Government of limited national power. The residuary power of the States was conceived to be far greater quantitatively than the powers granted to the Federal Government. The grant of two Senators to each State was based upon these assumptions. Appointment by legislatures was devised to safeguard this objective.

The above table proves that the exercise of Federal power, 21.4 percent of production, is more than 3 times the exercise of State power, 6.7 percent. This shift from State power to Federal power coincides with the alteration of our mode of selection of Senators from that of the legislatures to that of popular suffrage.

The equitable measure of representation for a dominant National Government is that of representation in proportion to population. That is the only possible protection of the majority of the people against the preponderant power of a minority of the people.

Statehood, by increasing the power of the minority, will tend to break down our two-party system. It leads to blocs and coalitions based on sectional and popular interests. The function of party organization to compromise between sectional and national interests is bypassed.

Instead of considering legislation in accordance with sound principle, excessive power encourages the consideration of legislation by political expediency and the pressures of the electorate. Theories are evolved afterwards to accommodate acts of political expediency.

The senatorial powers to be assigned by H. R. 2535 will not lie dormant. The powers of senatorial representation granted to these two Territories invite their abuse by reason of the fact that these powers are not coupled with corresponding and balancing accountability and responsibility.

For example, Alaska, with 2 Senators,

would possess one-fiftieth of the power to determine the expenditure of more than $60 billion per year. That share of power to spend is $1,200,000,000. Yet Alaska's responsibility for the collection of the amount to be spent, $60 billion, as represented by her Federal taxes, is only $48 million, or more than 1000 times less than the total national expenditure. Alaska's 2 Senators would be accountable to a population of 132,000—27,000 votes—although her 2 Senators would enjoy the senatorial power possessed on the average by about 3 million people of the Nation.

REPRESENTATION IN THE UNITED STATES HOUSE OF REPRESENTATIVES

This problem poses a number of unpleasant alternatives. The present bill would increase the members of the House by three seats allotted to the Territories. The membership of the House is increased from 435 to 438 Members. Although the membership of the House is to be increased, the increase is made not because of any advantages or need to increase the size. In fact, the present limitation of 435 Members was a careful decision as to the maximum desirable membership. The proposed increase by three seats is provided in this bill for the purpose of accommodating the proposed new Members. It is intended to anticipate the necessity for reducing the Representatives from other States if the membership is permanently limited to 435 Members.

Hawaii bases her claim to 2 Representatives upon the United States census population figure of 499,794. The latest estimate of her population would indicate that after 1960 her representation would probably be reduced to one Representative. Yet the membership of the House is being permanently increased by 2 seats to accommodate Hawaii's proposed Representatives and 1 seat to accommodate Alaska's Representative although, as of today, Hawaii is only entitled to 1 Representative.

If H. R. 2535 is amended so that the increase of membership in the House is temporary and will be reduced to 435 after the 1960 census, then the additional representation from Hawaii and Alaska will be included at the expense of representation from some other State. That reduction will probably be at the expense of those States who have failed to increase their population in pace with the national rate. The States that have shown a loss of population between the 1950 Census and the July 1, 1952 estimates are:

State:	*Loss in population*
Maine	22,000
New Hampshire	1,000
Vermont	7,000
Iowa	13,000
North Dakota	17,000
West Virginia	36,000
Tennessee	32,000
Mississippi	15,000
Arkansas	65,000
Oklahoma	9,000

If the membership of the House is retained at 435 by an amendment in the House or Senate, then we commit ourselves to reducing the representation of other states by either 2 or 3 seats to be allotted to these territories.

The Federalist Paper No. 58, warns us against a multitudinous representative assembly. Excessive numbers leads not to democratic processes but, on the contrary, to government by the few.

The latest United States census population estimates—1954—for these Territories are:

Alaska, civilian	132,000
Alaska, military	50,000
Alaska, total	182,000
Hawaii, civilian	467,000
Hawaii, military	55,000
Hawaii, total	522,000

Due to our military bases, the ratio of military personnel to the civilian population is far greater in these Territories than exists in the other states. The military personnel consists of citizens and inhabitants of the 48 States. Yet, the census makes no differentiation but adds the military population to the civilian in computing their entitlement to representation. This method violates the intent of amendment 14, section 2 of our Constitution.

Article II, section 2 of the proposed Hawaiian Constitution provides:

> No person shall be deemed to have gained or lost residence simply because of his presence or absence while employed in the service of the United States.

Thus we find that both Federal civilian and military personnel are excluded from the right of suffrage by this section. Yet their numbers are added to establish a base for Hawaii's entitlement to representation in the United States House of Representatives.

This section would appear to constitute an abridgement and denial of the right to vote. If so, then amendment 14, section 2 provides that the basis of representation shall be reduced in proportion. This writer suggests the desirability of congressional action to conform the apportionment of representation in Hawaii and Alaska with the requirements of amendment 14, section 2 of the United States Constitution.

The Alaska Statehood Committee reports that Alaska is politically impotent in Washington because it has no voting representative in either House of Congress.

During this writer's short tenure here, both Hawaii and Alaska have had the benefit of the finest, most capable, and diligent Delegates. They would bring honor to any constituency. They have distinguished themselves by outstanding service to this Nation and to the Territories they represent.

Most Representatives are limited to serving on one standing committee of the House. These committees very considerably in the volume and importance of the legislation referred to them. The distinguished Delegates from Hawaii and Alaska enjoy the unique advantage of membership on three major committees: Agriculture, Armed Services, and Interior and Insular Affairs. The Delegate from Alaska, in addition, serves on the Merchant Marine and Fisheries Committee.

Their service on these committees gives them the advantage of an association with fellow committee members which no other Representative enjoys. This opportunity enhances their influence and power.

The great mass of decisions made by Congress are made without a vote. The influence upon legislation in Congress cannot be measured by the right to vote. It is not a pleasant task to vote in opposition to measures which have adverse political repercussions for a fellow member of the House. It is not conducive to political good fellowship. The distinguished Delegates are saved from this necessity. When balanced out, the disadvantages of the lack of a vote are far outweighed by the advantages accruing to the delegates.

CONCLUSIONS AND RECOMMENDATIONS

The following conclusions and recommendations are respectfully submitted to this committee as an equitable disposition of this problem:

First. Statehood for Hawaii ought to be deferred until she has unquestionably eliminated communistic influences in her political, economic, and social structures.

Second. Statehood for both Hawaii and Alaska should be deferred pending the adoption of an appropriate constitutional amendment to provide for representation in the United States Senate on a basis proportionate to population.

Third. If statehood is to be granted upon the basis of equal representation in the Senate, then admission should be approved by three-fourths of the States pursuant to a constitutional amendment providing for the admission of States by the same procedure that is now required to amend our Constitution.

Fourth. Congress should immediately grant to each Territory the autonomy of statehood with full power of self-government in such form as may be recommended by the Territories.

The autonomy would include (a) complete executive power with the right of election of Governor; (b) full legislative power over all Territorial affairs, including public lands, fisheries, and subsurface resources; and (c) exclusive judicial jurisdiction.

Fifth. The enactment into Federal statute of such reasonable restrictions, comparable to limitations in their proposed constitutions, as may be recommended by the Territories to safeguard individual liberties and to insure a republican form of government.

Sixth. The immediate and outright grant to Alaska of specifically described public lands to be selected by the Territory from vacant, unappropriated, and unreserved lands, not to exceed 20 million acres.

Seventh. Grants of $7 million each year for a period of 5 years to defray the cost of governmental services assumed from the Federal Government.

This solution would strengthen and unify this Nation in the years to come. It would help preserve the rights of the States and the liberties of our people. The cause of justice and freedom would be advanced.

Foreign Aid as Seen by the National Federation of Independent Business

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. GWINN. Mr. Speaker, we have more than 4 million small and independent business men in the United States and these are the first to feel a depression. Out at the crossroads of America they wait and watch as buying declines and inventories mount, so they too stop ordering except such items as are needed from a day-to-day basis. Many of these small-business men are members of the National Federation for Independent Business with offices in various parts of the United States, including one here in Washington which is headed by Mr. George J. Burger, national vice president.

The National Federation for Independent Business polls its membership on every important economic issue including such things as foreign aid, fair trade, and the extension of the reciprocal trade agreements act. Recently Mr. George Burger appeared as a witness before the Senate Foreign Relations Committee and testified as to the results of the poll on House Joint Resolution 66 which I had the privilege of introducing. Mr. Burger's testimony before the Senate committee follows:

FOREIGN AID

(Statement of George J. Burger, vice president, national Federation of Independent Business, Washington, D. C., before Senate Foreign Relations Committee, April 2, 1958)

I am George J. Burger, vice president and Washington representative of the National Federation of Independent Business. I am appearing here solely for the membership of the federation.

We represent independent business and professional people in all vocations from all parts of the country. We have the largest directly supporting membership of any business organization in the country.

Our position on legislation is dictated directly by our membership. We poll our members on all important issues, and are committed by their majority vote. No officer or group of officers is permitted to speak or act officially for the federation until our entire membership has been polled.

Our members were polled through mandate No. 229 (official publicat'on of the federation) on House Joint Resolution 66 introduced by Congressman RALPH W. GWINN, a bill to amend the Constitution to prevent our Government from giving or lending money or materials to countries which still owe us money. The result of this poll, as it appears in mandate No. 230 shows: 70 percent for, 21 percent against, and 9 percent no vote.

It is to be noted on the mandate the instruction is given to the members: "Before voting, see arguments 'for' and 'against.'"

Within the past 60 days we polled our members through mandate No. 236 on President Eisenhower's proposal that Congress vote an increase in foreign aid this year. The result of this poll as it appears in mandate No. 237 shows 17 percent for, 77 percent against, and 6 percent no vote.

At this point, Mr. Chairman, I ask the privilege to have placed in the record of this hearing mandate bulletins Nos 229 and 236, which present the arguments for and against each proposition. Based on these votes expressed by our nationwide membership, the National Federation of Independent Business is opposed to further aid to countries who still owe the United States money and is against any increase in foreign-aid spending this year over last.

Mr. Chairman and members of the committee, bear in mind these views, coming from the grassroots of our Nation, all small-business and professional men, certainly should be noted by the Congress before any further action is taken. If the Congress deems otherwise, then it would be our opinion, in the best interest of small business and large business, that definite instructions be given by the Congress, as it relates to the operations of the International Cooperation Administration during this lull in our domestic economy, that all authorizations of ICA be channeled through American industry. Why do we say this? In reviewing the releases from ICA, we note quite frequently the source of supply is worldwide.

Here's a good example: Release from ICA dated March 24, 1958, authorizes supplies for Iran:

Iron and steel materials: $1,000,000; source, worldwide.

Motor vehicles, engines, parts: $3,999,000; source, worldwide.

Tires, tubes, repair material: $4,470,000; source, worldwide.

Mr. Chairman, we understand that Iran is one of the oil producing countries in the Middle East and it's hard to believe that that government would be in need of this aid from our Government at the expense of the American taxpayers. Further, we believe that this business, in these three commodities, accruing to American industry during this temporary recession would be a very helpful action upon the part of our Government.

As to the overall action of the International Cooperation Administration, I would like to have the privilege to file with the committee at the completion of my statement the complete text of a letter I directed to Mr. James H. Smith, Director of International Cooperation Administration, on February 12, and a letter received in answer from the ICA under date of February 24.

I quote in part from my letter of February 12:

"I am just wondering, at this time, in view of the recession in our domestic economy, as reported in the press, whether any consideration is being given by the agency as to diverting the source of supply from World Wide to our domestic producers."

I quote in part from the answer I received from ICA:

"In response to your inquiry whether this agency has under consideration a change in the source of supply from World Wide to our own domestic producers in view of the condition of the domestic economy as reported in the press, it should be mentioned that the policies of this agency are under continuing review. However, it is not anticipated that a change will be made in our policy regarding the source of supply for the reasons outlined below."

"A number of segments of United States industry have expressed the opinion that since the American taxpayer is paying the bill, American industry should be given priority on all procurement. The Mutual Security Act was not intended as a support for domestic industry. To make it such, even if only as a byproduct of our mutual security program, will not only make it more expensive for the American taxpayer, but in some measure defeat the purpose and objectives of much of the economic aid given since 1948."

Mr. Chairman, it is reported in the CONGRESSIONAL RECORD of March 11, 1958, Appendix page A2255, remarks of Congressman RALPH GWINN, and I quote:

"A check of the records indicates that during the period of World War II and in the postwar period to June 30, 1957, the American taxpayers have supplied more than $134 billion in aid to foreign governments and their peoples."

We put the question to the Congress, How long can the American people be "lady bountiful to the world?"

We continually read in the press that unless we continue this foreign-aid program that the Soviet Government will master the world. We wonder.

In this, it is interesting to note that only a short while ago a retired businessman, in conversation with me and others, stated that during his recent visit to the Middle East, Egypt, he mentioned to the Egyptian, "What was the reaction in Egypt when our Government failed to go through in building the dam?" The Egyptian replied, "Well, if we don't get it from your Government we will get it from Russia." He said to the Egyptian, "I am giving you a self-addressed envelope and will you drop me a line when the Egyptian Government gets that aid from Russia." He remarked that he is still waiting to get a reply.

In conclusion, Mr. Chairman and members of the committee, the American people as a whole would never deny aid irrespective of where the aid is needed that is where starvation, etc., is prevailing within a nation, but on the other hand, we are wondering whether under the subterfuge of necessary aid we may be building up the economy of nations throughout the world all at the expense of the American economy and if such action may act as a boomerang to us.

At least a correction should be made in the operation of the International Cooperation Association if foreign aid is to be continued. This in itself would be some relief for the American taxpayers and American industries.

A Businessman Evaluates Our Trade Development Missions

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 29, 1958

Mr. O'HARA of Illinois. Mr. Speaker, Thomas P. Collier, one of my constituents, is a businessman with 20 years of international experience and world travel. He has served his country with distinction as a member of a trade development mission, meeting businessmen of foreign countries for the purpose of promoting better commercial relations with the United States.

By unanimous consent, I am extending my remarks to include an interesting and informative letter from Mr. Collier relating his experiences and observations as a member of the United States Trade Mission to the Netherlands in the spring of 1957. The letter follows:

MY DEAR CONGRESSMAN O'HARA: I have a feeling that many of our Congressmen, including our people back home, do not have an understanding or even an appreciation of the tremendous value in the United States participation in international trade fairs

and on the economic trade missions. I would like to have the opportunity of relating some of my personal observations in this connection.

International trade fairs are a well established means of displaying and marketing merchandise in many areas of the world. They have been going on for hundreds of years. These are very important commercial functions attended by millions of people and also have high political and social, as well as economic value. Public Law No. 860 has established permanent authorization for participating in these fairs, and from every aspect, as far as I have been able to determine, results to date have been outstanding.

United States trade missions are an integral part of this program, providing American information and counseling services at the fairs and similar commercial service in other selected countries offering opportunity for increased United States trade and investment. These economic trade missions have been outstandingly successful and have made great contributions to American foreign trade as well as to our international relations.

As you know, Congressman O'HARA, the trade mission itself is made up of American industrial and commercial leaders whose success within the framework of the United States free-enterprise system has shown them to be exceptionally well qualified to accomplish the mission's objectives. Further, these business members are chosen from the American business community on the basis of their proven ability in fields in which the host country is known to need practical guidance and counsel. The mission is headed by a career Department of Commerce official who has devoted many years to trade promotion functions and who is well versed in United States international commercial policies.

I think that everyone will agree that the Netherlands has always been a very close and friendly ally of the United States of America. They are an equal partner in NATO. They have consistently supported us in our overseas endeavors. They are very grateful, and have used extremely well the funds made available to them under the Marshall plan. However, there were many misconceptions as to American trade policy, American governmental policy as regards the restrictions of imports into America, our quota systems, our complicated customs laws, our tariff systems, our pure food and drug laws. Consequently, our objective, as a group, was selling. We were selling our Government's sincerity and interest in promoting two-way trade. We were also selling the democratic philosophy of our Government and our people; we were selling the free and competitive enterprise system.

On many occasions, we were told by Dutch business leaders and people in many walks of life that they were amazed that businessmen, such as we, would be willing to take away 5 or 6 weeks from our business, at no salary, and in some cases at considerable personal sacrifice, in order to come over there to help them solve a business problem or to give them a better understanding of how America does business abroad as well as at home. This person-to-person relationship of American businessmen meeting their counterparts in the Netherlands has a terrific effect of bringing about a better understanding and a mutual respect for the aims and ideals of the country that we represented.

We spoke before members of the local chambers of commerce, industry federations, manufacturers' organizations, export and import groups, trade associations, and engaged in many private discussions with individual businessmen who had specific problems which they wanted solved on the spot.

Here is a program that virtually costs the United States Government nothing. Competent businessmen whose services could not be bought at any price, or whose experience could not be made available in any other manner, are freely offering their talents, experience, and good will in order to make better friends for America abroad and to increase their understanding and appreciation of the American way of life.

Many of us who have gone on our first mission have come back so enthusiastic for this type of a program, and the accomplishments that we were able to make, that we are willing to volunteer for another assignment abroad even though it represents considerable personal sacrifices and hardship on our part and the company that we work for.

I hope that Congress will never see fit to decrease its interest or funds in the international trade fairs and the United States trade missions; on the contrary, I hope that this can be expanded, as it is a demonstrable way to prove that we are sincere and that we, unlike the Russians, don't give promises of help but actually go out and do a job with no personal or self-interest involved.

I thank you for your considerations, Congressman O'HARA, and the fine support that you have always given to sound programs that will be beneficial to our international relations.

Respectfully yours,

THOMAS P. COLLIER.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Congratulations to Minnesota on Its Centennial

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 6, 1958

Mr. WILEY. Mr. President, I should like to convey my warmest felicitations to the government and people of the great State of Minnesota on the occasion of the celebration next Sunday, May 11, of its 100th anniversary of statehood.

We of Wisconsin, next-door neighbors to this great commonwealth, know from firsthand experience the beauties of the State, the friendliness of its people, the diversity of its contributions to America.

We of Wisconsin share with Minnesota a great many features, and that is why we feel particularly close to her in ways both spiritual and geographic.

We share her balance in industry and agriculture. We share her enjoyment of the Great Lakes as a mighty artery at our doorstep. We share her liberal tradition. We share her tradition of progress in human relations and of clean government.

We share here interest in tourism as a great industry.

We share peoples of common ancestry from abroad.

But mostly we share the bedrock traditions of the Middle West, of which we are both proud—part and parcel of the American way of life.

The eloquent words which have been spoken here on the floor by legislators from that great State do not need much amplification on the part of her friends and neighbors.

Ten years ago we of Wisconsin celebrated our centennial. We know that now, as Minnesota blows out the 100 candles on her birthday cake, she enters on her second century, as we of Wisconsin did, with hope high and confidence in the future.

During the coming weeks and months a great many visitors will be gathering in Minnesota. I know that they will enjoy their stay there. I know, too, that many of them will, no doubt, want to extend their visit to the Midwest by taking in the Badger State, as well.

A little later on, this month, it will be my pleasure to comment a bit about my own State, and what it has to offer to visitors from other States.

For the present, however, I should like to bring to the attention of my colleagues a brief article which describes three of the attractions of my State which opened last Thursday, May 1, and which I know many visitors to the Minnesota centennial will want to take in, as well.

These sights, too, are part of the great Middle West tradition which our sister State celebrates.

I send to the desk, therefore, the text of this article from the April 30 issue of the Janesville Gazette. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the news article was ordered to be printed in the RECORD, as follows:

WISCONSIN'S BIG THREE HISTORIC SITES TO OPEN FOR SEASON THURSDAY

The village blacksmith no longer stands under the spreading chestnut tree; the rough-and-ready days of the fur trader are gone; and the era of stagecoach travel is over (with few to mourn its passing).

But the flavor and history of these three periods is still alive. It is captured and preserved for modern generations at Wisconsin's big three historic sites: Stonefield Farm and Craft Museum, elegant Villa Luis, and colorful Old Wade House.

Opening day for all three sites operated by the State Historical Society of Wisconsin is May 1. They will remain open until November 1.

SHOES FOR THE VILLAGE BELLE

New projects are under way at Stonefield, the spacious Mississippi plantation estate built by Wisconsin's first Governor, Nelson Dewey. The site, located just outside Cassville, Grant County, will soon open a complete 19th-century village.

The Stonefield Village will have board sidewalks and old-fashioned street lamps; it will have a working telephone system of 1890 vintage, and it will have full-size stores and shops—a doctor's office, pharmacy, barber shop, general store, and printshop.

Already on display in the Stonefield Farm and Craft Museum are the life-size, working model shops of yesterday's skilled craftsmen: the shop of the blacksmith whose hammer and sparking anvil once attracted throngs of small onlookers; the harnessmaker who supplied graceful buggy whips for the carriage trade; the village butcher and the cooper; and the cobbler who tapped out high button shoes for the village belle.

Now this year is a miniature working model of an early lead mine, an industry once vital in the Stonefield area.

Thousands of pioneer farm implements and household goods (12,000 items have been catalogued this year and the job is not yet completed) are also on display at Stonefield, presenting a picture of early settlement along the middle border during the last century.

VELVET IN THE WILDERNESS

Less than an hour's drive from Stonefield is Wisconsin's elegant symbol of Victorian life and culture, the nationally famous Villa Louis at Prairie du Chien.

Built by an early fur trading agent, Col. Hercules Dousman, the mansion was outfitted with the finest furnishings of the period: marble, crystal, delicate china, fragile stemware, deep Brussels carpeting, and ornate velvet upholstered sofas.

Little has changed within the villa during its 115 years of existence: The lavish interiors are as brilliant today as they were in 1843, when the villa was completed. The plush home had no peer on the Prairie du Chien frontier during its heyday of hospitality and it is still considered a site of major historical significance.

Tours of the villa include a visit to the adjoining icehouse (which provided summertime air conditioning for the villa 100 years ago), the wine cellar, business office and the Museum Prairie du Chien.

PATCHWORK QUILTS AND PEWTER

The third member of Wisconsin's big three sites is located in eastern Wisconsin, halfway between Fond du Lac and Sheboygan—Old Wade House, the century-old stagecoach inn.

Attending the dedication of Old Wade House 5 years ago, Chicago poet Carl Sandberg termed it "an outstanding restoration. * * * There is nothing to compare with it in the Middle West."

The Wade House has been impeccably restored down to the last wooden peg, pewter pitcher and handmade patchwork quilt. Its first floor waiting room, dining hall and taproom appear today as they did back in 1852 when pioneer Sylvanus Wade opened the inn for stagecoach trade.

Upstairs the colorful rooms with small iron stoves (many of them rare collector's items), bright quilts, cornhusk mattresses, and butternut woodwork reflect the life and times of mid-America during the last half of the 19th century.

Located in a small but beautifully landscaped State park, Old Wade House today is receiving thousands of guests who arrive in the comfort of modern automobiles instead of the careening Concord stages that once rattled up to the inn's entrance.

Guided tours are available daily, from 9 a. m. to 5 p. m., at each of the sites. Admission is 15 cents for children and 60 cents for adults.

Jefferson-Jackson Day Dinner Address by Dean Acheson

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 6, 1958

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by former Secretary of State Dean Acheson at the Jefferson-Jackson Day dinner held in Detroit, Mich.

In the course of this address, Mr. Acheson raises some important and stimulating considerations in the new economic challenge of the Soviet Union. Moreover, he points to the need for the free world to pull together its resources and combine its vigor in the task of economic development which the next decade and generation imposes upon us. He points effectively to the importance of achieving greater economic liquidity

within the western alliance and to the increase of capital export, private and governmental, over the next years. He also illustrates how capital exports are not mere giveaways but also can add growth and balance to our own economy.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF THE HONORABLE DEAN ACHESON AT JEFFERSON-JACKSON DAY DINNER, DETROIT, MICH., MAY 3, 1958

Jefferson-Jackson Day dinners are times of celebration. This is not only because Democrats are happy and optimistic people who like to celebrate. It is also because they have had plenty to celebrate.

Of the last 14 national elections, the Democrats have won 11½. The one-half represents the 1956 election, in which the Democratic Party won the Congress but lost the White House. Curiously enough a good many Republicans think that they lost it too.

At any rate, 11½ wins out of 14 contests is a pretty good record anywhere. It shows that Democratic leadership and administration were strongly approved by the people they served. And such a long record of popular approval strongly suggests that Democratic performance was good.

Once again the prospects of victory look most promising. This time the performance to be judged by the voters will be that of the Eisenhower-Nixon administration, and this time the record is one of incompetence, lassitude, and failure, at home and abroad. These failures have affected every one of us. We are caught at home in steadily worsening economic conditions; and face abroad growing Soviet strength relative to our own, at the same time that inept and foolish actions have impaired the confidence of our friends and weakened our alliances.

Politically we Democrats have cause for optimism. We had better enjoy it, because it is about the only cause for optimism I can see. Everything else desirable is, we are told, just around the corner—as, for instance, business upturn; or just about to go up—as at Cape Canaveral; or just about to come down—as with taxes. We seem to be long on prophets, just at present, and short on performers.

So it would be pleasant at this time, when the anguish and sweat of the campaign is still a little distance away, to sit and enjoy the prospect of victory, or, at most, to recount lovingly the more luminous follies of the present administration.

But, unhappily, life does not stand still. There is much to be done in Washington; and no virile leadership from the executive branch. The Democrats control the Congress and, hard as it is for Congress to initiate, not only without executive help, but often over executive opposition, it must do so. No one else will; and both our livelihood and our security depend on prompt and vigorous measures by the Government.

The next 3 years seem to me very critical years. Within this time continued execution of our military and foreign programs in the feeble and absent-minded manner of the past 5 years could leave us practically disarmed in a nuclear world. For the drift into the position where our nuclear striking power could be destroyed, is to permit ourselves to be disarmed. Furthermore, to dilly-dally with this recession, as was done between 1929 and 1933 with another, could produce disaster for us and for the economic system of the whole free world.

A good deal of our present trouble—aside from the fundamental do-nothingism of the Eisenhower-Nixon administration—comes from regarding the problems we face, at home and abroad, as a series of isolated and unconnected pains. Nothing could be more wrong. They are all evidence of the state of health, or lack of health, of the great community of free and non-Communist peoples. Also what needs to be done at home and abroad is all one policy needed to keep this great area economically expanding and militarily secure.

We are faced by a comprehensive task. It is with others to fashion a workable and working system of free nations from societies shattered by two World Wars—to enable these nations to pursue their own ends in their own way, and to become secure against the domination of the Soviet Union.

This requires economic, military and political policies which will make this free, non-Communist society a desirable one to live within. By desirable we mean that it should offer to all who have the will, and can develop the skill, the opportunity for economic improvement, without the necessity of adopting the autocratic methods of communism or accepting Soviet overlordship. We mean, further, that this free world shall contain within it the military strength to defend itself. And we mean, also, that the nations of the free world shall follow political policies which so far as possible—man being what he is—will bring to the free world system harmony, mutual respect, and opportunity for diverse development.

This is, you may say, a pretty tall order. And, indeed, it is. But nothing short of it will do. The Soviet Union is a dynamic, powerful, and ruthless state. If the non-Communist nations should fall apart from lack of leadership, strength, or confidence in themselves, they could easily come within the domination of the Soviet Union. In that case, the scales of power would be so weighted against us that the problem of maintaining national and individual liberty within this hemisphere would be quite unmanageable.

Furthermore, to strengthen and develop the free world is quite impossible unless the United States continues to grow in strength and productive capacity. An American Government which cannot keep our own country in healthy growth will not succeed any better abroad. We are seeing this unmistakably demonstrated today.

The United States is the most powerful economic unit in the free world. The volume of its exports, imports, and overseas investments carries far-reaching consequences to every country of the free world. Whether or not the free world will have a workable economic life, offering hope to the millions who control governments throughout the world, depends, first, upon the state of affairs in the United States, and, secondly, upon whether the United States will provide loans to finance the export of capital and will make possible international trade by which other countries can earn dollars.

This concerns us deeply because, if nations in Europe and Asia cannot find economic progress and development within a system which our sheer bulk dominates, their peoples will demand other decisions which may be disastrous to them and to us. It would be sheer stupidity for us to force these decisions.

The issue will be determined in the next 3 years by a Government in which the Democrats will control Congress, and no one, apparently, will control the executive. If the decisions are wrong, the blame will be placed on the Democratic Party by the Republican candidate, Mr. NIXON. President Eisenhower, he will canonize as a martyr—and forget.

Moreover, there is a degree of rough justice in holding a party responsible which has sought and obtained responsibility for legislation, knowing the magnitude of the problems and the absence of Executive leadership. We cannot object to being judged by the manner in which the party discharges this responsibility.

We shall be judged first by how the Democrats in Congress deal with the depression. Or rather, not so much how they will deal with it, but when and how vigorously. For there seems to be a great area of agreement about what needs to be done. The economists and Democratic leaders who have appeared before the Congress speak pretty much the same language as the conservative and diversified panel of the Rockefeller brothers fund which reported 2 weeks ago. Some of the measures so uniformly recommended—a highway program, urban renewal programs, Federal aid in unemployment compensation, and so on—have already been put on the way to action by the Democratic majority in Congress. Others, such as tax reduction, which seems to be recommended almost universally, are—so the President indicated on April 23—under discussion between the Democratic leaders and officials of the executive branch.

We can all appreciate the importance of getting the agreement and cooperation of the officials who must carry out whatever measures Congress may enact. But too high a price can be paid for it.

The best measures lose their potency in geometric proportion to the delay in applying them. Public confidence, so large a factor in the battle, is lost as the procession of depressing statistics is accompanied by the chant that we have reached the bottom, the downtrend is flattening out. Next month, so the refrain goes, always next month, will see the upswing. If things get really bad, we are told, then the economy will be given powerful injections. I can think of no talk more likely to give the patient heart failure at the sight of the hypodermic. When it appears, he will know that he must, indeed, be in dreadful shape.

So it is sound economic and governmental policy to act with promptness and vigor. I submit, also, that the minimum political safety requires it. For, if delay in recuperative measures deepens the depression, it will be the party in control of Congress which will get the blame. Of course, we must expect the reverse, also. When the economic situation is saved by vigorous Democratic action forced upon a reluctant administration, all the massed choirs of Madison Avenue will sing hallelujahs to Republican doctrine. But we are a sorry lot of debaters if we allow a singed public to be taken in by this.

What is difficult is not to decide upon the measures needed to stop the economic downtrend and restore the forward movement. The hard task is to summon the resolution to act now and vigorously. Let us all support to the full our fellow Democrats in Congress in doing this.

To stop the economic decline and start a strong recovery is only a beginning. The greater task is to increase the rate of growth of American productive capacity and production. This has been Democratic doctrine for 25 years. Now for five we have been relearning that to achieve the rate of growth demanded requires managerial leadership, brains, and energy in Government. Business and finance left to themselves will not produce it.

The Rockefeller panel reports that, even with full employment and the highest rate of growth attained in recent years, "our capacity would be far below our desirable objectives." These objectives include, as they must, our defense requirements, our foreign-policy needs, other governmental purchases of goods and services for all sorts of needs, private investment to support growth, and the expanding individual consumption needed for rising standards and rising population. We simply cannot meet these needs unless our capacity to produce is greatly stimulated—and this stimulation must spring from a government that believes in it.

It will not come from a government whose leader takes as his text, as General Eisen-

hower did last week, the immortal words of Mr. Conway, the Cadillac dealer from Cleveland, "What we need now is more and better salesmanship and more and better advertising of our goods."

The great increase in Soviet productive power—perhaps the most spectacular in history—has made this growth an imminent necessity. More conservative estimates than mine would be have placed essential needs over the next decade, apart from individual consumption, at about double the amount of the national product which is going into them today. This could not be met out of a national product the size of last year's without a sharp cut in consumption. Even if our present rate of growth continues, we could not meet these needs and still allow for our present consumption standards applied to an increased population. Unless we achieve an even higher rate of economic growth, "we shall," in the words of the report, "have to hold back otherwise desirable expenditures in the Government field and keep the growth of private expenditures below a level commensurate with our aspirations."

To achieve America's aspirations has been Democratic Party doctrine since its foundation in 1792. Our task remains to give opportunity and stimulation to the dynamism and enterprise of our people. Today the growth of Soviet power and the drive to extend the scope of Soviet overlordship is, perhaps, the most pressing reason for swift economic recovery in the United States, for a quickening of our rate of growth, and for policies which will make possible a vigorous and expanding free-world economy. Only the Democratic Party can summon the will and capacity to do this. The test of the party will lie in whether it does.

At present the economic system of the free world is not in good shape. Without vigorous and imaginative action it is likely to get worse rather than better.

If we ask why this is so, the answer must begin with two central facts. The first I have just given you. The productive capacity of the United States—and the same is true of Europe—is not great enough without stimulated growth, to perform the tasks which lie ahead.

The second lies in defects in national economic policies and in the institutions for providing credit internationally. Today nearly half the total exchange resources of the world are held by the United States and Germany. Neither the United States nor Germany is behaving like a creditor nation. I shall come back to this.

On the other hand, the United Kingdom's reserves are half those of Germany and less than 4 percent of the total, despite the fact that sterling finances 40 percent of world trade. The need for increasing the United Kingdom's reserves runs directly counter to the need for extending credit for the export of capital, the essential means of industrialization in underdeveloped countries.

In these dry and obscure economic facts could lie the epitaph of the free world. Peoples everywhere demand an expanding life. Khrushchev promises the faithful and the uncommitted that Communist economics will produce this result. Only a blind man can doubt that it is turning out an impressive performance.

Only a blind man can also doubt that the free world is not doing the job. The job will not be done unless we—and the Germans, too—awake to the urgent necessity of three drastic steps.

These are, first, a substantial increase in the export of capital, both governmental and private, from North America and Western Europe; then, a substantial increase in imports into dollars areas, chiefly the United States; and, finally, an overhauling of our international financial institutions, principally the International Monetary Fund, to make possible the expansion of world exchange reserves and the provision of more credit where it can be most effective. This last must await an administration more alive to the world in which we live. I shall not discuss it further here.

These do not sound like words to inspire men to charge barricades. But, if the barricades to expansion remain, there are bad days ahead for the free world, already ringed about with troubles.

The export of capital means the production and shipment abroad on credit—or, in the postwar years, as gifts—of plant and equipment for industrial use. This has two important consequences. Producing these goods uses and expands the heavy industry and employment of the developed creditor country which does the producing. It enables an undeveloped country, which has skilled labor and management, to get plant and machinery for its industrialization. This is the way our own country and others were developed in the 19th century.

Another way of development, if a country has the natural resources, is the way Russia developed in the 20th century; that is, by having dictatorial power restrict the consumption of the people to the minimum and then use the rest of the national production for new plant and equipment. If a country does not have large natural resources as, for instance, China, it may have to adopt this latter course and, also, be dependent on the Soviet Union for exports of plant and equipment.

The Soviet Government is well aware of this. Since 1953 it has put out $1.6 billion of capital export commitments in 19 countries under the supervision of over 2,000 Soviet technicians. This could be the course of such countries as India, Brazil, the Philippines, and others, if the free world economic system should not operate effectively.

Governments which do not respond to the economic needs of their countries do not stay in power. The Republicans are finding this out in the United States today.

The development-loan-fund provisions of the mutual-security bill now before Congress meet some of this need for export of capital. The administration is asking $625 million this year. In my judgment the amount should be at least twice, and probably, three times as much.

These funds, with private investment added, represent what the economic giant of the free world makes available to expand production abroad. An idea of the seriousness of our concern with our responsibilities may be gathered by two other statistics. The amount asked from Congress to develop the free world is one-sixteenth what we in this country spend on tobacco and liquor. The other figure is that, if the same proportion of United States resources were invested abroad as the amounts Britain devoted in 1913, the entire Marshall plan would have to be carried out twice a year.

Figures of his magnitude are neither necessary not possible. But our present program is inadequate because so many of our people have been led to believe that the production of goods for export on credit is, in some way, at the expense of the American worker. But does anyone in this State seriously doubt the vast benefit its citizens have received from the purchase and export by foreign aid programs over 9 years of $3.1 billion of motor vehicles, iron and steel items, machinery, and chemicals, not to mention $9 billion of other industrial and agricultural items?

In 1955, the last year for which we have figures, over 30,000 workers in this State were employed on manufacture of goods involved in this program, which should be 2 or 3 times as large. Here is one policy which happily combines the expansion of employment and plant in our own and other developed countries with the expansion of employment and plant in undeveloped countries. It happens also to be essential to the development of free world power, stability, and a sense of common interest.

All this is true also of an increase in world trade by means of an increase of imports into dollar areas. There is no question about the need and desire of foreigners for goods from the dollar areas. People everywhere are eager for all our manufactured goods and farm products that they can pay for. But what people can pay for and the loans they can service depend on the number of dollars they can earn.

People can earn dollars only by selling us something. They want dollars only to buy from us. Here, then, is an economic exchange which is essential to the health of the free world and can bring us nothing but good. Since the money of foreigners who want to buy from us is not legal tender in the United States, and since counterfeiting is frowned upon, they have to earn dollars. So they propose to sell us something. They can only do this if what they offer is different from, or better or cheaper than, domestic products. Here the American purchaser cannot lose.

But, some of our producers argue that foreign wages are lower than American and that imports will ruin us. This is not only an odd argument in view of the acknowledged superiority of American productivity, but it is a demonstrable absurdity. Foreigners sell to us in order to buy. The annual value of what they buy is greater than what is spent on all home building in the United States or on new automobiles, or for farmers' crops or livestock. It has been estimated that if there were no tariffs at all on industrial products—which is not proposed—about 140,000 workers would be affected.

Furthermore, if we want to preserve an uneconomic venture for military reasons, we should subsidize it. We would then know exactly what we are doing, how much it costs, and not be undermining the economic foundations of the free world we are seeking to defend.

The application—I should hope the enlargement—of these essential measures for the strengthening of the free world economic system, recovery, growth, capital export, and increased trade, are before Congress now. They provide immediate opportunities and tests, not only for Democrats in Congress, but for all of us Democrats on the voting front. If we are fortunate enough to have representatives in the House and Senate who understand and will fight for these principles, let us encourage and support them with all our power. If we are so unfortunate, as I am, not to have representatives of this kind, let us get out and work for different and better ones.

1958 is going to be a Democratic year. We are going to increase the Democratic majorities in both Houses of the Congress. We are going to have more Democratic governors and give them more support in their legislatures. But, remember, we must have quality in this increased quantity. An isolationist or—if I may use a word which a well-known gentleman says he did not use—a squirrel-head is not much better for carrying a Democratic label; and sometimes he is worse. He may bring trouble on all of us.

So choose carefully, think carefully, and then go to work. We have a great and difficult task before us in these next 3 years. It is the task of saving the country and the international situation, despite the paralysis of the executive, and of insuring that in 1960 the people will return administration of affairs to those who will go forward once again with vigor and understanding.

Good performance will not necessarily insure Democratic victory in 1960, but it is an indispensable condition to any moral right to ask for it, or reasonable expectation of achieving it. Then, and only then, will our

party have the right to say to the present incompetent and irresolute drifters who occupy, but do not fill, the executive offices in Washington, in the contemptuous words of Cromwell to the Long Parliament:

"You have sat too long here for any good you have been doing. Depart, I say, and let us have done with you. In the name of God, go."

Improvement of Unemployment Benefits

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, May 6, 1958

Mr. NEUBERGER. Mr. President, as the current recession continues, the extension of unemployment benefits becomes one of the major issues before the Senate. This is particularly true in view of the recent action by the House in adopting legislation in this field, although I fear the House-passed bill is neither adequate nor fair in many of its essentials.

Because of the urgent importance of this entire issue of unemployment compensation, I would like to call to the attention of my colleagues a comprehensive article on unemployment insurance by Mr. George Brown, who is director of the political education department of the Oregon State Labor Council, AFL–CIO. Mr. Brown is also a member of the National Advisory Council on Unemployment Insurance, appointed by the United States Department of Labor.

I regret to add that Mr. Brown has intimate personal experience with the urgency of this problem, because our State of Oregon has been more hard hit by unemployment over a longer period of time than almost any other State in the Nation, due to the adverse impact of the housing slump on Oregon's vital lumber industry. Therefore, Mr. Brown's observations in this field are not merely academic, but spring from the grassroots where many workers in Oregon have already exhausted their unemployment benefits.

Mr. President, I ask unanimous consent that an article by Mr. George Brown, entitled "We Need Stronger Jobless Insurance," as published in the Oregon Labor Press of May 2, 1958, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WE NEED STRONGER JOBLESS INSURANCE

(By George Brown)

(This is the first in a series of articles on unemployment insurance by George Brown, director of the political education department of the Oregon State Labor Council, AFL–CIO. George Brown is exceptionally qualified as an expert on unemployment insurance because of his long and careful study of the subject and because he is a member of the United States Labor Department's National Advisory Council on Unemployment Insurance. In this and subsequent articles he will discuss the urgent need for a stronger unemployment insurance program in Oregon and in the Nation as a whole.)

The seriousness of the recession confronting the entire United States at the present time has pointed up the need for improving and strengthening our unemployment insurance laws.

Several bills have been introduced in Congress which provide for either temporary or permanent relief from the present inadequacy of State unemployment insurance laws and which attempt to correct that condition.

The administration has made one proposal of relief, and it is strictly a relief measure, not permanent correction of our law. The administration proposal simply provides for a temporary extension of benefits equal to 50 percent of the total number of weeks of benefits which an individual claimant would be entitled to.

The proposal provides further that this shall be a loan to the individual States and not an outright grant on the part of the Federal Government.

The proposal is not a sound one; first, because the extension of benefits is upon an inequitable basis and adds to the disparity between individuals drawing unemployment insurance. Under Oregon law, claimants are entitled to benefits for a period of a little more than 12 weeks as a minimum, and 26 weeks as a maximum. Under the President's proposal, this would mean an extension of benefits of 6 weeks to one individual and 13 weeks to another.

It is further an unrealistic proposal because the State of Oregon had to borrow $14 million from the Federal Government to prevent the suspension of experience rating under Oregon law, which would have resulted in further harm to our economy had the $14 million not been obtained. This money will have to be paid back in 4 years, and the administration proposal would simply add to the indebtedness of the State of Oregon and make it extremely difficult to repay the entire loan.

KENNEDY BILL IS BEST

There are several bills in Congress which provide for a temporary extension of benefits of 13 weeks as an outright grant of the Federal Government. That approach is much more realistic than the one the administration has proposed, but still provides for only temporary relief.

Students of unemployment insurance have strongly endorsed the establishment of permanent Federal minimum standards, such as those contained in the Kennedy bill, Senate bill 3244, and the McCarthy bill, House Resolution 10570. These bills, which are companion measures, provide for permanent improvement and minimum standards to be established. These standards would go into effect 60 days after the date of enactment of such legislation, and, until July 1 of 1959, the cost of the additional program will be paid by the United States Government. After that time it shall be the responsibility of the States.

The general terms of the Kennedy bill provide for an increase in maximum unemployment benefits to two-thirds of the average weekly wage of the State, or one-half of the individual's average weekly wage, whichever is the lesser.

It provides for a uniform duration of 39 weeks. Uniform duration means that any individual qualified for unemployment insurance shall be entitled to a potential of 39 weeks regardless of his base year earnings.

FEW DISQUALIFICATIONS

The bill also provides any payment under supplementary unemployment benefit plans will not be cause of a reduction in unemployment benefits provided by the States.

The measure provides further that a claimant will not be denied unemployment insurance when a strike results from the failure or refusal of an employer to conform to Federal or State laws pertaining to collective bargaining, wages, hours, or other conditions of work, or the failure of an employer to maintain for his employees wage rates, weekly earnings, hours, and other conditions of work substantially less favorable than those prevailing for similar work in that locality.

It provides for a 1-week waiting period within the benefit year, a flat period of 4 weeks of disqualification for voluntarily leaving work, refusing to accept suitable work, or discharge for misconduct. It provides a maximum penalty of 12 weeks for any cause.

Uniform provisions are established for eligibility as determined by the individual State law. Where the State law requires a multiple of the weekly benefit amount, the maximum of such multiple is set at 30 times. Where State law requires a high quarter formula as a standard of eligibility, the maximum shall be 1½ times the high quarter earnings. Where State law provides for flat number of weeks to determine eligibility, the maximum shall be 20 weeks of employment.

MORE WORKERS COVERED

Finally, the Kennedy bill provides for extended coverage to groups not now covered, and for coverage of all employees (one or more) in those categories that come under the law (an additional 1.8 million workers).

The New York Times has stated that the establishment of Federal standards in the unemployment insurance field is long overdue. Recently a panel of 19 of our leading university economists from Harvard, Yale, Princeton, Minnesota, Duke, Cornell, Massachusetts Institute of Technology, and others, have concluded that failure to establish Federal standards for minimum contributions has resulted in the steady deterioration of the many State systems because the States have competed in reducing benefit rates rather than attempting to carry out the essential purposes of the unemployment insurance law.

These experts also declare that the long-standing lack of Federal standards has resulted in defects in the unemployment insurance systems today and cannot protect our citizens in times of heavy unemployment.

COVERAGE WEAKENED

They traced the downgrading of unemployment insurance to interstate competition which has resulted in inadequate benefit scales, inadequate duration of payments, arbitrary eligibility requirements and arbitrary disqualifications. These defects have seriously weakened our unemployment insurance system as a first line of defense against protracted unemployment and as an element of stability in our economy.

Finally, they give this warning in relation to the administration's inadequate proposal of a temporary relief measure: "Without Federal standards, the United States is ill-prepared for recurrent recessions. A hasty and plausibly generous gesture of Federal relief payments under the guise of insurance benefits does not make up for essential weaknesses in the established program."

Democrats and Labor Racketeers

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Tuesday, May 6, 1958

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an article entitled "Democrats and Labor Racket-

eers," written by David Lawrence and published in the Washington Evening Star of April 29, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEMOCRATS AND LABOR RACKETEERS

(By David Lawrence)

The Democrats in the Senate voted almost unanimously to prevent the enactment of legislation that would prohibit labor racketeering. They won the vote this week, but they may have cost themselves the 1958 elections.

For the Democrats, in control of both Houses of Congress, have refused to allow remedial laws to be passed to rid the country of abuses of power by labor unions. This means that, in the campaign this autumn, in the big cities and particularly where the high cost of living hurts most, the Democrats who are candidates for Congress will be confronted with the argument that they aided the forces which have brought on the present recession. People with fixed incomes—and there are from 15 million to 20 million of them throughout the country—will be hearing speeches, mostly from Republicans, telling how the monopolistic power of labor unions has forced the present trend of inflation in America.

Within the last few days Charles C. Abbott, dean of the Graduate School of Business Administration at the University of Virginia, declared before the Senate Finance Committee:

"If the current recession deepens, I would raise a question whether economic historians may not label it the first union-made depression in our history."

Dean Abbott said that this spring a group of the most distinguished economic analysts to be found in our universities has been invited to lecture at the University of Virginia and that 10 of the guest lecturers have already appeared. He added:

"I have been impressed by the extent to which they ascribe many of our present economic difficulties to the exercise of monopolistic powers by trade unions. There is general agreement on the process through which these difficulties are generated. Under threat of strike, unions extract wage increases and other benefits from the economy that are in excess of increases in productivity. These wage increases inevitably push up prices when, as is the case in this country, there is a flexible money supply. That is why the kind of inflation we have today is increasingly referred to as a wage-push inflation and, incidentally, this type of inflation cannot be solved through monetary and fiscal policies alone."

Many Members of Congress of both parties feel something should be done to curb the monopolistic power of unions, just as the antitrust laws prevent corporations from exercising price-fixing powers. But the political strategy of the Democratic leadership has been mistakenly based on a belief that the issue is not very important and that the efforts of men like Senator KNOWLAND of California, Republican, to get something done about it do not have nationwide support.

It is significant that, on the question of requiring labor unions to conduct elections of their officers by secret ballot, at least once in 4 years, only one Democrat—Senator LAUSCHE, of Ohio—voted with the 36 Republicans who wanted such an amendment adopted. It is significant also that 10 Republicans—5 of whom are up for reelection this autumn—went along with the Democrats.

The excuse given, as Senator KNOWLAND rightly labels the strategy of the majority, is that the bills had not had adequate study in committee. Hence, promises were broadcast by the Democratic leaders that they would bring out a bill later on in this session. The betting today is that, if the Senate passes a bill, the Democratic leaders in the House will kill it. For the truth is the alliance of the Democratic Party in Congress with the labor-union bosses is still very strong. Even the southern Democrats, it is reported, felt they had to go along with the northerners this time, largely because of a belief that the Democratic Party control of Congress and their own committee chairmanships could only be retained that way.

The battle between the conservatives and the so-called liberals in Congress, many of whom depend on labor-union money to win elections, is going to be vigorously waged this autumn in several places where the Democrats hitherto have thought they could win easily. The sentiment of the Nation today, especially among the fixed-income groups as well as among housewives generally, is against those who are responsible for the union-made recession. There are many homes, too, where the union worker finds his wife wondering whether his union dues are being misused or embezzled, as the recent exposures have shown.

It looks now as if only by the election of enough new Members in Congress—committed to legislation that abolishes the labor-union monopoly—will there ever be any chance of getting relief from the wage-price spiral and inflation.

Opposition to Right-To-Work Legislation

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 6, 1958

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the appendix of the RECORD the joint statement of the Montana congressional delegation, Senator MIKE MANSFIELD, Representative LEE METCALF, Representative LEROY ANDERSON, and myself, in opposition to right-to-work legislation.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

We unalterably oppose any so-called right-to-work legislation.

We do so for the following reasons:

1. The real purpose of right-to-work laws is to weaken unions and reduce the effectiveness of collective bargaining, thus decreasing even more the income of workers who already, particularly in our State of Montana, are suffering from the effects of the recession.

2. Imposition of right-to-work laws hurts farmers, small-business men, professional people, and other unsuspecting victims as well as members of labor by reducing workers' purchasing power and volume of business they create. These groups have been hurt badly already by the administration's devastating farm and hard-money policies.

3. Under democratic procedures the will of the majority should prevail. In 46,000 plant elections conducted by the National Labor Relations Board, on approval of negotiated union shop agreements, 97 percent of the workers voted for the union shop. This overwhelming endorsement led Congress to the conclusion that further elections on this issue were a waste of time and money and so it removed a requirement that they be held.

4. The union shop does not restrict the right to work of those willing to share in the cost and effort of working together for mutual benefits.

America's prosperity—Montana's prosperity—rests in good measure on the gains agreed to by employers and employees bargaining together. Let's keep it that way. Let us all, instead of tearing down labor's and the Nation's gain, join in redoubled efforts to achieve full employment for American workers, develop our resources, expand our industries and thus create an abundance in which all America may share.

Senator JAMES E. MURRAY.
Senator MIKE MANSFIELD.
Representative LEE METCALF.
Representative LEROY ANDERSON.

A Wage Program That Could Stop Inflation

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 6, 1958

Mr. PROXMIRE. Mr. President, an article by Mr. Harold J. Ruttenberg in the current Reader's Digest proposes some ingenious and constructive measures to encourage economic growth without inflation. The problem of keeping our cost of living within bounds while pushing our standard of living and our military strength full speed ahead is a prime economic problem of our time. This is why I have introduced a resolution calling for an investigation that may help the Congress establish policies that will foster growth and stability. Mr. Ruttenberg makes an unusually helpful contribution to this objective. In proposing productivity wage increases, however, he still leaves us with a problem which the great economist Sumner Slickhter called to my attention at Harvard 12 years ago: Would not such wage increases provide a disproportionate benefit to those workers who happen to be in industries which are enjoying technological advance, and heavy gains in productivity, while workers in industries in which technology plays little part could receive no corresponding benefit from the national improvement in productivity?

Mr. President, I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A WAGE PROGRAM THAT COULD STOP INFLATION

(By Harold J. Ruttenberg)

During the 1930's, when wage inequities were being eliminated, working conditions modernized, wages raised and hours shortened, I asked my elders in the labor movement a simple question: What do we do when these failings of management have been corrected?

The answer was direct, simple, and continues as union policy to this day: "We shall keep right on asking for more. Our job is to get as much for our members as we can squeeze out of the companies. It is an easy job, as, once we get a new and better con-

tract, we have no further responsibility. It is entirely up to management to find the means to pay the rising wage bill every year."

This program of more pay for less work, already obsolete in the late 1940's, is today untenable.

Many of the increases in labor costs during the 1930's and early 1940's were made possible by the full utilization of productive capacity that was underutilized before the war. But after the war the constantly rising basic wage rates and fringe-benefit costs could be offset in only three ways:

By increasing productive efficiency.

By the efficient and full utilization of new capacity.

By increasing prices.

Each time wage increases not justified by productivity are followed by price rises, the unions are plundering every American who lives on a fixed income; that is, all the millions who do not enjoy the privilege of having the increases in their cost of living automatically covered by cost-of-living wage increases. I do not believe that the companies and unions in the basic industries can long sustain their positions of insulation while the rest of the 173 million Americans are exposed to the ravaging effects of spiraling wages and prices.

More than a decade ago I felt that unless the unions' program was modernized, the labor movement would become the victim of the sterile, intellectually bankrupting influence of its own great power. And so it has come to pass.

The next big step forward, therefore, must be initiated by the leaders of industry. A new and fundamental program for collective bargaining is the answer.

Industrial leaders should propose the following to their employees and unions:

To pay higher wages for more production.

To provide maximum capital for the purchase and installation of equipment to increase production.

To organize practical means for all employees to cooperate with management to increase production.

To enlarge existing, and create new, training schools for the dual purpose of operating new equipment at maximum production, and retraining for new positions those managerial and operating employees whose jobs have been replaced by new equipment or methods.

To negotiate a practical measurement of increased production so that productivity wage increases can be made semiannually to the extent that production has been increased, such increases to be paid one-half in direct wages, one-half in a separate fund to increase fringe benefits.

This proposal would increase employees' real purchasing power, enable management to absorb productivity wage increases through increased production, provide customers with products of higher quality at existing or lower prices, and let stockholders enjoy a portion of the benefits of increased production through higher dividends.

Isn't this a program worth considering?

Veterans' Hospital for South Texas

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 6, 1958

Mr. YARBOROUGH. Mr. President, the 14th and 15th Congressional Districts of Texas, with a population of approximately a million people, embrace 32 counties and a total of 34,168 square miles. Yet in all of this area there is not a veterans' hospital, and some veterans needing medical attention must travel over 400 miles to get it.

Two bills have been introduced in the House on this subject and I have introduced a bill in the Senate. My bill would provide for construction of a 300-bed Veterans' Administration hospital in this area. Such a facility is badly needed.

Recently the Veterans' Affairs Commission of Texas, meeting in Austin, passed a resolution endorsing the construction of a Veterans' Administration hospital in south Texas. I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD the text of this resolution.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

A RESOLUTION ENDORSING THE CONSTRUCTION OF A VETERANS' ADMINISTRATION HOSPITAL IN SOUTH TEXAS

Whereas the need for a Veterans' Administration hospital in south Texas has been established and proven by the fact that many veterans have been denied hospitalization benefits as it is impossible to travel the distance now involved and on several occasions veterans have died en route to other Veterans' Administration hospitals; and

Whereas south Texas veterans are being hospitalized in State and county hospitals and required to pay hospitalization where adequate facilities and doctors are not available; and

Whereas two bills are now in the United States House of Representatives, Veterans' Affairs Committee, and a similar bill is also before the United States Senate in respect to building a 300-bed Veterans' Administration hospital in south Texas; and

Whereas the South Texas Veterans Alliance is composed of all-veteran organizations and organized for the purpose of securing a Veterans' Administration hospital for south Texas; and

Whereas the Veterans' Affairs Commission of the State of Texas is vitally interested in any program of assistance to veterans and working in close conjunction with the service organizations, is well aware of the inadequate hospital facilities in south Texas: Now, therefore, be it

Resolved, That the Veterans' Affairs Commission in meeting assembled in Austin, Tex., this 23d day of March 1958, go on record as endorsing and giving full support to the efforts of the South Texas Veterans' Alliance in their attempt to secure adequate hospitalization for the veterans of south Texas.

E. L. JACKSON,
Chairman, Veterans' Affairs Commission of Texas.

Attested by:

CHARLES L. MORRIS,
Executive Director, Veterans' Affairs Commission of Texas.

Dwindling Assets

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 6, 1958

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Dwindling Assets," from the May 5, 1958, issue of Barron's, National Business and Financial Weekly.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DWINDLING ASSETS

From the frozen Yukon to Africa's sunbaked Rand, one of the oldest and most valued of all commodities, gold, lately has been much in the public eye. At home, as the United States struggles through its most severe postwar slump, mining of the yellow metal, the so-called contrary industry, has begun to prosper. Producers such as Homestake in this country and Giant Yellowknife in Canada recently have watched their shares scale new heights. Kaffirs like West Driefontein and President Brand also show buoyancy. Unfortunately, the news about the precious metal is not all cheering. Some disturbing shifts, in fact, have begun to show up in its international flow. Specifically, thus far in 1958, gold has been pouring out of the United States Treasury in quantity, steadily depleting the vast hoard in the vaults at Fort Knox.

The significance of this trend, however, seems to have been lost on most observers. Even such an authority as Federal Reserve Board Chairman William McChesney Martin last week shruggest it off as inconsequential. Surely, though, it should not be ignored. For America's sudden loss of gold sounds a clear warning. On the one hand, it demonstrates that quite a few foreign nations are in much better shape economically than often is supposed. The celebrated dollar gap which hampered their trade in the early postwar years—and again during the Suez crisis—now has been closed. The United States, on the other hand, is revealed to be less robust financially than it usually is pictured. Indeed, the gap now is starting to yawn in the opposite direction. This sharp turnabout brings forcibly to mind Lord Keynes' caustic phrase describing the United States, as a "high-living, high-cost" nation. It's time, then, to recognize that today's open-handed economic policies, at home and abroad, fast are becoming luxuries which the country no longer can afford.

The record of what has been happening is clear enough. For the past 25 years, the flow of gold into the United States has been so nearly constant as to produce an occasional embarrassment of riches. Only a few times has the long-term trend been interrupted, notably during World War II and the Korean conflict, when the United States drew down its gold stock rapidly in the scramble for raw materials and other supplies. The recent shift, then, represents a conspicuous departure from previous peacetime experience. Yet there is no disputing the evidence. During January 1957 the United States gained $310 million in gold; in March of this year, it lost nearly $250 million. Indeed, in the first 4 months of 1958, the outflow already exceeds $750 million. For the year as a whole, it easily could run as high as $2 billion.

In this remarkable turnabout, technical factors, to be sure, play a part. As the tight-money policy of the Federal Reserve has given way to increasing ease, many foreign holders of short-term dollar claims have chosen to switch to gold. But the reasons for today's loss also run deeper. The United States simply is paying out more dollars than it earns. During the slump, imports have held up relatively well, falling barely 5 percent from last year's lofty level. Exports, in contrast, have shrunk a phenomenal 18 percent. Actually, since official statistics include the whole gamut of economic aid and farm surplus disposal, in addition to commercial sales,

the true picture is even worse than it looks. True, America's gold stock, at nearly $22 billion, still appears ample to support the Nation's credit structure. Nonetheless, it is the downward trend which is significant, not to say ominous.

John Maynard Keynes, for one, would have had no trouble in diagnosing what ails the United States. Fundamentally, it is a growing inability to compete on equal terms with foreign producers. Most American farmers, for example, long have huddled under the double shelter of import restrictions and export subsidies. The automakers, who enjoy no such protection, have seen the United States, traditionally the world's leading exporter of cars, turn into its biggest importer. In diesel locomotive and in machine tools, European competitors are making headway, some even selling in the American market. Only recently, giant General Electric besought Washington for some insulation against overseas producers of turbines and transformers. Looking to the future, Britain is challenging the once impressive United States lead in nuclear power.

The dreary picture is highlighted by some World Bank statistics, pinpointing how the proceeds of its foreign loans have been spent. In the 7 years through June 1954, borrowers the world over spent no less than 65 percent of their funds for goods made in the United States. In fiscal 1955, that proportion dropped to 54 percent, and in the latter half of calendar 1956 to less than 48 percent. In the first quarter of this year, America's shares plummeted to 33 percent.

Faced with the loss of business here and abroad, many domestic industries plead tirelessly for price supports and market quotas, export subsidies, and buy-American legislation. All these supposed panaceas, however, not only are extremely expensive, but also threaten to make the illness worse. For at bottom it is the inflated costs of doing business that make this country vulnerable to competition from many a less wealthy nation. Everyone knows, of course, that United States wages are unparalleled elsewhere. It is equally significant that, owing to Government supports and subsidies, many manufacturers also have to pay far more than the world price for raw materials like cotton and nonferrous metals. Thus in seeking to pacify one pressure group after another, Washington merely has succeeded in hobbling American business more severely in the unending race for world markets.

What is happening to the flow of gold, then, discloses certain fundamental dislocations within the economy. Under the lead of Democrat and Republican alike, Washington in the postwar years has piled Pelion on Ossa in economic commitments at home and abroad. Yet the resources of even the wealthiest nation, it is well to remember, are not limitless. Before this continuing drain begins to jeopardize the Nation's credit, it is imperative to pause and take stock. For the gold now ebbing away symbolizes the loss of something even more vital: the very qualities and strengths that once gave America its competitive edge.

Judge Richard Henry Alvey, Distinguished Son of Maryland

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, May 6, 1958

Mr. BEALL. Mr. President, following the death in 1906 of Judge Richard Henry Alvey, a former chief justice of the Courts of Appeals of Maryland and the District of Columbia, one of his colleagues in the judiciary eulogized him as follows:

His work speaks for itself. In a word, his opinions as reported are not excelled in the judicial annals of the State, or by the judgments of any other judge where the English tongue is spoken.

This is high praise, but it is a historical fact that the remarkable Judge Alvey was entirely deserving of it. Here was a man worthy of emulation, not only by his contemporaries, but also by today's generation and those of the future. Therefore, I ask unanimous consent that a biography of Judge Alvey be printed in the Appendix of today's RECORD. It was prepared by Ruth Worthington Pfeil (Mrs. Robert H. Pfeil), of Middletown, Md., a granddaughter of the late Judge Alvey.

There being no objection, the biography was ordered to be printed in the RECORD, as follows:

JUDGE RICHARD HENRY ALVEY, DISTINGUISHED SON OF MARYLAND

At Leonardtown, on March 6, 1826, Richard H. Alvey first saw the light. His forefathers had come to Maryland in 1634, with Leonard Calvert, and several had served as soldiers in the American Revolution. Richard H. Alvey was the son of George and Harriet Wicklin Alvey, who were highly regarded because Mr. Alvey both taught school and acted as the justice of the peace in Leonardtown.

With this background, young Richard attended the school taught by his father. His father's law library was his chief delight and, as he grew older, Richard spent more and more time studying his father's law books. He was sent to Charlotte Hall Academy, in St. Mary's County, to continue his studies.

By 1844, having reached the age of 18 years, he decided that practicing law must be his vocation. With that object in mind, he went to Charles County, where he studied law at night and became the deputy clerk, and later the clerk, of the circuit court of Charles County. He was admitted to the bar in Charles County in 1849. The next year he moved to Hagerstown, where he began practicing law and acquiring many friends.

Soon after settling in Hagerstown, Mr. Alvey was nominated by the Democrats for State Senator from Washington County. Judge French, a popular Whig, was his opponent. Washington County at that time was strongly Whig, and the result was a tie. Then a second election was held, and Judge French won by a few votes.

In 1852 Richard Henry Alvey was nominated as a Pierce presidential elector, and canvassed Maryland thoroughly. This time the voters gave him a large majority.

Shortly after coming to Hagerstown, Richard H. Alvey met Miss Mary Wharton, the daughter of Dr. James O. Wharton, a prominent physician. The young couple were much attracted to each other, and in 1856 they were married. A little daughter was born to them, and their happiness seemed complete. But fate decreed otherwise, for Mrs. Alvey passed away in 1860, when only 26 years of age, and her little daughter soon followed her.

At this time there was a wide breach in the hitherto serene life of the period in Maryland. Situated as it is between the Northern and the Southern States, and with the Nation's Capitol within its borders, there was bitter feeling between Maryland's Northern and Southern sympathizers on many questions.

On April 19, 1861, Union troops came to Hagerstown, and bitterness ran high between the two factions. As Mr. Alvey had not hesitated to express his views on States rights, he was hated vindictively by the Union sympathizers. The Union soldiers decided to capture him as a prisoner, but had no legal grounds upon which to arrest him. Therefore, they resorted to a trick, as a result of which Mr. Alvey was taken to Union headquarters and subsequently transferred to the Hagerstown jail, then to Fort McHenry, near Baltimore, then to Fort Lafayette, in New York State, and finally to Fort Warren, off the coast of Massachusetts. In the following February 1862, he was allowed freedom, but only as a parole prisoner.

After Mr. Alvey returned to Hagerstown, he became acquainted with Miss Julia Jones Hays, daughter of Dr. Joseph C. Hays, of Sharpsburg, Washington County, Md. She admired the brilliant lawyer for his courageous stand on his convictions, and when he asked her to marry him, she accepted. The wedding took place in St. John's Episcopal Church, in Hagerstown, on November 2, 1862. This marriage was a most happy one. Ten Alvey children made the welkin ring through the house.

In 1865, the War Between the States now over, all the Southern sympathizers were disenfranchised, and deprived of many of their rights as American citizens. Richard H. Alvey, having suffered much himself, was among the first to work in behalf of the many fine citizens who had been excluded from serving on a jury. He drafted the present jury law in force in the counties, and attended the legislature of 1867 to work for its passage. The new law was passed as he had prepared it.

This same legislature of 1867 called the constitutional convention which framed the present constitution of the State of Maryland. Richard H. Alvey was sent to the convention as a delegate.

With the new constitution in force, he became a candidate for the position of chief judge of the fourth judicial district, composed of Washington, Allegany, and Garrett Counties; and simultaneously, as associate judge of the Court of Appeals of Maryland. He was elected by a splendid majority in the fall of 1867, and again, after a 15-year term, in 1882.

Upon the retirement of Chief Judge Bartol, of the Court of Appeals of Maryland, Judge Alvey was called to be chief justice of the Court of Appeals of Maryland by Gov. William T. Hamilton, his former law partner.

In 1893 President Cleveland organized a new court for the District of Columbia, and invited the distinguished jurist of the Court of Appeals of Maryland to be its first chief justice. Judge Alvey accepted this honor with pleasure.

Judge Alvey presided on the bench in Washington for 11 years. He also acted as chancellor of the National University of Washington, and lectured to the law students.

President Cleveland in 1896 again honored Judge Alvey by appointing him a member of the Venezuelan Boundary Commission, which was set up to investigate the boundary between Venezuela and British Guiana.

In June 1902 Princeton University conferred upon Judge Alvey the honorary degree of Doctor of Laws. St. John's College, at Annapolis, Md., on June 15, 1904, also bestowed the honorary degree of Doctor of Laws upon him.

Judge Alvey retired from his last important office of chief justice of the Court of Appeals of the District of Columbia on December 30, 1904. At home again in Hagerstown, the judge lived quietly with his family on Prospect Street. On September 14, 1906, after a short illness, Judge Alvey passed away at his home.

Political Significance of Rockefeller Economic Report

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 6, 1958

Mr. PROXMIRE. Mr. President, the Rockefeller Economic Report was a magnificent contribution to an understanding of the great economic problems facing this country and Congress. At the time the report was published, I noted that it was immensely heartening to find the seasoned, practical, successful businessmen, who took part in writing the report advocating policies of bold economic aggressiveness, policies very similar to those of the New Deal and the Fair Deal.

One of America's greatest columnists, Miss Doris Fleeson, commented in the Washington Star last night on the great political significance of this report. Miss Fleeson said:

It demonstrates that the Democrats cannot count on a monopoly of liberal and progressive ideas in national campaigns no matter how many Republicans coalesce with southern Democrats in Congress. It shows that a Republican presidential candidate who strikes out as the champion of economic growth and expansion can count on very telling support.

Mr. President, I ask unanimous consent that the article written by Miss Fleeson be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PARADOX OF THE ROCKEFELLER REPORT—IDEAS IN DOCUMENT NOTED AS EVIDENCE OF RISING LIBERALISM WITHIN GOP

(By Doris Fleeson)

The conservative manner in which President Eisenhower handles the Government economy, including the recession, has been highlighted from an unexpected source. It is the Rockefeller report which, as its name suggests, is the work of important men identified with large vested interests and strongly oriented toward the Republican Party.

Naturally the antirecession measures suggested in their bulky document got the headlines, especially as their tax cut proposal seemed to cut across the President's program. The business and financial community has since had time to give the report more intensive study and is voicing some arresting conclusions.

One is that, far from attacking the welfare state, the report takes the country further and faster along that path than Roosevelt and Truman did. The evidence:

The report states as a fact that the Nation is dedicated to economic growth and full employment and that to this end real wages out to be doubled in 30 years with a possible rate of growth of 5 percent a year.

By contrast the President has referred to the recession as a minor emergency we are meeting internally. He dwells upon each bit of evidence that the climb back to the old plateau may have begun and has offered no growth plans.

Detailed forms of desirable Government regulation of the economy are set forth also in the Rockefeller report, including use of the taxing power and monetary and fiscal policy. The Federal Government is urged to take the lead in transportation policy, land and water use on a national scale, urban problems, and various other social needs.

The Rockefeller planners do not, of course, represent all of business, and their philosophy is perhaps overweighted with the ideas of Eastern internationalists. But they are a sufficiently inclusive group to prove that a revolution in the thinking of important business interests has taken place since President Roosevelt took office.

That they are interests which intend to be counted in American politics can hardly be denied. They supported in large part the Eisenhower candidacy and it is an irony of history that at this point the Midwest smaller business backers of the late Senator Taft—like former Treasury Secretary Humphrey—seem to have the greater influence now with Eisenhower on economic matters.

What the report does in a broad sense is accept it as proved that this Nation is in a race for expansion with the Soviet Union. In its details it sets up a timetable and direction signals for that race.

Politically its significance is twofold. It demonstrates that the Democrats cannot count on a monopoly of liberal and progressive ideas in national campaigns no matter how many Republicans coalesce with southern Democrats in Congress. It shows that a Republican presidential candidate who strikes out as the champion of economic growth and expansion can count on very telling support.

Service by Schoolteachers in State Legislatures

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, May 6, 1958

Mr. NEUBERGER. Mr. President, in my State of Oregon an unfortunate constitutional provision has acted to bar schoolteachers from serving in the Oregon State legislature, despite the desirability of having their knowledge and education and idealism in the halls of government.

In fact, the Oregon Education Association is currently circulating an initiative measure to correct the present regrettable situation.

For that reason, I am delighted that the distinguished Governor of Maryland, the Honorable Theodore R. McKeldin, declared on May 4 that it is not only permissible but highly desirable that schoolteachers serve in the legislature of the State of Maryland.

Therefore, Mr. President, I ask unanimous consent that an article pertinent to this matter from the Washington Post and Times Herald of May 5, 1958, entitled "Teachers in Legislature Endorsed by McKeldin," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEACHERS IN LEGISLATURE ENDORSED BY MCKELDIN

BALTIMORE, May 4.—Gov. Theodore R. McKeldin said today:

"It is not only permissible but highly desirable" that schoolteachers serve in the Maryland Legislature if they have the inclination and are elected.

The Governor took an opposite stand from his State superintendent of schools, Dr. Thomas G. Pullen, in a speech recorded for radio broadcast here.

Dr. Pullen had ruled that J. P. Carlton, agriculture teacher at Southern High School in Lothian, could not serve in the house of delegates from Anne Arundel County if elected and take leave of absence during legislative sessions. He said schoolteachers are State employees and barred by the constitution for serving in the assembly.

"Certainly public-school teachers of Baltimore City and the counties are not employees of the State," said McKeldin, emphasizing the "not." "And even if they were, there is precedent for State employees, as distinguished from State officers, obtaining leaves of absence from their regular posts for legislative service.

"If a teacher were to be barred from seeking or occupying a seat in the assembly because of his or her status as a city or county employee, then there are holders of other public positions who should not have served in past sessions, and who should now either resign from the legislature or from their regular jobs."

McKeldin's comments, in the seventh of a series of weekly broadcasts he is making on public issues, obviously stemmed from questions raised by Carlton's bid for public office, but he did not mention the candidate by name.

Effects of the Recession in Massachusetts

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, May 6, 1958

Mr. KENNEDY. Mr. President, the Commonwealth of Massachusetts has been among those States to suffer most during the current recession. One out of every 14 of our workers is currently unemployed and several of our most important industries have long been in serious economic trouble.

John C. Cort, in an article in the Nation, describes the situation in Massachusetts graphically.

I ask unanimous consent that the text of this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Nation of April 5, 1958]

BOSTON: 45,300 JOBLESS

(By John C. Cort)

BOSTON.—Last week I was talking to a friend, a man with five small children who had recently lost his job. He said, "After the first week out of work the tension starts creeping up the back of your neck and goes right to the top of your head. And the only thing that can cure it is a good stiff drink."

Stories on unemployment, including this one, are bound to be soggy with statistics. In reading the figures, it might be helpful to think of them in terms of men, like my friend, who are trying to stay sober and sane at the same time, but are not quite sure they can make it.

In capsule form, the situation in Massachusetts is as follows: Unemployment is esti-

mated at 158,000, which is 7.5 percent of the work force, and about 50,000 more than this time last year. Greater Boston has 45,300 jobless. All industries have been hit except for finance, insurance and real estate, services, miscellaneous, and mining (first time I realized we had any mines in the Commonwealth), and State and local government. The last category accounted for an increase of 6,000, which could indicate either that unemployed citizens are being put to work on local work projects or that the politicians are taking care of their friends, an appropriate phenomenon in the land of the last hurrah.

One of the more disturbing items in the breakdown is that the number of men receiving unemployment benefits is going up much faster than that of women. As of March 15, the figure was 66,000, an increase of 28,000 from a year ago, whereas the number of women on the benefit rolls had risen only from 26,000 to 38,000. Since men are traditionally the bigger moneymakers and breadwinners, this reflects the rate at which purchasing power is dropping and hunger increasing in this State.

If you have been following closely up to this point, you will have noticed that only 104,000 are receiving State unemployment benefits out of the estimated total of 158,000 unemployed. Another 7,000 are getting either veterans' or Federal employee benefits. This leaves 47,000 who are either unlucky enough to have been working in an uncovered industry or occupation (mainly self-employed, farming, local and State government, domestic service, charitable, religious and educational institutions) or who have exhausted their benefits.

The latter would mean that in most cases they have completed the 26 weeks for which they were eligible for benefits. It is no surprise that the "exhaustees" are increasing every month. Last month, there were 5,400 new exhaustees as compared with 3,600 in February 1957. In the week ending March 15, there were 1,700 new ones, which would mean a monthly rate of over 7,000.

All hands, or at least most hands, are looking hopefully to Washington for passage of the Kennedy-McCarthy bill, which would increase from 26 to 39 the maximum number of weeks for receiving benefits. This would do much to ease the problem of the exhaustees, who are currently approaching the point of no return unless things pick up rather quickly. The bill would also provide for a new benefit maximum of two-thirds of the average wage, or about $50 as compared to the present maximum here of $35 per week. It should be added, however, that the State pays $4 more for each dependent under 18, which makes things a little easier for my friend with the 5 kids. How inadequate this is to keep human flesh and spirit intact should nevertheless be evident to every reasonable man. Even Senator Kennedy's bill is not going to make up the difference.

A small number of our unemployed are getting SUB (supplemental unemployment benefits, originally known as GAW, or guaranteed annual wage), mainly through contracts held by the autoworkers or steelworkers. This would include the 1,200 who were laid off when Ford closed its Somerville plant on March 14, one of the most discouraging single foldups that has hit this area in some time.

New Englanders are resigned when another textile mill closes. The collapse of this industry has come to be one of the accepted facts of life. Nevertheless, I was surprised, in looking at the figures, to see how much of a collapse it has been. Since 1947, textiles have slid from a work force of 130,000, by far the largest manufacturing industry in the State, to a current employment of 56,000, which leaves them in fifth position behind electrical products, machinery, leather and leather products (another declining industry, but more slowly), and apparel.

What really depresses us, however, is to see a progressive, modern industry like autos close up a plant. And we are not exactly cheered by the spectacle of layoffs in the electrical industry, which had added 22,000 jobs in the 10 years between 1947 and 1957 and is now our largest manufacturer, with something over 90,000 jobs. In every discussion of the New England economy, somebody sooner or later mentions the word "electronics" and everybody feels better. But now we see that there are about 6,000 fewer jobs in this industry than there were a year ago. Most of these layoffs, incidentally, have been in the big General Electric plants in Lynn and Pittsfield.

Geographically, the saddest area in the State is still Gloucester, where 19.9 percent of the work force is on the street or the beach. Ironically, Gloucester, 1 of the worst spots in the Nation, is, along with Lawrence, 1 of the only 2 areas in the State that has more jobs than it did a year ago. Which perhaps means that the fishing industry, still another sick one, has reached rockbottom at last.

Lawrence has edged upward from a bad 11.1 percent to 10.6. The effort to fill up the abandoned textile mills with diversified industry is paying off slowly.

Everywhere else the picture is darker. In North Adams, there has been a jump in the jobless from 6.3 percent to 15.6, the worst deterioration in the State. Mayor O'Connor, of Springfield, reports triple the normal unemployment from that area, or about 15,000 of a labor force of 150,000, and has asked his city council for money to put people to work on sewer and road projects.

Fall River and New Bedford, which were bad a year ago, are worse today, with percentages running over 11 and 10, respectively.

Strangely enough, one of the areas least hurt has been that of Greater Boston, which accounts for 45 percent of the State's total labor force. And it is perhaps this fact that makes the big difference between Massachusetts and a State like Michigan, where the principal city is operating at so poor a fraction of capacity.

The difference is probably that Boston is strong in the white-collar and institutional trades, which have been least affected by the recession so far. A year ago, for example, Boston's unemployment percentage was 3.4, which is a bit lower than the healthy norm. Today it is a little over the norm, but still well under the national average. And despite the ever-mounting tax rate, which has everybody half sick, there was a wave of something approaching enthusiasm in the old city as the Prudential Insurance Co. moved ever closer to the day when it will break ground for its big new business development on 32 acres in the Back Bay now occupied by railroad yards.

This could make a difference, too, in the construction industry, whose unemployment figure has risen from 13,000 a year ago to 20,000 on March 15. There should be plenty of building jobs soon in the Back Bay.

To sum up, Massachusetts could be in worse shape, but it could also be very much better. Judging from unemployment benefit figures, the situation is at its worst since the recession of 1949 (current claims for total and partial unemployment number 114,000 as compared with 117,000 in March, 1949). In that year, the Commonwealth paid out $115,000,000 in benefits and almost busted its fund. As a result the merit-rating system was suspended for 3 years and all employers were forced to pay the maximum levy of 2.7 percent of payroll. This in turn put the State's industry at a nasty competitive disadvantage with States that pay lower benefits and for this reason can afford to give their employers a lower rate on payroll taxes. Now Massachusetts is back down to a rate of 1.6 percent, which is not much above the national tax average of 1.3, but somewhat more than such States as Texas and Ohio (0.7 percent) or Virginia, Colorado, and Iowa (0.5).

Which brings us to the ancient question: "How long, O Lord, are we going to allow the States of the Union to bid against each other for new business with the coin of human hunger and despair?" It would seem to be more than about time that we cut out this heartless nonsense and put unemployment compensation under a uniform, nationwide system whose benefits and tax rates are established by Federal law. The Kennedy-McCarthy bill is a move in the right direction, but only a move.

Postal Pay Raise

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 6, 1958

Mr. MURRAY. Mr. President, last year postal workers suffered from the President's veto of the postal pay raise bill. This year the postal workers are suffering from the failure of Congress to complete action on the long-overdue, well-deserved pay increase for postal workers.

A letter I just received from a postal worker in Missoula, Mont., points up the dire financial problems of these faithful Federal employees. I ask unanimous consent to have this letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MISSOULA, MONT., *May 2, 1958.*

Hon. JAMES E. MURRAY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR MURRAY: What gives with the postal pay raise?

Last year when the President vetoed the pay raise we employees were assured by an overwhelming majority of Congressmen and Senators that one of the first orders of business in the new Congress would be an immediate and adequate pay raise. We are now beginning the fifth month since Congress convened and still no results.

Reading the news reports today leads one to believe that a raise for us postal people is all but a dead duck for the near future. Can't something be done?

We are like shipwrecked, drowning people, reaching for straws.

Senator MANSFIELD stated in his TV appearance during the Easter recess that $3,600 a year was a bare subsistence wage. My take-home pay is just slightly over that figure and I am in the top pay grade plus second longevity grades. My biweekly check amounts to $150.77; figure it out yourself. We have received what was supposed to be a 6 percent increase since 1950, but my deductions were increased by 2½ percent, so my total increase then amounted to just slightly over $2 a week take home, a barely noticeable amount.

As you know, the Government's own figures give 23 to 25 percent as the cost-of-living increase since 1950, and the experts freely admit that figure is too low. Yet there are those in Congress, as well as the President, who talk of 6 percent as a realistic

increase; actually, 16 to 18 percent would be much more so in the face of the facts.

I have worked myself to the point of physical collapse working at my postal job, plus outside work, in an effort to make a decent living. My wife is now working, but even so, it is still a tight squeeze.

My oldest daughter is graduating from high school and would like to go on to school, but unless she can find a job to make her way it will be practically impossible for us to afford the additional money to send her even though the university is in our own town.

Please do something for many of us who are about to go under.

Yours truly,

———— ————.

A Program To Meet the Recession

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 6, 1958

Mr. HUMPHREY. Mr. President, the Democratic Advisory Council to the Democratic National Committee has this week released a statement summarizing concern of its members over the recession confronting the American people, and offering suggestions as to constructive action to restore prosperity.

The statement is the outgrowth of careful study and deliberations, in which some of the Nation's leading economists were called upon for advice and counsel.

As a member of the advisory council, I feel the statement reflects a prevailing viewpoint in the Democratic Party.

Mr. President, I ask unanimous consent to have the statement referred to, entitled "A Program To Meet the Recession," printed in the Appendix of the RECORD, together with a list of the 24 members of the Democratic advisory committee issuing it.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

A PROGRAM TO MEET THE RECESSION

The well-being of the American people is now at stake. So is our reputation before the world. The United States can no longer afford the present spectacle of political confusion and economic incompetence in the face of a seriously mounting crisis. There are now over 5 million out of work. With the inclusion of additional part-time unemployment, we have the equivalent of at least 7 million unemployed. This is double what it was last year.

The time has come to end this recession. The debate should no longer go on as to the desirability of vigorous antirecession action. The answers to what should be done are not to be found in devising new economic gadgets, or in cheerful slogans of confidence.

We must bring to bear all of the available remedies that we know will work until the recession has been ended and the growth of our Nation is resumed.

No economic misfortune was more clearly foreseen or the subject of more specific warnings than the present recession. For several years the rate of advance in the economy has been less than that which is possible or needed to employ an expanding labor force and serve an expanding population. The present recession represents the conversion of an inadequate rate of advance into a definite retreat.

In short, the present Republican administration has never grasped the potential for growth in the present economy—a potential that is only realized by widely shared well-being. Its deflationary farm policy, its upper-income tax policy, its reluctant approach to needed public investment, and its tight money policy have all contributed to present problems.

This is not hindsight. Early last autumn this council warned of the gravely damaging consequences of the tight money policy. Early last winter we urged early and prompt action to arrest the recession, and we spelled out specific measures. We also pointed out that prompt and preventive action at an early stage would avoid the need for much larger scale action later on.

Nonetheless, the administration, true to Republican tradition, has remained committed to its policy of inaction and evasive words. President Eisenhower, after proclaiming last January that recovery would begin in March, now says the bottom is around the corner. By way of remedy, he one day recommends the hard sell and the next day tell manufacturers to stop cramming goods down people's throats. In one breath he calls on people to buy everything and in another to do it selectively. Such questions as to what the man who is out of a job should use for money have never seemed important to Republican Presidents.

Meanwhile, Vice President NIXON, characteristically, has played both sides of the tax cut debate, while apparently hoping that people will not notice that he is part of the administration. Other members are lining up on the side of no action whatever. Secretary of Commerce Sinclair Weeks has even stopped his weekly predictions of prosperity.

Two excuses have recently been offered for inaction. One is that inflation is not yet over. The other is that measures now taken to remedy the recession may contribute at a later date to renewed inflation.

As to the first excuse, it must now be clear that whatever the causes of inflation, unemployment and recession are not a remedy.

As to the future inflationary effect of measures taken to combat recession, it is quite possible that steps taken now will require later reversal. Taxes now reduced may later have to be increased. To justify inaction now because of fear of inaction later on represents a new high level of absurdity and a new low level of futility in Republican economic policy.

To get out of the recession we need a revision of monetary policy, increased public spending and a reduction of taxes.

MONETARY POLICY

So far the Federal Reserve has been far too cautious in reversing its tight-money policy. Despite the large business decline since the middle of 1957, reserves of member banks and excess reserves, which largely determine the amount of money, are unchanged as compared to a year ago or even since the beginning of the decline some 8 months ago.

The Federal Reserve Board should show the initiative which was displayed in the 1930's and provide several billions of additional cash to the market by purchasing Government bonds in the open market. The result might well be at least a beginning toward a return to lower rates of interest which are a prime need for recovery.

PUBLIC OUTLAYS

When the private economy is reducing its spending, employment and income fall. This creates the need for compensatory action by Government.

This program should make the maximum contribution toward treating the recession. Outlays must be judged especially for their effectiveness in getting prompt increase in employment.

But we hasten to add that the long-run purpose and effects of such programs are also of essential importance. We have many vital national needs. There need be no spending for the sake of spending.

Requirements for education, health, housing, urban redevelopment, natural resources, roads, are all urgent. We must have in mind the long-run benefits of these programs as well as their contributions to recovery.

The Congress under Democratic leadership has already taken substantial steps to increase Federal expenditures as a recovery measure. The programs now approved or currently under active consideration—Community Facilities Act, extension of unemployment compensation, the highway program, area redevelopment, education, and housing—will ultimately involve outlays of perhaps $4 billion a year; however, the additional spending in calendar year 1958 is not likely to be more than $1 billion to $1.5 billion. The reduction of private investments inclusive of inventories, the likely reduction of the excess of exports and the threat of a decline of consumption indicate a reduction in private spending of the order of $10 billion to $15 billion at an annual rate. This is what we must offset promptly if we are to be certain of reversing the decline.

In addition to any possible expediting of needed national-security expenditures, we urge a program of $1 billion annually for education (construction and equipment), and a doubling of the programs for urban renewal, public housing, and hospital construction. We would also urge a rise of one-third in outlays on natural-resources development, with particular emphasis on the great river basins of the West. These programs would add $2 billion on an annual basis, though less in 1958.

Undoubtedly the most immediately effective program is an extension of the period for paying unemployment compensation. The money goes directly to those who need it most, and it immediately enters the spending stream to generate more economic activity.

We stress the need for a permanently liberalized unemployment compensation program. This should include, as a goal, Federal standards with increased coverage, a maximum benefit of two-thirds the average wage and a minimum of one-half, duration of 39 weeks and Federal reinsurance. However, as an immediate recession measure the country needs Federal funds to provide the liberalized benefits, extension of coverage, and a larger period of coverage which are promptly needed until the States have an opportunity to meet minimum Federal standards.

We also propose liberalization of old-age benefits. An average of $65 per month is altogether too low.

TAX REDUCTION

If we were to choose between increased spending for public improvements and tax cuts as an exclusive approach, we would favor the former. And for two reasons:

First. We have underspent for schools, health, roads, urban development, and natural resources since the 1930's.

Second. Because on the whole taxpayers are more affluent than nontaxpayers, we propose to help those with less means rather than those with more.

We believe, however, that the present situation is now so serious as to require a tax cut also—in part because the effects are likely to be felt sooner than a spending program. The period of reduction should be related to business prospects at time of passage.

In order to help low-income taxpayers and insure maximum effectiveness we propose a substantial reduction in the personal income tax either by splitting the first bracket rate or alternative cuts of similar incidence, and a reduction in excise taxes excepting liquor,

tobacco, and those related to the Federal-Aid Highway Act or to Federal control measures.

The present economic distress emphasizes the need for a comprehensive revision of our tax laws. We must eliminate the loopholes and leakages that make our tax system inequitable and unnecessarily burdensome. By eliminating the most flagrant of these, at least $3 billion of additional revenue could be immediately secured to offset partially the tax reductions we here propose.

SUMMARY

We have proposed a genuine easing of monetary policy, larger public expenditures to offset declining private outlays, and emergency tax reduction. Our objective is not to increase deficits but rather to introduce policies that would reverse the decline of income.

What we propose then is a policy to raise income and thereby raise the tax base and hence tax receipts. We have every hope that the result will be a much smaller deficit than would prevail with a do-nothing policy.

(Note submitted by Senator ESTES KEFAUVER: While I am in general agreement with the analysis and remedies here presented, I feel that greater emphasis should be placed on price reductions rather than on tax reductions in halting and reversing the present economic decline. It seems to me that a stimulation and broadening of consumer markets could readily be achieved by price reductions, particularly in basic industries such as steel and automobiles where prices have not yet reflected production decreases.)

(Note submitted by Gov. G. Mennen Williams: I feel that a broad public works program is the prime essential in any national effort to overcome the recession. I believe that properly planned and instituted public works can have a rapid effect on the economy—and that they are particularly necessary at this stage of the current economic downturn. While I am in general agreement with this policy statement of the council, I would not favor antirecession moves taken at the expense of public works.)

THE DEMOCRATIC ADVISORY COUNCIL

Jacob M. Arvey, Democratic national committeeman of Illinois.

Paul M. Butler, chairman of the Democratic National Committee.

Miss Katherine M. Cullinan, Democratic national committeewoman of Rhode Island.

Mrs. Benjamin Bryan Everett, Democratic national committeewoman of North Carolina.

Leo C. Graybill, Democratic national committeeman of Montana.

Camille F. Gravel, Jr., Democratic national committeeman of Louisiana.

Gov. W. Averell Harriman.

Senator HUBERT H. HUMPHREY.

Mrs. Ione Hunt, Democratic national committeewoman of Minnesota.

Senator ESTES KEFAUVER.

Arthur B. Koontz, Democratic national committeeman of West Virginia.

Mayor David L. Lawrence.

Former Senator Herbert H. Lehman.

Gov. Stephen L. R. McNichols.

Mrs. Margaret Price, Democratic national committeewoman of Michigan.

Calvin W. Rawlings, Democratic national committeeman of Utah.

Mrs. Thelma Parkinson Sharp, Democratic national committeewoman of New Jersey.

Adlai E. Stevenson.

Mrs. Lennard Thomas, Democratic national committeewoman of Alabama.

Mrs. Marguerite Peyton Thompson, Democratic national committeewoman of Colorado.

Former President Harry S. Truman.

Mayor Raymond R. Tucker.

Gov. G. Mennen Williams.

Paul Ziffren, Democratic national committeeman of California.

Russian Proposal To Halt Nuclear Tests

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 6, 1958

Mr. PROXMIRE. Mr. President, the Milwaukee Journal has just printed an extremely useful and somewhat surprising summary of foreign reaction to the Russian proposal to halt nuclear tests and to hold a summit conference.

Mr. President, I ask unanimous consent that the editorial from the Milwaukee Journal be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the Appendix of the RECORD, as follows:

[From the Milwaukee (Wis.) Journal of May 4, 1958]

WHAT OUR FOREIGN FRIENDS THINK OF TESTS AND SUMMIT

We have had an excellent opportunity in recent days personally to test world opinion on two subjects important to Americans: Foreign reaction to the Russian proposal to halt nuclear tests and the holding of a summit conference.

The findings: Our foreign friends and allies see the phoniness in the Russian proposal, and they favor a summit conference.

This unusual opportunity came in traveling around the United States for 11 days with 72 foreign newspaper editors, executives and a few wives. The transcontinental air journey, with visits in nine major cities, followed the seventh general assembly of the International Press Institute in Washington. (About 30 more of the foreign members at the meeting did not make the tour.)

Here are sample comments of our foreign colleagues:

Torolv Kandahl, editor, Tidende, Drammen, Norway: People know that the Russian offer came after an endless series of tests of their own. A sensible person naturally asks, "What kind of an offer is that?" As to how Norwegians look at a summit meeting—maybe something would come out of it.

Rudolf Kalmar, editor, Die Presse, Vienna, Austria: If Russia tests its atomic weapons for the first 6 months of the year and the United States tests its weapons the last 6 months, we are not so foolish as to accept as honest a Soviet offer to suspend tests at midyear.

Zeyyat Goren, foreign editor, Hurriyet, Istanbul, Turkey: United States prestige was not at all affected by the Russian offer. Most of our people feel that the United States should continue testing its nuclear weapons. Our people feel that a summit meeting might be helpful even if the only result is an exchange of opinions.

Mansur Ali Khan, managing editor, Zamindar, Lahore, Pakistan: The Russian offer did not make a great impression. Pakistanis never liked or trusted the Russians and feel there is a hidden meaning of some sort in everything the Soviets say. It is unlikely anything worthwhile will come out of a summit meeting at this time.

Ernst Bieri, editor, Neue Zurcher Zeitung, Zurich, Switzerland: The Russian offer did not create a great stir in Switzerland. We don't trust words about peace and love. We want to see facts. The most impressive fact was what happened in Hungary.

Paul Fieschi, editor, Journal de la Corse, Paris, France: Very few Frenchmen were fooled by the Russian offer. We are quite optimistic about the possibility of peace as long as the United States continues its atomic experiments.

Alf Schiottz-Christensen, editor, Stiftstidende, Aalborg, Denmark: The average Dane realizes that the Russian offer was a propaganda move, but has to admit it was a propaganda victory. If the Russians really are willing to stop tests, it must mean they have all the information they think they need or can get. As for a summit conference, the average Dane believes that, with all the apparent difficulties, some good might come out of it.

Werner Friedmann, editor, Suddeutsche Zeitung, Munich, West Germany: We don't trust the Russians and their offer didn't harm United States prestige, but we do feel, without such a start toward ending nuclear testing, there is no hope of reunifying Germany. For the same reason we hope for a summit conference, although we realize there is no great hope of a successful meeting.

Representative Charles O. Porter Writes on Freedom From Totalitarian Control

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, May 6, 1958

Mr. NEUBERGER. Mr. President, in speaking of international relations, since the beginning of the cold war, we have come to apply a brief name to that part of the world which is not under the domination of the governments in Moscow and Peiping, or under other Communist authority.

We call this non-Communist-dominated portion of the globe the free world.

That is a beautiful phrase, evocative of the best traditions of our own history. No doubt it is an effective concept with which to counter the Marxist vocabulary in the worldwide ideological conflict of our times. However, its effectiveness in the long run will be directly proportional to its accuracy, in actually describing the nature of the society we would present as the alternative to that offered by communism. Its accuracy must be a matter of continuing and genuine concern to us, lest our claim of freedom is to be as hollow a slogan as the Communist's cynical and fraudulent use of democracy.

Do we in fact maintain such a genuine concern for freedom in the free world? Absence of Communist control or domination over a nation in itself is not yet freedom. A nation whose government is independent of Soviet dictation is not by that fact free, for freedom is an attribute of the life of men and women, not of States. If we care about freedom, we must ask more than "Is this nation's government on the Soviet side or on ours?" We must ask "Can the people of this nation speak and write freely? May they travel, read foreign literature, practice a religion of their choice, criticize their government? Do independent courts protect them against arrest, detention, punishment by police agents without legal warrant? Most funda-

mentally, does their government recognize a legal, organized opposition, which has the right and the opportunity at regular intervals to assume the reins of authority by a public, civilian choice, in the peaceful interchange between 'ins' and 'outs' that is the essence of parliamentary democracy?"

These are the questions which have been raised, courageously and persistently, by Representative CHARLES O. PORTER, of Oregon's Fourth Congressional District, ever since he first came to Congress in 1957. He has raised them most recently in an article in the April 14 issue of the New Leader magazine, entitled "The Struggle Without End."

CHARLIE PORTER is dedicated to freedom in fact, and not only in phraseology. Upon his election in 1956, he happened to be at once confronted with a dramatic question of freedom in one small corner of the free world, in the famous case of the disappearance in the Dominican Republic of Gerry Murphy of Eugene, Oreg., Mr. PORTER's own hometown. It is characteristic of him that he did not stop with making routine representations to the State Department on behalf of a constituent. He has made the cause of freedom in the Western Hemisphere his cause, heedless of the fact that it has initially been a lonely one in the face of indifference and even opposition. I agree with him that it is a good cause; and it is one which will prove increasingly critical as communism shifts from aggression to social and economic tactics in its competition with us, and as our proud claim of freedom will have to prove itself in affirmative accomplishments, not only in negative noncommunism, however despotic.

I ask unanimous consent, Mr. President, to have printed in the Appendix of the RECORD Representative PORTER'S outspoken article on "The Struggle Without End," from the New Leader of April 14, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE STRUGGLE WITHOUT END

(By CHARLES O. PORTER)

When I was in Bogota, Colombia, in June 1957, I was asked at a university forum, "When do you expect to win your fight against dictators?" I replied in my limited Spanish, "Never, this is la lucha sin fin—the struggle without end."

A few weeks earlier, I had visited Costa Rica and discussed the same problem with that nation's remarkable President José Figueres (who is now completing his term of office). I spent some pleasant and informative hours as a guest at President Figueres's ranch. Its name is La Lucha Sin Fin, and the reference is identical. Figueres has fought hard, long, and effectively for democracy in Costa Rica and elsewhere. Back in 1948, he personally led the first armed resistance to communism in this hemisphere.

My own involvement in this struggle began in December 1956, when a constituent of mine, a young man by the name of Gerry Murphy, disappeared in the Dominican Republic under circumstances which shrieked of murder by order of Dictator Trujillo himself. Representatives of the State Department and the FBI came to my office at my request. They told me of the Dominican explanation that a co-pilot had killed Gerry in a drunken fight and then committed suicide out of remorse. They said that stirring matters up would only bring out evidence of certain shortcomings on Gerry's part.

The Dominican explanation of Gerry's death was full of holes, and I felt that Trujillo had shown fantastic effrontery in offering it. I was aghast that our officials seemed willing to accept it. When I called Gerry's parents, who live in my hometown of Eugene, Oreg., they wanted me to go ahead and press for an investigation.

On February 28, 1957, I made my first speech as a Member of the House of Representatives. Police swarmed around the Capitol, and I had warnings that my life was in danger. My speech was an analysis of the known facts in the Murphy case, including the inconsistent and implausible explanation given by Trujillo's government. Two weeks later the State Department rejected the Dominican explanation and asked for further investigation.

The State Department also requested three times that Arturo Espaillat, former Dominican consul general in New York, who subsequently became Trujillo's Minister of Security, be made available for questioning and possible trial. This request was refused each time.

Soon afterward, because widespread unfavorable publicity in the United States and Latin America was causing the Dominican Government to lose tourists as well as respectability, Trujillo hired the famous New York lawyer and author, Morris Ernst, to investigate the related cases of Gerry Murphy and Jesus de Galindez, the Basque scholar who disappeared in New York in March 1956. I had admired Ernst as a keen, fearless lawyer and a foremost guardian of our civil liberties. Now, regretfully, I have my doubts about him, because he has refused to carry his investigation into the Dominican Republic itself and require full publicity there by TV, radio, and newspapers. He agreed to do this when he came to my office last fall. Now he writes me that he never agreed to it at all.

The Murphy-Galindez case is far from closed. John Frank, a Washington lawyer, was convicted in December 1957 as an unregistered Dominican agent who was mixed up in the affair. The Government has told me that more indictments are in prospect.

But there is a larger issue involved: the whole question of American policy in Latin America. The treatment accorded him by Washington in the past gave Trujillo every reason to believe that he could commit murder with impunity.

My mail, my visitors and my reception on 4 trips to Latin America in 1957 make it clear that I enjoy wide popularity on that continent. The reason for this is my work in the Murphy-Galindez case and my often expressed belief that the American people hate dictatorships and love democracy and that our foreign policy should reflect this fact.

My efforts are important to Latin Americans because they see in them the possibility that the United States will change its soft-on-dictators policy. I am receiving support from Latin American leaders who for years have risked their lives and fortunes so that their peoples might have better, more democratic conditions of life. I refer to men like Luis Munoz-Marin of Puerto Rico, Jose Figueres of Costa Rica, Ramon Villeda Morales of Honduras, Eduardo Santos and Alberto Lleras Camargo of Colombia, and Romulo Betancourt of Venezuela.

My warm reception by democratic leaders is itself a sign that our State Department should reverse its policies which lend respectability to police states and their chiefs. I have yet to find any member of the Department below the highest echelon, or any newspaperman who knows Latin America, who did not applaud my position, and in many cases, offer assistance.

Gen. Lemuel Shepherd, Chief of the Inter-American Defense Board, tells me that we don't deal sternly with Trujillo, Somoza, or Batista because we need them to help defend the Panama Canal. (As if they and their armed forces would be any help against supersonic air or missile attack.) Similarly, the State Department told me that we did not praise Colombia publicly for throwing off a dictatorship because Marcos Pérez Jiménez, then still in power in Venezuela, might have decided not to let United States companies develop his country's oil resources.

I say we need a policy based on facts like these:

The United States is the leader of the free world and must base its leadership on moral as well as material resources.

The American people believe in government by free elections and in courts which are fair.

In our struggle with international communism, we may have to ally ourselves with police states, such as Spain, for reasons of defense, but we do not have to allow them to identify their tyrannies with us and make it appear that we regard them with favor.

Political, social, and economic gains in non-Communist nations make them stronger allies of the West; hence, we should encourage their development, as we are doing to some extent already. The chief need is that we stand up and declare our faith in democracy over tyranny without implying that we believe ourselves to be perfect or that the advantages of democracy can be achieved quickly and without effort.

Last August, the State Department wrote me that juridical equality and nonintervention were the indispensable bases of our relations with Latin America. Nobody has any complaint about juridical equality. But nonintervention has been blown up beyond its original meaning of renouncing the use of marines or money to change governments.

Consider the State Department's response to my suggestion that we publicly call a spade a spade, a dictator a dictator. After citing the Charter of the Organization of American States, which happens to be a very prodemocratic document, it said: "It is the opinion of this Department that for the United States, by means of official proclamations, to characterize its neighbor countries as being dictatorships would now be viewed by practically all of the Latin American governments and peoples as an act of calculated and distinctly unwelcome intervention in their internal affairs."

I agree that the dictators would cry intervention, but the democracies and the nations striving in that direction would be encouraged. This is the kind of intervention that spells moral leadership and ultimate victory for those who believe in human rights.

The State Department went on to say that "for the United States to become a self-appointed official censor of existing governments in the Americas would soon have us in unwarranted difficulties with our neighbors." But we are already in unwarranted difficulties with nations which should be our friends. Nor is there any question of censorship involved. We would simply be saying out loud what we already know. Batista and Trujillo are dictators. They know it. All Latin America knows it. The State Department knows it. Let's say it so that the American people will know it, too.

Finally, the spokesman denied that any of our friends in Latin America feel that the United States has shown undue friendship for dictatorial governments. Again, the overwhelming evidence is to the contrary.

We gave medals to Perez Jimines and Somoza, we send arms to Batista even though he is using them against his people in violation of the agreement he signed with us, and we are giving military and economic aid to Trujillo. Why should men like these receive aid from us? Will they help us if the Soviet Union attacks us? I say negli-

gibly, if at all. Is this aid helping to keep down internal subversion? I say no.

Opponents of dictatorship soon realize that the United States has identified itself with their oppressors. Inevitably, they will turn to the Soviet Union, whose agents are glad to form a popular front and hope to profit from the overthrow of the police state to set up their own brand of totalitarianism.

It is a struggle without end, but not a struggle without hope. The first step is to recognize that our leadership in the free world must be based on moral principles. Liberty and justice for all means not only all citizens of the United States but all citizens of this one world we live in today.

Consumer Buying Plans

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, May 6, 1958

Mr. PROXMIRE. Mr. President, the latest issue of U. S. News & World Report contains an article entitled "Trend of American Business." The article includes a summary of consumer buying plans just released by the National Bureau of Economic Research. These plans are based on a poll of 25,000 families who are members of the Consumers Union. This comprehensive analysis of consumer buying plans should put Congress on notice that for the next 6 months the American consumer now plans to reduce his purchases of automobiles and household equipment, and that people who thought the present a bad time to buy outnumbered by 2 to 1 the people who thought it a good time to buy.

Mr. President, under these tremendously important psychological conditions, it seems to me imperative that Congress should continue to act decisively and aggressively to adopt measures to stop the economic slump.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TREND OF AMERICAN BUSINESS

American consumers, on the whole, are not yet in a mood to buy heavily. That's what scientific polls of consumer attitudes are finding out. Conclusion is that buyers must be assured of an end to recession before they try to bring about an end to the setback by their own actions.

Here is an insight into consumer-buying plans just released by National Bureau of Economic Research, an independent research organization. It stems from a poll of 25,000 families who are members of Consumers Union.

Plans to buy new cars in the next 6 months declined by 20 percent from October to early April. More people planned to buy used cars.

Auto-purchase plans, as a result, are down only 10 percent since October, but the prospect is not encouraging for new car sales.

Buying plans for household equipment are off by a bit more than 10 percent since October. This poll sampled plans for buying expensive items, such as refrigerators, ranges, food freezers, and television sets.

The poll found that people who thought the present a bad time to buy outnumbered by 2 to 1 those who thought it a good time to buy. Almost a third of the households expected worse business conditions in months ahead.

It's not that these families are hard up, or overburdened with debt.

Half the families told the pollsters they had only mortgage debt.

A fourth of them said they expected to be out of debt within a year.

More than 40 percent reported they had increased liquid assets—cash, bank deposits, securities—during the past 6 months. Only 10 percent said that they had reduced their liquid assets during that period.

Many of these families, moreover, had suffered no financial reverses in the recession. Apparently they were well able to buy if they wished to.

Soil Stewardship

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 6, 1958

Mr. HUMPHREY. Mr. President, May 11 to 18 will be observed as Soil Stewardship Week, in churches of many denominations throughout the country, reflecting man's responsibility to God in preserving our heritage of soil and water resources, and our stewardship in caring for God's rich natural gifts.

More than 2,700 soil conservation districts throughout the country will participate in observance of this week of thankfulness for our productive blessings.

In preparation for this week, the National Association of Soil Conservation Districts has prepared and distributed an attractive and inspiring booklet reminding all people of man's sacred obligation in the ownership and use of our land, our water, and our other related resources.

The booklet contains an open letter from Nolen J. Fuqua, President of the National Association of Soil Conservation Districts, entitled "A Word of Concern," and a preface entitled "Together" which aptly discribes the purpose of the Soil Stewardship Week.

Mr. President, I ask unanimous consent that the letter referred to, as well as the brief preface be printed in the Appendix of the RECORD.

There being no objection, the letter and the brief preface were ordered to be printed in the RECORD, as follows:

A WORD OF CONCERN

There is in every man, latent though it may have become, an awareness of his responsibility to God for the wise use of our soil and its related resources—water, plants, and wildlife.

It is the responsibility of those who assume the leadership for spiritual and moral matters to include in their sphere of effort the awakening of man to his soil stewardship responsibility.

The church is, and truly ought to be, a factor for reminding man of his obligation to God in the use of God's rich natural gifts. For too long our people have neglected or used without appreciation or understanding these divinely created resources.

Already in this comparatively young Nation we have lost millions of acres of good productive land. We have let water, a necessity and a boon to every community, become a scourge as it rushes seaward, bearing loads of sediment to stream, channel, and precious reservoir.

Therefore, we may see in every muddy rivulet, in every dust laden wind a warning from God. His rules regarding the use of His earth by man are being violated.

All people must now realize the importance of an abundance of good water and its relationship to our soil and our watersheds, for soil and water are life itself.

The stewardship of soil and water resources must be the concern of everyone who loves his Nation. The responsibility of this stewardship rests with the people who own and operate the land. These are the farmers and the ranchers. Upon them we must depend to save and to improve what we have left in soil and water resources.

The Nation's soil conservation districts need the help of the churches and their leaders in this divinely-directed responsibility.

NOLEN J. FUQUA,
President, National Association of Soil Conservation Districts.

TOGETHER

In the widespread observance of a week dedicated to soil stewardship, it is fitting that we state the principles regarded as basic in man's use of the land:

1. God created the world, of which the earth is a portion, with a purpose. Through His loving providence He maintains the world for the good of human beings.

2. The land is God's greatest material gift to mankind. It is a fundamental source of food, fiber, and fuel. It is the storehouse and channel of another of God's great blessings—water.

3. Ownership of land involves social responsibilities. The steward of land has a duty to protect and to enrich the soil he tills and to hand it down to future generations as a thank offering to God, the Giver, and as a loving inheritance to his children's children.

4. The family is the primary institution, and a main objective of soil stewardship is family strength and unity. A unique relationship exists between the family and the use of the soil.

5. In land use, efficiency is to be judged—not by material yields alone, but also by the spiritual and social values that benefit the individual, the family, and society.

6. Society has the responsibility to encourage and to assist the stewards of land in the conservation, use, and treatment of soil with such techniques as will make them masters of their own economic destiny.

7. Stewards of the soil owe sacred duties and obligations to God, to the community, and to humanity. Faithful and honest fulfillment of their responsibilities goes hand in hand with their rights and privileges.

Beginning on Sunday, May 11, 1958, and continuing through Sunday, May 18, the more than 2,700 soil-conservation districts of this Nation will observe Soil Stewardship Week. It is hoped that the entire Nation will join in this observance.

The publication of this booklet by the National Association of Soil Conservation Districts is in the hope that it will be an instrument of good in awakening man to his responsibility in soil stewardship. In its preparation, the national association has had the guidance of national church organizations and their leaders in town and country work. For this assistance the national association is grateful.

May churches of all faiths find this booklet helpful in reminding all people of man's

sacred obligation in the ownership and use of our land, our water, and our other related resources.

The Powers of Congress Over the Courts

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 6, 1958

Mr. THURMOND. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the column In the Nation by the able writer, Mr. Arthur Krock, which appears in the May 1, 1958, issue of the New York Times. In this column, the distinguished correspondent discusses, with his usual candor, the bill approved by the Judiciary Committee to limit appellate jurisdiction of the Supreme Court.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

IN THE NATION
(By Arthur Krock)

WASHINGTON, April 30.—The Senate committee bill, approved today, to reduce the appellate jurisdiction of the Supreme Court asserts a power of Congress that has been used but once and seldom strongly urged in the history of the United States. But this power was specified by the Constitutional Convention in a formal vote on August 27, 1787.

In 1867, in the emotional atmosphere in which reconstruction was imposed on the prostrate South, Congress exercised this power and reaffirmed the action over President Johnson's veto. This law took from the Supreme Court its jurisdiction to review denials by lower courts of applications for writs of habeas corpus. The Court, acknowledging the power of Congress to limit its appellate province, dismissed on that ground a pending appeal from such a lower court denial.

In view of some of the decisions of the current Supreme Court that have overruled previous decisions and longstanding precedents, it cannot be taken for granted that the Court would refuse to review parts of the bill for their constitutionality or rule them invalid. But so far as the record can establish it, the committee has asserted a general power plainly bestowed by these words of section 2 (2), article III: "In all the other cases (save those in which original jurisdiction is specifically granted) the Supreme Court shall have appellate jurisdiction both as to law and fact, with such exceptions and under such regulations as the Congress shall make."

In the present phase, therefore, and until or unless the Supreme Court should grant review on and uphold some claim that a part of the Senate committee bill is an unconstitutional construction of the words above, the only issue raised by the measure is of public policy. In that area it poses these questions:

Does international communism create a clear and present danger requiring that the standards for bar admission shall be fixed by State courts and not be subject to Supreme Court review? Does this new menace make it vital to national security that congressional committees be the sole judges whether questions to witnesses are pertinent to their legislative purpose and this pertinence also made clear to the witnesses? (On the ground that this relation was not made clear the Supreme Court quashed the contempt for one unresponsive witness before a congressional committee investigating Communist activities.) Does the threat to national security make it essential that the States shall enforce their own antisubversive laws? (In the Steve Nelson case the Court held that Congress had preempted this entire enforcement field.)

AMENDING LEGISLATION

Another section of the Senate committee bill, and a recommendation by a subcommittee, both of which also grow out of international Communist activity, would amend existing legislation without question of the Court's jurisdiction over the texts in their present form.

The first would amend the Smith Act of 1940 to make it a crime to teach or advocate the violent overthrow of the Government. (The Supreme Court decided the Smith Act makes criminal only conspiracy to overthrow, or activities designed and calculated to incite action to that end.) The subcommittee recommendation was for action to relieve peace officers and the lower courts of an impediment to the conviction of major criminals that was imposed by the Supreme Court's decision in the case of one Mallory. He had been detained by Washington police for 7½ hours before arraignment for rape, during which time he confessed to the crime, committed under particularly brutal circumstances. The Supreme Court ruled that Mallory's conviction was invalid because he had not been arraigned before the unnecessary delay forbidden in the Federal penal code.

In the confusion of police officers and lower courts over what the Supreme Court may periodically adjudge to be a span of reasonable interrogation of criminals before arraignment, other confessed major criminals have been set free and prosecution thwarted. This has arisen particularly in rape cases, where identification of the criminal by the victim is usually difficult and confession the only evidence that will stand up in court.

That is the Supreme Court background for the second determined congressional effort in American history to limit its jurisdiction, and for the additional effort to rewrite laws to remove the bases on which the Court made certain rulings. Both enterprises are orderly and have the weight of established legality.

All but the recommendation to clarify what is unnecessary delay in the arraignment of persons for heinous crimes are and will be opposed by many as public policy. But the moves to limit the Supreme Court's jurisdiction represent the legitimate use of one of the checks and balances by which the Constitution sought to keep any one branch of the Government from infringing on another. Nor was the Supreme Court designed to be excluded whenever, exercising the judicial supremacy that, as Judge Learned Hand put it, Chief Justice Marshall imported into the Constitution, it exceeds the high obligation of self-restraint.

Trickle Down a Poor Theory

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Tuesday, May 6, 1958

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Washington Daily News of Saturday, March 15, 1958, entitled "Trickle Down a Poor Theory."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRICKLE DOWN A POOR THEORY

In the near panic of the Washington politicians, ever since they suddenly discovered there is a business slowdown, only a few voices of sanity are being heard.

One of them belongs to Senator JOHN J. WILLIAMS, of Delaware, whose facts and arguments in the Senate this week helped stall, for the moment, the headlong rush toward a reduction in taxes.

Mr. WILLIAMS paid his respects to this foolishness in plain pocketbook language which any wage earner can understand (even if some of his political representatives can't).

"Tax reduction," he said, "is being pushed on the basis that if the man who has a job is given a tax cut some of the cut will trickle down to the man in the street who is out of work."

"If it is desired to do something for the unemployed," he said, "let us do it directly, and not on the trickle-down theory. What an unemployed man wants is a job, and not a lot of hot-air promises."

He said a lot more:

"Tax reductions on borrowed money only mean more inflation."

"Through this resulting inflation, we would only further increase the cost of living, thereby making it even harder for the person who is unemployed and who needs assistance.

"Do not overlook the fact that as a result of the inflation of the past 20 years our dollar has lost over one-half of its 1939 value. That means that one-half of the life savings of every American has been destroyed.

"We are thinking too much of the political implications of a tax bill rather than discussing such a bill from an economic standpoint.

"Our Government cannot spend itself into prosperity on borrowed money."

And:

"I think the trouble today is that the confidence of the people in their Government has been undermined as a result of some of the schemes that have been proposed. The Congress is on the verge of being stampeded into rushing off in all directions at the same time."

The trickle down from a tax cut, if it trickled at all, would be only a pittance to what inflation shortly would steal back—and inflation follows Government red ink as surely as debt follows borrowing.

Lobbyists Peril Postal Legislation

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 6, 1958

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article under the title "Lobbyists Peril Postal Legislation," written by Jack Steele, and published in the Washington Daily News of May 1, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOBBYISTS PERIL POSTAL LEGISLATION
(By Jack Steele)

The postal rate-postal pay bill is in danger of being lobbied to death.

A Senate-House conference, after weeks of being subjected to some of the most intense lobbying ever seen around the Capital, broke up in bitter disagreement.

REFUSAL

The angry conferees refused even to set a date to meet again to try to clear the bill for final congressional approval.

Imperiled by this lobbying pressure is a measure which would:

Boost the pay of 550,000 mail carriers and other postal workers by an average of slightly over 10 percent.

Increase postal rates enough to offset these pay rises and trim about $300 million a year from the huge post-office deficit.

The bill already has been stalled in conference for 2 months.

Meanwhile, the Capitol has swarmed with lobbyists interested either in the pay or rate features of the measure.

More than a score of officials of postal workers' unions and other groups of Government employees have camped on the doorstep of the conference committee.

INTEREST

Their interest is the proposed postal pay increases—which would set the pattern for later wage boosts for other Government workers.

These union lobbyists have blocked Capitol corridors, buttonholed conferees entering and leaving committee meetings and elbowed reporters out of press conferences.

Just as active, although not quite so obvious, have been lobbyists for big mail users, chiefly magazines and junk mailers. Their objective is to hold down the proposed postal rate increase or, preferably, to kill the bill entirely.

Hon. Will M. Whittington

EXTENSION OF REMARKS

OF

HON. ARTHUR WINSTEAD

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 1, 1958

Mr. WINSTEAD. Mr. Speaker, I would like to join with others here today in congratuating the Honorable William M. Whittington, a distinguished fellow Mississippian, on the occasion of this 80th birthday, and in paying tribute to him as an outstanding Mississippian and one of the ablest, most honest, and courageous men who ever served in the Congress.

Mr. Whittington was first elected to serve the people of Mississippi in the 69th Congress, and remained in the House for the succeeding 26 years. At the end of this time he voluntarily resigned from Congress, but he has maintained his interest and active participation in the affairs of our State and Nation since his retirement.

Mr. Whittington enjoyed the friendship, esteem, and respect of every Member of Congress who served with him, and he has carried with him into his retirement the admiration and high regard of all of us. He was not only a man of unusual ability, but one who devoted his time and energy to the task at hand, finding no time to waste but ample time to counsel and advise with fellow Members, both young and old, on matters in which they were interested or needed help. It was my privilege to serve with him for several years, and our association was always most pleasant and his counsel most helpful. His career and notable contributions to the laws of our country remain as an example and inspiration to all of us. I sincerely wish for him many more years of happiness and contentment.

Labor Abuses—Defects in the Taft-Hartley Act

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Tuesday, May 6, 1958

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Spotlight on the Payoff," published in the Washington Post of April 30, 1958, dealing with the abuses exposed by the Select Committee on Improper Activities in the Labor or Management Field, and defects in the Taft-Hartley Act.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SPOTLIGHT ON THE PAYOFF

Senate Majority Leader LYNDON JOHNSON undoubtedly won a major victory in turning aside the Republican barrage of amendments to the welfare and pensions funds bill, but how big a price did he pay? The price cannot be accurately calculated at present because of the uncertainties surrounding the new labor-reform bill which the leadership has promised to lay before the Senate. But the price appears to be substantial, and it is by no means certain that the majority leader will continue wear the smile of the tiger when he has to pay it.

Mr. JOHNSON'S strategy last week and again on Monday was essentially a holding operation. He checked a flood of amendments that were threatening to swamp the welfare and pensions funds bill by promising to let them flow in orderly fashion through the Committee on Labor and Public Welfare. Ordinarily, this might seem to be a minor concession, but in recent years the Labor Committee has acted as if its function were to bottle up legislation instead of considering it on its merits. Now the Senate leadership stands committed to a breaking of the log jam. If its promise is fulfilled in good faith, that may well prove the most significant aspect of current controversy.

Despite its passage of the Kennedy-Douglas-Ives bill requiring full accounting for the operation of pension and welfare funds, almost without change, the Senate has demonstrated that it wants to go further. There is as yet no indication as to how much further it wishes to go. But the Committee on Labor now has a mandate to write a bill embodying the best of the proposals that have been voted down on procedural grounds and to send it promptly to the Senate floor. Any failure to do so, would be a major embarrassment for the Democratic leadership generally.

The strong case that can be made for enactment of a more comprehensive labor bill at the present session may be seen in the nature of some of the amendments that were voted down on procedural grounds. One of them sponsored by the Eisenhower administration would have repealed the union-busting provision of the Taft-Hartley Act. Another would have permitted the NLRB to certify a construction union as a bargaining agent without an election when there was a history of bargaining with the employer in question. A third offered by Senator WATKINS would have permitted the States to deal with labor-management disputes in the present no-man's land between the NLRB's operations and the jurisdiction of the States.

It is not to be supposed that all the abuses exposed by the McClellan committee and all the defects in the Taft-Hartley Act can be corrected in one omnibus bill to be put together in the next few weeks. But the Labor Committee will not be plowing in virgin soil. It can and should promptly write a measure that will correct the most flagrant abuses and defects. Meanwhile the House should put the bill for regulation of pension and welfare funds on its must calendar. It is difficult to see how Congressmen could face their constituents if they failed to act on this essential and noncontroversial reform.

Detroit: Focus of the Basic Duel

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 6, 1958

Mr. HUMPHREY. Mr. President, in the New York Times magazine of May 4 there appeared an excellent article by A. H. Raskin on the hard-hit automobile industry. Mr. Raskin points out that what is happening in Detroit has worldwide implications. He notes that the Soviet Union has made it clear that ultimate victory in the contest between totalitarianism and freedom will go to that side which builds the highest standard of living for its people. Our ability to solve the dilemma faced in Detroit will serve as a test of our strength in meeting the Soviet challenge.

I ask unanimous consent that this thought-provoking article, entitled "Detroit: Focus of the Basic Duel," be inserted in the Appendix of today's RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DETROIT: FOCUS OF THE BASIC DUEL

(By A. H. Raskin)

DETROIT.—From the outside little is changed. The huge automobile plants that made the Detroit area the mass production capital of the world have lost none of their grimy majesty. Only the barren parking lots betray the stillness within. Sharply curtailed payrolls, short work schedules and skip-weeks have become the pattern for most of the industry that has made itself bearer, backbone and badge of the American economy.

It is an industry so efficient that technicians from every continent flock here even now to regard its factories in shrinelike reverence. But this year's cuts in output

reflect no miracle of push-button automation. The public is not buying cars with anything like the enthusiasm it did in most postwar years. And when Detroit's assembly lines stop for lack of sales a tide of secondary idleness washes through hundreds of other cities across the Nation. For the auto industry normally gobbles up a fifth of the country's steel and staggering quantities of rubber, glass, textiles and other basic commodities.

Detroit lives on a roller coaster. It leads the economy and it is chained to it. Its manufacturers gamble upward of a billion dollars each year on their ability to guess what Americans will want and on their having enough money to buy it. Many of its workers are no less venturesome. They count on the steadiness of their pay checks to buy an imposing list of goods on the installment plan.

This willingness to go for broke makes Detroit a vibrant community, one in which violence runs close to the surface. It has not forgotten the turbulent sitdown strikes that forced the first break in the industry's resistance to unionism 21 years ago. Its racial tensions erupted in 1943 in a riot that left 34 dead and 700 injured. Its labor movement gave rise to the very different but equally controversial characters who head the country's two biggest unions, Walter P. Reuther of the United Auto Workers and James R. Hoffa of the International Brotherhood of Teamsters.

Control of its industrial life is centered in three mammoth corporations, General Motors, Ford and Chrysler. The abandoned shells of once flourishing plants stand as acre-broad tombstones for companies that could not meet the test of survival in the war for market supremacy. State analysts estimate that 77,000 jobs have disappeared in Michigan auto factories in the last 3 years as a result of the consolidation of companies, the transfer of operations to other States and the heightened productivity of automated equipment.

This was the arsenal of democracy in World War II—principal supplier of the guns, tanks, trucks, and planes that gave the Allies their victory over nazism. Now, a few weeks after Nikita Khrushchev took over the Soviet Premiership with the boast that he would destroy capitalism by outproducing it, a third of the productive facilities are blacked out in the city the world views as the fountainhead of America's high living standards.

THE MOOD

The sign on your hotel bureau says, "You never had it so good," and goes on to extol the roast beef, steak and shrimp in the new grill. It is your introduction to the wistful effort the city that put the world on wheels is making to prove it is not careering downhill. "Look at the doughtnut, don't look at the hole," is the advice an inquirer gets from one top industry executive.

The city's banks are bulging with savings deposits, the two cars that are being turned out in closest to normal volume are both in the luxury price range—Cadillac and Thunderbird; the restaurants hardest to get into are those that charge $5 to $8 for a steak; the opening of the baseball season brings 46,698 out to cheer the Tigers; private investors press plans to start $150 million worth of downtown development projects in the next 9 months.

These manifestations of well-being, even opulence, leave the visitor ill prepared for the misery that is Detroit's other side. It is to be found in the human wastepile of the unemployed—the dispossessed and those with a shaky hold on their possessions; the worried woman on her way to the hospital, whose husband had a heart attack the week his job insurance ran out; the youth about to sign up for another hitch in the Army, who confides: "All the money I've got, you can hear it jingle."

In all this there is no panic, rarely a display of rancor. The men and women in the long queues at the State unemployment offices ("wall-to-wall people," one official calls them) wait with almost as much outward detachment as if they were on the check-out line at a supermarket.

When one talks to them, even those who have lost their homes, their cars or their furniture are likely to sound apologetic about the collapse of their security, as if it were all somehow their fault. But there is, in many, a sense of defeat that goes beyond resignation. It takes hold at the last twist of the wringer when they must make the dreaded turn from insurance paid as a matter of right to public relief issued only after proof of destitution.

This is Detroit, 1958 model. No schizophrenic ever was so bedeviled with contradictions, conflicts, and frustrations. And, as if these were not enough to dismay even the most dynamic community, this city of 2 million finds itself the setting for the year's most crucial and most acrimonious union-management negotiations—the wage talks between the Big Three auto companies and Walter Reuther's UAW. Even though the slackness of production and the staggering backlogs of unsold cars in the hands of dealers have made the chance of a strike virtually nil, the emotional overlay of the unresolved labor issues adds to Detroit's jitters.

THE WORKERS

The chief sufferers on the human side include tens of thousands of ex-G. I.'s, one-time members of the 52–20 Club, who drifted here and found steady work after months of futile search for an area of civilian usefulness in their hometowns in the hills of Kentucky and Tennessee and in the segregated, under-industrialized Deep South. The layoff ax, moving implacably up the seniority list, has chopped off the great bulk of the workers who got their jobs in the last 10 or 11 years.

That means that most of the orphans of the assembly line are former servicemen and others who came to adulthood and family responsibility too late to have suffered through the great depression of the thirties. Now they are victims of a slump that already has caused 55,000 Michigan workers to exhaust their 26 weeks of State insurance benefits and that brings 5,000 more to the same dreary terminal each week.

The mother stood with her five children in the shabby parlor that has a 2-foot hole in the plaster beside the television set. The 10-year-old said he didn't want to go out to play—the other kids on the block teased him too much because his blue jeans were 6 inches too short and full of patches.

"I've always tried to keep my family clean and decent, but now their clothes are just falling apart," the mother said wearily. She was a slim graceful woman, soft-spoken and looking younger than her 30 years.

She told of the troubles that had piled up since her husband, a Navy veteran, lost his job as a welder in the Chrysler body division September 6. One child fell off the back steps and had a concussion. Another had to go to the hospital for treatment of infected sinuses. By then the Blue Cross had lapsed and the medical bills came to $300. The washing machine conked out in December and the transmission in the 1948 Ford called it a day a couple of months later. They kept up their $80 monthly rent until February, but by the time they drew their last weekly insurance check of $48 a month ago their original savings of $200 had turned into a $200 debt to a finance company and an unpaid installment of $15 on their sewing machine.

"The landlord's been nice to us," the mother said, "but he works at Chrysler and he's laid off, too. My husband goes out every day just walking and walking, looking for work. But there is just nothing anywhere. Sometimes he babysits for 50 cents an hour. We are both nervous wrecks; we never had it like this before. We have applied for relief and they give us a temporary allowance of $26.42 a week for food. Accepting money from welfare, I feel we're down to the last notch. I don't want the children to grow up with the idea of welfare aid. My parents back in Arkansas raised me never to lean on welfare. If I could only get a job—any job—even with five kids."

The credit jeweler interrupted his lament that business was practically killed to wait on an old customer, a Chevrolet worker idle for the first time this year as a result of a 1-week shutdown. The jeweler came back scratching his head. The worker had bought $750 worth of jewelry—on the installment plan.

An armored truck stood outside the unemployment insurance office in a down-at-the-heels neighborhood 5 minutes' ride from Detroit's glistening civic center. On the truck's side was a sign: "Charge for cashing checks. Up to $50—15 cents. Over $50—20 cents." Two-thirds of the workers streaming out of the office thrust their checks through the slot and paid tribute to the man in the truck.

But he was not their only partner. A ponderous blind man in blue denim and galoshes sat on a milk case beside the truck. A tipsy woman in a brown jacket held the alms cup for him. She pushed it forward every time a worker got his money. "Something for the blind," she said. Not one failed to drop a dime or quarter in the cup. "It's bad luck not to give," one donor explained sheepishly.

Inside the office the manager frowned: "That armored truck is violating the law, but the cops don't bother the owner. And the wives like it, it keeps their men out of the beer gardens to cash their checks. They say the blind man pays that woman $50 a week. Not long ago the woman's husband had an argument with the blind man and cut him over the eye. This is a rough section. Occasionally, workers are stuck up in broad daylight as they walk away with their money."

The hot sun brought hundreds of jobless to the banks of the Detroit River to fish and doze. The perch were not biting, but that did not bother anyone much. A metal finisher in his 12th week of layoff at Fisher Body looked up and down the line of DP's from other auto plants on the embankment, and said:

"After a while just sitting around the house gets you down. You look at TV till the last show goes off and then you have nothing to do till you start looking tomorrow. What with your wife being nervous, you're always getting into arguments. The other day she said to me, 'I see in the paper where President Eisenhower says 300,000 people got jobs last month. Why weren't you one of them?' I only wish the President would tell me how to get from the fishing line to the assembly line."

The two Chrysler workers had not seen each other since they were laid off in January. They met on the street, each with his small children at his side. One reported that his wife had found work as a nurse. The other's wife was working as a charwoman.

"I do all the cooking, take care of the kids and run the errands," the first one said.

"I do all that and the washing besides," said his friend.

"I don't do that."

"Well, you will."

His grin was so cheerful that a passerby might have thought the short, amiable man with the blue shirt and grey dungarees was telling a funny story. His unemployment insurance ended 2 months ago and he took his wife to move in with her widowed sister

and 2 youngsters in a hotbox that looks like a transplant from Tobacco Road. He has a road-weary Ford he bought secondhand 4 years ago and on which he already has paid more than $500. He still owes $310.60 on it, but it is so dilapidated that the finance company never bothered to come and haul it away.

"They've took about everything else," this ex-Chrysler assembler said in his uncomplaining way. "They took my bedroom set and my living room set. I owed $300 on them. Then they took my gas cabinet range. I lacked $100 on that."

Relief is his next stop.

The lunch buzzer sounded in the busy Cadillac plant and four girls sat on the floor beside a fuchsia body assembly to munch sandwiches. They talked angrily about a washroom rumor that all married women were to be fired to make jobs for men. "When times were good," one exclaimed, "the men didn't want these jobs. They would stay a day or two and say I can get a job somewhere else." The girls all felt better when a visitor assured them that the company had no intention of ousting women and that the union contract forbade any sex discrimination.

THE MANAGERS

Industry executives, tasting austerity through a sharp falloff in their own bonuses and special compensation, do their best to accentuate the positive. Each fresh cutback in production rates is accompanied by a barrage of comforting statements about future sales prospects. The chief of one operating division that is finding it particularly hard to hold its market travels east to tell businessmen that the economy is not sick—it is not even ailing. "Even a sound and healthy economy has to pause occasionally for a rest," is his clinical estimate.

Few things irk the industry more than suggestions that people are not buying new cars simply because they consider them too big, too gadget-encrusted or too costly. The angriest reproaches in the first month of union negotiations were touched off by a Reuther quip that the companies would sell more cars if they designed models that did not need a block of parking space.

This is the ultimate heresy in management circles. There are a lot of reasons other than stubbornness to explain why the industry is so resistant to pressure for a small economy auto. Bigness does not make for maneuverability, whether in cars or in corporations. Unlike frenetic Seventh Avenue, which can switch from waistlines to sacks overnight, the auto manufacturers require a year or more to make a U-turn in their basic styling. And that lead time begins only after a summit decision, made agonizing by the layers of authority to be consulted and the monumental expenditures involved in a wrong guess.

"Certainly any unemployed is too many," the General Motors vice president declared, "but when you look at the general level of the economy it provides solid basis for optimism. So far as the long-range future of the auto industry and of the national economy is concerned, I think we all have to be very bullish. The entire situation underscores the necessity for good, sound, constructive selling."

Footnote by another vice president of the same company: "It is not the unemployed people who are causing the recession, but the employed people who refuse to buy at this time."

In the private dining room at the suburban club, the wife of a company official made excuses for her mink: "It's last year's and it's getting a little shabby; it doesn't look good for an executive vice president's wife to wear a new mink this year." A bank official, who serves on an auto company's board, also had a recession note to contribute. He had promised his daughter a yacht as a fifth wedding anniversary present this year, but he decided to defer the purchase. To make amends, he cut short his winter vacation in Florida and lent her his own yacht for a Caribbean cruise.

With all the security precautions of a trip to Cape Canaveral, the visitor was ushered into the top-secret styling showroom in which hand-built prototypes of the 1959 models were stored. They were not calculated to cause exaltation to an admirer of small cars. The executive said: "If the public wants to lower its standard of living by driving a cheap, crowded car, we'll make it. But we still don't believe that's what they want, and every survey we have made backs up that belief. The industry intends to invest well over a billion dollars in tools and dies for new big-car models for 1959. We are confident it will prove a sound investment."

Despite this brave talk, reports are widespread in the motor center that all the Big Three are rushing preparations to have a small car ready for sale—by 1960.

THE HIGHWAY AHEAD

The green light for full production is not likely to flash on before the 1959 models go on the line this fall. On the charts the Michigan Employment Security Commission uses to record the ups and downs of unemployment, the blue and yellow mountain already has climbed right off the graph that was adequate to handle all the fluctuations in the 20 years since the job-insurance system began. The statisticians forecast: "We have only begun to set records."

No less worrisome is the danger that Detroit will remain a distressed area even after the auto plants swing back into sustained production. Prof. William Haber, of the University of Michigan, one of the country's prime experts on manpower problems, warns that 200,000 workers in the State (nearly half the 450,000 now unemployed) would stay jobless even if the recession ended tomorrow. He feels that Detroit may be in for the kind of readjustment that caused such a prolonged industrial blight in New England when its textile factories started moving out.

Diversification—a massive effort to attract new industries—is imperative unless unemployment is to become a permanent drag on the area's prosperity.

THE LESSONS

An observer comes away from a week of trudging through somber streets full of somber homes and somber people wondering whether we know as much about keeping our economy from causing wholesale human suffering as we think we do.

Here are factories built to satisfy America's desire for a more abundant life. Their equipment represents the ultimate in industrial technology; behind them stretches an overfull pipeline of raw and processed materials awaiting conversion into finished goods. And here, locked out of these factories for want of orders, are 265,000 workers in a three-county industrial area—their only mission the collection of unemployment payments, their living standards on the downgrade, their confidence in their own worth sagging with each week of being unneeded and unwanted.

How long their stoicism will last is a question on which no one likes to speculate. Mike Marasco, community services director of a UAW local in hard-hit East Detroit, has this answer after months of responding to pleas for help in getting surplus food and in keeping household effects from being carted off:

"Our people are not bitter. They have plenty of faith in the future of Detroit. But they won't sit still for another winter like the one they've been through. They're looking forward to going back to work in the fall. If they don't they're not going to be quiet till someone tells them why."

The jobless find it puzzling that their ordeal evokes so little sense of urgency in Washington. The delay and bickering over proposals to extend unemployment insurance was an initial disappointment. It condemned additional thousands to turn to relief while awaiting Federal action.

But the real interest of the idle lies not in more benefits but in more work. For all the vigor of the industry's campaigns to stimulate sales through such slogans as "You Auto Buy Now," Detroit sees little hope that its woes will lessen materially without an upsurge in the national economy. That means that the city must look to President Eisenhower and Congress for any Government initiative needed to hasten the rise.

Detroit also must look to itself. It is still far from certain that, once national prosperity is restored, enough people will want to buy the kind of cars Detroit is making at the prices it is asking. The conviction is growing that buyers will be more selective in the future, less disposed to trade in their old car every year for the sole purpore of having one that looks a little more like a mobile neon sign.

"There was a fellow in this town once who became a billionaire by selling transportation, instead of gingerbread," is a sentiment one hears often among the industry's hometown critics.

The city's dominant power forces in labor and management are unlikely to add to the economic bloodletting by a test of strength this year. But their long-range antagonisms on pay, prices, profits, politics, and personalities have been made more virulent by the present travail. The prospect of a cooperative effort to solve Detroit's deep-rooted ills appears remote. This is doubly tragic, because there are few cities so well endowed on both sides with men of intelligence and imagination.

This is a frontline in the battleground Khrushchev has picked for the contest between totalitarianism and freedom. He has made it clear that the decision will not go to the country that launches the most sputniks into outer space or that piles up the most imposing reserves of thermonuclear weapons, but to the one that builds the highest living standards for its people. We start with an enormous advantage in that contest of peaceful accomplishment. How well we do in Detroit will be a large measure of our ability to stay ahead—and to stay alive.

Survival in the Nuclear Age

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks in the RECORD, I include a splendid address, Survival in the Nuclear Age, which was delivered by Brig. Gen. Alden K. Sibley, on December 7, 1957, at the Miltary Government Association dinner, in Boston, Mass.:

SURVIVAL IN THE NUCLEAR AGE, ADDRESS BY BRIG. GEN. ALDEN K. SIBLEY BEFORE THE MILITARY GOVERNMENT ASSOCIATION, DECEMBER 7, 1957

Mr. President, Secretary Roderick, members of the Military Government Association, ladies and gentlemen, to meet with members of the Military Government team tonight is a deeply nostalgic experience for me. In Au-

gust of 1944, 52 members of the French Country Team of the European Civil Affairs Division arrived in Paris to report to General Eisenhower's military mission to the French Government. They tackled the problems of initial food supply, public health and sanitation, rehabilitation of French telephone and telegraph systems, opening up the flooded French coal mines, rehabilitating the disrupted system of the French railroads, establishing an initial system of military justice later to be taken over by the French courts, and in general, rehabilitating the dislocated economy and political structure of the French nation with great dispatch and efficiency. As chief of staff of the SHAPE mission to France, I could only sit by and watch the skillful accomplishment of their specialist missions with awe and admiration.

In a period of international tensions and cold war the specialized problems of military governments are among the most challenging which our country faces today. As President Eisenhower indicated in his November 13 address in Oklahoma City, the United States has military agreements with 42 countries. The economic aid missions, the military assistance advisory groups which we call the MAAG's and the United States Forces stationed by agreement on our bases in these host countries are confronted with problems familiar to all of you in this room. In a world situation, many of whose aspects are without precedent in history, posing a challenge to the American way of life and even to our survival, it is important that we as a Nation set our bearings by the stars and not by the lights of each passing ship. It is important too that we not wear out the rubber of our tires by alternately stepping on the gas and screaming to stops through a series of uncoordinated traffic lights.

In our great democracy a wise administration is alert to the changing political climate of the Congress and the Members of Congress in turn are sensitive to the views of their constituents. Accordingly, it is most important that the American people, as a whole, be well informed of the problems of our age. And, more importantly, that they be prepared to think; to think until it hurts. And we can well search the writings of Clausewitz and Mahan and Douhet and MacKinder, for in an age without precedent the American people have real need for guidance. Thus I should like to discuss with you tonight the need for an informed and thinking public as prerequisite to our survival as a Nation in the nuclear age.

As framework for our discussion this evening, I suggest that we use the outline of the classic five-paragraph military field order. Its five paragraphs are as follows:

1. Situation
2. Mission
3. Operations
4. Logistics
5. Command

I think we may find that this simple outline, when considered from the point of view of national strategy, will lend simplicity and perhaps a degree of force and emphasis to our deliberations.

First of all, therefore, let us consider paragraph 1, "Situation": The situation in which the United States finds itself today. Our country emerged victorious from World War II faced with two startling, unequivocal facts. First, the Union of Soviet Socialist Republics progressively revealed itself as the antithesis of a benign former ally content to live with us in peaceful coexistence. We found instead the specter of a police state motivated by Marxist-Leninist international communism and relentlessly devoted to the destruction of the capitalist system and to world conquest by any means. It soon became clear to us that the continued adherence of the masters of the Kremlin to Marxist-Leninist doctrine of world conquest was confirmed almost daily by their every word and deed. Mao Tse-tung, the acknowledged leader of the Communist Party in China, like Hitler in Mein Kampf, has written for all the world to read: "I am a Marxist dedicated to communizing China and the world under the leadership of Moscow." And more recently, we are all familiar with Khrushchev's statement to the effect that the masters of the Kremlin could be expected to depart from the Marxist-Leninist doctrine of world conquest when the snail learns to whistle. The second unequivocal fact which faced the United States following the end of World War II was the consequence of a technological revolution which we ourselves had precipitated. We were faced with a transition in weapons which we slowly came to realize was without precedent in the history of mankind. When we consider that it was actually possible as late as 1825 for the British War Office seriously to consider the replacement of musketry by the crossbow in the hands of British infantry, we can begin to appreciate the magnitude and suddenness of the transition from conventional to nuclear weapons.

It was during this period that man learned to reproduce on earth the nuclear fusion reactions which take place in the central regions of the sun. The proper isotopes of hydrogen are sufficiently plentiful in ordinary sea water to make a pound of heavy hydrogen sell for about $35; hence, as big as you like, as many as you like, and almost as cheap as you like, or more bang for your buck. But in spite of the rapid increase of our nuclear and thermonuclear stockpiles, some felt that every ounce of nuclear material should be allocated further to increase our retaliatory capability against the Soviet heartland. In recognition of Soviet aggressive intentions and as a deterrent to global war, the principle of massive retaliation received general support in allied councils. Although it can be argued that our capacity for massive retaliation was successful in preventing Soviet nuclear aggression against the heartland of the United States during this period, it must, of course, be recognized that until about 1955 U. S. S. R. did not possess the capability for such an attack. Henry Kissinger suggests that our concentration on the principle of massive retaliation may even have limited the freedom of American diplomacy to some extent during this period.

Our national strategic concept was founded on the assumption that the American democracy would not itself precipitate an aggression. The corollary to this assumption, of course, was that the military advantage inherent in a surprise attack had to be conceded to the aggressor. As a counter to surprise attack, therefore, the capacity for massive retaliation gained currency as the only effective deterrent. The limitation of this concept was, of course, the fact that little less than a direct threat to the survival of the United States itself would have caused us to release such a holocaust. The masters of the Kremlin, of course, knew this. They also knew that, inhibited by the horror of nuclear war prevalent in the minds of our allies, we should not be likely to resort to such measures to counter limited peripheral aggressions. The doctrine of total massive retaliation, and the absence of a capability for the limited employment of nuclear force which might have carried with it the conviction of plausibility may give some clue to the predilection of international communism for conquest through subversion, sabotage, political corruption, and economic infiltration around the periphery of the world island.

In the United States the recognition gradually dawned on even the most ardent isolationist that America at last had become a Nation among nations, dependent economically on Europe, the Far East, and the uncommitted areas for world markets and for raw materials. With only one-seventh of the world's population and an approximately equal proportion of its natural resources, the United States could scarcely permit the sinister inroads of international communism to ring down the Iron Curtain successively on the other nations of the world. Such a course of isolation would ultimately present the United States with a strategically impossible situation. We faced the dilemma of being nibbled to death by mice or atomized in a world holocaust. The record of the states enslaved by international communism, however, was clear: initially, Russia, then Estonia, Latvia, Lithuania, Czechoslovakia, Poland, Bulgaria, Hungary, Rumania, Albania, East Germany, the mainland of China, Outer Mongolia, Tibet, North Korea, North Vietnam, and, in process of enslavement today, Egypt and Syria—18 countries including parts of countries and over 900 millions of people. Those of us who have not as yet been engulfed or subverted and thus enslaved by Communist dictatorship would be less than prudent not to provide an effective deterrent to Communist aggression. But what kind of a deterrent is needed? In answering this question it is significant that the Communist leaders with competent scientific advisers are acutely aware of the fact that in unlimited nuclear war there can be no victor. Thus they have turned to the orthodox methods of dialectic materialism to accomplish the avowed aims of the world conquest and domination by means other than total nuclear war. Moreover, while the free world has been diverted by the necessity of putting out successive brush fires around the periphery the world island, the Soviet Union has been busily engaged in a sinister and relentless program of technological education at home.

To compare the number of graduates in scientific fields within the last 30 years in America and in Soviet Russia is not particularly frightening until one looks at the past 2 years and realize that probably 33 percent of Russian graduates are fundamental researchers: pure physicists, mathematicians, chemists, and the like. Perhaps the Russians are wrong in such a concentration of national effort in science. If they are wrong, they will have an overabundance of scientists; if we are wrong in developing too few scientists, it may cost us our survival as a Nation. In Soviet Russia a young man or woman who attains distinction in mathematics or science over the intense competition of the high schools automatically becomes a member of the economic and social elite. Concessions by the state, fringe benefits, and incentive awards place him in a kind of a Socialist aristocracy where he maintains his place by his mental fertility, his production of ideas and his publication of scientific papers. Tragically, in our country the road to economic success and to the presidencies of corporations seldom leads through the laboratory. There is too little opportunity for material success in America for the pure scientist—for the fundamental researcher. Or, conversely perhaps, we place so high a premium on material success as such, that the more lasting achievements of the advancement of human knowledge tend to get lost in the shuffle. But on the other hand, we have been and probably are today the world's masters in engineering and technology. We are essentially a Nation of gadgeteers and this has come to us naturally with the necessity for conquering the wide-open spaces of our great continent. In contrast, the crowded cities of Europe are more conducive to the contemplative way of life—to pure research. In America, with a $5 billion research and development Federal appropriation each year, we devote only about 10 percent to pure research; 90 percent goes to developmental technology. We research the hell out of everything but we contemplate very little.

So we emerge in the fall of 1957, 12 years after the end of World War II, with a technological breakthrough by the Soviets. The launching of the space satellite is, however, but an outward and visible manifestation of the thoroughgoing success of the scientific education program of the Union of Soviet Socialist Republics. Militarily it has two significant implications. First, it shows that the quantity and the quality of Soviet scientists is at least equal to our own. It brings home to the man in the street some of the facts which have gravely concerned the National War College in Washington and the National Security Council in the past several years. Whereas in 1950 the United States graduated 130,000 young men and women in all scientific fields, as compared to about 70,000 graduates per year in the Soviet Union, in 6 years the picture was almost exactly reversed. In 1956 the number of graduates per year in all scientific fields in the United States had dropped to about 70,000 and in the Soviet Union had reached nearly 140,000. Militarily it gives us pause to wonder from when the next technological breakthrough will come and who will make it. Secondly, the most recent Soviet technological breakthrough makes it clear that they are on the threshold of an operational intercontinental ballistic missile capability. It may also provide an answer to the enigma which has puzzled our air strategists for the past several years as to the failure of the Soviets to develop long-range tanker aircraft and the technique of inflight refueling for their Bear and Bison bombers. It is possible that they have considered the manned bomber as an interim weapon and, with their disregard for human life, have been willing to rely on its capacity to conduct one-way missions against continental United States, pending the era of the ICBM.

Here we have the richest nation in the world, the greatest industrial nation in the world, 3 million square miles, highly productive, richly endowed with natural resources; 165 million people live here; the acknowledged masters of the art of mass production. They have a gross national product of $400 billion, and in the last 5 years over $200 billion of capital investment has been made in plant and equipment alone in this country. One hundred million of these people live in cities; one-half of these reside in 232 cities; one-third of them live in 41 cities. The central cities of the 32 largest metropolitan areas cover only an infinitesimal 55 square miles of the total 3 million square miles of territory, but at the peak period crowded into this tiny area are 22 million people. In 25 cities are located 70 percent of all petroleum products, 89 percent of all financial transactions and one-half of the Nation's foreign commerce is carried on in 6 port cities; one-quarter of our foreign commerce is in a place called New York. With the Soviet's present capability for the delivery of one-way nuclear attacks on this great industrial complex, we are today living in the long-heralded era of nuclear plenty. This term must not be confused with nuclear parity for it is quite clear that the Soviets will not have attained the equivalent of our enormous nuclear stockpile for some time to come. However, with the capacity for destruction of our economy, what, I ask, would it avail them to be able to destroy it twice over? This then is the situation in December 1957.

Let us now turn to paragraph 2 of the classic 5-paragraph field order. This paragraph, titled "Mission," when applied to national security planning is termed the "strategic concept." In his November 13 address in Oklahoma City the President spelled out with crystal clarity the four elements of our national strategic concept in the nuclear age. He said that we must: "(1) As a primary deterrent to war maintain a nuclear retaliatory power of such capacity as to convince the Soviets that any attack on us and our allies would result, regardless of damage to us, in their own nation's destruction. (2) In cooperation with our allies, provide a force structure so flexible that it can cope quickly with any form of aggression against the free world. (3) Keep our home defenses in a high state of efficiency. (4) Have the reserve strength to meet unforeseen emergency demands."

With this clear and unambiguous statement of our 4-point national strategic concept, let us now look at paragraph 3 of the field order: "Operations." How do we carry out our 4-point mission that the President has set for us? First, we must, of course, maintain our nuclear retaliatory power in the form of an ever alert strategic delivery capacity by the Air Force and the Navy, supplemented by intermediate range ballistic missiles in overseas bases, and provided with intercontinental ballistic missiles as rapidly as the combined efforts of our dedicated scientists and engineers can make them.

As the second element of our national strategic concept, the President has prescribed that in cooperation with our allies we must provide a flexible force structure to cope quickly with any form of aggression. It is well that we examine this, as our operational plans for meeting this second element of our mission may well provide the key to future diplomacy and even our national survival itself. Whereas our preoccupation in the past with a total and overwhelming nuclear retaliatory power entailed a course of action inconceivable in the absence of a direct threat to our national survival, the possibility of a graduated and flexible capacity for nuclear retaliation provides a means for relating military force directly to diplomacy in any area of the world. A capability in being to counter peripheral aggression by limited, nuclear actions should constitute a plausible use of force which could well give the Communist aggressor pause to stop and consider the consequences. Forces to compete successfully in limited war in the nuclear age must be widely dispersed, technically trained, extremely mobile, and above all self-sustaining. They would thus not present the concentrated targets which massing of conventional firepower entails, nor would they require highly vulnerable port, depot, and logistic supply systems—ideal targets for nuclear attack.

It is entirely possible to have forces, trained and equipped for limited nuclear war, which at the same time have the capacity to fight conventional war with conventional weapons. The forces to counter aggression against the free world must be designed, trained and equipped with a capability for tactical nuclear combat, if need be. This as the President has said, we are doing. The importance of the Army's role in limited warfare of the nuclear age is of such importance that I understand Secretary Roderick, your key speaker this evening, plans to discuss this subject with you and will bring to it a far greater degree of clarity and emphasis than could I.

An immediate consequence of the concept of limited tactical operations of interest in passing, however, is that the aggressor is placed at a disadvantage in achieving his purpose of occupying territory and controlling populations. During the revolt of the Hungarian people in November 1956, for example, the Red army was forced to employ 22 divisions to put down a presumably unarmed populace. Such concentrations of manpower would present unexceptionally vulnerable targets to a nuclear armed tactical defending force. Moreover the masters of the Kremlin in full realization that general nuclear war would spell disaster for their cause would have every incentive to avoid extending such limited actions and so precipitate their own annihilation.

As the third element of the President's strategic concept, we must "keep our home defenses in a high state of efficiency." Here in New England, the strategic northeast corner of the United States, we are making great strides in this field. The NIKE defenses of our industrial and air base complexes spell the doom of the piloted bomber. These deadly air defense missiles are being supplemented by even longer range and more effective defenses, as the headlines have proclaimed in recent weeks. Even today my own office is hard at work in the engineering, design and construction of complex installations and emplacements to complete the shield of air defense, and our dedicated scientists are applying their best brain power to the solution of the anti-missile missile problem.

Thus, it seems every aspect of the President's 4-point strategic concept brings us back in the end to the question of brain power and from this overriding requirement our military leaders are certainly not exempt. The weapon systems of the modern age have already become so highly involved technically that even minor tactical units, infantry company and the artillery battery, require scientists on their staffs. The time, therefore, has long passed for the professional military commander at any echelon to sit back, complacent in his leadership and command ability, leaving the difficult technical questions to the scientific "long hair." In the age of modern weaponry any commander who fails to know his weapons and to study with diligence the complex problems of weapon effects will progressively abdicate command to those who do. For it stands to reason that he who knows how the blast, heat, and radiation of a weapon strike can affect the course of battle will control the military decision and will in consequence become the "de facto" commander.

And just as I would urge upon my colleagues in uniform, green, gray, or blue, the importance of becoming military scientists as well as commanders and leaders of men, so I would call upon our captains of industry and our great educational leaders in whom New England has such a rich heritage to grasp the nettle of their grave responsibilities for our survival in the nuclear age.

For the dignity and prestige of the executive and the thinker in our national plan of operations to give effect to the President's strategic concept are fully as significant as are those of us in uniform. In our great democratic system the Federal Government can only prime the pump of basic research and scientific education. The continuing impetus which alone can produce the mathematicians, physicists, chemists, political scientists and statesmen we must have, must come from the citadels of private enterprise and the halls of learning of our country. This is a real and vital problem. This is your challenge and my challenge, for we as Americans must find the way to remove this vulnerable Achilles heel in our security structure before it is too late. Until we make it possible for the mathematician in his study, and the physicist in his laboratory, to aspire to the material recognition we give to the chairmen of our boards and the presidents of our corporations, the ablest and best will desert the study and the laboratory for new worlds to conquer and those very material rewards on which our society has come to place so high a premium. So much for an outline of the operational plan to implement our national strategic concept set forth by the President.

Let us turn briefly to paragraph 4 of the field order "Logistics." What is logistics? I should like to propose to you the definition contained in the Outline Logistic War Plan for Supreme Headquarters Allied Powers Europe under NATO. It reads, "Logistics is

the science of marshaling the resources of nations in support of their allied military objectives." This definition perhaps has shortcomings and the author will be glad to answer for them. Classically our military field manuals have divided logistics into five specific functions. First, supply and procurement; second, evacuation and hospitalization; third, movements in transportation; fourth, construction and installations; and fifth, signed communications. Paradoxically, however, the most important aspect of logistics is that which it is not. Congressman KILDAY, several years ago in the House Armed Services Committee gave the following pointed definition of logistics: "An army marches on its stomach; without money they'd be empty stomachs and they'd march with bare feet. Without money that captivating word 'logistics' has no meaning."

A significant example of the importance of one field of logistics, that of construction, has always been to me the fact that NATO infrastructure, the construction effort of our European alliance, is the only function of that alliance which is considered so important as to be funded out of an international budget through a cost sharing formula contributed to by the 15 nations of NATO. The President stated with regard to our airpower, our defense system, and our warning system: "More runways, more fueling stations and more housing." This means more construction. This means more dollars, which must be spent carefully and conscientiously in the interest of our national security.

The construction effort in some ways may be described as the most important of all logistic functions. Construction in a very real sense is the first concern of any military commander. Before a weapon can be designed, research and development facilities and testing installations must be built. Before a single soldier, airman, or sailor can be mobilized and trained, classrooms, training installations, and camps must be constructed. Before a single air defense weapon can be installed, facilities must be constructed for its installation. Before a single military unit can be deployed overseas to any 1 of the 43 nations with whom we have military base agreements or elsewhere, military bases and facilities must be constructed. The Army engineers of our airborne division, using air transportable construction equipment, must provide four landing strips for assault aircraft within 3 to 5 hours. And with the rapid developments in technology, our complex of installations must be modified frequently, many of them actually in the course of construction.

As the President announced in Oklahoma City, during the last 5 years $211 billion have been appropriated for our national security, an average of $42 billion a year. How much of this fantastic sum has gone for construction alone, only one of the functions of logistics? The cost of a single, long-range bomber is measured in terms of millions of dollars, but the cost of long-range bomber bases is measured in hundreds of millions of dollars. We think today of the high cost of nuclear material, and yet the developments of the Manhattan district in the initial $12 billion investment by this country in atomic energy at Oakridge, Hanford, and elsewhere, was largely spent for construction. The President has indicated that the Federal Government is appropriating at a rate of $5 billion a year for research and development today, and yet, when we think of the guided missile test range at Cape Canaveral, the Lincoln Labs, and the Cambridge Research Center here at Bedford, construction represents the preponderance of the cost of these research facilities. The construction of the 35 NIKE air-defense missile batteries we have just completed in New England has cost much more than the missiles which arm them.

Let us look for a moment then at the role of the construction engineer as it contributes to our survival in the nuclear age. Before the plans for a new weapon or a new piece of equipment are off the research and development drawing board, the construction engineer must be planning his installation designs. Many of these designs will be unprecedented, requiring pattern-making engineering solutions: the construction of Arctic airbases on compacted ice sheets; of miles of tunnels in lieu of roads on the ice cap, and of crackproof rigid pavements to carry 240,000 pound gear loadings on frost susceptible, glacial till material. The construction engineer is among the first to come to grips with the realities of implementing the national strategic concept. His capabilities frequently dictate the feasibility of military plans and operations. Meticulous design, careful construction supervision, and inspection must produce the high standard of construction for which the Army Corps of Engineers is reputed. And paradoxically enough, the proudest act of the Army engineer is to strike his colors. When the flag bearing the engineer castle is finally lowered over an Army engineer construction project and the flag of the using service is raised, there is deep satisfaction in knowing that the installation has taken its place at last as part of our national security structure. So much for logistics.

When we consider the final paragraph, No. 5 of the classic field order: "Command," we have a problem for the future. In applying the field order to a small infantry unit such as a platoon, paragraph 5 usually reads, "I will be at such and such a place." Even when applied on the national scale the principle of command recognizes that once a decision is made by the Commander, he relinquishes for a time the control of his operations. After the Commander's decision has been made, he cannot, however, sit back idly and watch the course of the battle. The Commander's job is immediately to undertake plans for the next move. What is our Commander planning for the future? Again the President in Oklahoma City, answered this question with finality: "One thing that money cannot buy is time. Frequently time is a more valuable coin than is money. It takes time for a tree to grow, for an idea to become an accomplishment, for a student to become a scientist. Time is a big factor in two longer term problems, strengthening our scientific education and our basic research. * * * Remember that when a Russian graduates from high school, he has had 5 years of physics, 4 years of chemistry, 1 year of astronomy, 5 years of biology, 10 years of mathematics through trigonometry, and 5 years of foreign language. * * * Young people now in colleges must be equipped to live in the age of intercontinental ballistic missiles. However, what will then be needed is not just engineers and scientists but people who will keep their heads and in every field, leaders who can meet intricate human problems with wisdom and courage. In short, we shall need not only Einsteins but Washingtons and Emersons." Thus the Commander has made his decision and has launched the planning for the future. The time for educational dilletantism, for poor and underpaid teachers, and the tendency of a student to just get by in academics in order to play football, is long past if we are to survive as a Nation. We must learn to think and think hard if we are to escape the defeat of the Roman Empire. We are the richest Nation in the world. We have the highest standard of living in the world. We cannot afford to allow ourselves to go soft. We must have the courage and the intestinal fortitude to pay the annual premiums on our national insurance policy with adequate military stature and adequate scientific and technological strength. Just as a rich man must lock his door at night not to tempt the housebreaker, so we must be prepared to protect our riches or we shall surely lose them to the international gangster who will take them if he dares. To carry out such a challenging program requires more than national fortitude. Survival in the nuclear age requires national brains. Collectively and individually, Americans must learn to think, to think hard. For I say to you with all the energy and vigor at my command, that young Americans must either learn to think or learn Russian.

Chairman Lewis L. Strauss Sets the Record Straight

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. HOSMER. Mr. Speaker, AEC Chairman Lewis L. Strauss is a man as sincerely dedicated to peace as any in the world. His dedication to this cause, however, does not take the form of meaningless eulogies of the concept or espousal of boobytrapped schemes to weaken the United States capability to resist Communist enslavement in the name of peace.

He correctly gages the difficulties facing our Nation and the strength we must maintain to overcome them and ultimately reach mankind's basic goal of a peaceful world. The Los Angeles Examiner on May 5 editorially noted both Chairman Strauss' dedication and courage to face our problems realistically as follows:

A STRAIGHT SET OF FACTS

Chairman Lewis L. Strauss of the United States Atomic Energy Commission, put together a pretty straight set of facts on the troublesome question of international disarmament, in his recent statement before a subcommittee of the United States Senate.

He said it is the earnest hope of the American Government, as it is of all thoughtful men throughout the world, that a reliable and effective system can and should be negotiated by the major powers for the control of the world's armaments—"a system which can reduce and finally eliminate the possibility of a third world war."

But he also said there are certain things that have to be remembered and given prior consideration.

One of these vital things is that the act of aggression needed to start a great war will never be of our doing. As a democracy, it is the unavoidable destiny of America to be cast in the role of defender in any war. The uncomfortable but irrefutable fact is, as Mr. Strauss says, that we are compelled by our moral concepts to leave the responsibilities and the advantages of aggression to the totalitarian nations.

The advantages of being the aggressor are obvious. They give our enemies the chance to pick both the time and the place of attack, but aboye all the chance to strike the first blow—a frightening thing under the conditions of modern warfare.

This being true, our only protective recourse in offsetting the advantages of initial

attack which we grant to the aggressor is just what Mr. Strauss says it is—that of having more and better weapons than the aggressor can bring against us.

Our sole hope of survival if war comes under these circumstances of our disadvantage is in having such overwhelming weapons of reprisal and retaliation that our ultimate victory will be assured. And of course the brightest and best hope that springs from this position of defensive strength is that it will confront the potential aggressor with such a certainty of defeat and such a burden of cost that he will be deterred from making war against us.

Hence, whatever else we seek and agree to in our negotiations for a system of international disarmament, our unyielding insistence must always be, as Mr. Strauss urges, that:

"It must not be such as to impair the defensive and retaliatory power of ourselves and our allies without a convincingly compensating restriction on an aggressor's ability to attack."

United States Exhibit, Brussels World's Fair

EXTENSION OF REMARKS
OF
HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. TEAGUE of California. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter just received from Louis Lancaster, of Santa Barbara, Calif. Mr. Lancaster was formerly connected with the Department of State and for many years has been a successful businessman. He has spent much time abroad and is well qualified to pass objective judgment upon the effectiveness of the United States exhibit in the current World's Fair at Brussels. This he does in the letter which follows:

WORLD'S FAIR,
Brussels, Belgium, April 26, 1958.

Congressman CHARLES TEAGUE,
Washington, D. C.

DEAR CHUCK: I wish you and a few other Congressmen would hop a plane and take a quick look at our exhibit here. It has just opened and they expect 40 million people at the fair this summer.

Our building is beautiful—probably too beautiful. Inside most of the floor space is a pool of water. On an island—our main feature—a fashion show of mink stoles, costly evening gowns.

Russia—next door in a large, factory-like building—features sputnik, manufacturing, education.

The impression one gets. United States—pretty, rich, indolent, frivolous. Russia—strong, serious, down-to-earth.

Why must we again miss the boat? It's not too late to change our interior display. There are so many things we might have done—a typical United States community (modern home, supermarket, school, library, church, etc.).

I hate to have 40 million Europeans think our main thoughts are on mink stoles, rich evening gowns, and anemic, slinky fashion models. Most people in the world are poor. Why flaunt a let them eat cake attitude?

Regards,

LOUIS LANCASTER.

SANTA BARBARA.

Educational Potentials of Hawaii

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. BURNS of Hawaii. Mr. Speaker, Hawaii has been famed as the land of song, but little recognition has been given to her real achievements in the field of music. In including the following article which appeared in the New York Times of April 27, I wish to draw attention to the progress Hawaii has made, and underscore the spirit of understanding among people which has contributed in no small degree to this advancement.

In the not too distant future, I am sure the University of Hawaii will meet its responsibilities by a college of music so that the meeting place of the East and West will contribute to greater cultural achievements for all.

HONOLULU LOOKS AT THE MODERNS
(By Ben Hyams)

HONOLULU.—As spontaneously as night-blooming cereus bursts into blossom around the Punahou School campus, modern music is flourishing seasonally in this unexpected academic quarter.

Staid, missionary-founded Punahou sprang a pleasant surprise last spring when its music school, staged a Festival of Music and Art of This Century. It became quickly apparent that an institution had been founded, and the subsequent announcement that a second festival would be held April 20–23 came as no surprise at all.

As festivals go, this was a modest affair, comprising three concerts and a forum; but size is no measure of its value. For the occasion, Montague Hall, the music school building, besides providing the hall for the concerts, was turned into a gallery for a concurrent exhibition by members of the Hawaii Painters and Sculptors League.

The festival is the brainchild of the music school's director, Miss Marian J. Kerr, who came to Punahou in 1945 as chairman of the piano department after having served on the faculties of Pennsylvania and Northwest Missouri State Colleges. Miss Kerr felt her school owed the community something more stimulating than its tradition-bound faculty concerts. With no box office to worry about, Punahou emerged as a progressive force.

LIVING COMPOSERS

Her phrase "of this century" in the festival title was chosen to avoid the limitations of the word "contemporary." Nevertheless, all the music programed was by living composers, three of them living here. It was planned that way. By a departure from the first festival, this year Miss Kerr wrote or talked with various composers, asking some of them to suggest works of theirs for performance.

The response was nearly total, and totally compliant. Those represented on the programs included Walter Piston, Alvin Etler, Burrill Phillips, Paul Hindemith, Ingolf Dahl, Hawaii-born Dai Keong Lee (now of New York) and the three resident composers—George Barati, Homer Keller and Donald E. Wiley. There also were Alan Hohvaness, Quincy Porter, Alexei Haieff, Vaughan Williams, Henk Badings and Benjamin Britten.

ADVANCED TASTE

Publishers replied, too, offering material in some cases still in their printing shop. But here and there Miss Kerr thought she detected doubts of Honolulu's competence. Phrases like "you wouldn't want my very difficult quartet" hurt a little. Performers in the festival are no amateurs, but mostly mainland-trained musicians who will face up to dodecaphony with the best of their brethren back home.

Thus music in Honolulu is marked not so much by its differences from mainland music as by its similarities. While the Hawaiian guitar is sovereign at Waikiki Beach, back along the soft hillside slopes of this island the classic instruments prevail, including even the viola d'amore, lute, harpsichord and Japanese koto. Situated in that are are Punahou and the University of Hawaii, which are the main centers of musical life and provide a fair portion of the Honolulu Symphony Orchestra's membership.

The orchestra received a welcome infusion of modernism 8 years ago when Mr. Barati, a modernist composer-'cellist, became its conductor. Under his direction the orchestra has grown in national status from the community to the metropolitan class.

Composition of the Honolulu Symphony is as mixed as its racial ancestries. A university player may sit next to a lawyer or sugar scientist whose avocation is music. The likes of Robinson, Iwanaga, and Wong play as neighbors under their Hungarian-American conductor. Another member is undoubtedly the islands' best civilian bassoonist, Floyd Uchima, who is also a basso well known for his grinning portrayals of Leporello, Don Pasquale, and similar roles. So valued is Uchima's bassoon that a woodwind quintet by Barati scheduled for last year's Punahou festival was put off until this year because Uchima was unavailable then.

Among the young performers in the second festival concert, for children, were noted three Chinese-American Yee sisters and a boy named Oh, of Korean extraction. Honolulans will also tell you with a smile that the town's three leading choral directors are Murphy, Kelly, and Gallagher. Racial dividing lines are faint in this American community.

FESTIVAL SPIRIT

Since the first Punahou series, but not necessarily because of it, something of a festival spirit has spread. Last Christmas, Julius Herford came from New York to lead Honolulu's first Music Workshop and Festival, devoted to Bach-Beethoven and climaxed by a performance of Beethoven's Ninth by Barati and the symphony. Now a second Herford-led workshop-festival is planned for next Christmas, possibly on contemporary music.

Meanwhile, an established local chamber music organization called for guarantors to back a new spring season of concerts. They were readily oversubscribed. In addition to concerts by local ensembles, the Amadeus String Quartet will play here April 1 and the Alma Trio May 1.

Honolulu may be far from becoming a world music festival center. But let us say at least there are stirrings in that direction.

An Open Letter to the President

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. ROGERS of Texas. Mr. Speaker, it is rare, I believe, when an issue affect-

ing a large segment of our economy and our population, is so clearly pinpointed as has been done by a small independent oil producer in Hereford, Tex. I refer to the recent letter of Mr. Joe G. Evans to the President of the United States which was reproduced in the April 27 edition of the Sunday Brand in that community. Because it states the problem so graphically, under unanimous consent, I insert here Mr. Evans' open letter to the President:

AN OPEN LETTER TO THE PRESIDENT

HEREFORD, TEX., *April 23, 1958.*

Hon. DWIGHT D. EISENHOWER,
President, United States of America,
Washington, D.C.

DEAR MR. EISENHOWER: I think I would not be exaggerating to say that your decisions on imports of oil and agriculture have directly or indirectly put 1½ million people out of work, which means these people are having to house up with relatives and live on short rations like they did in the 1930 years of depression.

It doesn't seem that the price of wheat makes much difference in a loaf of bread, for I remember when we were getting $3 per bushel for wheat; we could buy a loaf of bread for 17 cents that now costs 26 cents and wheat is selling at $2 per bushel. Everything the farmer buys has gone up, up in price and everything he sells is down. In many cases, a farmer cannot hire help because he doesn't have a margin that will enable him to do so.

Mr. Eisenhower, can you tell us where the importing of oil gives the needy home folks one bit of justice? When he had 20 days allowable, our domestic oil industry was healthy. They found the huge oil reserves in the foreign countries and our Government began to cut our days of allowables here at home, so that the most powerful oil companies in the world could flood us with foreign oil and we were cut from 20 days down to 8 at the present time. These mighty oil companies that have ruined our domestic industry have tried to pose patriotism by saying, use foreign oil in time of peace and our home oil in case of war. You take the extra profit they make out of imports, over domestic oil, and you will see where their patriotism will be.

Mr. Eisenhower, just the fellows who work on the drilling floors are not the only ones that are put out of work, every industry in the Nation is seriously affected. I understand there are about 22 companies that are doing the major part of this importing—they are already fat with wealth, for instance, Mr. Paul Getty averages 100,000 barrels of import every time the sun comes up. Is it right for that few, who are already too rich to even have any feeling for humanity, to destroy the biggest industry of the Nation and put a million people out of employment?

Already, Mr. Eisenhower, many independents have gone under, because of the excessive oil imports. The few huge oil companies have tried for years to put independents out of business, but never could as long as independents had a fair deal, but now with the huge oilfields in the Far East, and with strangling 8 days allowable here at home, so that the mighty oil companies can have room for their oil when their tankers reach our ports, they can and will.

Well, Mr. Eisenhower, I could go on and talk for hours but it looks to me like a 12-year-old boy could see through this. I am not informed on all of it, but I have seen enough and heard and read enough to know that it is terribly unjust. You have the power, Mr. Eisenhower, to impose mandatory control, why don't you do it and thus put a million of our people back to work and, at the same time, save many an independent from going completely under—many of them are hanging on by a slender thread.

Hon. LYNDON B. JOHNSON on March 12, 1958, made a speech explaining this terrible situation—on March 6, 1958, he wrote you a personal letter, I have a copy of each.

Mr. Eisenhower, the people of the Nation are depending on you to give relief in places where you have the power to do so.

Sincerely,

JOE G. EVANS.

How Stalin Stole Spain's Gold

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mr. BOW. Mr. Speaker, under leave to extend my remarks, I offer an article by Lawrence Sullivan, our distinguished coordinator of information, entitled "How Stalin Stole Spain's Gold." It reveals a pattern of Communist subversion that should serve as a warning to all Americans.

HOW STALIN STOLE SPAIN'S GOLD

(By Lawrence Sullivan, coordinator of information, U. S. House of Representatives)

(In 1936 the Spanish Communists secretly delivered 600 tons of Spain's gold reserves to Stalin. Here is the sworn testimony of the Russian NKVD agent who engineered the shipment.)

When the Communist Popular Front took over Spain, in February 1936, the new government assumed control by the familiar Kremlin tactics of assassination, violence, and pillage. And when communism was thwarted by Franco's forces in October, the Red leaders determined upon one last act of treachery—the secret transfer of all Spain's gold reserves to Moscow. The shipment consisted of 600 tons of bar gold, valued at approximately $700 million.

Moscow never has returned this treasure. Today the Kremlin's price for return of whatever may be left of the Spanish gold is stated in terms of baldest blackmail—resumption of diplomatic relations between Spain and Russia, and Spanish acceptance of a large staff of Russian "technical forces" throughout Spain.

The story of Spain's betrayal was told under oath before the Senate Internal Security Committee on February 14, 1957. The witness was Alexander Orlov, who formerly had served in Moscow as deputy director of the Soviet Secret Police, and later as economic adviser to the dreaded NKVD. Orlov renounced communism in July 1938, and fled to the West.

Orlov, in Moscow, was ordered to Madrid late in 1935, to set up Kremlin operations for the Spanish civil war, which broke violently in February 1936.

"I directed the guerrilla warfare there," the witness related.

Sickened by Moscow's treachery against the Spanish people, Orlov renounced communism on July 12, 1938, made his way to the United States and was granted asylum. In 1953 he published his first book, The Secret History of Stalin's Crimes.

The Communist Popular Front Government secretly turned Spain's gold reserves over to Russia in October 1936.

Orlov, in Madrid, received a personal telegram from Stalin on October 20, directing him to arrange the shipment.

"I hold you personally responsible for this operation," Stalin's coded message said. The text of this message appears in Orlov's Senate testimony, at page 3430:

"Together with Ambassador Rosenberg, arrange with the head of the Spanish Government, Caballero, for the shipment of the gold reserves of Spain to the Soviet Union. Use for the shipment a Soviet steamer. This operation must be carried out with the utmost secrecy. If the Spaniards demand from you a receipt for the cargo, refuse. I repeat, refuse to sign anything, and say that a formal receipt will be issued in Moscow by the State Bank. I hold you personally responsible for this operation. Rosenberg has been instructed accordingly."

Franco's anti-Communist forces then were pressing at the very gates of Madrid, and the Communist government was preparing to flee the city.

"From our Embassy we went to the Spanish Ministry of Finance, where Negrin, the Finance Minister, introduced me to the Chief of the Treasury, Senor Mendez Aspe," Orlov recalled.

"Only three men in the Spanish Government knew about this operation. No one else in the Cabinet knew about it. Those were Prime Minister Caballaro, Finance Minister Negrin, and the President of the Republic, Azana."

Fearing he might be caught by Spanish patriots in the act of transferring the gold to Russian ships, Orlov obtained from Finance Minister Negrin a special certificate in the name of Blackstone, designating him as an agent of the Bank of America (San Francisco, Calif.) to which the gold presumably was enroute for safe keeping.

"Negrin did not object," Orlov's testimony continues. "He thought it was a fine idea. I spoke more or less decent English, and could pass for a foreigner. So he issued to me credentials in the name of Blackstone, and I became the representative of the Bank of America. * * * I commandeered four Soviet steamers then in Spanish ports. * * * And I left for Carthagena, the Spanish port where the gold was stored in a huge cave hewn out of a mountain.

"I asked the Government to give me 60 Spanish sailors to do the loading of the gold. The Spanish sailors were kept for 3 nights and 3 days in that cave. They understood pretty well what was in those boxes. * * * but they did not know where the gold was being taken—maybe to another Spanish city.

"For three nights the loading of the gold was done during the night, and transported during the night in complete blackout, to the pier where it was loaded on the Soviet ships. * * * The health of Mendez Aspe was a very serious thing. He was a nervous man. * * * So he fled and left just one assistant, a very nice Spanish fellow, who did the counting of the gold for them * * * but after Mendez Aspe fled and that lone officer did the counting, the figures began to diverge."

When the cave had been emptied the count showed a discrepancy of 100 boxes of gold, each box weighing 125 pounds. Orlov made a special report to Moscow on this discrepancy in the loading count. Although Orlov's count showed 7,900 boxes, the official receipt later issued in Moscow was for 7,800 boxes.

"I think that probably Stalin decided that he could use 100 boxes of gold, maybe for some Comintern work," Orlov testified (p. 3433).

"The Spanish Communist Minister of Defense, Prieto, provided a special Spanish naval escort to see the gold ships safely through the Mediterranean en route to Odessa, but he did not know what the ships carried.

"Several months after the shipment of the gold, when I was lying in a surgical clinic of

Professor Bergere, in Paris, the chief of the Soviet NKVD himself, Sloutsky, came to see me; and he told me about the gold, what a great event it was when it arrived in Moscow; and he told me on good authority that that gold, according to Stalin, would never be returned to Spain."

Another visitor from Moscow told Orlov of the celebration banquet attended by all the top Soviet brass in Moscow to mark the safe landing of the Spanish gold. At that banquet Stalin said: "The Spaniards will never see their gold again."

Orlov continued (p. 3434):

"The gold is still locked up in the underground vaults of the Kremlin, and if nothing is done about it, it probably will never be returned. That gold belongs to the Spanish nation. Regimes come and go, but the gold belongs to the people, and the Spanish nation has a right to do it. I think it would be a good idea if the leaders of the Spanish political parties, irrespective of their political affiliations and ideas, would combine together and demand that the gold should be returned, or transferred to the United Nations, or to the World Bank, in safekeeping for the Spanish nation."

The importance of this gold piracy to Spain is suggested by the fact that the total gold reserves of the Bank of Spain today are reported at only $200 million.

After the collapse of the Communist Government in Spain, Dr. Juan Negrin, the Red finance minister, lived in exile in Paris until his death on November 14, 1956.

Soon after Negrin's death, the official Moscow receipt for the Spanish gold was delivered from Negrin's personal papers, to a Paris representative of the Franco Government.

The Negrin papers revealed in 1956 for the first time, that the gold had been assigned to Moscow, ostensibly as security for Russian arms shipments to the Communist Republicans in Spain during the 1936 civil war.

The Russian receipt for the Spanish gold was signed in Moscow February 5, 1937, by G. F. Grinko, People's Commissar for Finance, and N. N. Krestinski, Assistant People's Commissar for Foreign Affairs. It was countersigned by Marcelino Pascua, Spanish Communist Ambassador to Russia at the time. The receipt specifies only 510 metric tons of gold delivered from Spain at the Russian port of Odessa.

In April 1957 Moscow radio announced that more than $420 million of the Spanish gold had been spent "to finance the Spanish Republican cause." The same broadcast contended Spain still owes Russia $85 million for loans to the Communist Popular Front government in Madrid during the Spanish civil war.

This savage act of piracy and betrayal in Spain doubtless will be heard before the World Court of International Justice.

Meanwhile, the world has another tragic example of Moscow's real aims and purposes in Popular Front peaceful coexistence.

The unofficial Soviet explanation was printed in Pravda, Moscow, April 5, 1957, about seven weeks after Orlov's testimony in Washington.

"Some foreign newspapers carry articles concerning the deposit of Spanish gold in the U. S. S. R. 20 years ago, completely ignoring the expenditure incurred by the Spanish Republican Government. * * * After the Spanish Republican Government had deposited the money in Moscow, it frequently asked the Soviet Central State Bank to make payments abroad from it. The payments became so frequent that the money soon was all gone."

United States Secret Service agents exhibited before the Senate committee some $100,000 in counterfeit Federal Reserve notes gathered in from Texas in 1928. These counterfeit notes were in $100 denominations.

"I learned about this operation of counterfeiting $100 bills in 1930, and I learned that that operation had been directed by Stalin personally," Orlov told the committee (p. 3441). "That money was well fabricated, because it was made in the Russian engraving and printing offices * * * so it is no wonder that that money is undistinguishable from American $100 bills. * * * The plan was for $10 million at first."

Secret Service agents traced this counterfeit United States currency from both Shanghai and Berlin in the years 1928–33, but never were able to determine precisely how much of it Stalin had printed in Moscow.

"Stalin was in need of money for financing industrialization," Orlov explained.

In 1945 Stalin seized $340 million in German bonds from captured Berlin bank vaults, and ordered them smuggled into the United States, to be redeemed by the United States Treasury as German property seized in the United States at the outbreak of war in December 1941. But the German-American Validation Board spotted this Stalin fraud, by positively identifying the bonds as German, rather than American, property.

Orlov also told the Senate committee that 18 Soviet spy rings operated in the United States in 1938, when he was associated with NKVD operations.

"Two rings, as we know, have been exposed, one by Whittaker Chambers, the other by Elizabeth Bentley. It stands to reason that at least 16 spy rings are at large and have the free run of this country" (p. 3459).

In addition, there were 20 other Soviet spy rings operating under the direction of the fourth department of the Soviet army. These 20 military intelligence rings operated entirely apart from, and independent of, the 18 NKVD rings.

The terrorist Communist militia which sprang to life throughout Spain in February 1936 to commandeer all wealth then in the safe boxes of banks, had been organized secretly in every large city by the Moscow underground. First all gold and silver bars were transferred to the mountain caves near Carthagena. Next all jewels and foreign currency were emptied from private safe boxes in all banks. No accounting of these safe-box raids ever has been made, but computations by the Franco Government later established this plunder at more than $200 million gold value.

"On the night of November 6, 1936," the official Franco report relates, "an individual called at the Bank of Spain, accompanied by the then director general of the Treasury, Francisco Mendez Aspe. This man, named Masegosa, styled himself captain of carabineers. The head of the safe-deposit service being called, they informed him that the Minister of Finance had ordered the opening of the safe deposits and that the operation would have to be carried out with all speed so as to get through it before 10 o'clock next morning. * * * The assailants who, in case of need, had brought with them some 60 locksmiths, forced open 3,959 safes, emptying them of their contents * * * besides which they forced open 2,236 jewelry safes. * * * The hired safe deposits of all the private banks suffered the same fate" (p. 373).

In the private banks alone, a total of 4,887 safe boxes were emptied.

"Carabineer forces invaded the buildings of the private banks, forcing the safe deposits and strong rooms and removing the contents."

During November 1936 all this plunder was moved from Madrid to the new Communist capital at Valencia.

As the Communist Popular Front government fell apart under the steady pounding of the Franco forces, the loot, representing virtually the entire movable wealth of Spain, was smuggled to Russia, France, and Mexico.

"In less than 1 year Spain was denuded of all the wealth accumulated through the centuries. In all, 14,393 private bank safes were forced open and plundered, plus 297 strongrooms, with a large quantity of bonds, stocks, and banknotes" (p. 380).

To block legal proceedings seeking restitution of the confiscated wealth, "the ex-convict, Juan Garcia Oliver, was raised by the Popular Front government to the dignity of Minister of Justice. He had neither a lawyer's degree nor any other academic qualification. This individual ordered the destruction of the archives of the Central Registry of Convicts and Rebels, thus depriving Spanish society, whatever its political regime may be, of an indispensable instrument of defense against common criminals."

The sickening and revolting details of Moscow's rape of proud Spain reveal once more the familiar Communist pattern of Popular Front penetration. Moscow will promise anything to get a foothold in a country. It always begins with an open alliance with the so-called liberals or progressives in the country to be taken over.

Once accepted, the Communists first take over the entire Popular Front organization, then the key posts in government. At this point the plunder and rapine begin, and the liberals and progressives who helped establish the Popular Front are revealed as stark traitors.

Their own country has been sacked, and usually there is then no escape possible from the savage Communist yoke.

Let all patriots beware of the Popular Front appeal. It is always the opening wedge to Communist pillage.

Washington and Small Business

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to call the attention of my colleagues in the House to an interesting and informative article that appeared in a recent issue of a publication sponsored by the National Federation of Independent Business and has to do with renewing and extending our present Reciprocal Trade Agreements Act.

The article in question attempts to show the proponents of the extension and enlargement of our trade policies form a monopoly made up of a few huge exporting concerns together with interested groups who have foreign investments that exist and thrive only through their ability to import cheaply produced foreign goods into the United States to the detriment of our domestic industries.

The article follows:

WASHINGTON AND SMALL BUSINESS

(By C. Wilson Harder)

Perhaps not since President Andrew Jackson waged a successful battle to knock out the charter which gave the privately owned Bank of the United States complete control over the Nation's currency and banking, has there been such a clear-cut battle waged

between monopoly interests and American independent enterprise as now goes on in Washington.

The issue is the request for a 5-year extension of the so-called reciprocal trade treaties.

Now, at a time of high-peak unemployment, a highly developed welfare state, and also when big labor has forced up labor rates, there is a drive to open the American market still further to cheap imports, some made with labor as low as 7 cents per hour, produced on modern machinery given to the foreign nations through the foreign give-away programs.

Spearheading the drive to extend reciprocal trade treaties for 5 years, which is to all intents tantamount to slashing protective tariffs, is an organization known as the Committee for a National Trade Policy.

This cozy-sounding committee is headed by one Sidney Svensrud, who just happens to be board chairman of Gulf Oil, one of the biggest domains in the oil business.

It also so happens that Gulf Oil has a heavy stake in the international angle inasmuch as its foreign investments are pegged at somewhere around $30 billion.

Included in the members of this organization are such groups as the American importers of Japanese Textiles, American Chamber of Commerce for Trade With Italy, Cooperative League of the United States of America, National Council of Jewish Women, National Export Traffic League, the Straw Goods Importers Association, United States Cuban Sugar Council, and many others.

Opposed are such groups as the American Fine China Guild, American Glassware Association, National Cattlemen's Association, and a whole host of groups made up of small United States manufacturers, farming groups, labor groups.

On several occasions, the Nation's independent businessmen, voting through the National Federation of Independent Business, have gone on record against further rape of American industry and employment via the tariff slashing method that reciprocal trade treaty legislation places in State Department.

Actually, some observers on Capitol Hill believe the issue is so clear cut it will be possible to run a box score on final congressional votes on measure.

These observers say that a vote for extension of this system will mean the voter is a supporter of monopoly business.

This may be a severe method of appraisal. On the other hand, it is going to be hard to explain to a worker any vote that jeopardizes his job in favor of a 7-cents-per-hour-wage-slave in some Japanese monopoly-owned factory.

Thus, the battle is joined.

It will be a major battle, and casting a shadow over the debate will be the specter of the present 5 million unemployed in the land.

Polish Constitution Day

SPEECH

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 5, 1958

Mr. FULTON. We wish to join with our good Polish friends and relatives of the Polish people in this country in celebrating May 3 as Poland's Constitution Day. On this date 167 years ago, democratic rights and religious freedom for all Poland's people were established by the Constitution.

We people in America remember the freedom of the Polish people, and urge our good friends and relatives in Poland to keep up their faith and good spirit in their brave efforts to regain their freedom. We have not forgotten the accomplishments of Poland under its Constitution of 1791, and we take this opportunity to extend the hand of friendship to the people of Poland, and assure them of our sincere interest in the cause of freedom, independence, and justice. We compliment the Polish people on this the anniversary of the Polish Constitution, and send them our best wishes.

Fuel for Thought

EXTENSION OF REMARKS

OF

HON. WALTER ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1958

Mr. ROGERS of Texas. Mr. Speaker, on May 1, 1958, the gentleman from Arkansas, the Honorable OREN HARRIS, addressed the annual meeting of the Panhandle Producers & Royalty Owners Association at Amarillo, Tex. His remarks were on a subject that is of vital interest to the entire Nation and its economy. The subject was one on which he is eminently qualified to speak. The tremendous acclaim with which it was received by those attending the meeting in Amarillo, Tex., together with my own appreciation of the outstanding talents of the gentleman from Arkansas, prompts me, under unanimous consent, to include his address in the Appendix of the CONGRESSIONAL RECORD to be preceded by the introductory remarks of Gen. Ernest O. Thompson, member of the Railroad Commission of the State of Texas:

INTRODUCTION OF OREN HARRIS BY ERNEST O. THOMPSON

Few men in our country, certainly few men in the United States Congress have had and do have as much to do with the commerce of our country as does our distinguished speaker here tonight, the Honorable OREN HARRIS, chairman of the Interstate and Foreign Commerce Committee of the House of Representatives, United States Congress.

OREN HARRIS is a lawyer, born in Belton, Ark., December 20, 1903. He holds a bachelor of arts degree from Henderson State College, Arkadelphia, Ark., clas of 1929, and a bachelor of laws degree from Cumberland University, 1930. He was married to Ruth Ross May 9, 1934, has two children—Carolyn Marie and James Edward. He was admitted to the bar in Arkansas in 1930 and to the United States Supreme Court Bar in 1943. He served as deputy prosecuting attorney, Union County, Ark., 1933 to 1936, and prosecuting attorney, 13th judicial circuit, 1936 to 1940. He was elected to the 77th Congress in 1941 where he has served for 18 years ably and well, and as I said in the beginning, he is the present chairman of one of the greatest committees of the Congress. This is the same committee that was formerly presided over as chairman by the Honorable SAM RAYBURN, now Speaker of the House of Representatives of the United States Congress.

Congressman HARRIS is a member of the Arkansas Bar Association, was district governor of Lions International for Arkansas 1939 and 1940. He is a Democrat, a Baptist, a member of the SAE fraternity, a Mason, a Shriner, and member of the Knights of Pythias.

It has been my pleasure and privilege, at his invitation, to appear before his honorable committee several times. He generates and engenders real sincere interest in the work of the committee from and by every member of his committee of both parties. He is one of the best informed men it has ever been my pleasure to know and I am proud to present him to this meeting as a distinguished American, a true patriot, a real statesman, Chairman OREN HARRIS of the Interstate and Foreign Commerce Committee of the House of Representatives of the United States Congress.

ADDRESS OF THE HONORABLE OREN HARRIS, OF ARKANSAS, BEFORE THE ANNUAL MEETING OF THE PANHANDLE PRODUCERS AND ROYALTY OWNERS ASSOCIATION, AT AMARILLO, TEX., ON MAY 1, 1958

FUEL FOR THOUGHT

Mr. Chairman and my friends, you were extremely kind in inviting me to be with you for this occasion. I appreciate this opportunity of being with you and the privilege of being here in the district with my esteemed friend and colleague, WALTER ROGERS, your able and effective Congressman, of whom you are rightfully proud.

There were two reasons that I hastened to accept the courtesy of your invitation to be with you tonight.

In the first place I am always delighted to be with knowledgeable men like you and to increase my own understanding of some of our vital problems.

But, beyond that, I must confess I seized this as an opportunity for the presentation of some things that, in my opinion, badly need saying now. There are some things I have in mind that relate intimately to the health of our entire economy, for they concern the energy requirements of that economy.

I do not mean that they are important just to you who are producers and royalty owners associated with the production of oil and gas. You do have a direct and immediate interest in the problem but yours is not the only or even the dominant interest.

I am not thinking of this problem as being important only to you and to those who use the oil or the gas you produce. Your customers, that is, the consumers, do have a great stake in the problem, but the real import of it transcends even their interests too.

No; this is a matter that goes to the public welfare in its broadest possible interpretation. Fuel for Thought, about which I want to talk tonight, should claim the serious attention and consideration of every person in our Nation.

Conflicting claim

At the heart of what I want to discuss with you lies a big question: What can and should be done about natural gas for this Nation's growing needs?

There are some consumers, for example—and especially some self-appointed so-called spokesmen for consumers—who seem to have an easy though impossible formula. What they want is a superabundance of natural gas at exceedingly low and depressed prices. Seeing no conflict between these two de-

sires—although there plainly is one—they are all out for rigid government controls to drive prices downward.

Some producers, on the other hand, without quarreling about the desirability of expanded supply, see the price matter very differently. They would like better prices, not lower ones, for their output. Consequently, they would prefer having no controls of any kind on prices to keep them down.

As a Member of Congress, I have listened—and sympathetically, I trust—to the arguments from both sides. I have heard the consumers argue that their preferential position should be maintained. I have heard the producers argue that the very importance of this fuel to progress and prosperity makes it imperative to give them the preference. And I must admit that each side can in its own time make a very persuasive case for its claims and counter claims.

As other Members of Congress and particularly with our Committee on Interstate and Foreign Commerce, I deem it my duty to not become a champion of one segmented interest against another. I see only one course that I can in good conscience follow, and that is the course leading to general rather than to particular or special interest. We should not plump for the consumers on the one hand or for the producer on the other. Our adherence should be toward a policy that will insure an impartial justice to everyone.

The need for solution

To obtain this objective, I introduced H. R. 8525, cosponsored by my colleague, Mr. O'HARA of Minnesota, which in our opinion is the embodyment of the fairest answer to the natural gas supply problem.

Having made an intensive study of the problem over the years, I was convinced when we introduced the bill it was necessary in the public interest.

Now, in this period of recession or slump, or whatever you might call it, my conviction has deepened and grown stronger.

When we introduced the bill last year, I saw it then as a balanced solution to the natural gas problem. It would give consumers a meaningful assurance of adequate future supplies along with a federally insured guaranty of a reasonable price. It would give the producers a degree of freedom from meaningless redtape at the same time that it would define for them clearly an area of unconfused operation. Without loosening the producers completely from controls, it would at least provide that the controls to be exercised on them would be realistic and practical.

My views toward this legislation are firmly held, without alteration. But what I want to say here is that recent events have given this bill an urgency even far greater than I had realized at the time of its introduction. It is needed now, not just to bring an end to the chaos produced by the court-directed effort to impose utility controls on nonutility gas industry but it is needed and immediately as an important contribution to the Nation's necessary fight against the effects of the downward trend in our economy.

The recession

Washington is filled with talk about this recession. Frankly, much that has been said on the subject—particularly from the White House—has appalled me.

We recall the President himself, saying back in January that the slump was bottoming-out. Soon, he said, with beaming confidence, "business would be turning upward."

Well, March has come and gone. April has come and gone too. Still the recession persists and in many areas worsens. The problem stubbornly refuses to disappear simply on the basis that people in high places keep insisting that it really isn't here. Something else is needed.

To be sure a few localities and even some industries have thus far escaped the full impact of the business decline. Maybe they will continue to escape it though that seems increasingly improbable. But the economy in general has been at least temporarily staggered by the slump. And the people in the oil and gas producing industry in particular are undergoing what former Secretary of the Treasury Humphrey described as a "hair-curling" depression.

The Federal Reserve Board index of industrial production fell in a few months from 147 to its March level of 128, a drop of nearly 13 percent. Inevitably this has meant a sharp decline in the use of energy in industrial production. And that in turn has meant that those who provide the fuel for the energy have been hit and hit hard.

Slump in fuels

This does not hold only for you who are in the oil and gas business. Coal has felt the devastation too. The demand for coal in March 1958 was almost 11 percent below that of a year ago. Exports of coal have also declined. Here is a sick industry. It too had better take note and I am sure it is.

The demand for oil in March 1958 was only 0.3 percent above that in March 1957. Yet the normal postwar increase earlier had been averaging 5½ percent a year.

Domestic production itself has, of course, been even more badly hit than these figures for overall demand would indicate. In that area the imports flood has made an already bad picture even worse.

Mr. ROGERS, my esteemed colleague, has already covered this thorny problem of imports in his able address at noon. Let me add to his preceptive comments that it is my own conviction that it is high time for some constructive action on this thorny problem, and it should be resolved without resorting to legislation. But that approach doesn't appear too helpful.

But what I want to point out here is that imports in and of themselves now constitute only one part of the total problem of slump that confronts the petroleum industry.

Since the Phillips decision

Go back to mid-1954, the time when the Supreme Court so shockingly held in its Phillips decision that natural-gas production was subject to Federal Power Commission control. You'll find there the beginning of a trend—a most disquieting trend—that simply can't be attributed solely to the influence of imports.

Since that decision there has been a 25-percent decline in the number of exploratory crews actively engaged in seeking new oil and gas reserves. One out of every four are gone from the scene.

Admittedly, the decline cannot be attributed solely to the ill-advised split Court decision. Other elements have had their effect, too. But surely it's much more than coincidence that exploratory efforts fell off so sharply immediately after that decision.

A part of the incentive for discovery has been removed. Confusion and uncertainty had been imposed on the entire gas branch of the industry. Obviously, those who might otherwise have invested risk capital in the search for new gas supplies decided to hold off until the rules of the game could be clarified.

It's true that well-drilling itself continued for quite awhile to stay at high levels even after the Phillips ruling. People in the industry were continuing to prove up properties on which the exploration work had been done earlier. The drilling figures continued to give the appearance of health.

But, by the middle of 1956, much of this backlog that had been built up by the earlier exploration was worked off. The drilling rate turned downward, and it has continued downward steadily ever since.

The total wells drilled in 1957 were 7 percent fewer than in 1956. Through the first 3½ months of 1958 the figure is down by another 13 percent. For the same period wildcat drilling, all-important in the finding of additional reserves, is down by 25 percent. If present drilling rates persist, the industry's completions this year will be down from 1956 by 20 percent.

These statistics, of course, only confirm what you yourselves have seen. You have watched drilling rigs and experienced personnel being transferred to foreign producing areas. You have been approached for jobs by the laid-off members of one-time drilling crews. You've heard others talk about deferring their drilling plans, and maybe you've deferred at least a few yourself. You have seen leasing activity fall off. You have witnessed the drilling industry grow sicker by the day.

What you've been seeing can be blamed in a large measure on the split-court pronouncement of June 7, 1954. The Supreme Court sowed the wind, and the petroleum industry has since reaped the whirlwind.

GROWTH AND NATURAL GAS

What is perhaps particularly tragic in all this is the fact that at least one segment of the petroleum industry—the gas segment—could have been growing even more than it has been in recent years.

It has grown, as a matter of fact, even though it has been put under wraps by forcing gas production into a straitjacket of controls. But it would have expanded even more, recession or no recession, were gas supplies available in increased quantities.

Think of the great market for natural gas that is currently going begging for supplies. Witness after witness who appeared before our committee during hearings on H. R. 8525 called attention to this situation. There are on the waiting lists of distributing companies in areas served by natural gas literally hundreds of thousands of potential customers. They are actually impatient for a service that is denied to them only because the supplies aren't available in assured quantities.

You hear many explanations for this recession that we're in. One of the soundest, surely, is that there has been a falling off in consumer purchases of durable goods. People go on buying eggs and bacon and cigarettes and clothes. But they've cut their purchases of automobiles and of the major appliances such as water heaters and ranges and clothes dryers.

Figure for yourself, then, what effect on the recession might come if those hundreds of thousands of would-be customers who want natural gas could get it. Calculate the number of gas furnaces that would be bought and installed, the number of gas water heaters, the number of gas stoves, the number of gas incinerators. Can anyone doubt that such buying would give an impetus to recovery?

Think of the employment that could be created by local distributing companies if only they had the gas supply to bring to these waiting customers. There would be new distributing systems built, and extensions of old ones. You'd have a vast and profitable market created by these distributors for both materials and labor.

Transmission companies would do their part, or more, in expanding their materials-and-labor market. Many of them already have their expansion plans engineered and waiting on the drawing board. In some cases construction of totally new lines waits only on the unmuddying of the waters of present Federal policy. Given the green light of an end to the existing chaos, these

companies would proceed promtply to the execution of their many plans.

Additional gas wells would be drilled calling for increased oil country tubular goods and labor.

Certainly the sum total of the capital outlays that are being held up would exceed $1 billion a year. I submit that this would be an antirecession step that would cost the taxpayer nothing; that would be carried out entirely by private business funds; that has the endorsement of the administration and of Congress; that would provide lower energy costs; that would require hundreds of thousands of tons of steel pipe and oil country tubular goods; that would put thousands upon thousands of men back to work; that would be of benefit to the total economy.

Record of frustration

Why is it that this industry growth is being blocked out of our economy?

At the risk of repeating to you what you may already know, I'd like quickly to review the record.

When the Natural Gas Act of 1938 was adopted by Congress, practically everyone was quite clear about what it was intended to do. It prescribed a plan for the regulation of the utility business of pipelines that transport gas interstate from the gas fields to the distributing companies. It did not prescribe any plan for regulating the business of nonutility producers and gatherers. In fact it stated most explicitly that its terms were not to be applied to production or gathering. It applied to transmission. It didn't apply to production.

On 11 separate occasions over a 16-year period, FPC's varying political complexions steadfastly held that the act meant just what it said. But the courts were another matter, and there certain unfortunate ambiguities in the original legislation offered a loophole for misconstruction.

When it became obvious, in 1948, that some court might some time actually fall in with the strained interpretation of the law, Congress acted. So there could be no possible misunderstanding, it moved to make doubly clear that production and gathering were outside the scope of FPC rulings.

I was chairman of the House committee that drafted the amendment to the Natural Gas Act that later came to be known as the Kerr bill. That bill handily passed both Houses of Congress. But it was vetoed by the President.

Phillips decision and after

Then in 1954 what we had begun to fear might happen in the forties did happen. The Supreme Court on a 5–3 split held that the Natural Gas Act did, in spite of everything apply to production. For the first time in the peacetime history of this Nation a commodity was brought under Federal utility-type control.

In the year following, 1955, Senator FULBRIGHT and I together introduced what became known as the Harris-Fulbright bill. It was not, its numerous vociferous opponents to the contrary, a complete decontrol bill as the simpler Kerr bill had been before it. It provided—I think effectively—for an indirect control of prices by the FPC, but it did free the producers from all direct controls upon them.

Both the House and the Senate passed this bill after thorough study and prolonged debate. But once again a presidential veto intervened. For reasons which had absolutely nothing to do with the merits of the legislation, the President withheld his signature.

Maybe the smart thing to have done at that point, at least as far as I am personally concerned, would have been to abandon the entire effort. Twice the Congress had spoken. Twice for extraneous reasons the Congress' actions were set at naught.

And yet, I couldn't rest easy in the face of my steadily growing conviction that the national welfare and even the national security were vitally involved here. I couldn't justify to myself standing idly by while a great industry was being throttled and the supply of a valuable resource was being choken off.

H. R. 8525

So it was that another effort is made by the pending bill, H. R. 8525. It marks a completely new departure in its approach to the central problem.

It is not a decontrol bill. Anyone who says it is either has not read the legislation at all or is deliberately set on misleading others about it.

It would give to the FPC direct control of the field prices of natural gas. But upon a realistic basis, not upon the basis of theories about utility control that cannot possibly be tailored to fit gas production.

For almost 4 years now the FPC has been trying, and trying valiantly, to work out some fair formula that might conceivably permit the regulation of field prices of natural gas. The commissioners are by now completely willing to admit that it can't be done on a cost basis. Utility-type control, in their own words, is patently inappropriate and unworkable. The need for some other system is obvious, and the Harris-O'Hara bill provides it, along with a very complete set of safeguards to protect the consumer interest.

The principles incorporated in this bill have twice been recommended to Congress by the President. The Federal Power Commission, itself, has strongly recommended passage of the measure. It has received the support of the Director of the Office of Defense Mobilization, who testified that it is in the interest of defense requirements. The House Interstate and Foreign Commerce Committee has reported the bill favorably.

And yet, because of circumstances which again have no relation to the merits of this proposed legislation, the bill most certainly will not even get to the House floor for consideration this session barring some legislative miracle. It has been cruelly sabotaged. One man, thoughtlessly and naively, undertook an ill-advised appeal for political purposes. Again a faux pas has for the present thwarted a program badly needed in the general public interest because the carefully cultivated reaction to his letter has buried this essential legislation for the time being some 9 feet under.

Legislative miracle?

You may ask, does that mean I have despaired of action at this session? Not necessarily. I still cling to the hope, however faint, that with sufficient interest, effort and understanding of the imperative need of this legislation that there may be the legislative miracle that could revive the near-dead measure.

I am making no book on the possibility, and certainly I am offering no odds that it will occur. I am somewhat of a realist. As I see it now in the light of present circumstances and the time element, I have to be realistic enough to recognize that the chances are not at all bright.

And yet the logic of the situation seems to me overwhelmingly to call for revival of the program and its quick passage.

There was need enough for the bill before. On it rests the consumer's only present hope tha there will in the future be adequate gas supplies at reasonable prices.

But now at a time of slump the need is actually pressing. The basic problem of gas supply and the growth of the gas industry has been complicated by the new problem of the recession.

There are scores of programs being proposed in Washington as partial antidotes to the slump. Whole handfuls of them are being acted on, not always with the consideration and the foresight they really deserve. And yet here is one that could make a tremendous contribution to recovery without the expenditure of a dime of Federal funds totally neglected. This bill, whose passage would unlease all of the constructive energy of the natural-gas industry again, remains on the shelf.

I can only hope, and frevently, that it will be taken from that shelf and examined on its merits rather than in light of a single badly written letter, or some other ill-advised act.

All that is needed, I am convinced, is for everyone to recognize the importance of this issue and to agree to what is eminently true—that this is must legislation.

If and when we can and will join in pushing for its passage in what is so clearly the public interest, the Congress will act. Of that I am certain. And I am confident that the next time such legislation, so carefully drawn for consumer protection will be approved all the way.

Industry action

And yet in view of the fact that it was an act by certain members of the industry given as the reason for killing the bill 2 years ago, and now by another act has all but killed the present effort, I cannot quite let it go at that.

I would, therefore, like to leave with you on this occasion some carefully guarded and considered words of advice. Constructive advice, I firmly believe.

Sooner or later something is going to have to be done with this problem. It cannot continue to remain in the chaotic and uncertain status. It is too widespread and affected by the public interest to such a degree that the welfare of the Nation will demand it. The longer it is postponed, the worse it will be for the welfare of the Nation.

If this proposed bill is revived at this session or even if solution of the pressing problem is postponed and considered at a later session, the industry is on trial. It will be watched carefully in every move it makes.

In all candor, you have been on trial before. To date I must say you haven't been doing too well for the last few years.

Let me suggest 2 or 3 things for your consideration. Perhaps by asking some fundamental questions deserves careful consideration, frank and honest answers.

In the first place, has the fuels industry become so highly competitive and self-centered as to breed frustration, envy, and strife within to the extent that it threatens the inherent principles under our American system and the service demanded by the American public. Healthy and vigorous competition, yes, strengthens this system as we know but when we get to a matter of principle, I wonder if we recognize that through unity and coordination and understanding, it will prevail.

Within your industry, within the entire fuels industry, it is important to discontinue the infighting and to work together toward legislative policy so obviously in the interest of our total economy.

Furthermore, have you in the industry told your story fully and fairly to the American people?

Have you made known the facts—all the facts—about your operation?

Have you across the board been willing to stand up and meet the issue and battle it out in the good old American way with those, your enemy in principle, that would destroy or seriously hamper your future and the service that you can perform to the American public?

Or have you been letting internecine warfare create in the public mind an image of this great industry as a collection of self-seekers who have no regard for the public welfare?

You have a story to tell, a service to provide, a fundamental principle to preserve, a strong and effective industry and organization if unity of purpose on fundamentals could be effectuated.

You see, we are on the receiving end of your letters and your testimony on matters that concern the industry and we honestly find it most difficult at times to tell where the truth lies when royalty owners are pitted against producers or producers against refiners, or refiners against jobbers, etc.

The common ground

Finally, isn't there a common ground on which a great industry as is yours and the fuels industry can unite on principle—the common ground that is the welfare of the general public?

It is on this basis there should be unity. This should be the paramount concern. Otherwise, I am frank to say, we are going to see a great industry hard put to its survival, much less to prosper. We should remember and act on the solid adage that "there is no true profit in anything that results in a public loss."

My years of experience in Washington have convinced me that the oil and gas industry must undertake and pursue a sound course on this common ground and present facts and a fair interpretation of them.

I believe that the industry has an obligation to the public and to the government to improve its public relations.

The opposition is working steadily and skillfully. Make no mistake about it. The need for giving the true and factual story is acute. Even while you sit here today, the net of a strangling regulation draws more tightly around you.

We must remember that in this long drawn out problem that at every step of the way, support for the cause of freedom has grown weaker.

The formula for success in combating this trend is quite simple: All that is needed is to present the facts fearlessly and fairly in combating vicious propaganda and then stand together for the common welfare, working together for a finer national economy. You will gain by it. Your children will gain by it. We will all have a greater and more prosperous future.

Anthracite Coal Industry Ignored by the Administration

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of April 28, 1958, which comments on the Federal subsidy plan of the administration to aid depressed mining industries, but ignoring the long-depressed anthracite coal industry:

AID FOR INDUSTRIES

The Associated Press reported from Washington yesterday that the Eisenhower administration proposed Federal subsidies for domestic producers of copper, lead, zinc, fluorspar, and tungsten. The story explained the President had endorsed the stabilization payment plan for depressed mining industries.

The dispatch was of special interest to this community because it contained no mention of coal. Apparently anthracite is not regarded in the Nation's Capital as a distressed industry.

Utilization Research in the State Experiment Stations

EXTENSION OF REMARKS
OF
HON. D. R. (BILLY) MATTHEWS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1958

Mr. MATTHEWS. Mr. Speaker, under leave to extend my remarks, I am pleased to enclose a paper which was presented by Dr. J. R. Beckenbach, director, Florida Agricultural Experiment Stations at the spring collaborators conference, Southern Regional Utilization Laboratory, New Orleans, La.

Dr. Beckenbach is doing outstanding work in Florida, and I feel this timely article will be of special interest to those of us who are vitally concerned with the problems of American agriculture.

UTILIZATION RESEARCH IN THE STATE EXPERIMENT STATIONS

Both Federal and State agricultural research agencies are presently facing a situation which demands a sharp increase in so-called utilization research. To some extent, we are at fault, in varying degrees, for not foreseeing this need. On the other hand, however, who among us could be expected to foresee the two war situations of the past sixteen years, and the various farm policy programs that resulted from this? Or the supluses? We do better, I believe, if we just face the situation as it stands, and attempt to work out practical solutions.

We are faced with several major agricultural commodities in surplus, which are costing millions per day for dead storage. We are faced with Government programs designed to reduce these surpluses, and with other programs which allow for surplus increases, in the event that the first ones don't work. This indicates the complexity of the situation. And we are faced with the probability of sharp increases in funds designed primarily for research to be used to develop alternative and new industrial uses for these commodities.

As you all know, the need for utilization research by public agencies is hardly a new thing, but is as natural a development as was the need for production research and for research in marketing. This laboratory is no new thing, and has made many fine contributions in this field. However, none of our agencies are geared to crash research programs in this area, and yet a crash research program may shortly be launched and is possibly justified. This places something of a dilemma before us. It is not a simple problem, especially for those of us in the States. The crux of the problem is personnel—there is no reservoir of able but unemployed biochemists in the country, nor of capable unemployed scientists in the related areas. Consequently, a greatly expanded program is not only going to have its own personnel problems, but will create problems in existing research agencies.

An obvious need is the one for more trained scientists. This is peculiarly a problem for the land-grant colleges, and that means the State Experiment Stations, indirectly. Our research people are also our teachers, and our laboratories are also the graduate students' laboratories. Any crash program that bleeds the land-grant colleges of trained research and teaching staffs is a short-sighted program. A centralized crash program would do just that, in my opinion.

I believe that the time is past due to back up and take another look at the overall problem.

First, what is the nature of this problem? Does it compare with the need which resulted in the crash program that developed the atomic bomb? It was certaintly the success of this which popularized crash-program research. It seems easy to forget the fact that the bomb success was made possible by several unique factors: (1) A single, specific objective, (2) the urgency of a war situation, and (3) it was a military problem, wholly Federal in scope.

Our agricultural surplus problem is quite different. There is no single, specific objective, but several commodities now in surplus, and any agricultural commodity can move into a surplus situation at almost any time. We have a short-range problem of eliminating the commodities now in enormous surplus; we have a long-range objective with almost every agricultural commodity which moves in volume. The short-range objective is to divert food, feed, and fiber commodities now in surplus into industrial channels. This can be no long-range objective. Food, feed, and fiber is where the ultimate use will be.

Perhaps the State stations have been remiss somewhat in not developing utilization research to a greater extent earlier. If so, our Southern States have been less so than other sections; this laboratory and present State programs are testimonials to that. Individually, some of us have active programs in our State stations, but probably no State station has a utilization research program which matches its production research program.

Lest anyone jump in at this point and criticize us too severely for this discrepancy, let me say that the States could hardly be expected to anticipate the patchwork quilt of Federal programs which resulted in these surpluses. These present surpluses are basically Federal babies; if appropriation requests are to be presented only for the Federal research agencies, that is really outside of my concern, except as it may tend to bleed us of personnel in already established programs. The latter point is my concern, and should be the concern of every State station.

Should sharp increases accrue to the Agricultural Research Service, provision may be made for State participation under contract. I would say on this point only that it is difficult to hire good research people for short-term appointments in the present highly competitive market. Such contracts are no adequate solution to the problem.

It is my opinion that the State stations are in for some rough weather in the area of utilization research. The President's Commission took little cognizance of the fact that several States have aggressive utilization programs. Its recommendation for fellowships, nonetheless, seems to assume that we are adequately staffed to train personnel for utilization research, while its recommendations for research appear to be such that the increases will tend to bleed us of these instructors. We had better be prepared for stiff competition for our people—in terms of salaries.

It is my hope that this laboratory will receive a substantial part of the increases that may be appropriated. The Southern States have learned to work with this staff.

All of the above, or the most of it, is defensive policy as far as the States are concerned. Any Maginot Line that we may devise can be no complete answer. It seems

to me that we need now to look ahead in the States to a deliberate program designed to attack the long-range objective—the development of utilization research on all of our major commodities. This should include by-product research and the utilization of culls and wastes as major objectives.

It would be my recommendation that every State station review its own home State agricultural production with a critical eye at this point. None of us are doing sufficient research on the utilization of agricultural wastes or of agricultural byproducts. We are not about to get any increases in Federal grant funds for this purpose—none were included in the budget. Why this was so, at least to an extent matching the Agricultural Research Service increase, or at least a compromise between that and the zero, I do not know.

I do know this, however. The record of the State stations in production research has been the hard core of agricultural progress in this country. The decentralized, close-to-the farmer approach in production research at our stations is very responsive to the need, and close to the critical eyes of the industry. Increased appropriations at the State level prove the job that has been done.

The States are equally capable in the marketing and utilization research areas, and these, too, can benefit by the very fact of our decentralization. We should deliberately choose to expand here. Thinking and planning by many capable people who are close to the problems is bound to have some advantages over thinking and planning of equally capable people, fewer in numbers, who are geographically removed from the problems. We should balance our programs with utilization research.

We already have the machinery set up for coordination of effort, both among ourselves and with the research agencies of the Federal Government. Duplication of research effort in such broad fields is largely a bogie, but even so, we manage to keep pretty clear of criticism in our present programs, and it should be no handicap in these other areas.

We need to move smoothly into these research areas. We have an added obligation to do so, since ours is the obligation to train future scientists for all agencies. And we must not be robbed of our present personnel, or all of agriculture will be the loser. Research increases ought to be carefully balanced among agencies, so that overall and continuing progress will result.

Perhaps as various of our regional projects close out, we can use regional funds released for some work of this kind. It would certainly seem desirable for most States to carefully consider their needs in this area, and base their requests for increased funds on specific utilization research proposals.

This talk has been somewhat disorganized, and perhaps it would be worthwhile to outline briefly what I consider to be the soundest approach to this utilization research problem. I am going to number and list the several desirable steps as I see them:

1. Increase utilization research in all existing laboratories, both Federal and State, on commodities now in surplus in the area concerned. This should be a direct Federal grant program with respect to the States concerned.

2. Initiate some utilization research at each station located at the land-grant college, using presently available State or Federal grant funds. This will permit the concurrent development of student training.

3. In the immediate future, expand both Federal and State utilization programs, the latter with Federal grant funds. A 2-to-1 ratio is suggested, in keeping with the present Agricultural Research Service-State ratio for production research.

4. Amplify the student training aspects to whatever extent the Congress may determine by appropriations for fellowships or assistantships in this area.

If you have gathered from all of the above that I have little faith in a crash program solving more problems than it creates, then I have gotten my main point across. It seems to me that we already have the pattern for sound collaborative research effort between our State and Federal research agencies. Not to follow such a proven pattern would seem to prove that our fathers were much smarter in this agricultural research business than we are.

Placing the Blame

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Camden News, Camden, S. C., of May 6, 1958:

PLACING THE BLAME

Juveniles are contributing far more than their share to the increasing national crime rate, according to the latest annual crime report issued by the Federal Bureau of Investigation.

Persons under 18 years of age were arrested last year in 10.3 percent of all arrests for crimes against the person: Murder, negligent manslaughter, rape, and aggravated assault. In the crimes against property category—robbery, burglary, auto theft, and other larcenies—persons under 18 represented the startling total of 53.1 percent of all arrests. In the theft of automobiles alone the 18-and-under group represented 67.6 percent of all arrests. This probably comes from youths having become accustomed to using the family car and when its use is not possible they just steal one.

The tremendous growth of juvenile delinquency is indicated by the fact that arrests of persons under 18 years of age have increased 55 percent since 1952.

J. Edgar Hoover, head of the FBI, and one of the most competent officials this country has ever had, places the blame for juvenile delinquency squarely on the home.

In a letter which he recently directed to all law-enforcement officials in the Nation discussing the problem he said:

"The growing menace of youthful depredation is the core of the crime cancer in America. The avalanche of juvenile crimes, increasing not only in numbers but also in viciousness, has brought misery and destruction to communities throughout the land. Almost 46 percent of the persons arrested for major crimes are under 18 years of age. Since 1952, while population in the 10 to 17 age group has increased only 14 percent, arrests in those same age brackets have mounted 42 percent.

"Children are not born bad. Lacking spiritual guidance and moral training in the home during early years, youngsters generally develop badness and mature into teenage terrors through parental negligence. Such irresponsibility on the part of parents is a crime against society. Certainly, it is only sensible to hold the parents of youthful vandals and hoodlums legally and financially accountable for the crimes of their offspring.

"The vast majority of our youngsters are upright, wholesome citizens. Unfortunately, the public reputation of the entire group of American youth is too frequently jeopardized by the vicious acts of the relatively small percentage of youthful hoodlums. Individually and in gangs, however, these teen-age criminals commit some of the most violent crimes of the day.

"The recent scourge of street mugging, sex attacks, bodily assaults, murder, and other carnage by young criminals across the country demands a reappraisal of the ugly reality which is juvenile crime.

"What a fanciful flight of imagination it takes to label such crimes 'juvenile delinquency.' The present youth problem does not involve child pranksters and mischief-makers. The real terror today comes from the vicious juvenile criminal. Soft justice and unwarranted leniency merely encourage these young thugs in disdain for lawful authority.

"We can no longer afford to let 'tender age' make plunder into a trifling prank, reduce mayhem to a mischievous act, and pass off murder as a boyish misdemeanor. This distorted notion of justice has even permeated our court system. In all too many instances the law has been bent to favor the criminal at the expense of the rights of his innocent victims.

"The battle against juvenile violence must be waged by the mothers, fathers, and all adult citizens of America who share responsibilities for youth. The time for theories and test-tube treatment is past. Only fair but stern action against delinquent parents and snarling young thugs can bring a halt to the present plague of youthful lawlessness."

This is the word of the man who knows more about crime perhaps than any other man in the Nation.

Every now and then you will hear some public speaker get up and discount the wave of juvenile delinquency by saying that the youths today are no worse than when he was growing up. Some are not—that is true—but the crime records of this country show conclusively that juvenile delinquency has become what Mr. Hoover cites as the core of crime cancer in this country.

It would seem that every father and every mother who reads the daily newspapers and thus becomes acquainted with the horrible crimes being committed by youths over the Nation would think long and earnestly of how they might save their own children.

Loyalty Day Observance Held at Nanticoke, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of April 25, 1958, which comments on the Loyalty Day ceremonies held at Nanticoke and the meaning of Loyalty Day:

LOYALTY DAY OBSERVANCE

A parade and other ceremonies at Nanticoke tomorrow will be the highlight of the local observance of Loyalty Day, sponsored by the Veterans of Foreign Wars. Throughout the country, there will be similar celebrations to offset the annual May Day of the Communists next week.

Loyalty Day has come to have a special meaning to Americans, apart from the orig-

inal intent to meet the Red challenge. It is a time for Americans to rededicate themselves to a way of life that is freighted with more significance than at any time in history.

If at all possible, participate in the Nanticoke demonstration tomorrow as a marcher or spectator. In any event, display the flag from your home or business place. All communities may share in the spirit of Loyalty Day in this manner.

Projects Versus Taxes

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Gaffney Ledger, Gaffney, S. C. of May 3, 1958:

PROJECTS VERSUS TAXES

President Eisenhower has vetoed a $1½ billion water projects bill. It was designed to fight the recession, and was supported by many Democrats and some Republicans.

President Eisenhower definitely had a point in vetoing the water projects bill. Some of the projects included in the bill were of questionable merit, and since the bill he vetoed was an authorization bill, and not an appropriation bill, his veto will probably have the eventual effect of reducing the number of projects authorized. The ones with considerable merit, and the most commendable of them, will no doubt be carried out.

One of the things some people overlook in viewing public projects versus lowered taxes—in fighting the recession—is the fact that a more immediate effect will be felt by lowering taxes. Congressman JOHN J. RILEY, South Carolina Democrat, has pointed this out with clarity.

RILEY notes that public-works projects, while good, take some time to be put into effect. In addition, the money to be used in financing public-works projects is collected from the taxpayer in the form of taxes, and by the time the Federal Government handles it, administers the project, and pays all sorts of administrative salaries and costs, about one-third of the total amount is dissipated before it is used to create jobs.

On the other hand, a tax reduction would create immediate buying power. RILEY estimates there are 62 million workers in the United States. As an example, if $1 per week were returned to them, in the form of reduced taxes, and they spent it, that would be an expenditure of $62 million a week.

Figured over a period of 1 year, this would increase the buying power in the market by several billions of dollars. If this increased buying power put more men back to work, enabling them to earn money and pay taxes, then the Government would not fare badly—since it would collect taxes to offset the loss of the several billion dollars in lower income taxes to the 62 million workers.

This is why we favor a tax cut over other courses, in fighting the recession it will provide immediate relief, it will provide relief to those who will probably spend the money immediately, and it will, through increased purchases, stimulate industry and create jobs. It is a necessary part of any successful program to check the current recession.

Communistic Political Aspects of Statehood for Hawaii and Alaska

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. PILLION. Mr. Speaker, on April 13, 1958, I made a television broadcast over the CBS network on the subject of statehood for Alaska and Hawaii. The following is the text of that broadcast:

Bills to admit Hawaii and Alaska as States will be acted upon by Congress very soon.

Hawaii would have 2 Senators and 2 Representatives.

I have said, in and outside Congress, that, in granting statehood to Hawaii, we actually invite four Soviet agents to take seats in our Congress. They will be carefully selected by Communist agents, cleverly following the Soviet party line, although always appearing to be merely liberal. I repeat this statement.

Most advocates of statehood have sincere motives. They believe in the right to vote.

The right to vote can be a misleading slogan.

Last month, 99 percent of the Russian voters voted for Khrushchev's candidates. These people exercised their right to vote.

But this isn't the effective political equality that we believe in.

The civilian population of Alaska is 160,000. The total vote, in the last 1956 election, was only 26,266.

Statehood would grant to this handful of citizens 2 Senators, 1 Representative, and 3 electoral votes, in choosing our President.

Alaska's 2 Senators and its excessive power, for example, would nullify the will of California's 14 million people, of Illinois' 10 million people, of Georgia's 4 million people, and of the voters in each of the other 48 States.

The voters in Alaska, with 3 electoral votes, would have 5 times the voting power of your vote and mine, in electing a President.

The framers of our Constitution founded a Republic, combining the best features of both Federal and national types of government.

The powers granted to the Federal Government were limited, reserving the residual sovereign power to the States and its people. The plan of two Senators to be selected by each State legislature conformed to the Federal nature of our Government.

There have been drastic changes in our Republic.

The President and the Senators are now elected directly by the voters.

The Senators are accountable only to their constituents and are no longer responsible for preserving the powers of their States. Their prime interest must lie in expanding national power to satisfy their areas with Federal funds.

The National Government has assumed powers wholly beyond the original concept of our Constitution.

Expenditures and taxes are a fair estimate of the exercise of political power.

The people of this country pay a total tax of more than $100 billion per year. The National Government takes 75 percent of this. The remaining 25 percent goes to support the State, local, and school governments. By this test, we have evolved from a Federal republic into a national democracy.

Twenty-five States, with a population of 31 million people, constituting only 18 percent of the Nation's population, control 50 votes and have the majority power in our Senate.

This imbalance of power is a prime factor in our huge Federal bureaucracy, its wastages, and the consequent huge Federal taxes. Every question in Congress, even defense, is tinted with practical politics.

I imply no criticism of the Members of the United States Senate. They are all hard-working, honorable gentlemen.

But, it is a paradox, that the harder they work, the greater our expenditures and taxes become, and the weaker our Nation.

The Senators, too, are the victims of this great and, perhaps, fatal weakness in our constitutional structure.

Statehood for Alaska and Hawaii is repugnant to the proper apportionment of representation for a national democracy. It violates our ideals of political equality. We cannot, of course, reapportion the Senate. But let's not make our condition any worse.

Now I shall attempt to establish the relationship between the Communist Soviet Government, the Communist Party of the United States, statehood for Hawaii and Alaska, the Supreme Court of the United States, and our Congress.

William Z. Foster is chairman of the American Communist Party. The Baltimore Sun of March 23, 1958, reports his plans, printed in the Moscow Kommunist magazine. This is the official bible of international communism.

His orders are to agitate for a peace crusade, create dissension among farmers, Negroes, and the unemployed.

He says that since 1955, there is no law to fear and his orders are, full steam ahead.

Mr. Foster has reference to the series of Supreme Court decisions since 1955. The Nelson case invalidated every antisedition law of the 48 States.

The Yates case states, in effect, that "we must be on the brink of a successful revolution, before the Federal Smith Anti-Sedition Act can be invoked."

The recent Supreme Court decisions have paralyzed all efforts to control Communist subversion.

These decisions were made despite the findings by Congress, by the President, by the FBI, and by the Attorney General, that the Communist Party is a subversive integral agency of the Soviet world conspiracy; that Communists owe their allegiance to the Soviet.

The Supreme Court's decisions even shackle the emergency powers of our President.

This is a fantastic and frightening state of affairs.

Statehood for Hawaii is a major objective of the Soviet conspiracy to which Mr. Bridges and his unions lend themselves.

We show you a photo of Chairman Charles Fujimoto announcing the program of the Hawaii Communist Party. He says, "We favor statehood." Period.

The Communist power in Hawaii emanates from two unions, the International Longshoremen's and Warehousemen's Union and the United Public Workers Union. Their abbreviations are ILWU and UPW.

Both of these unions were expelled by the CIO in 1950 on the ground that their policies follow the Communist Party and that Communists control these unions.

The ILWU has a membership of 25,000 in Hawaii. Harry Bridges, next to William Z. Foster, is the greatest force aiding American communism. He is the international president of this union. Louis Goldblatt, who was expelled from England as an international Communist agent, is secretary-treasurer.

Jack Hall, an identified Communist, is the regional director in Hawaii.

The UPW is headed by Henry Epstein who claims that its membership increased by

1,000 in the past 2 years to 3,000 members. Most of its officers are also Communists. They control the vital transport, waterworks, fire, and even the sheriff's department.

I show you an article in the October 1956 American Legion magazine by Victor Riesel. He is the courageous labor columnist who has done so much to protect the decent rank and file union members against labor racketeers and labor Communists.

One of these photos shows:

Harry Bridges drinking a toast with Mr. Molotov.

I quote from this article:

"Last Christmas week, Russia's top geopoliticians announced that the Kremlin considered Hawaii a colonial power. Last New Year's Eve, the Kommunist magazine stated that Hawaii and American Samoa must be liberated by revolutionary action.

"Comrade Khrushchev knows that the first phase of Harry Bridges' political and industrial infiltration is completed.

"His well knit disciplined voting machine can deliver 40,000 votes. It is the power on the island."

Mr. Bridges rules a Communist collectivized kingdom in Hawaii.

I now quote, from the Hawaii Commission on Subversive Activities, report of 1955:

"The ILWU has established 16 book lending libraries. Their books are uniformly subversive, teaching race hatred, ridiculing religion, glorifying Russia and Red China and teaching military techniques for mass labor and political strikes.

"The ILWU uses 4 radio stations to broadcast their communistic propaganda, every day, in the English, Japanese, and Filipino languages.

"The ILWU expends more than a quarter of a million dollars a year for treasonable propaganda."

The ILWU of Hawaii operates in both the Republican and the Democratic parties. It is just, now, reaching the peak of its power.

I show you reports of the 1954 elections by the two largest Hawaii newspapers, the Star Bulletin and the Advertiser.

The headings are: "Jack Hall Says Unions Get Credit for Victory," "Labor Backed Candidates Did Well in Isle Elections."

I quote from these reports:

"The survey shows the ILWU gave its endorsement to 71 candidates. A total of 58 were elected.

"In the house of the legislature, 28 out of 30 were endorsed. 22 of the backed candidates won."

Now in the last 1956 elections, the ILWU did better than in 1954.

I show you a clipping of the Star Bulletin. The heading is "ILWU Backed Candidates Won in 26 of 28 Contests."

I show you a listing of all of the 15 senators and 30 representatives in the Hawaiian Legislature. The "x's" indicate ILWU endorsements.

Six out of 15 Senators are so endorsed.

Twenty-one out of 30 representatives were elected with the ILWU endorsement.

I show you this page of photographs from the Honolulu Star-Bulletin. It shows the agents of the ILWU and the UPW operating with the legislature in the Iolani Palace, the Capitol Building.

On November 8, 1956, Governor King forced the resignation of his attorney general for attending a testimonial dinner for Jack Hall. Governor King was not reappointed.

In the 1956 elections, William F. Quinn accepted the ILWU endorsement for senate. He is now the Governor, succeeding Governor King. I show you newspaper accounts of Governor Quinn tendering a public appointment to Jack Hall as a member of his traffic commission.

It is an accepted political fact in Hawaii that you can't receive the recommendation of the Interior Department for a Presidential appointment without the blessing of the ILWU.

I would like to pay special tribute to Dr. Lyle Phillips, to the Dillingham family, to former Governors Judd, King, and Stainback, to the Hawaii Residents' Association, for their courageous fight against communism in Hawaii, at great personal sacrifice.

The International Fishermen and Allied Workers of America is one of the largest unions in Alaska. It was expelled from the CIO in 1950 as being Communist controlled. The next day it joined Bridges' ILWU. It is Bridges' beachhead in Alaska, today.

Just as soon as statehood is granted, Bridges can and will send 100 organizers into Alaska. It will be "apple pie" to take over its politics.

The chain of command, the line of discipline will be completed from Moscow to Foster to Bridges, to Honolulu and Juneau, Alaska, then into our Congress.

By the way, Mr. Eugene Lyons, senior editor of the Reader's Digest magazine, has a fine article on communism in this same American Legion edition of October 1956.

The last poll in Alaska shows the people there voting 2½ to 1 against statehood. Certainly, we ought not impose statehood upon them against their will.

I thank you for your interest.

Polish Constitution Day

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of May 2, 1958, on the occasion of the commemoration of Polish Constitution Day:

THE 3D OF MAY

When you are reading these lines tonight, it will be Saturday in Poland because of the difference in time. A new day will have arrived—the 3d of May, normally the greatest civil holiday on the calendar in the land that gave to the world Pulaski, Kosciuszko, and so many other notables. For this day commemorates the constitution of May 3, 1781, a document that introduced to Europe the idealism in government, exemplified by the Constitution of the United States.

The 3d of May is Constitution Day in Poland, or at least it was until the Soviet Union obtained a stranglehold of this land and installed a Communist puppet regime.

The constitution of Poland, commemorated this day, proclaimed that "all power in civil society is derived from the will of the people." That, of course, does not apply to this enslaved land now.

A year ago, there were high hopes that this 3d of May might be freighted with significance instead of having officials ignore or give lipservice to the spirit of the occasion. But these dreams of liberation have not materialized, although the fires of liberty continue to burn. A century of subjugation failed to extinguish them, so there is every reason to believe they will survive the current ordeal.

The spirit of Poland seems to grow stronger under oppression instead of being broken. This is easy to understand when the principles, incorporated in the constitution of the 3d of May, are considered.

Are the Veterans of World War I To Be Placed Eternally on the "Maybe" List Until They Are Extinct?

SPEECH

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1958

Mr. VAN ZANDT. Mr. Speaker, on Thursday, April 7, 1958, Lewis Brake, the national commander of the Veterans of World War I, in a speech at Lima, Ohio, stated:

The Government may not owe every veteran a living, but it does owe its life to the veteran.

Commander Brake continued by saying:

With the passing of each day there are 320 fewer veterans of World War I.

He said he knew from personal experience as a veteran service officer in Illinois that many of the World War I veterans who die each day were in need of medical care, food, and clothing.

Mr. Speaker, Commander Brake's statement can be confirmed by hundreds of service officers throughout the Nation who have firsthand observation of the economic plight of the vast majority of the remaining 2,900,000 veterans of World War I whose average age is nearly 65 years. In addition Commander Brake's statement reveals that those veterans who are alive out of the 4,744,000 Americans who served in World War I are truly the forgotten veterans of the Nation. They are forgotten because this Congress and many previous Congresses have taken no action on numerous bills providing for pensions similar to those paid to the veterans of the Spanish-American War.

Mr. Speaker, in revealing the economic plight of the World War I veteran as he advances in years, it should not be forgotten that upon discharge he received a $60 separation allowance for the purpose of purchasing a suit of civilian clothes and an overcoat.

Later the World War I veteran received a so-called bonus; but, Mr. Speaker, it was designed as an adjustment of the $30 monthly pay the American doughboy received for his military service in 1917–18.

Having mentioned the $60 separation allowance and the so-called bonus, it should be emphasized that as far as the veteran of World War I was concerned there were no fringe benefits such as terminal-leave pay, unemployment-insurance benefits, or GI benefits in general as received by the veteran of World War II.

Let me stress the point Commander Brake made in his address at Lima, Ohio, when he said:

The Government may not owe every veteran a living, but it does owe its life to the veteran.

This is a true statement, and, applying it to the veterans of World War I,

the gratitude of the Nation is lacking because they have not been accorded equal treatment with veterans of other wars.

Mr. Speaker, at this time H. R. 972, H. R. 2201, H. R. 5011, H. R. 5054, H. R. 8425, and H. R. 10451 are pending before the House Committee on Veterans' Affairs, all of which provide a $100 monthly pension for veterans of World War I when they reach age 60, subject to certain income limitations.

In addition, H. R. 316, H. R. 2128, and H. R. 5272 are also pending before the House Committee on Veterans' Affairs, which provide a $100 monthly pension for World War I veterans at age 62. All of these bills have been pending in the 85th Congress for months, but no action has been taken or scheduled at this time.

Mr. Speaker, any one of the bills pending is a step in the right direction, and I sincerely hope we can get action on such legislation before the adjournment of this Congress. Any bill to be perfected by the House should provide for a monthly pension of at least $100 at age 65 or if the veteran is permanently or totally disabled. In addition, I think the bill should provide outpatient care for every veteran of World War I who is in need of medical treatment on the same basis as provided the veteran of the Spanish-American War.

In conclusion, let me quote from an editorial appearing in the April 26, 1958, issue of the Army-Navy-Air Force Register regarding "forgotten men":

> Congress sees fit to appropriate billions to be used in other ways. But what of the veterans of World War I? Are they going to be placed eternally on the "maybe" list until they are extinct? They are, indeed, the forgotten men.

Polish Constitution Day

SPEECH
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 5, 1958

Mr. FLOOD. Poles are one of the most gifted, industrious, and courageous peoples of Europe. They have a long and glorious history, and their contribution to western civilization in the arts and science, in statesmanship, and in military leadership, has been great. They have also made a significant contribution in the art of governmental institutions. This last point is clearly borne out by the liberal and progressive constitution which they adopted on May 3, 1791.

That constitution expressed the true spirit of the age. The powers of the monarch were curtailed, and a real check was placed upon the exercise of his authority. Autocratic government was cast aside and in its place ministerial responsibility was introduced. Many intricate and obsolete features of the old and unwieldy system were abolished, and class distinctions were reduced. Personal privileges formerly enjoyed by the few were made available to all townsmen, and the peasantry was placed under the protection of the law. Religious toleration was established and religious fredom was guaranteed. These advanced features of the constitution represented a decided advance over anything yet known in Central and Eastern Europe.

The annual commemoration of the Polish Constitution Day provides a fitting occasion for all those who believe in freedom and independence to pay tribute to the memory of the men who forged that inspiring document, and also to those brave souls who through the years have sacrificed their lives so that the ideals embodied in the constitution of 1791 might take firm roots and live on.

Michigan and Its Accomplishments

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. RABAUT. Mr. Speaker, this is the time of the year that the people of Michigan set aside to publicize and make known the benefits of being residents of the Wolverine State. The people of Michigan have much to be proud of since during the long and glorious history of their State they have been blessed with an abundance of natural resources, human achievement, social and technical progress, and dynamic leadership.

When most people consider Michigan they automatically think of the automotive industry and justly so. Michigan is the automotive center of the world, but the automotive industry is by no means the only industry in our great State. Michigan contains over 12,000 factories with over one and a half million employees. Michigan, besides being the leading manufacturer of automobiles, also ranks first in the production of automotive trailers, grey iron, cutting tools, woodworking materials, breakfast foods and refrigerators. The State of Michigan is also one of the leaders in the production of metal stampings, drugs, refrigeration equipment, sporting and athletic goods, steel, furniture, chemicals, and paper. The Dow Chemical Co., one of the largest chemical producers in the world, has its headquarters in Michigan. Kalamazoo is known throughout the world as the "paper city." The industrial capital of the "arsenal of democracy" is Detroit, part of which I am privileged to represent. On a per capita basis, no other major city has an equal number of factory workers or as large a volume of manufactured products. Detroit's industry is also diversified. Besides the automotive industry it ranks first in pharmaceuticals, adding machines, foundry products, paints and heavy chemicals. Detroit also uses over 10 percent of the Nation's output of finished steel. No other major city in the United States has as high a proportion of its families living in single, detached homes. Detroit is also the healthiest city in the world. It has been the recipient of the National Health Contest three times and has the lowest death rate of any city with more than a million inhabitants. Detroit is the Nation's third ranking city in business and industry while remaining fifth in population.

But industry and commerce are not the only factors that make the people of Michigan proud of their State. In the field of agriculture Michigan ranks 10th or higher on production of the Nation's 20 major crops, although ranking only 22 in area. Michigan leads the country in the production of tart cherries, navy beans, celery, cantaloupes, strawberries, and chicory. Michigan ranks second in the country in the production of plums, carrots, field beans, cauliflower, red clover seed, onions, blueberries, and is one of the leading commercial producers of apples. Wayne County, which includes Detroit and is the industrial center of the State, leads the other 83 Michigan counties in production of sweetcorn.

Besides being blessed with a great industrial capacity and an agricultural abundance Michigan is also a leading vacationland. Michigan has four times as much water covered area as any other State. Our neighboring State of Minnesota brags about having 10,000 lakes while we of Michigan make little of the fact that we have 11,037 inland lakes. Michigan also contains 36,350 miles of streams and 3,121 miles of Great Lake shoreline.

Michigan is also a sportsman's paradise. More fishing licenses are sold annually in the State of Michigan than any other State. The finest trout fishing in this country is found in the streams of Michigan. The Wolverine State also leads the country in the number of State parks and campsites available to the public. Hunting is also a leading vacation feature offered in Michigan. The annual deer herd of Michigan, averaging 700,000 in number, is the largest east of the Rockies. Isle Royale National Park, Mich., is noted for having one of the largest remaining herds of great antlered moose in the United States. Furthermore, in the State of Michigan one is never more than 6 miles from a lake or stream. People from throughout the United States come to Michigan every year to enjoy the scenic splendor, grandeur, and hospitality that Michigan and its people offer the year round.

Michigan has also been a leader in the field of transportation. The story of the automotive industry and its development as a basic part of the American story and its great contribution of putting America on wheels has played a major role in the development of the vast transportation and highway systems that are an integral part of our social and economic life. One of the first cement highways in the world was built in Detroit in 1899. The Ambassador Bridge between Detroit and Canada is the world's longest international suspension bridge. International Bridge, one of the world's largest jackknife bridges, spans the American locks, St. Mary's Rapids and the Canadian locks at Sault Sainte

Marie. The newest achievement in this field is of course the opening of the Mackinac Bridge at the Straits of Mackinac. The Mackinac Bridge is the longest suspension bridge in the world. Including anchorages, but excluding any approaches, its length is 8,614 feet. Including approaches the total length of the bridge is 23,195 feet, almost 5 miles. Michigan is particularly proud of this new engineering achievement. One of the most important aspects of the bridge that the people of Michigan are justly proud of is that the bridge itself was built without any Federal assistance. Linking the two peninsulas of the State the Mackinac Bridge will stand forever as a fitting monument to the people of Michigan.

Michigan is also America's largest inland water trade center. The Detroit River is the busiest waterway in the world and Detroit is the third largest port in the country in dollar volume of cargo handling. Detroit is the No. 1 port for trade with Canada, the United States best customer. The Detroit River also carries more tonnage than the Rhine, Thames, Seine, and Volga combined.

Michigan has also been a leader in the field of education. Michigan was the first State to assure every child the right to a tax-paid high school education. Michigan was also the first State to provide in its constitution for the establishment of a public library system. Michigan also leads all other States in the number of organized 4–H Clubs, with well over 5,000 throughout the State. Michigan was the first State to organize school safety patrols over 25 years ago. The State has also been a leader in the field of juvenile welfare. The first State school in the Nation for neglected and dependent children was established in Coldwater in 1875.

Michigan has also shown the way in higher education. The University of Michigan, founded in Detroit in 1817 and moved to Ann Arbor in 1837, is regarded as the "mother of State universities" because of its leadership in the development of State-supported higher education. The University of Michigan is listed among the Nation's 5 or 6 leading universities. It is fourth in size among American universities and ranks first among State universities in the number of alumni listed in Who's Who in America. Among other achievements of the University of Michigan that we of Michigan are justly proud is the fact that it is the first university to be governed by a board of regents elected by the people; it is also the first university to admit women. The school of public health, established in 1941, was the first such school established in this country. The university center of Japanese studies is the only one of its kind in the United States. The University of Michigan law school ranks as one of the finest in this country and it has one of the foremost law libraries in the western hemisphere.

Michigan is also proud of its other major institution of higher learning, Michigan State University. Ranking as 1 of the 10 largest universities in the country, Michigan State University was founded in 1855, when it established the first agricultural college in the United States. The first commencement exercise in 1861 was canceled in order that the entire class could be excused to enlist in Howland's Engineers for service in the Civil War. Michigan State has also achieved many "firsts" on the field of education. The first building for the teaching of scientific agriculture in America was established at Michigan State in 1857. It was also the first land-grant college to admit women. In the field of scientific agriculture, the first hybridization of corn was done at Michigan State in 1877. In 1888 it established the first horticulturist laboratory in this country. It has also achieved many firsts during the last 40 years. It was the first college in the Nation to employ radio having its first broadacst in 1924, and it also was the second college in the country to establish a fully equipped television station.

Michigan has also been a pioneer in the field of public health. This year the Michigan Department of Health celebrates its 84th year of service to the people of Michigan. During the long and dedicated history of the Michigan Department of Health it has helped bring about many changes to further the health and welfare of people everywhere. The department developed one of the first effective vaccines for protection against whooping cough and was one of the first States to remove tuberculosis from the welfare category and declare that payments for hospitalization was for the protection of the public health. Michigan also pioneered free X-rays for the detection of tuberculosis and in October 1940, it had one of the first mobile X-ray units in the world. The famous Kahn test for syphilis was developed in the Michigan Department of Health laboratories. Michigan has some of the best water supplies in the Nation. Eighty percent of the population drinks water from supplies approved by the health department and not one case of typhoid fever has been traced to the water supply since 1934. Michigan is the leading State in providing community programs for the application of sodium fluoride solution to the teeth of children for the prevention of tooth decay. Michigan's program for the screening of children for defective vision and for improving visual environment was the first program of its kind to be undertaken on a statewide basis. Michigan is the only State in the country preparing and distributing antihemophilic globulin used in control of hemophilia. The Michigan Department of Health was the first State agency to distribute blood plasma to hospitals and physicians for civilian use. The first low-cost incubator for premature infants, now in use in every State and in 44 foreign countries, was developed by the Michigan Department of Health. Michigan also initiated the first State program of consultant service to hospitals on care of mothers and newborn babies. Michigan was the site of the first Governor's Conference on Mental Health. Held in 1954, the conference was the first concerted effort of the States to lay out a program to combat this serious social problem. Michigan has done much to improve the general health of all its people and it has contributed much to the betterment of the health and well-being of people everywhere.

Michigan has led the way in many other fields too numerous to mention, and the Wolverine State will continue to display the indomitable spirit and determination that has gained it a worldwide reputation. The people of Michigan are justly proud of their heritage and during Michigan Week they want to share this feeling with everyone. The people of Michigan have a proud and glorious past and they look to an even greater future as the Wolverine State continues to work for the betterment of all people.

Tribute Paid to the Late Henry Walser, Hazleton (Pa.) Publisher

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Hazleton Plain Speaker of April 25, 1958, calling attention to the tribute paid to the late Henry Walser by the American Newspaper Publishers Association at its recently concluded annual convention held in New York City:

AMERICAN NEWSPAPER PUBLISHERS PAY TRIBUTE TO HENRY WALSER

NEW YORK.—A solemn memorial service which honored the name of Henry Walser, late co-owner and publisher of the Hazleton Plain Speaker and Standard-Sentinel was held here yesterday by the Nation's foremost newspaper executives in the closing session of the 72d annual convention of the American Newspaper Publishers Association in the Waldorf-Astoria Hotel.

As they stood in silence, William Dwight, retiring president of the organization, recalled to the assembled delegates the name of Mr. Walser and others "long identified with leadership in their communities, lost to us by death since we last met together."

Reading from the ANPA necrology, Mr. Dwight said, "the year that has passed has taken from us friends and colleagues whose memory should be solemnly and affectionately honored by all who are gathered here today.

"These men who sat with us in our deliberations were devoted guardians of the truth and dedicated servants of the profession we all hold high. They were willing to assign their time and energies to the tasks above and beyond the pressure of their own duties. They contributed to American journalism the zeal and fire that has kept it the fighting defender of the rights of mankind and the intelligence and integrity and vision which has distinguished America's press in its crusades for enlightenment and peace among all peoples.

"As newspaper leaders they were proud of their role and jealous of the idealism which still vitalizes the decisions and performance of our profession. They served it

with a wide range of talents, but always in the high-principled spirit of increasing its influence, dignity, and authority.

"As evidence of our distress at the passing of these trusted and beloved colleagues and as an indication of the grief we share with those who knew and loved them, we in this 72d convention resolve that this recognition be made a part of the permanent minutes of this meeting and that copies of this tribute be sent to the families of those who have left us, together with an expression of sorrow and sense of loss in their passing."

Pan American Games in Chicago

EXTENSION OF REMARKS
OF
HON. THOMAS J. O'BRIEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. O'BRIEN of Illinois. Mr. Speaker, under unanimous consent, I am extending my remarks to include a letter from the Honorable Richard J. Daley, mayor of Chicago, and a fact sheet on the Pan American Games to be held in Chicago in September of 1959, as follows:

CHICAGO, ILL., *May 5, 1958.*

DEAR REPRESENTATIVE O'BRIEN: That you may be informed regarding planning for the Pan American Games to be held in Chicago in 1959. I am forwarding you the latest fact sheet.

The many references by distinguished leaders of our government of the great importance of furtherance of understanding and friendship between the people of the Americas serves to emphasize the importance of the Pan American Games.

The bringing together of some 2,000 young athletes from all the countries of the Americas to engage in friendly athletic competitions in the heart of mid-United States is an enormous project.

In serving as host for the games, Chicago becomes the United States in the eyes of the thousands of visitors who will come here to participate in and see them. We intend that nothing be left undone to make this event one of the greatest in the history of our country.

We will appreciate your assistance in informing the congressional delegations, and the Government departments and agencies, of the coming of the games to Chicago in 1959 and urge the sympathetic and cooperative interest of all.

Sincerely,

RICHARD J. DALEY,
Mayor.

[From the fact sheet of the Chicago Pan American Games Citizens' Committee, Chicago, Ill.]

The Pan American Games will be held in Chicago August 27 through September 7, 1959.

The Pan American Games are held every 4 years under the direction of the Pan American Sports Organization. The member countries are those countries of the Americas whose National Olympic committees are members of the International Olympic Association.

At present countries eligible for participation in the games are: Argentina, Bahamas, Bermuda, Bolivia, Brazil, Canada, Columbia, Costa Rica, Cuba, Chile, Dominican Republic, Dutch West Indies, El Salvador, Guatemala, Honduras, Jamaica, Mexico, Panama, Paraguay, Peru, Puerto Rico, Trinidad, United States of America, Uruguay, and Venezuela. It is probable that before the games take place Ecuador, Haiti, and Nicaragua will be added to the list of eligible countries.

The erroneous opinion exists generally that the Pan American Games will be held in Soldier Field. The games program includes 20 sports, in 7 of which there will be competitions for both men and women. All of the sports facilities of the Chicago area will be used.

PROGRAM OF SPORTS AND LOCATIONS

Track and field (men and women), Soldiers Field.
Basketball (men and women), Northwestern University, Loyola University.
Baseball, Wrigley Feld and Comiskey Park.
Boxing, Northwest Armory, International Amphitheater.
Equestrian sports, Oak Brook Polo Club, Soldiers Field.
Fencing (men and women), University of Chicago.
Football (soccer), Hanson Park.
Gymnastics (men and women), University of Illinois, Navy Pier.
Weightlifting, Lane Tech High School.
Wrestling, Rivas High School.
Swimming and diving (men and women), Columbus Park, Portage Park.
Modern pentathlon, Oak Brook, Camp Logan, Bartlett Gym, Columbus Park, Washington Park.
Equestrian polo, Oak Brook Polo Club.
Rowing, Cal-Sag Canal.
Tennis (men and women), Oak Park, River Forest.
Pistol and rifle, skeet, Camp Logan, Lincoln Park Gun Club.
Volley ball (men and women) De Paul University.
Water polo, Riis Park.
Cycling, Humboldt Park.
Yachting, Lake Michigan.

At the previous games in Buenos Aires in 1951, and in Mexico City in 1955, each time there participated 1,800 athletes. Accommodations will be provided for 2,000 athletes at the Chicago games.

There has been appointed and are functioning 20 sports organizing committees each charged with the responsibility of planning for the conduct of its sport at the games. These committees are composed of men and women identified with the sport they are serving. This identification comes through experience as competitors in major competitions; as officials; or as athletic directors, coaches, and administrators.

In addition there has been appointed and are functioning a feeding and housing committee, a publicity and promotions committee, a ticket committee, an awards committee, and a transportation committee.

The Chicago Rotary Club; the Pan American Council; Cook County Council of the American Legion; the Olympians; and the Spanish Speaking Community of the Chicago Area have organized hospitality committees to assist in the entertainment of the athletes and officials.

The Department of Defense has named consultants for the conduct of the modern Pentathlon and the shooting events. The equestrian committee has engaged the service of one of the leading authorities in the United States to assist in laying out the riding courses. As needed, the services of other consultants will be employed.

A campaign to raise $500,000 to finance the games will be commenced shortly. Half this mount is needed to augment the sum which each country will pay for the feeding and quartering of its athletes. Their contribution will be $3 per day per athlete. The estimated cost for food and lodging is $10 per day. The balance of the money is required for providing facilities for the conduct of the various sports, and for administration.

Contributions in substantial amounts will be solicited and a city-wide campaign to enlist sponsors, persons who will contribute $5 each, and who will receive credit coupons in that amount which can be exchanged for tickets to the track and field events.

Headquarters will be opened at 69 West Monroe on May 1.

The assistance of all is solicited and those who are desirous of helping are invited to contact the mayor's office.

Inspired by the holding of the Pan American Games there will also be held in August of 1959 a great cultural and information congress; participation in which has been extended to all the countries of the Americas. This event, of which Arnold Maremont is chairman, has been named a Festival of the Americas.

Nineteen Hundred and Fifty-eight North Dakota Mother of the Year, Margaret K. Beauchamp Breuer

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. BURDICK. Mr. Speaker, North Dakota has what I believe is a unique honor in having chosen Mrs. Henry B. Breuer, a member of the Arickara Tribe of Indians, as North Dakota mother of the year for 1958. As a tribute to the Indians of North Dakota, as well as the State as a whole, I should like to here insert Mrs. Breuer's autobiography:

Mrs. H. A. Belcher, of Fessenden, N. Dak., president of the North Dakota Mothers Committee, announces that the selection committee members have named Mrs. Henry B. Breuer, of the Fort Berthold Reservation, Emmet, N. Dak., as the 1958 North Dakota mother of the year.

Mrs. Breuer, born in August 16, 1906, on the Fort Berthold Reservation, in a community then known as Armstrong, a member of the Arickara Indian group, 1 of the 3 groups of Arickaras, Mandans, and Hidatsas, comprising the Three Affiliated Tribes of Fort Berthold Reservation. Her people who have lived in this area for many generations, have been agriculturalists and with the other tribes have given to the Northwest much of its 90-day maturing seed.

Mrs. Breuer is a member of the Arickara Congregational Church. Her father, Peter Beauchamp, taught school for many years as a Federal employee and was one of the early pastors of the Arickara church. A councilman for many times, a delegate to Washington, D. C., on tribal business a number of times, and an interpreter for his people. He is now retired and lives with his daughter, Ina B. Hall, of Parshall, N. Dak.

Her mother was Adeline Powell Beauchamp, who came to Fort Berthold as a young woman as missionary teacher and adviser under the American Missionary Association, serving at the Fort Berthold Mission School for a number of years before she married. Later she became a field matron. (The mission school was started May 9, 1876.)

Her only sister, Mrs. Ina B. Hall, is associate home demonstration agent with the North Dakota Agricultural College Extension Service, working out of Parshall, N. Dak. Her brother, Safford Beauchamp, lives in Garrison, N. Dak.

Began her education at the Congregational Mission School, later attending public schools being the second pupil of Fort Berthold to

graduate from a town public high school, which was Garrison, N. Dak. Then to the Minot State Teachers College, where she earned her degree, mainly through summer sessions in 1941, and her life professional certificate in teaching in 1957. Taught her first school in the fall of 1926 and later entered the Federal school service.

Married in 1928, Mr. and Mrs. Breuer have 3 sons, Peter, Bernard, and Almit. Peter is a graduate of the North Dakota Agricultural College, majoring as an agricultural engineer, and is now working for the Bureau of Reclamation in Bismarck, N. Dak. Bernard graduated from the Bacone College, in Bacone, Okla., and is now a machinist foreman working in Los Angeles, while Almit follows ranching and farming near the Breuer home. In addition, Mrs. Breuer has been like a mother to her niece, Adeline Hall, daughter of Mrs. Ina Hall, and who is now married and lives in Overly, N. Dak.

Mrs. Breuer has been a vital factor always in developing and improving the relationship between the races, teaches in the Whiteshield Federal School which school has a biracial setting, very active in community and church affairs and one who is always ready to do her part and more when it comes to strengthening the community life in all its phases.

Dr. Ben Reifel, former superintendent of the Fort Berthold Reservation, now area director for the Bureau of Indian Affairs, with offices in Aberdeen, S. Dak., writes of Mrs. Breuer: "In addition to rearing a family and being a farm homemaker, she found time to continue her education to the point where she was able to get a bachelors degree and is at present one of the outstanding teachers in the elementary school in the Bureau of Indian Affairs. She is also a vital factor in developing and improving the relationships of both groups within the community, among adults within the community as well as children within the school. She is ever a resource for advice and encouragement to Indians and non-Indians alike in the reservation community within McLean County. She keeps active in church affairs and serves as an outstanding example of Christian womanhood."

Mr. Albert Wabaunsee, principal, Whiteshield School, writes: "A mother has to be a stabilizing factor if a home is to be successful. In this case Mrs. Breuer has lived up to a mother's place in the home. She has provided her husband and family with an excellent home life, providing them with all the necessary ingredients to prepare them to take their place in modern civilization. In my observation, Mrs. Breuer has lived up to her reputation as a good teacher, an outstanding teacher; and by that I mean she has her children under control at all times. Her main objective is to prepare them for the second grade, scholastically, morally, physically, mentally, and socially. The youngsters leave the second grade with confidence in themselves, in their classmates, and in other teachers. She not only uses the professional training which she has received in getting a degree from the Minot State Teachers College but draws on the experiences which she has acquired in the past 29 years as a mother and teacher to her own as well as to others. There are those many little extra things which she does to develop her pupils—to develop democracy, it is lived rather than taught. The children are taught that there are laws which have to be abided by, yet they have opportunity to voice their own opinions. The children are treated fair in their work as well as play and they have opportunity to do both. A varied program is carried on in her teaching. With her modern professional training she has the ability to adapt the modern with some of the traditional which makes a worthy program for the youngsters. Always happy and congenial, she gets along well with fellow employees as well as the people of her community. She is teaching the second generation of children and both parents and children have respect for her. Briefly, Mrs. Breuer has done and is doing outstanding work in the classroom as well as successful work in the community. She has tried to use her home training, daily life's experiences in developing the youngsters to be future citizens of these United States of America."

Dr. Ralph Hubbard, former professor of biology and social science, Minot State Teachers College, writes: "Mrs. Breuer is a very brilliant, intelligent, and gifted lady. While taking her college work she was both teaching and raising her family at the same time. This all included, in the natural course of events, a great deal of activity in social, civic, community, and church affairs. At the college the faculty found her grades and student craft most superior. She was outstanding in research as proven by her intelligent use of the library facilities. Her reading was very broad. In the department of educational science, Mrs. Breuer presented marked contributions, backed by her powers of observation and excellent experience in the practical field of education. This lady comes from a strong family of fine citizens and educators. Her sister, Ina B. Hall, who has also raised a splendid family, is a powerful figure in the field of education."

Unemployment-Compensation Spread Is First Line of Defense Against Recession

SPEECH
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 1, 1958

The House in Committee of the Whole House on the State of the Union had under consideration H. R. 12065, Temporary Unemployment Compensation Act of 1958.

Mr. LANE. Mr. Chairman, no economist can agree on one single reason as the cause of the current recession, or on one factor that will guarantee economic recovery.

The first victims of any slump are the unemployed.

Their predicament is immediate and clear.

For those covered by unemployment compensation, the benefits they receive are considerably less than the wages they once earned, and there is a definite limitation on the number of weeks that this insurance will provide them with some purchasing power.

For those not covered by unemployment compensation, the loss of a job means instant deprivation.

It is generally agreed in the Congress that we must extend, temporarily, the number of weeks to which an unemployed person is entitled to benefits as the first line of defense that will absorb the immediate shock of this recession.

When the jobs of over 5 million people disappear, we have a situation that affects not only the unemployed, but everyone in the Nation. The repercussions extend to all the world.

When 5 million people are forced to curtail their buying, then use up their savings, and finally fall back on the charity of relatives or the welfare provided by the community, you have 5 million personal tragedies and 5 million customers out of the market.

This is temporary legislation, but it also points up the fact that we have delayed in modernizing our unemployment-compensation system.

I hope that, apart from this emergency measure, we will proceed to enact permanent legislation that will extend coverage to include those who presently have no protection whatever when they lose their jobs.

H. R. 12065 provides up to 16 weeks of additional unemployment compensation for those who have exhausted their benefits, and the extension of coverage up to 16 weeks to those who did not come under any State or Federal unemployment-insurance program.

The unemployment-compensation laws of the States are adequate to meet the needs of normal unemployment, but they cannot cope with a situation like the present. When benefits are exhausted and there are no jobs available, how are these unemployed going to survive?

Even worse are the immediate hardships suffered by the 600,000 unemployed who had sufficient wages to qualify for benefits, but had the misfortune to work in noncovered employment. The discrimination operating against them demands correction.

The simple and expeditious way to provide aid is by a grant from the general funds of the Federal Treasury. Otherwise, there would be no relief in time to avert acute suffering.

This is temporary unemployment legislation designed to meet an emergency problem.

It would be self-defeating if it became mired in technicalities.

And it will give us a breather, during which we can explore and advance those fundamental changes that are required to modernize and strengthen our whole unemployment-compensation system.

If this bill is to succeed in its humane and economic objectives, it will have to be passed swiftly and without any crippling amendments.

In fact this bill, by reversing the loss of purchasing power, will help to regenerate the demand that will create jobs and thus stimulate economic recovery.

Among all the antirecession measures that have been suggested, the Temporary Unemployment Compensation Act of 1958 clearly merits top priority.

How Can It Happen?

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. George E. Sokolsky which appeared in the Washington Post and Times Herald on April 30, 1958:

HOW CAN IT HAPPEN?
(By George E. Sokolsky)

I read a broadcast from Panama City which tells a mighty tale about all the money

that we are scattering about the world with little concern for what happens to it. Let me repeat the Panama story:

"This is the story of an incident that occurred in the capital of our country; we shall call it the story of the lost building.

"This building, which was a large one and which contained recreational facilities, such as an ice rink, dance hall, gymnasium, and so forth, was sold to the Panama City administration by the United States Government for 1 balboa. The understanding was that the building was to be moved to another site, where it could be used by the children for their activities.

"But what happened? The building has disappeared, and the lot on which it was to be re-erected is being used for commercial purposes. No one knows what happened to the building; no one knows why the new lot, which was set aside for the relocation of the building, is being used for profits; no one knows why children have been deprived of the use of both the building and the new lot. Attempts have been made to find answers to these questions, but we have always been given idiotic answers. In the meantime, what happened to the building? Who is profiting from all this?"

A balboa is worth $1. It is a sad tale of our generosity going astray.

I was reading a speech—a sort of annual report—delivered by Tito to the Federal People's Assembly of Yugoslavia on April 19, in which he said:

"Part of the (military) requirements has been supplied from the aid received since 1951 from the United States. As is known, receipt of this aid was suspended in December last year after a mutual agreement at our request, because that military aid was no longer in accord with our foreign policy, the policy of coexistence, in the changed international situation."

In a word, when we aided this fellow up to the tune of $1 billion, he felt that he was doing us a favor by accepting the aid. He will now do us no more favors. We can keep our tanks, and planes, and whatnots.

In fact, Tito regards Soviet Russia's competition with us in the giveaway business as particularly notable. Let me quote his words:

"In the field of so-called international economy and technical aid, a significant moment came when the Soviet Union started granting aid on a broader international plan."

This cost the United States about $1 billion before our officials in Washington discovered that Tito continued to belong to the Soviet world, that his quarrel was personal with Stalin, and that once Stalin died, the quarrel is no more. Note his own comments on the subject:

"A great event of broad international significance was the visit paid by a Soviet delegation headed by Comrade Khrushchev to our country, as well as the regulation of the relations between the two countries and the visit of our delegation to the Soviet Union."

The time has surely come for a restudy of the giveaway program, call it by whatever name. It was surely devised originally, in the form of lend-lease, to assist our allies in war. It has been exaggerated into a worldwide eleemosynary effort to aid remote and distant countries to achieve by one hop, skip, and jump to an agricultural and industrial plateau similar to ours.

We have sought to expend money to bring all the world to a common standard of living, which can only mean dragging down the countries of noble cultures to the standards of the Polynesian fishermen of remote Pacific islands.

This program never made much sense but was an expression of American sentimentality which we all delight in and undoubtedly explains why we contribute more to private charity after paying enormous taxes than any people on earth. It is the way we are constituted and as long as we have the money, who can complain?

It is only when we hit troubled times, like these, when cash in hand is less than usual, that we begin to look around to see what we can do to save a buck here and there. And we expect the same of our Government. Before this depression is over, the United States may have to drop many of its outlandish philanthropies.

The Case of Ezra Pound

EXTENSION OF REMARKS
OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1958

Mr. BURDICK. Mr. Speaker, on last Tuesday I had a famous visitor, poet Ezra Pound. Mr. Pound came to wish me speedy recovery from the little ailments that I have been bothered by of late, and to thank me for promoting his release from St. Elizabeths Hospital, where he had been since 1946.

Mr. Pound told me that when he was at St. Elizabeths he used to think that there were 160 million worse cases outside, and he said that after viewing our modern-day city traffic he could see why this might be true. Of course, it was because I also thought there were millions of worse cases outside that I introduced a resolution last summer to investigate his case with a view to ending his long and unnecessary incarceration at the Federal hospital for the insane.

Mr. Pound and I talked about many things. Mr. Pound told me: "You've had a chance to talk as much as you like. It is what you're paid for. I've had to plug in for 12 years."

As the Library of Congress report on Mr. Pound indicated, he had not made public utterances of any sort during his long stay at St. Elizabeths. So last Tuesday Mr. Pound tried to tell me as much as he could about his views and ideas.

I am sure that Mr. Pound does not agree with me on many of my interpretations of economics and history—and also the other way around. But Mr. Pound is a learned man, and I listened with great interest to what he had to say. That is not to say that I joined him in his views or, for that matter, would or could express myself in just the way that he does.

It was May 5, 1945, 13 years ago last Monday, that Mr. Pound surrendered to the Allies in Italy. For the next 7 months or so, Mr. Pound was the guest of the American Army at the disciplinary training center near Pisa, and for part of this time, in a gorilla-cage-like security cage. Mr. Pound told me: "Few men of letters have had these opportunities."

The Library of Congress report, the first three installments of which I placed in the CONGRESSIONAL RECORD of April 29 and 30, has given the details of the now-dismissed case of United States versus Ezra Pound. There has been much honest—and some dishonest—agreement and disagreement over the various aspects of his complex case. As the Library report indicated, there are several Ezra Pounds—the poet and critic, the amateur economist, the medical patient, the man who didn't like President Roosevelt and said so, the man who has been criticized about as much as he has criticized, both wrongly and justly.

Mr. Pound, 15 years ago, wrote Attorney General Francis Biddle a letter to explain why he had been broadcasting his views over Radio Rome:

> A man's duties increase with his knowledge. * * * Someone must take count of these things. And having taken count must act on his knowledge, admitting that his knowledge is partial and his judgment subject to error.

Last Tuesday, Mr. Pound told me: "It is a shame that a man has to be 72 years old before he can learn history. That is to say, here I am 72 years old and I am going back to kindergarten, reading Coke's Institutes. At any rate, that's what's wrong with the whole educational system."

Mr. Pound's grandfather, Congressman Thaddeus Coleman Pound, of Wisconsin, once made a speech, back in 1882, on the floor of the House arguing for vocational education for our American Indians: "Give them spades in place of powder, plows in place of guns, opportunity rather than hymns and prayers. Encourage citizenship."

Last Tuesday, Mr. Pound commented about his grandfather: "T. C. was asking for the same things I am asking for in very much the same style."

On November 28, 1957, the Hailey (Idaho) Times, edited by Mr. Berwyn Burke, carried an interesting article which suggested almost prophetically that in the next few months the complicated Pound case might indeed be settled. I am pleased that, in introducing House Resolution 403 last August and in requesting the Library for the LRS study, I may have been in a small way partially responsible for bringing the Pound case into the open so that the Court would have the opportunity to resolve the whole business in the way that they did.

I want to wish Mr. Pound many more years of good writing, and whether Mr. and Mrs. Pound choose to remain in this country or to return to the Italian Riviera, I wish them many years of health, happiness, and peace.

[From the Hailey (Idaho) Times of November 28, 1957]

THE CASE OF EZRA POUND

One of the world's most skillful and most influential writers was born 72 years ago in the western mountain mining town of Hailey, Idaho. Name? Ezra Loomis Pound. The grandson of a Wisconsin Congressman and a distant cousin (by way of his mother) of Henry Wadsworth Longfellow, Ezra Pound left Hailey as a baby, grew up to poethood and one of the most controversial careers of our time. It has been predicted that future generations will rank him with such all-time literary giants as William Shakespeare, and indeed things may work out just that way.

Pound's present whereabouts? A little room in a red-brick building on a sprawling campus of red-brick buildings surrounded by an unpoetic red-brick wall—St. Elizabeths. Federal hospital for the insane, District of Columbia. Pound was committed there in 1945 as incompetent to stand trial for allegedly treasonous doings during the Second World War.

Pound, who had been living on the Italian Riviera for several years before war, broadcast over Radio Rome during the war. He bitterly lashed out at Messrs. Churchill, Stalin, and Roosevelt, most Jews, and the antipoetic world, in general. If Pound had been convicted of betraying the United States, he could have gotten from 5 years' imprisonment to death in the electric chair. Instead, he never went to trial, was found insane by the court, and committed to the Federal lunatic asylum. And there he has been, a relatively forgotten man for 12 years.

Tokyo Rose, sentenced to 10 years in jail, is out now. Pound, arrested before Tokyo Rose or Axis Sally, or any of the broadcasters accused of treason, has gotten—according to some—a life sentence to the mental hospital.

One Congressman, North Dakota's maverick, USHER BURDICK, has decided to look into the Pound story. Some say Pound is as sane as the average person. A noted psychiatrist, Dr. Frederic Wertham, of New York, has insisted all along that Pound is sane and shouldn't be at St. E's. Just before the end of the first session of this Congress, Representative BURDICK introduced a bill for an investigation and study into the question of Pound's sanity.

Another legislator, an unidentified Senator, has asked the Library of Congress to prepare a report on the present status—literary, medical, political and juridical—of the 72-year old poet. The Library's study is being made by H. A. Sieber, young modern poet and Library of Congress assistant in political science.

A national civil liberties organization has announced its intention to take the Pound case to the courts, in an effort to obtain his release from the mental institution.

There are several ways of looking at Ezra Pound. He may be a great poet, some say, but he is a traitor and a lunatic. He may be sane and he may be innocent of the charges, some say, but he is no poet, at least, not a great one. He may be innocent and an important writer but he is insane, some say. And so on. There are several ways of looking at Pound. The facts are hard to come by.

As time goes on, Pound's claim to greatness may be proved or disproved. Time, after all, is the literary court with the last word.

But sanity may be just a whisper away from insanity.

And treason may be just a breath apart from patriotism under some circumstances. Hard cases make bad law, it has been said, but (if Congressman BURDICK's plans take hold) the next few months might see the settling of a very difficult case.

When Pound dies, his tombmarker may simply read "Ezra Loomis Pound, American Poet. Born Hailey, Idaho, October 30, 1885. Died ——." A friend of the poet once composed an epitaph for him: "Here lies the Idaho kid. The only time he ever did." Pound himself, in one of his famous Pisan Cantos, has written an appropriate final self-appraisal:

"What thou lovest well remains, the rest is dross.
What thou lovest well shall not be reft from thee.
How mean thy hates
Fostered in falsity, to have gathered from the air a live tradition
Or from a fine old eye
The unconquered flame
This is not vanity.
Here error is all in the not done."

It should not be forgotten, of course, that "the rest is dross."

War Memorial on Corregidor Island

EXTENSION OF REMARKS
OF
HON. JAMES P. S. DEVEREUX
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. DEVEREUX. Mr. Speaker, today, for many of us, the months and years appear to pass by with alarming speed. The days and weeks are not long enough to permit us to complete fully the many tasks and duties of our daily lives.

Sixteen years ago, Mr. Speaker, on May 6, 1942, I had more time on my hands than I knew what to do with. I was in a position of enforced passivity. I was a resident of a Japanese prisoner of war camp.

Today is, therefore, the 16th anniversary of the surrender by Gen. Jonathan Wainwright of the American and Filipino forces on Corregidor Island in Manila Bay.

All of you recall that unhappy event which may be said to have marked the low mark of the ebb tide of our struggle against aggression in the Pacific.

The tide may be said to have actually turned the next day because on May 7 our naval forces in the battle of the Coral Sea sunk the Japanese carrier *Shoho,* and on May 8 damaged the *Shokaku,* thus stopping the seaborne attempt to capture Port Moresby.

In less than a month there was no doubt the tide had started to flood when Admiral Nimitz and his ships won the Battle of Midway on June 6, one of the most decisive battles in naval history and the historic turning point in the Pacific war.

Even though the years since these epochal events have passed all too swiftly I am pleased to note that the Congress has not been oblivious of the successful effort of over 4 million servicemen, and women, and the sacrifice of a hundred thousand who died in defense of our liberties and freedom.

On August 5, 1953, there was enacted into law a bill to establish the Corregidor Bataan Memorial Commission. Serving on it are 3 Senators, 3 Congressmen, and 3 noncongressional members. During my second term in this body I was proud to accept assignment to this Commission because I believed wholeheartedly that the American people would wish to recognize, by an appropriate form of a memorial, the sacrifices of their fellow countrymen who had achieved victory in the Pacific area in World War II.

Within this vast area and over a period of 4 long years, we suffered initial defeats at Pearl Harbor, Bataan, and Corregidor. But then we regained our freedom of the seas at Midway in June 1942; we held at Guadalcanal in February 1943; we broke through the Bismarks barrier in May 1944; and we reentered the Philippines in November 1944. General MacArthur announced the liberation of the Philippines on July 5, 1945. A month later the first atomic bomb was dropped on Hiroshima and victory came with the signing of the surrender documents on September 2 on board the battleship *Missouri.*

The victories leading up to the surrender were of course the result of the combined efforts of our industrial might, our leadership, and the valor and ability of the 4 million men who served in the Pacific area. But in battle there is frequently a time when victory lies in the balance and then the scales are tipped by the bravery of the individual—by the men who die to purchase that victory. It is for them that we are planning the memorial.

It will be a memorial to all the Navy, Marine and Air Corps aviators lost at Midway, but particularly to the crews of the 41 torpedo planes who skimmed low above the water straight toward the 4 Japanese carriers and into their own valley of death. Japanese fighter planes dived down to the attack and left unguarded the air above their carriers. But at this same moment two waves of our dive bombers arrived and found no Japanese Zeros on station to intercept them. Methodically each American pilot brought into his bombsight a carrier flight deck and, when the attack was over, four Japanese carriers were left burning and sinking. Seventy brave men went to gallant deaths in the torpedo planes but the Battle of Midway was won.

It will be a memorial to all the brave men who fought in the battle of Guadalcanal, but particularly to 1 battalion of soldiers and 1 battalion of marines who fought side by side during the crucial night action of October 25, 1942, on the south slope of Bloody Ridge with the vital Lunga airstrip at their backs. It was this brave band who bore the brunt of the last major effort of the Japanese to capture the airfield and drive the Americans into the sea. From immediately after dark until daylight the Japanese kept up their reckless assaults only to be thrown back with ever-mounting casualties. It was this small band of soldiers and marines who broke the last offensive of the enemy ground forces and insured the safety of Guadalcanal.

It will be memorial to all the soldiers who finally broke through the Bismark's barrier and opened the way back to the Philippines, but particularly to Pvt. Rodger Young, who fought on New Georgia in the Solomons. He knew how to move forward but not to retreat. His platoon, fighting in a deep jungle, was pinned down by intense machinegun fire and ordered to withdraw. Young, badly wounded, called out that he could see the Japanese position and crawled toward it. Wounded again, he kept moving forward, firing his rifle and hurling grenades until the enemy gun crew was killed. Rodger Young was awarded the Medal of Honor posthumously.

The tales of individual heroism during the capture of the Philippines are numberless. But there was Sgt. Jose Calugas, a Filipino mess sergeant serving with a battalion of artillery. During the defense of Bataan he saw that one of the guns on the left was not firing. He ran across a wide field raked by enemy machinegun fire to the position of the gun. There he quickly organized a new gun crew and had the gun in action when the

enemy charged. For this act of extreme bravery, he was awarded the Medal of Honor.

It is to honor all of these heroes and all of the thousands who, from December 7, 1941, until September 2, 1945, formed the valiant group that won the battles under the leadership of Admiral Nimitz and General MacArthur. The fame of these leaders will be perpetuated in the history books. Let us perpetuate the bravery of the individuals by means of this memorial which in itself may become an important part of history.

One may ask what will be accomplished by the construction of a magnificent war memorial on Corregidor Island? We, the members of the Commission, believe it will accomplish three significant purposes.

First. It will be a symbol to every survivor of the Pacific war of the months and years of his participation in beating back an aggressor bent on conquest and tyranny. To such a veteran and to the families of those who did not survive it will be well-deserved recognition of each man's contribution—be it large or small—to the war in the Pacific, the greatest feat of arms in all recorded history; its only rival being the European war of World War II.

Second. It will be a symbol to every Filipino who sees it—and they will be numbered by the hundreds of thousands—of the understanding and appreciation in the United States of the Gethsemane they endured through 4 long years in order to stand bravely and fearlessly by the side of an Occidental nation.

Third. The most significant point of all, the memorial will become so strong a symbol of the power of free peoples banded together against despotism and tyranny that it will inspire all peoples to struggle against those enemies of democracy constantly seeking to enslave the body and mind of the individual. As such a font of inspiration it will become a living memorial to encourage the Filipinos and other oriental nations to work unceasingly in the cause of democracy and freedom.

The Commission has been fortunate in obtaining a beautiful and inspiring design for the memorial. During 1956 and 1957 there was held a nationwide competition in which 43 architectural firms participated in strict anonymity. A year ago a distinguished jury of award selected the design submitted by the Seattle firm of Naramore, Bain, Brady & Johanson. The jury of award was composed of Fleet Adm. Chester W. Nimitz, United States Navy; Gen. Walter Krueger, United States Army (retired); Gen. George C. Kenney, United States Air Force (retired); Mr. Pietro Belluschi, dean of the School of Architecture and Planning, MIT; Vice Adm. William O. Hiltabidle, United States Navy (retired); Arthur Brown, Jr.; William Gehron; William J. H. Hough; Lee Lawrie; Frederick V. Murphy; John W. Root.

The design has elicited many expressions of praise from any groups including the National Commission of Fine Arts. It was accepted unanimously by the Philippines National Shrines Commission established in 1954 by President Magsaysay to cooperate with the American Commission.

The Commission has studied several plans developed to raise the cost of construction. It has decided recently on a most fitting and appropriate one. The Department of the Navy is anxious to dispose of a number of obsolete naval vessels in order to reduce the heavy cost of their annual maintenance. The sum realized from the sale of about 29 warships would be relatively small—about 13 to 15 million dollars. Half of this amount would suffice to build the war memorial on Corregidor Island.

Why is this method of obtaining construction funds considered to be fitting and appropriate? Because many of these now obsolete naval vessels saw World War II service in the Pacific and thus became an intangible part of each man who served on board. To put it another way, each man left part of himself in the ship in which he served. He left not only that period of his life measured by his months and years of service, but also his valor and his fears, his hopes and disappointments. Thus each of the ships and the men who fought in them became a unit which paid their part of the price we all paid to purchase victory in the Pacific.

The thought now to dispose of these ships as scrap steel without any final meaningful purpose becomes repugnant. But dispose of them we must. Their annual maintenance costs, we recognize, are prohibitively excessive. Realism requires their eventual disposal, sentiment urges a delay. How best can we reconcile this matter?

A solution is to use part of the steel and bronze from these old war vessels in the actual construction of the memorial—a thousand tons could be so used; and in addition to make available to this Commission funds not to exceed $7½ million from the proceeds of their sale as steel scrap for the purpose of proceeding promptly with the blueprint and construction phase of the memorial.

The thousands who served in these ships and particularly each of the 4 million veterans of the Pacific war will applaud such a decision on the part of the Congress. Token amounts of steel from Army and Air Force sources could be added to the steel from these war vessels to form a cohesive bond between today's efforts to insure security and peace with the efforts of the men whose deeds in the past we wish now to revere and memorialize. To the thousands of veterans who will one day stand before their memorial and recall the years of service they spent in distant lands and on distant seas, the use of these obsolete war vessels as an instrument to create their memorial will seem a highly appropriate and most fitting use.

My colleagues on the Commission, and I, have introduced a bill to accomplish this dedicated purpose. It is H. R. 12353. I earnestly seek your support of this bill if, in your judgment it merits support, when it reaches the floor.

My hope, Mr. Speaker, is that this memorial when erected on Corregidor will become a shrine dedicated not solely to the valor of those who served in our victorious armies and fleets, but to the search of mankind for ultimate peace and freedom throughout the world.

California Facts on Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1958

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Mr. Robert McKay, of the California State Teachers Association, before the Sucommittee on General Education of the House Education and Labor Committee, which I believe represents a most valuable contribution to a documentation of the need for Federal aid to education. While Mr. McKay's remarks are directed to the school crisis in California, the problems which he presents so clearly are the same problems which exist throughout the country, and for that reason I include his statement for the interest of all my colleagues:

STATEMENT OF THE CALIFORNIA TEACHERS ASSOCIATION PRESENTED BY ROBERT E. MCKAY, GOVERNMENTAL RELATIONS EXECUTIVE, CALIFORNIA TEACHERS ASSOCIATION, SAN FRANCISCO, CALIF., TO THE SUBCOMMITTEE ON GENERAL EDUCATION OF THE HOUSE COMMITTEE ON EDUCATION AND LABOR, MAY 2, 1958

Mr. Chairman and members of the committee, I am Robert E. McKay, of San Francisco. I am governmental relations executive of the California Teachers Association, an organization which with its 94,000 members is the largest statewide professional group in the United States.

I am appearing in support of the principle of Federal aid to education and to urge favorable action on the legislative proposal now being considered by this subcommittee.

I do not propose to repeat the broad economic considerations already submitted which we feel indicate the imperative necessity of the Federal Government shouldering its share of educating the youth of the Nation.

Instead, I should like to confine my discussion in the main to conditions in my home State. I should like to offer evidence that education is a national responsibility that cuts across State lines and that Federal aid is needed by California, a State generally considered to be wealthy and capable of completely meeting its own educational needs without assistance.

I propose to show that the shifting pattern of population in the United States has created a problem of gargantuan size in California, that this problem with its national implications cannot be solved with State and local resources alone, and that Federal funds should and must be used to meet the crisis.

MASS MIGRATION

The overriding consideration in California's educational problem is the unbelievable increase in its population. It is responsible for the critical shortage of classrooms and the equally alarming shortage of properly trained teachers.

History shows that periodically peoples of the world have moved en masse to new

areas, there to make their home. Over the centuries war, pestilence, climate and economic conditions have caused sizable segments of the population to migrate to new and presumably more favorable lands. In most instances they have bundled up their belongings and, of course, their children and moved to what they considered an area of greater opportunity. Usually they took with them little in the way of worldly goods or economic wealth. Invariably, however, they arrived in the new land with needs which had to be met largely by those who had preceded them and established the area.

Such a movement has been underway in the United States for the past 50 years. At the outset the westward trend was so gradual that it was scarcely noted. It started, of course, with the discovery of gold at Sutter's Mill in 1849, but it was not until the turn of the century that it became dramatic, with people by the thousands pouring into California from other states. It has never stopped.

California is the focal point of the greatest mass migration in the history of the world. Her population has more than doubled every 20 years, with the result that she is now second only to New York State in number of inhabitants. And the end is not in sight.

Every day of the year nearly 1,000 residents of other states pack their bags and move to California, there to stay. Yes; nearly 30,000 people a month come streaming across the borders of the Golden State from other parts of the Nation, principally from the East, the South, and the Midwest. When you add to that the product of a high birth rate within the State you find that California is expanding by an average of 45,000 persons a month. That means an annual increase of more than half a million persons, 550,000 to be exact.

This has been a steady, continuing growth, not a sporadic thing, with the rest of the United States contributing the major part of the growth, and a major part of the educational and other problems which accompany such fantastic expansion.

Here, in capsule form, is the story of California's growth:

In 1900 it had grown to a respectable 1,485,000 residents.

Twenty years later it had more than doubled. Its population approximated 3,500,000.

In 1940, just 2 decades later, it hit 6,907,000, just about twice the 1920 figure.

By last year, 1957, it had exploded to 14,160,000 persons, more than doubling again in just 17 years.

With indications that the westward migration will increase rather than decrease, it is now estimated that California's population will exceed 17 million within the next 8 years and will exceed 24 million by 1975.

I have gone into some detail on the nature and extent of California's growth in order that the magnitude of her educational problems may be understood.

SCHOOL HOUSING

The housing of the hordes of school children which accompany such fantastic population increases is a monumental task. California has done her best to mobilize both State and local resources to meet the need; she has not been able to keep abreast of classroom requirements, even though thousands of new schools have been built, and cannot meet the long-range need without assistance.

TEACHER SHORTAGE

The same is true in the field of teacher supply. California has, by straining resources available to it, been able to maintain a high level of salaries for teachers, compared to many areas in the Nation. Consequently it has attracted many teachers from other States. It has stepped up its own program of teacher education, but it still cannot produce or attract enough qualified young people to staff its mushrooming school system.

CLASSROOMS

California's school enrollment has raced along with and at times ahead of the State's population increases.

It took 90 years—between 1849 and 1940—for California to enroll 1 million children in its public schools.

The enrollment of the second million took only 13 years, from 1940 to 1953.

It then took only 5 years, from 1953 to now, for the schools to be jammed with the third million.

And in less than 5 more years, by 1963 at the latest, California will have 4 million children in her schools.

The provision of classrooms for these children is a king-sized undertaking which already is taxing almost to the limit the financial resources of the State of California and her school districts.

Under State law and generally accepted fiscal policies a limit has been set on the amount of money which can be raised from local ad valorem sources for capital outlay. In California this is fixed at 5 percent of the total assessed valuation of the school district. When that limit has been reached the district is prohibited legally from raising additional money, even though it may have thousands of unhoused pupils.

With the full impact of migration and high birth rate just starting to be felt in 1949, California undertook a program under which the State, through general obligation bonds, came to the rescue of these destitute school districts. It has thus far made available to an increasing number of qualified districts a total of $690 million in State aid for school construction. In addition, another State bond issue of $220 million will be voted on by the electors of California in November, bringing to $910 million the amount of aid the State of California has within 10 years poured into what is still only a partial solution of its school-building problem. The State's share of this program has approximated $100 million a year.

The State-aided program has in that 10-year period produced 17,800 new classrooms. That amounts to about 60 percent of the classrooms built in California; the other 40 percent were constructed by school districts which still had local resources available to do the job. The number of districts in this category is dwindling rapidly.

In addition to the sizable amounts provided by the State, local districts have strained their resources to meet the building needs. In the 9 years following World War II, slightly more than half of the $1½ billion of capital outlay was financed from the proceeds of district bond issues—$781 million—or 52 percent.

Despite this prodigious effort California has been unable to keep pace with her classroom needs. The number of children on half-day sessions has increased, not decreased. In 1952, a total of 140,000 pupils were going to school on a double-session basis. Today the number is 163,000, an increase of 23,000 pupils on half-day sessions in the last 6 years.

LOS ANGELES' NEEDS

Perhaps the construction need can be visualized more rapidly if translated into terms of one district's problems. Los Angeles is the largest of California's approximately 2,000 school districts. Its growth is typical of the State, even though some smaller districts are growing more rapidly.

The average annual increase in enrollment of the Los Angeles schools is 30,000 pupils. Just to keep abreast of that growth the district has had to construct an average of 1,000 new classrooms during each of the past 10 years.

The Los Angeles School District must open a new 23-room school every Monday morning simply to meet the increased enrollment.

It still has 34,000 pupils on double sessions, a situation which would require construction of an additional 1,400 classrooms.

Los Angeles spent $52 million last year in capital outlay, for land, buildings, and related facilities. It spends an average of $1 million every week in an attempt to meet its building needs.

To house the children which it knows will be waiting on the doorstep in the next 10 years, California must build an additional 59,000 classrooms.

SALARIES

California traditionally has maintained teacher salary schedules at or near the top in the ranking of the States. Currently the median for all teachers is $5,585 a year. For teachers at the elementary level, where the greatest number serve, it is $5,307 a year. These salaries have been possible only through a relatively high level of State support and high operating taxes locally in most instances.

It might be presumed that comparatively high salaries in a State would eliminate the possibility of a teacher shortage. This has not been the case in California. The level of earnings generally in California is higher than in many other areas, so that the existence of reasonably adequate teachers' salaries does not give the schools the advantage in employing available personnel that it might be presumed to give. The competition of business and industry for trained personnel has made it impossible to properly staff the schools of California.

More than 13,000 teachers are serving in California's schools on substandard or provisional credentials. That amounts to about 10 percent of the total teaching staff in the State. The number of teachers completing requirements in California institutions is falling alarmingly short of the needs. Were it not for teachers moving to California from other States it would be impossible to keep classrooms open even with inadequately trained persons.

California had a shortage of 17,000 teachers this past year. It will need at least 15,000 new teachers each of the next 10 years. This need cannot be met until teachers' salaries are raised to a truly professional level.

RESOURCES NOT AVAILABLE

The twin problems of school construction and teachor shortage are acute in California at this time, but will appear mild when compared with those of the years immediately ahead. When the full impact of population growth and enrollment expansion hits the schools, particularly at the secondary level, the combined resources of local districts and the State simply will be inadequate to meet the needs. In addition, the problems of higher education in California, where more than 190,000 full-time students are already enrolled, are of magnitude similar to those at the elementary and secondary levels which I have described today.

Local school districts are approaching the danger zone in school finance in California. Even though property owners have shown an amazing willingness to shoulder the maximum burden necessary to provide good education, there is a point beyond which land and improvements and other locally taxable wealth cannot safely go. State law in California sets the maximum school tax rates which can be exceeded only by a vote of the electors. A majority of all school districts in the State have voted to exceed those statutory limits, some of them assuming total school tax rates of as much as $6 per $100 of assessed valuation. Local tax sources cannot provide the greatly expanded revenues needed to meet the California problem.

STATE SOURCES

In common with many other States, California faces serious fiscal problems at the State level. Expenditures in the current State budget exceed income by more than $113 million. The 1958–59 budget has been balanced only by the near-exhaustion of all available surplus and reserve funds. California faces the end of its next fiscal year with a potential deficit of $250 million. Revenues for the first 9 months of the current fiscal year have failed by more than $7½ million to equal the estimates on which the budget was based.

Thus, it appears from the fiscal evidence available, that supposedly wealthy California will be unable to solve its problems of school finance from State sources. With local tax sources already strained to the limit, there remains only one logical source of aid, the Federal Government.

A NATIONAL CONCERN

Educational expenses no longer can be paid chiefly by means of a property tax. Our present national income depends more upon economic activity than it does upon fixed property which is declining relatively as a source of governmental support. Corporate profits and compensation of employees now account for about 81 percent of the total national income. These increasing sources of wealth have traditionally paid very little taxes to support the public schools. If such wealth is to carry a portion of the education load, the taxes must be levied by the Federal Government. The most recent analysis available indicates that more than 96 percent of taxes on personal and corporate income are paid to the Federal Government, leaving available to State and local government only a relatively small portion of the taxpaying power of the total economy of the Nation. This broader tax base, we believe, should be utilized for education.

I have attempted to show that education in California, as it is elsewhere, is a national problem. The shift of population across State lines is demonstrated perhaps more dramatically in my home State than in others, but basically the problem is Nationwide in character. The United States has the facilities to meet the challenge. It is our earnest hope that immediate steps will be taken to do so.

The Story of the Capitol

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. RADWAN. Mr. Speaker, the current dispute over changes to the United States Capitol is one more index to the beloved place it has in our national affections. To all, it is a revered symbol of our democracy and hundreds of thousands visit it every year as a shrine. It is one of the few real links we have with the infancy of our Nation, recalling as it does the multitude of dedicated men and women who made the United States what it is. With praiseworthy diligence, thousands of our school children are brought here annually.

With the Capitol such an object of devotion and attention, it is strange that for years the average tourist and student has not had a reliable, handy history and guide to the building. Congress has seen this need and attempted to meet it, but the official publications have not been distributed widely enough to meet the need. Most of the historic buildings in metropolitan Washington have been adequately described, but the Capitol was not.

So I am happy to report that the long-felt need for a reliable, complete, and interesting guide to the Capitol is now available.

It is The Story of the Capitol, by Stephen V. Feeley, and is published by Henry J. Stewart, Inc. Both the writer and publisher are Buffalonians and old friends. Before coming to Washington as a newspaper correspondent, Mr. Feeley had made fine contributions to our regional western New York history from his original research. His new book on the Capitol has been praised by historians, educators, and Members of Congress. He brings out many new facts and anecdotes about the venerable Capitol, and he educates in an entertaining fashion.

The publisher is to be commended for assembling text and many pictures into a handsome paperback at reasonable cost.

The new book on the Capitol is available to Members of Congress at the stationery room, and I urge my colleagues to inspect it. They may wish to make it available to schools, libraries, and student groups in their districts. It is a notable contribution to American history, worthy of broad distribution and study.

Time To Decide

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. DINGELL. Mr. Speaker, I was much impressed by an article by the distinguished columnist Walter Lippmann appearing in this morning's Washington Post and Times Herald on the subject of the recession. Those of us in Congress who come from areas badly hit can understand the merit of this article. I hope everyone will read this article and assist us in securing vigorous congressional action at the earliest possible date to help the people affected. I insert the article in the Appendix:

TIME TO DECIDE
(By Walter Lippmann)

With the recession more than 9 months old, the President is still undecided about taking stronger measures to overcome it. He is impressed with a few signs that the decline has begun to slow down, and he is hoping that after a while a recovery is somehow destined to take place. That is what seemed to happen in 1954, and if it happened then, why not now?

There is no proving that the President may not be right in his hopes. But it is quite possible that he may be wrong. For this recession is certainly more severe than the recession of 1953–54. And moreover, the measures have not been taken, namely a big tax cut, which preceded the recovery of 1954. Nor are there many convincing signs that there exists the kind of consumer demand for automobiles, houses, and other durable goods which promoted the boom after 1954.

If the President is wrong in counting upon a recovery beginning this summer, he is taking a very great risk in not setting up stronger measures before the present session of Congress adjourns. It will be a long time from the midsummer of 1958 to the midwinter of 1959. Even supposing that the decline is arrested this summer, if unemployment continues at or near the present level, it may well be profoundly depressing to public confidence if strong measures—that is to say a tax cut and the formation of a long-range spending program—have not been taken.

The situation is one where it is wiser to overinsure rather than to underinsure the economy against what may be at best, as Business Week puts it, "a sluggish, unenthusiastic recovery."

The President might well compare what he is doing today with what was done in the recession of 1953–54. The contrast is striking. For while the earlier recession was much milder than is the present one, the remedial measures taken were much stronger.

It is enlightening at this point to read a chapter entitled "No More 1929's" in Mr. Robert Donovan's authorized book, Eisenhower: The Inside Story. We find there that in the preceding recession, as in this second one, the signs of a decline were clearly evident at the end of the summer. By September 1953 the Cabinet had been warned by the administration's economic advisers that a recession had begun. On September 22, Secretary Humphrey announced in a speech to the American Bankers Association that the administration would make no effort to prevent the tax reductions which, under the Korean war tax legislation, were scheduled to take effect 3 months later, on December 31, 1953. On that date the excess profits tax was to expire; so, too, was the 10 percent emergency increase in personal taxes, and there were to be some reductions in excise taxes.

All in all, at the first sign of the recession the taxpayers were assured of a large relief to begin within a few months. The tax reduction was in the order of $7½ billion a year.

There are reasons for thinking that Secretary Humphrey's speech in September was not primarily meant to announce a policy to combat the recession. Then as now, he was a firm believer in balancing the budget at a lower rate of taxation and of expenditure. Without relation to the recession he may have been for the tax reduction of 1954, knowing that in the coming Eisenhower budget there would be a continuing cut in expenditures.

But the fact remains that President Eisenhower and Secretary Humphrey did in 1953 what a growing body of expert opinion today would have the administration do now. When the recession of 1953 was detected, a big tax reduction was announced, and this tax relief took effect in the months before the recession ended in June 1954.

The President might also take a look at what happened in the Truman recession of 1948–49. Then, before the recession got started, there was a tax cut. The President should find it entertaining to recall that this tax cut was enacted by the Republican Congress and that it was passed over the veto of Harry S. Truman. This tax cut, plus, of course, the big public spending which began in 1949 under the Marshall plan, are almost certainly why the Truman recession did not last very long.

Experience indicates, therefore, that in the postwar era the recessions have been short

and mild because there has been early tax relief. Since the end of the World War the American economy has faltered three times. In the two earlier recessions, which proved to be mild and short, there were tax cuts before recovery. In the first there was also a big spending program, the Marshall plan.

In the second, there was a great private spending boom, activated by the pent-up demand after the austerity of the Korean war and financed by an enormous extension of consumer credit and a boom in capital investment.

This third postwar recession is plainly worse than its two predecessors. But this time there is no tax reduction. This time there is no public spending program to compensate for the decline in private investment. This time there are no signs, indeed quite the contrary, that there is a large pent-up consumer demand for the durable goods that are now depressed.

Is it, then, wise, is it safe, to ignore our experience and to put off from month to month the decision to take strong measures, hoping that something will happen to make them unnecessary?

Mr. Speaker, I was shocked to find that unemployment statistics for the city of Detroit and the State of Michigan have again risen. The number of unemployed has risen and is now 275,000, or 18 percent of the labor force in Detroit, and 465,000, or 15.9 percent of the labor force in Michigan. According to the Michigan Employment Security Commission the current jobless total is the largest since 1938. The increase in unemployment in Michigan was 49,000 between March 15 and April 15..

It is imperative that immediate action be taken by the Congress to alleviate this critical condition.

I insert herewith three articles from the Detroit News describing the present economic situation:

JOBLESS MARK HITS 18 PERCENT IN CITY—15.9 PERCENT IN STATE

More than 22,000 Detroit-area workers were added to the jobless rolls in the first 2 weeks of April as the community's unemployment rose to 275,000, or 18 percent of the labor force.

The continued slump was general in Michigan. The total increased to 465,000, or 15.9 percent of the labor force.

These figures were announced Friday by the Michigan Unemployment Security Commission, which also disclosed the record load of idled workers had cut the unemployment insurance trust fund to below $200 million.

As the employment rolls dropped, the Michigan Employment Security Commission feared the State constitution might prevent Michigan from participating in the extended jobless-aid program now being studied by Congress.

The barrier is a provision that forbids the incurring of State debts in excess of $250,000 without approval of the voters.

Attorney General Paul Adams will be asked to rule on whether the constitutional amendment is applicable in the present case.

While 49,000 persons in Michigan joined the unemployed ranks, between March 15 and April 15, the number of persons working in Detroit stood at 1,241,000 and in the State at 3,308,000.

Currently, 350,000 persons are drawing unemployment benefits from the Michigan Employment Security Commission. Another 56,663 exhausted their benefits in the first 4 months of 1958.

These persons would benefit under the proposed Federal-aid extension of jobless benefits in Michigan by 13 weeks.

The Michigan Employment Security Commission also sought some way to charge additional costs of administering the emergency extension of benefits to those employers with the largest number of workers idle.

Michigan Employment Security Commission said the current jobless total is unquestionably the largest since 1938. But the State has no records before 1949.

Previous peaks in the last 10 years were in September 1954, when 271,000 were out of work in Michigan, and in December 1949, when 350,000 were unemployed.

Max M. Horton, Michigan Employment Security Commission director, said he didn't think the situation would worsen appreciably, but neither did he see an upturn before fall.

He predicted that the unemployment list would be further expanded in June when high school graduates and college students enroll for jobs and are automatically added to those out of work.

APRIL AUTO PRODUCTION CUT SHARPLY

Further cuts in domestic passenger-car production in April reduced dealer inventories to about 800,000 units, down 60,000 from April 1, Ward's Automotive Reports said Friday.

"It is likely," said Ward's, "that the industry's severe manufacturing cuts will persist throughout the summer, a prelude to some of the earliest shutdowns for model changeovers since the pre-1940 period."

The statistical firm tallied April car production at 316,503 units, lowest for the month since 1948. The total compared with 357,049 in March and 548,656 in April 1957.

Car production was up 35.8 percent this week, Ward's said, despite the closing of 12 of the industry's 48 assembly plants. The week's total was 79,661 cars, compared to 58,664 last week.

IDLE BENEFIT ROLLS IN UNITED STATES DECREASE

WASHINGTON.—Unemployment as measured by the unemployment compensation system showed the first improvement in many weeks in late April, the Labor Department said Friday. Part of the improvement was seasonal.

Both initial claims and insured unemployment were down notably in the latest reporting week. Initial claims are a measure of new layoffs.

In the week ended Apirl 19 insured unemployment fell by 30,742 to 3,332,602. This was 8 percent of the labor force, compared with the record 8.1 percent of the previous week. The total was still more than double a year ago, however.

Initial claims in the week ended April 26 were down 23,335 to 423,031.

The Labor Department said the improvement in both measures was partly due to a pickup in outdoor work, particularly construction.

California showed much the biggest change, with a drop of 22,400 in insured unemployment.

States with increases included Tennessee with 10,100, Michigan with 5,100, and Ohio with 4,000.

The report also said the number of persons exhausting their benefit rights in the 8 large States that report weekly fell in the week ended April 26 to 24,500, down 800 from the week before.

The issue of exhausted benefits—and ways to extend them—again dominated the recession front in Washington Friday.

President Eisenhower was said to be gratified by House approval of a modified version of his plan for a 50-percent extension of benefits, in substitution for a more liberal and costly Democratic plan.

The first signs of a fight in the Senate on the issue appeared as Senator DOUGLAS Democrat of Illinois, said: "We have got to improve on the House bill."

DOUGLAS, a member of the Finance Committee, said it should provide for extension of benefits for 16 weeks, should help unemployed workers not covered by the benefit system, should not require special sessions of State legislatures to take effect and should make a start toward improving State benefit amounts.

In a related development, the House Appriations Committee approved a second urgent deficiency appropriation for the relatively small federally financed unemployment compensation system for Korean war veterans and Federal workers. The amount was $26 million.

The House Banking Committee heard H. Christian Sonne, head of the National Planning Association, recommend a tax cut of $7 to $8 billion to assure a vigorous recovery from the recession.

Sonne said he felt the dip in the economy "will probably come to an early halt."

But he said it is "most doubtful that in the near future we will be back on the road toward a satisfactory level of activities if we wait for the forces of the market to resume their expansion."

A tax cut, plus a probable increase in spending of about $4 billion "seems to be large," Sonne said. But he argued it was "not too large if seen in the perspective of the task, namely raising production by $30 to $40 billion."

The Late W. C. Handy

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1958

Mr. REECE of Tennessee. Mr. Speaker, when the evening sun set for W. C. Handy, the author of Memphis Blues, St. Louis Blues, Beale Street Blues, and the Harlem Blues, America lost one of its great composers.

Mr. Handy had a varied and interesting life. One time, when I heard him play the St. Louis Blues and the Memphis Blues on his famous trumpet, he remarked to me afterward that he really liked the melody of the Memphis Blues better than anything else which he had written. There was probably some sentiment about this, because it was his first composition, which he arranged and played at the rallies of Mr. Edward Crump in his first campaign for mayor of Memphis, Tenn.

The man in Tennessee who was closest to Mr. Handy and in whose home he visited once a year is Lt. George W. Lee, and he has written a memorial, I Knew Handy, which I am presenting for the RECORD. Lieutenant Lee, who is grand commissioner of education, Improved Benevolent Order of Elks of the World, is an outstanding orator. He was selected by the late Robert A. Taft to second his nomination at the national convention in 1952.

I KNEW HANDY

(By George W. Lee)

MEMPHIS, TENN.—"I hate to see the evening sun go down," is a line in the St. Louis Blues, which hangs in the American mind like tinsels on a Christmas tree.

For W. C. Handy, the composer of this immortal tune, the evening sun has gone

down for the last time beyond Old Man River. But like Old Man River the melody of his sad, sweet songs will just keep rolling along through the corridors of the centuries and baffle the mists of time.

I once asked W. C. Handy what made him great. He pondered the question for a moment, and finally, when he lifted his head to answer, a strange light was in his eyes. He said slowly, "I don't know about being great, I just love people, and I love doing things to glorify them."

Handy loved Beale Street. I am sure of that. He spent a life in full service to all its demands and its traditions, its weaknesses, and its ecstasies. To him there were humor, pathos, and drama in that crooked little street which sprang as from some miasmic dream of a paved Congo, the jerky pantomime of plaint and piety, suppressions, and sensuousness which were the outer soul of the Negro come to the American town.

Handy had been blind for years, but he could see though his eyes were closed. Louise Handy, his loyal and faithful wife, was his eyes.

He had been married once before to Mrs. Elizabeth Handy, the companion of his youth and years, who died in 1937.

Last Friday, at 3 o'clock in the morning, at the Sydenham Hospital in New York, he passed quietly into another world, at a time when he didn't have to see the evening sun go down. There were those about his bedside who saw him come to the end of his day long before the night had fallen from heaven on a rope of twilight—W. C. Handy, Jr., Wyer Handy, his two sons; Charles Handy, a brother; Mrs. Catherine Lewis, a daughter; Mrs. Handy, and William Handy, a grandson. From the ends of the earth other mourners came, as thick as grief.

Rivers full of muddy water have rolled down to the sea since that night back in 1909 when Handy first got a blues song right in his head and set it down on music paper. A million bands have gone to town on that song, the Memphis Blues. A million voices have echoed it like winged music through eternity and a million juke boxes have swelled up loud in smoke-laden night clubs from Beale Street to a crossroad shack in the Montana plains.

For the past 40 years America has been singing Handy's first song, the Memphis Blues. Its mood and melody have resounded around the world. Its melody created the St. Louis Blues, which went with President Harding's flagship to Alaska and to Washington to entertain Ramsey MacDonald. But the father of the blues has no more melody in his soul, nor will he listen again to one of his great sacred songs: They That Sow in Tears Shall Reap in Joy.

The life of W. C. Handy and the story of how he originated the blues have been told many times. He has been honored by everybody. His hometown of Florence, Ala., recently erected a handsome ultra-modern public school in his honor. Memphis has a town square named after him, and St. Louis has a scholarship fund in his name to be awarded annually to worthy Negro and white youngsters with musical talent.

The fund offices will be housed in a new building to be erected on the spot where Handy once slept as a hobo. The huge clock on its facade will play the opening bars of the St. Louis Blues on the hour.

Handy made a long step from Alabama to the advancing wave of circumstances on which he advanced himself to one of the high pinnacles of earthly grandeur and renown.

He was born on November 16, 1873, in Florence, Ala. As a child he was thrilled by the singing of his people. In his 10th year, he could read music at sight and he had a good tenor voice. His father and mother wanted him to be a minister, but Handy wanted to be a musician. His first step was to get enough money to pay for instructions. To this end, he left home and walked all the way to Birmingham, where he taught school for a while.

When the depression that marked the Cleveland administration brought general unemployment, he joined a saloon quartet and set out for the world's fair at Chicago. The singers had no money, so they hopped a freight train and attempted to beat their way west. Luckily for them, the brakeman who discovered them had a weakness for songs, so with cornet and guitar, as Handy said, "they soothed his savage breast," and instead of being red-lighted, they were conducted to a caboose deluxe.

In 1897 Handy returned to Alabama and taught vocal and band music at the Agricultural and Mechanical College in Huntsville. His life at this period was restless, interspersed with travel in Mexico, Cuba, and Canada. Handy, the composer, had not found himself. It was in Memphis, Tenn., where Handy received the impetus that sent him along the road to renown.

Through the mist of the years he beheld the golden towers of his dreams rise at last against a background of reality. A great impulse to set the songs of the cottonpickers, the work songs of the railroad, the river songs of the roustabouts who made music as they worked. To them singing was a necessity, rather than a luxury. W. C. Handy, who like Stephen Foster, brooded over the songs of the Negro flowing in quick tears and laughter straight from his unhappy heart. So, in Memphis, Handy emphasized the native and nationalistic element of these songs and gave them as an enduring gift to America's treasury of music.

A political situation in 1909 afforded nationwide publicity for Handy and his new music. In that year Williams, Talbot, and E. H. Crump were running for election for mayor of Memphis. Jim Mulchay, political ward boss, hired Handy to play for Crump. Echford and Bynam bands were employed for the other two candidates. In order to outdo these two great bands, Handy was spurred to creative efforts. Down in Clarksville, Miss.; in St. Louis, Mo.; in Evansville, Ind.; in Henderson, Ky., and later on Beale Street, Handy had devoted himself to acquiring the material and atmosphere which would some day aid him in making a musical rendition of Negro folk songs.

Now he found his store of knowledge useful in another way. His band opened the campaign at Main and Madison with a piece called Mr. Crump, a composition which took the shape of the inevitable results of the tempo of cotton-picking work songs along the aching side of old man river, of happy nights in the pleasure palaces strung out along Beale Street, and the privation of poverty-chinked cabins and slender precarious meals.

The crowd in the streets literally went wild over it. They shouted until they were hoarse, demanding to hear it again and again. They whistled and danced with the rhythmic sway of the music as the words came with the drift of the wind:

"Mr. Crump don't 'low no easy riders here,

"Mr. Crump won't 'low no easy riders here.

"I don't care what Mr. Crump don't 'low,

"I'm gonna bar'l-house anyhow.

"Mr. Crump can go and catch hisself some air."

That tune was the vehicle which carried two to victory. Handy rode on it from Beale Street to Broadway. Crump to 25 years of undisputed political leadership in Memphis. After the election, the Mr. Crump song was changed and titled "Memphis Blues" and offered for publication. After every publisher in the country had turned it down as worthless, it was sold to T. C. Bennett, a young white man, head of the music department of a department store, for $100. The young white man made a fortune out of the Memphis Blues.

Handy's next number, the St. Louis Blues, suffered the same fate with the publishers as did the Memphis Blues. When the publishers rejected it and laughed at him, he became discouraged and laid it aside. Finally, he organized the Pace and Handy Music Co. to publish the St. Louis Blues.

This little song about the man stealing a woman with her diamond rings, has sold more than 2 million copies, is played and recorded in almost every country on the map and has become one of America's national anthems.

The growth of Handy's music in our time has a consequence which is still impossible to determine. I think, some day this music called the blues, will provide the raw material which will stimulate American culture.

There are many people in these vast United States, who have become famous in the field of music, but without a doubt the leader and dean of them all is the late W. C. Handy, famous for composing and writing the Memphis, the St. Louis, the Beale Street Blues and in addition, many sacred songs that America is now listening to, such as They That Sow in Tears Shall Reap in Joy.

The last time Handy was a visitor in my home, he said that Handy Brothers Music Co. was about to publish an outstanding symphony called Blue Destiny. The first movement would be based on the St. Louis Blues, the second movement on the Beale Street Blues, the fourth movement based on the Harlem Blues and the Memphis Blues.

So, the dean of American music has passed. He brought to the American public songs that the heart cannot tell in its own futile terms, but must borrow out of travesty and fervent plant, the wails from which he drew his own great songs.

The Beale Street Blues, the Memphis Blues, the St. Louis Blues hold fast to something deep down inside of one. They are more than songs. They are a loving, shining symbol that only the soul of man can understand.

Loyalty Day 1958

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1958

Mr. VAN ZANDT. Mr. Speaker, in over 700 communities of the United States, the Veterans of Foreign Wars of the United States through their local posts sponsored Loyalty Day ceremonies.

On Saturday, May 3, 1958, I delivered the following speech at Ebensburg, Pa., in connection with the Loyalty Day program sponsored by the Lt. W. Garfield Post No. 4963, Veterans of Foreign Wars of the United States:

LOYALTY DAY 1958: SPEECH BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, AT THE LOYALTY DAY CEREMONIES, SPONSORED BY LT. W. GARFIELD POST NO. 4963, VETERANS OF FOREIGN WARS OF THE UNITED STATES, EBENSBURG, PA., MAY 3, 1958

Mr. Chairman, I consider it an honor to have been invited to join you in your annual observance of Loyalty Day.

As many of you know I am a next door neighbor and have visited Ebensburg many times in my capacity as a Member of Con-

gress and as a veterans leader. On every occasion I have enjoyed mingling with you.

You who make up the membership of Ebensburg post No. 4963 of the Veterans of Foreign Wars are to be commended not only for your accomplishments in the field of patriotism, but especially for today's parade, and for this evening's spendid meeting.

As a member of the Veterans of Foreign Wars I want to join you in giving our great organization the credit it is entitled to for launching an annual nationwide observance of Loyalty Day.

I can recall a period many years ago when the Veterans of Foreign Wars decided to establish an annual demonstration of loyalty on the part of real Americans as a counter-offensive to the May Day celebration of the Communists and their fellow travelers.

This year, as in previous years, from one end of the country to the other hundreds of communities are matching your Loyalty Day celebration with a similar observance.

In each instance you will find spearheading the observance, your organization and mine, the Veterans of Foreign Wars of the United States.

It is fitting that the Veterans of Foreign Wars play such an important role, because it is an organization composed of men who defended their country on the field of battle.

Today as veterans of various wars we refuse to compromise on the principles of true Americanism.

I am not going to confine my remarks solely to our veteran population. But to the contrary, what I have to say here tonight about Loyalty Day is directed to every liberty-loving American.

Loyalty Day, May 1, as a counter observance to the May Day celebration of the Communists, provides an appropriate occasion to lay stress on our blessings as a people.

Moreover, since loyalty is everybody's job, it presents an excellent time to point out the danger of subversive forces within, and the peril of international gangsterism without.

This two-pronged danger should influence intelligent citizens to work more resolutely for a strong united America wherein lies our hope for survival in a divided world.

Never has this Nation been under such a ruthless attack as that levied upon us by Soviet Russia in the form of a cold war. To meet this challenge to our national security we must at all times be vigilant and strong.

In this connection the important sources of our strength as a Nation comprise three major factors:

1. Religion and the Bible.
2. Schools and the education of youth.
3. Americanism and love of country.

From these three basic elements of true Americanism were derived the power and inspiration that built and preserved the Republic. Let us consider them.

First, it should never be forgotten that the vital factor in the moral integrity of an individual and a nation lies in the field of religion.

Our belief in Almighty God is now in a death struggle for survival against Soviet Russia which is dedicated to atheistic communism. This was reflected best by the Communist leader, Lenin, when he said that religion is an opiate of the people.

Recently Mr. Khrushchev said that 99 percent of all Russia is atheistic.

In contrast, Daniel Webster, in commenting on our forefathers who had left the persecutions and restricted opportunities of the Old World, said: "The Bible came with them and it is not to be doubted that to the free and universal reading of the Bible in that age men were much indebted for their right views of civil liberty."

Yes, Daniel Webster considered the Bible "a book which teaches man his own individual responsibility, his own dignity, and his equality with his fellow man."

You and I know that laws are never sufficient without a spiritual desire to comply with them. An adequate definition of spiritual values is difficult.

Yet we know what happens when men have proper respect for Almighty God.

Such men have a deep reservoir of moral strength. Such men are courageous, sincere, honest, patient, and capable of meeting adversity as they discharge their obligations as American citizens.

As I mentioned a moment ago, religion, now seriously challenged, has inspired the greatest leaders of our civilization, and clothed all mankind with the human dignity intended by God.

Since we know that western civilization and the Judeo-Christian religion are at stake, there is a pressing need for militant religion to meet the definite challenge. That means the necessity for rallying to the old slogan and battle cry of "loyalty to God and country," which, interpreted in the words of scripture and in the fine tradition of our civilization, is: "Render unto Caesar the things that are Caesar's, and unto God the things that are God's."

The second vital factor to be considered is our schools and the education of our youth.

It was realized by the Founding Fathers that the spreading of knowledge and wisdom among the body of the people was the major means of determining whether the rights and liberties of the Constitution and the Bill of Rights would be preserved.

But little did our Founding Fathers know there would in time arise in the ranks of educators and social scientists some, and I repeat some, who would attempt gradually to educate the basic philosophy of our Republic away. Teachers who would advocate alien ideologies and a one-world government.

This form of creeping socialism, which has often been used as a veiled protest against the American way of life, moved in upon the American educational system and the country in general in a sly and sneaking manner.

For example, by 1949 resolutions petitioning Congress to consider world government had been adopted by 23 State legislatures, although others had earlier repudiated this movement.

But since 1950, after the Veterans of Foreign Wars, the DAR and other patriotic organizations had brought the true meaning of one-world government to the attention of the various State legislatures, 21 of the 23 States rescinded their previous action.

It should also be remembered that this idea of one-world government was, and is still, being taught in some schools.

Let me make it clear that there is no question of a teacher's right to accept, and as a citizen to promote outside the classroom, the premise that capitalism will, or should, be replaced by socialism or any of the numerous forms of world government.

But it is entirely different when teachers use their profession, when appearing before involuntary audiences of their pupils, to become agents, propagandists, and advocates of alien ideologies.

While this has been going on, many teachers neglected to instruct the youth committed to their care in the responsibilities of American citizenship.

In short, let me state frankly that people who are employed to teach the American philosophy of government along with the three "R's" are by no stretch of imagination supposed to advocate to students dreamland forms of government or other radical changes in our social order that would displace the American system which has made us free, prosperous, and mighty as a nation.

I warn all of you tonight to stop, look, and listen. Then think and act as you consider the education of American youth.

Ask yourself this question. Is the curriculum in the schools of the Nation based on historic American principles? What is taught of the meaning of freedom?

Are the young people learning anything about our American heritage and what it has given, and is giving today, to civilization?

Is there anything said about the Christian heritage?

What is being taught the millions of young future voters in our schools about the high duty of loyalty to country?

Frankly, we can render our country and our family no greater service than to insure that our children become loyal, thinking Americans.

Let us not forget that the philosophy of government which controls American youth will control this Nation and possibly the world.

We should also remember that reliable and well-informed sources tell us that cunning forces are working against us in the field of education.

We, of the Veterans of Foreign Wars, believe that the third and last great factor needed to inspire and strengthen us as a people is a double-barreled dose of good old-fashioned Americanism. It will give us a keener and deeper appreciation of our American system of government and those who founded and preserved it.

It will continue to inspire us to keep faith with those illustrious Americans who gave their lives on the altar of freedom.

After all, when we as Americans realize the true value of our blessings, then we will give full time to promoting an unadulterated type of real love of country.

All of these things are part and parcel of the broad field of true Americanism.

I say to you, true Americanism is the most effective antidote to godless communism and the ruthless cold war challenge of Soviet Russia.

By working together to protect, preserve, and to promote American ideals we repay our debt to the American way of life that has done more for more people than any form of government yet devised.

One of the most inspiring features of loyalty day parades such as your parade is the participation of proud Americans whose ancestry may be traced to foreign lands yet who appreciate the precious blessings they enjoy as American citizens.

Loyalty day definitely provides a time for us to examine and restate in terms of today's needs the rights and responsibilities of American citizenship.

Furthermore this will be stimulated throughout the year by an added emphasis on the education of youth, the religious foundation of the American way of life, and by individual and collective effort to learn more of the history and ideals of our great American heritage of liberty and freedom.

As I conclude let me leave this thought with you:

Today we are hearing a lot about the so-called wave of hysteria and fear resulting from the efforts to ferret out Communists and subversive elements in every walk of life.

Let us assure you that we have nothing to fear as a nation if every American worthy of the name will measure up to the high standards of citizenship as embodied in the type of Americanism exemplified by our forefathers and defended to this day on the field of battle by succeeding generations.

In short, these are perilous times, for the Soviet challenge to the American way of life was never more real or of a more definite threat.

Therefore as I conclude this loyalty day address let us heed the stern admonition of George Washington, that in times of dire emergency we should make certain that we put only Americans on guard.

Judicial Powers Differ in Courts

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. WALTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the Stroudsburg, Pa., Daily Record of May 2, 1958:

JUDICIAL POWERS DIFFER IN COURTS

(By Hon. Chester H. Rhodes, president judge, Pennsylvania Superior Court)

The present system of courts in Pennsylvania consists of the appellate courts (the supreme and the superior courts) and the district or county courts.

The supreme court has the ultimate judicial power in Pennsylvania. There is no further appeal unless a Federal question or the United States Constitution is involved. In that event the United States Supreme Court may ultimately determine the controversy.

The Pennsylvania Supreme Court was first established by the Provincial Assembly on May 22, 1722. It consisted of the chief justice and two associate justices who held sessions in Philadelphia. They also traveled throughout the colony for the trial of cases.

At the present time, justices of the supreme court still have the power to sit in the local courts in serious criminal cases. This power is rarely exercised. The number of justices of the supreme court was increased to 4 in 1767; it was reduced to 3 in 1809; it was increased to 5 in 1826; the constitution of 1874 increased the number to 7.

By the earlier constitution of 1776 it was provided that the justices be appointed by the president of the provincial council for a term of 7 years. By the constitution of 1790 they were given life tenure. In 1838 the term was fixed at 15 years. In 1850 the constitution of 1838 was amended to make the judiciary elective.

A justice of the supreme court today serves for 21 years, and is not eligible for reelection. The justice with the oldest commission is designated the chief justice.

The Commonwealth is presently divided into three districts in which the supreme court convenes—eastern district at Philadelphia; middle district at Harrisburg; and western district at Pittsburgh.

The supreme court is essentially an appellate court, but it has original jurisdiction in certain specific matters which include habeas corpus, mandamus, writ of prohibition, title to office.

The superior court was created in 1895 to relieve the appellate burden of the supreme court. The court is composed of the president judge and 6 other judges, all of whom are elected by the voters of the State at large for terms of 10 years. They may be reelected.

The court sits in Philadelphia, Pittsburgh, Harrisburg, and Scranton. It has original jurisdiction in cases of mandamus and prohibition as well as in habeas corpus.

Like the supreme court, the superior court is essentially an appellate court. The appellate jurisdiction of the superior court lies principally in three categories—criminal, civil, and administrative.

Appeals in all criminal cases except felonious homicide are taken to the superior court. The same is true of divorce cases. The superior court hears appeals from the courts of quarter sessions, the Municipal Court of Philadelphia County, and the County Court of Allegheny County.

Appeals from the various State departments and administrative agencies, such as the public utility commission, the unemployment board of review, the workmen's compensation board, are taken exclusively to the superior court. In some instances there is an intermediate appeal from a department or an administrative agency, such as the workmen's compensation board, to a local court before it reaches the superior court. Appeals from the revocation or suspension of drivers' licenses are in this category.

With the exception of those rare instances when the appellate courts exercise original jurisdiction, all litigation orginates in the county courts, the administrative agencies, or the minor judiciary.

The principal local courts are designed as the court of common pleas. Their origin, as previously indicated, may be traced from early English history through colonial times. We have a minor judiciary of limited jurisdiction both civil and criminal. This is made up of justices of the peace, aldermen, and magistrates.

The Pennsylvania constitution of 1874, which is presently in force, provided that the courts of common pleas should continue as then established, and that not more than four counties should be included in any one judicial district.

In districts composed of more than one county there are associate judges who are lay persons not learned in the law. They have considerable power which is seldom exercised.

The office of associate or lay judge not learned in the law is as old as the judicial system in Pennsylvania. In 1834 the legislature first required certain associate judges to be learned in the law. Gradually "learned in the law" became a requisite qualification for the office of judge of the various local and statewide courts.

In the constitution of 1874 the office of associate judge not learned in the law was abolished in all counties forming separate judicial districts. In those counties not forming a separate judicial district, such as Monroe and Pike Counties, there are two lay judges in each county, as well as a president judge who must be learned in the law. He, of course, is Judge Fred W. Davis in our district.

Any two of the judges may hold a court of common pleas, a court of quarter sessions, or the orphans' court.

President Judge Davis may hold a court of common pleas or orphans' court without any of the associates; he must be present with an associate to constitute a court of oyer and terminer and general jail delivery.

On questions of law the associate judges are bound by the determination of the president judge. On questions of fact or in the exercise of certain discretion the judgment of the majority of the judges prevails. Although associate judges have these broad powers, they rarely exercise them.

A comprehensive treatise on this subject was prepared by the late Frank B. Holmes, Esq., of the Monroe County Bar, and presented before the Monroe and Pike County Bar Associations on June 16, 1936, at Milford, Pa.

A Bad Veto for Oklahoma

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 6, 1958

Mr. ALBERT. Mr. Speaker, under leave to extend my remarks, I include an editorial from a recent edition of the Tulsa Tribune. This newspaper, which is generally regarded as Republican and which supported President Eisenhower in both 1952 and 1956, criticizes the ill-timed veto of S. 497, the omnibus rivers and harbors bill.

The editorial follows:

A BAD VETO FOR OKLAHOMA

Thirty thousand new jobs will be needed in eastern Oklahoma in the next 5 years to bring this area up to the employment level of the rest of the State, Governor Gary's economic development commission has been informed.

The Governor will call railroad executives and other business leaders together next month to consider a program to produce these jobs. There is no doubt in their minds that the area involved is Oklahoma's No. 1 economic problem. That is why President Eisenhower's veto of the rivers and harbors authorization bill the other day was a body blow to Oklahoma.

There were, of course, political and economic reasons for the veto, and it has been hokum for the Democrats to describe it as a measure aimed at relieving current unemployment. It takes some years to convert an authorization project into one under construction. The first duty of the President and Congress is to afford immediate relief from the hardships of the depression. The President signed the additional highway bill in preference to the rivers and harbors measure for the reason, doubtless, that he thought it could be translated into jobs sooner.

But one of the reasons the President gave for his veto was his opposition to authorization of a series of reservoirs in the mountains of four of Oklahoma's problem counties—McCurtain, Choctaw, Pushmataha, and Le Flore. We can't accept that silently. Oklahoma Democrats and Republicans alike should lay aside partisanship and submit the facts to the White House so this error will not be repeated.

In 1956 the average income per capita in the 4 counties was under $750, less than half the average for Oklahoma, and barely 38 percent of the national average.

One dollar out of each eight came in public welfare assistance payments. Today a fourth of the population is receiving Federal surplus commodities.

Twenty-five years ago much of the South looked like that statistically. It was called America's No. 1 economic problem. While it still lags behind the Nation, one of the reasons it has made great strides forward has been the private industry growth which accompanied such public developments as TVA. Not many Americans today are worried about having to support the South during the next century.

The four Oklahoma counties, in which the reservoirs contemplated in the public works authorization bill are located, would benefit greatly by a similar but smaller development ignited by the Federal Government. They are rich in natural resources. They have rainfall ranging up to an annual average of 50 inches. They have fine stands of timber as well as coal. The water is the finest in quality to be found anywhere.

Today they elect 3 State senators and 6 State representatives who have no other job but to saddle as much of the cost of their local governments and schools upon the rest of the State as possible. Through matching money supplied from Washington they are a great burden to the country. This will go on for years unless a bold plan of reform is executed. The water development scheme was such a one.

The President is right in asking that it be clearly pointed out where the Federal interest lies in these projects. We have suggested

one area. Flood control on the Red and Mississippi Rivers is another. Some of the dams will provide electric power. Others will be excellent municipal water supplies and should be revenue producing. The recreation possibilities are great. None of the land to be inundated has a present-day value that amounts to much.

The Federal Government is carrying out scores of developments that have fewer possibilities for public good and United States money saving than these. Unless it intends to go out of this business it mustn't draw the line when it comes to Oklahoma.

Cultural Achievements in Israel Marking 10th Anniversary Hold Lesson for United States

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 3, 1958

Mr. THOMPSON of New Jersey. Mr. Speaker, Israel's 10th anniversary sees some 40 institutions established in the graphic and performing arts, as well as in archeology and literature which are beneficiaries of the America-Israel Cultural Foundation. The Israel Philharmonic Symphony, ranking among the world's leading orchestras, now plays in its own air-conditioned, acoustically perfect $2,500,000 Frederic R. Mann auditorium in the new cultural center in Tel Aviv. Though this auditorium seats 2,800, each program must be repeated several times to meet the demands of avid, would-be ticket buyers. An academy of music is being completed, and the Israel Opera Company has become well-established. Six professional theater companies and 100 amateur and semi-amateur troupes perform throughout the country, while Tilon, a children's theater, has just received official recognition from the Ministry of Education and Culture.

In the reassessment of American education which is taking place today it will be helpful, I think, to look at what one of the youngest nations—and one of the oldest peoples—in the world is doing in art, music, and the theater since these are considered to be frills by some critics of education but certainly not by many of the ablest educators and leading scientists. Hope for a better program of education lies, I think, in the broad agreement which, in reality, exists among leading protagonists on both sides of the current debate as to what constitutes frills and what is basic.

American schools have done a tremendous job in educating people at a rate beyond the dreams of most nations. Such a quantitative achievement was bound to hit some snags but in the debate over what constitutes a worthwhile education program, as Life magazine said in a recent editorial which it reprinted in the New York Times of March 26, 1958:

It serves no purpose to polarize the educational debate by shouting "un-American" at the late John Dewey's bones (a distinctive Americanism, in fact, was one of Dewey's intellectual boasts), or by making blanket denunciations of frills in education (if how to run a beauty shop has no place in a general high-school curriculum, a good challenging music-appreciation course very definitely has). * * *

Years of barren discussion courses in English have made a whole generation chronically incoherent in the English language (the mutterings of a United States teen-ager trying to discuss his beliefs generally sound like a sanitized version of Elvis Presley). * * * Surely the history of the Crusades can give a young American a better grasp of the problems implicit in the U. N. or NATO than dressing up as a Pakistani delegate in an imitation U. N. assembly at school. * * *

The worthwhile innovations in method brought by Dewey's educationists should be kept. But their exclusive devotion to techniques and group adjustment should never again be allowed to hide this fact: American education exists first of all to educate the individual in a body of learning, with a tradition and purpose behind it.

A man so educated is far better equipped as a democratic citizen than the merely well adjusted. For he will have not only the social ease to make his civilization comfortable, but the intellectual discipline to help save it.

Dr. Eugene Rabinowitz, atomic scientist, in an address before the 44th annual meeting of the American Association of University Professors, held this year in Denver, Colo., has said:

It is not enough to teach the scientist some philosophy, some history, and some sociology or awaken his interest in art. He has to learn to integrate science with the humanities and not place the two mechanically one beside the other.

Dr. Louis B. Wright, Director of the Folger Shakespeare Library and an outstanding student of 18th century America, recently declared the United States is a great Nation today because Washington, Jefferson, John Adams, Marshall, Franklin, and a host of others "were intelligent, patriotic, and frequently wise." He went on to say that in many ways these men "represent a striking contrast to the 20th century, which has placed its highest emphasis upon material success and has scorned learning."

Dr. Wright added:

Our whole social structure depends on the creation of evermore material desires, which we must satisfy by expanding our credit. We are mortgaging our souls and the souls of all future Americans at the behest of Madison Avenue. For what? For bigger and longer motor cars, loaded with useless gewgaws, designed in the most vulgar taste imaginable.

And now, forsooth, we are told that to be patriots we must rush out and buy these monuments of vulgarity to keep our economy healthy—and the manufacturers wealthy and happy. Apparently it has never occurred to the makers of motor cars that the manufacture of a sensible car within the financial range of the average citizen would be a patriotic—and a profitable—enterprise.

HADASSAH NEWSLETTER, APRIL 1958, REPORT ON CULTURAL ACTIVITY OF THE AVERAGE ISRAELI TODAY

I include here a report on the place cultural activity occupies in the life of the average Israeli today. I think this has great significance for us. It was written by Mrs. Zelda Popkin, a well-known author, and appeared in the Hadassah Newsletter of April 1958:

ART, MUSIC, THEATER
(By Zelda Popkin)

It was 1948. The young Israelis sailing with me on the steamship *Marine Carp* were going home to fight a war, but every night the decks shook with their horas (a kind of rock-and-roll). This was an integral part of their culture.

Arriving in Tel Aviv, I found an art show exhibiting mainly nonobjective paintings, as in so many galleries on New York's 57th Street. The first Knesset was assembled in the Tel Aviv Museum. During lengthy debates, ministers and members strolled around the galleries to examine art.

I entered Jerusalem by the wreckage-strewn Burma Road, my duffelbags crammed with clothing, food, medicines, cigarettes, and New Yorker magazines. My visitors that evening snatched the magazines. "No fresh reading matter since the siege began," was their apology.

Every book on every shelf was dog-eared, worn with many borrowings. The soldier at the barbed wire barricade at a border intersection kept his Sten gun on his lap while he read a ragged volume of Heine's poetry. The daily press then was undersized and thin. Paper was the luxury of luxuries.

Leonard Bernstein and the Israel Philharmonic also struggled up that Burma Road to play Beethoven in Jerusalem while the mortars boomed. The week the Negev war was won, the musicians traveled to Beersheba where Bernstein performed Gershwin's Rhapsody in Blue.

When the Road of Courage from Tel Aviv to Jerusalem was paved, it was Hanna Rovina, Habima's leading lady, who marched, with Ben-Gurion, to cut the white ribbon, opening the new highway. The Habima and Chamber Theatres continued rehearsing, producing, performing as though there was no war. A story circulated, apocryphal no doubt, that Yigal Yadin, the army commander, had been denied petrol by a soldier in the Negev when he announced his name. "I know you're an imposter," the soldier supposedly said, "Yadin was here last night. Yosef Yadin acted for us at this base." Generals were well known in 1958, but actors apparently more so.

When the State was being formed and history created, Israel brimmed over with culture, but it bore importers' labels, mainly Made in Europe or Made in U. S. A. The orchestra was a good orchestra, but it was composed of musicians who had been trained abroad, and its repertoire consisted of standarde European works; Habima, born in Russia, steeped in Stanislavsky, was addicted to the classics; the Chamber Theatre, younger and bolder, broke the tradition by presenting Hebrew versions of contemporary Broadway plays, but its technique was Stanislavsky, still.

The novelists wrote nostalgically of the Russia nor Galician villages where they had spent their childhoods. Their styles were lush and Victorian. The painters looked back to Paris, which had influenced their youth. Even Reuben Rubin, of whom it was said, "he made the Palestinian landscape," was oddly reminiscent of Corot.

Only the silver filigree work of Bezalel and the languorous strains of The Song of the Negev—No. 1, then, on the Israel Hit Parade—suggested that this country lay in the Middle East.

When I returned to Israel in 1951, a definite change had begun. The ingathering had become an inpouring. From Iraq, Iran, Afghanistan, Cochin China, Morocco, and Yemen, Jews were streaming in. The highways were pageants from the Arabian Nights. Israel was receiving her diverse sons, and with them a fantastic inheritance. How catch and preserve the colors, patterns, melodies, the symbolism of primitive ways, before they faded into the uniformity of life in a modern state? How digest this all at

once? And how achieve the transformation into the oneness of spirit of a new Israel?

Musicologists, with their tape recorders, swarmed over the ma-abarot to catch the folk tunes, the liturgical variations, before they might be corrupted or entirely lost. At Hadassah's Alice Seligsberg School, the fingers of the students flew, copying costumes, to preserve them for posterity and inspire designers for decades to come.

This was merely skimming off the top. What lay beneath—in racial memories, in spirit, fettered long in hostile lands; in creativity, left fallow in the drowsy Middle East? Would one culture seek to dominate another—the European overwhelm the Oriental, or the other way around? How big a part would the sabra play? Would Israel, out of all the variety, create a unique cultural contribution? In 1951 all this was just speculation to fill the leisure hours of cafe conversation.

There were trends: the young writers were producing novels, plays, poems and vignettes. Their prose was lean, the no-romantic-nonsense of the sabra. The plot lines of their dramas and their books and novels suggested the Soviet Union's boy-and-girl-meet-tractor school. Recent events, contemporary problems preoccupied the writers, and their approach was either propaganda or journalese. The emotional jelling, settling down, which transmutes what writers' eyes and ears have marked into universal human terms, were not yet in evidence.

The theater was booming. Ohel, the Workers' Theater, following Chamber Theater's lead, was performing modern plays. Chizbatron, a new satirical group, was cutting its professional teeth, bringing welcome laughter to the army camps and hard-pressed settlements. An amusement-famished public in a land which lacked the dollars to bring in cans of films, offered plentiful encouragement to live entertainment. Talent was abundant and some of it, as time and international applause has proved, was very good indeed.

Now, almost 10 years later, we can begin to analyze Israel's cultural trends. The word "culture" here is loosely used. It lumps together creation and enjoyment, sources and results. It has many facets. Literacy—the mere ability to read and write—is one; mores and religion are others. Israel's culture, compounded of diverse ethnic, social and spiritual strains, will develop with succeeding generations.

A progress report cannot be clairvoyant. It must deal with tangibles. In these tangibles the tiny nation's cultural achievements are surprising. Witness the 40 established institutions in the graphic and performing arts, as well as in archeology and literature, which are beneficiaries of the American-Israel Cultural Foundation. Organized by the late Edward A. Norman, the foundation has brought moral and financial encouragement, and a deep interest in the growth of Israel's cultural endeavors.

The Israel Philharmonic, ranking among the world's leading orchestras, now plays in its own air-conditioned, accoustically perfect $2,500,000 Frederic R. Mann Auditorium in the new cultural center in Tel Aviv. Though there is a capacity seating of 2,800, each program must be repeated several times to meet the demands of avid would-be ticket buyers. Celebrated foreign composers and soloists vie for its guest-performer invitations. The orchestral repertoire includes, in addition to the classics, recent works of Israeli composers.

The Rubin Academy of Music is being completed in the remodeled Shocken Mansion in Jerusalem. It will have, in addition to its auditoriums, studios and classrooms, a dance studio where Martha Graham will teach. Haifa and Ramat Gan, too, have chamber orchestras. Kol Yisrael's excellent orchestra plays live as well as on the radio. The Israel Opera Company will be singing "Faust" and "Don Pasquale" for Tenth Anniversary visitors. A number of music teachers travel among the border settlements, employing flute and drum and song for integrating newcomers.

Six professional theater companies, headed by the veterans—Habima, Chamber and Ohel—and 100 amateur and semi-amateur troupes perform throughout the country. Tilon, a children's theater, has just received official recognition from the Ministry of Education and Culture. The current choice for theatergoers may range from that hardy perennial of the Yiddish and Hebrew stage, "Mirele Efros" with the great Rovina as a female King Lear, all the way to "Snunit on the Coast of Mayumba", a musical comedy in which an Israeli ship is beached in Equatorial Africa, its crew establishing contact with the Negro natives, including a seven-member local Zionist organization.

The Inbal dance troupe, so enthusiastically received in the United States this winter, represents a trend, too—a singularly successful way to utilize the treasures of the ingathering. The Yemenites are a quiet, pious people, yet their impact upon Israel has been remarkable. In their centuries of isolation in Yemen, they developed skills—gold and silver craftsmanship and exquisite embroidery work. It is their handicraft which seems to the visitor most typical of Israel. It was the tradition and folklore of ancient Yemen, brought by the gifted Sara Levi-Tanai into the theatre, which personified for Western audiences the spirit of modern Israel.

Next to the Yemenite, the Persian ethnic inheritance seems, at present, most adaptable to Israel's creative needs. Israel composers have begun to borrow from the Persian for their symphonies; her painters are favoring the strong clear blue and the delicate style of Persian miniatures. Into the cultural hopper all this goes, along with the strong bold colors and drum beat of North Africa, the swaying, hand-clapping of the *hassidim* of Eastern Europe, and other characteristic cultural stamps, out of which will evolve Israel's individual voice and style.

Israel's painters and sculptors—whose ratio to the general population far exceeds that of other modern lands—have commenced at last to find roots in their own land. While painters set up their easels in Jerusalem, Tel Aviv, Ashkelon and everywhere, there are two exclusive "artists' towns"—Ein Hod and a section of Safed.

Ein Hod is a former Arab village dating back to Crusaders' times. The War of Independence left it a rubble heap. Bulldozers were about to wipe it off the map when the painter Marcel Jancu rescued it. The artists moved in, repaired the roofs, cleared the roads, and made an idyllic setting for fifty creative workers who live here all year round.

In the old Arab houses of Safed, medieval stronghold of the Cabbalists, high up on a mountain-top in Galilee, another group of artists, headed by Jerusalem-born Moshe Castel, live and work, and here the beginnings of an Israeli school of painting have been made—the grouping for a common denominator of color and for a distillation of the mystique of the land.

Museums are everywhere, in city and kibbutz, as are also libraries. Bookshops, well stocked with current literature, in Hebrew, English, Russian, German, French, Hungarian, crowd one another on the avenues, and since the new paper mill at Hadera makes it no longer necessary to spend hard currency outside of the country, the publishing industry is flourishing.

In a single recent year, Israeli publishers printed 1,000 Hebrew titles, of which 75 percent were original Hebrew works, with the remainder translations from publications outside Israel. The sale of a novel published in Hebrew is usually 2,000 copies. A best-seller sells 6,000 copies. Readership is, however, far greater than sales figures indicate. Every purchased copy of a book passes through many hands.

The cinema shortage, too, has been remedied. The movie-goer in Tel Aviv last month could take his choice of Peyton Place, Gunfight in the O. K. Corral, Charlie Chaplin's King in New York, or the latest French, Italian, British, Russian, or Indian films. The product of the local studios at Herzlia is still limited to one full-length production, Hill 24 Does Not Answer, and a variety of shorts. Its limitations are not of talent or equipment, but of capital to compete with Hollywood.

This, then, is a brief report on the extent of Israel's participation in those activities we designate as culture. The quantity is spectacular—but even more extraordinary is the penetration of that culture to every stratum of the population. The bleakest kibbutz room, lacking every luxury, will have an oil painting on its wall, a bookshelf beside the farmer's cot. The city worker and soldier will budget for theater or concert tickets just as for their rent and bread and margarine.

A case in point is Eilat. This is the outpost at the southern tip of the Negev, a fishing village surrounded on three sides by enemy territory—Saudi Arabia, Jordan, and Egypt. The area is remote from populated centers, but in the very week when the American oil tanker *Kern Hills* made the first "innocent passage" to Eilat, the community heads sat down with the representatives of the American-Israel Cultural Foundation to plan their town's cultural future. The music sphere was to be the first, since Eilat already possessed a concert hall. The American AFL–CIO had built it as a memorial to Philip Murray.

A few weeks ago, Eilat had its first concert. Jose Iturbi, world-celebrated pianist and conductor, who had been the Israel philharmonic's honored guest, flew down, his grand piano convoyed down the winding desert road. He gave two concerts in Philip Murray Hall, one at 7 in the evening, one at 9. Seven hundred music lovers—a huge proportion of the population for any time or place—came to hear him play.

Yet all this, impressive as it is, represents only a trend, to be noted in progress reports. Israel participates in cultural activities; Israel creates in all the arts. After one decade, the country possesses the places to house her cultural activities: museums, orchestras, concert halls, theaters, cinemas, libraries, and universities. But these are mere physical repositories.

A nation's culture stems from deep within, from roots. In the land of the Bible, those roots are Biblical. Eliezer Sukenik, the renowned archaeologist, risking his life during the Jerusalem siege 10 years ago to bring, through lethal shelling and barbed wire, the first three of the Dead Sea Scrolls, acted from those roots. Moshe Dayan, until lately chief of the Army, relinquishing his command to study the humanities at the Hebrew University, Yigael Yadin, digging up ancient history at the site of Hatzor, personify the basic trend from which an indigenous modern Israel culture will eventually evolve.

How's That Again, Denver Post?

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1958

Mr. ABBITT. Mr. Speaker, unfortunately for many years, the press and other news media in sections of our country have failed to understand and properly present the true facts in the

southern section of our country regarding the relationship of the white and Negro races. Particularly in the North and West we find many editors, news reporters, radio commentators, and columnists who profess to know our problems and offer suggestions for solving them. Many of these people, even though they profess to know all about the true situation in the South, do not have first-hand knowledge of the true facts nor in many instances are their statements of fact correct. Because of this situation, the South's position is ofttimes incorrectly reported in other sections of the country.

A glaring example of this appeared in the Denver Post of April 29, 1958. The article in the Denver Post was commented on editorially in the Richmond News Leader on Saturday, May 3, 1958. This editorial, which is exceedingly well written, points out cogently how many writers are ignorant of the subject matter about which they are writing.

In the hopes that our newspaper friends in other sections of the country will try to get the true facts before they attempt to write about our problem, I include with my remarks the editorial in the News Leader mentioned heretofore entitled "How's That Again, Denver Post?" The editorial is as follows:

HOW'S THAT AGAIN, DENVER POST?

If the Southern States had nothing more to combat than contrary opinion in their effort to win friends outside the South, the struggle might not be so discouraging. In a free country, every man is entitled to his own opinion, and besides, reasonable men may be persuaded to change their opinions on the basis of rational appeal.

But it is not merely contrary opinion, but also a vast amount of misinformation and plain ignorance that the South has to deal with. A good part of the Nation, sad to say, still pictures the Negro people of the South as a mass of woebegone African slaves, clad in gunny sacks, ridden with pellagra, confined to tar-paper shacks, and regularly whipped before breakfast by white overseers. That is exaggerated, perhaps, because we are a little annoyed in the writing of this piece, but it is not much exaggerated.

What prompts the annoyance is a psalm-singing sort of editorial in the Denver Post of April 29. Paul Manns, member of the house of delegates from Caroline County, happened to be in Colorado this week, and sent it along. There are some good men on the editorial staff of the Denver Post—Leverett Chapin and Stanton Peckham, to mention two—men who are not total idiots, but one fairly groans at their ignorance of the South today.

The Post's editorial was designed to encourage contributions to the United Negro College fund, a most excellent cause that we have commended in the past and freely commend again. The fund is seeking $2,250,000 to be divided among 38 Negro colleges and universities, including 3 in Virginia—Hampton Institute, Virginia Union University, and St. Paul's Polytechnic in Lawrenceville. The 33 institutions participating in the fund are private institutions, and they are having budget problems in common with other private colleges throughout the United States. Readers who wish to contribute may send their checks to William Trapnell, at the Commonwealth Natural Gas Corp., 116 South Third Street. Mr. Trapnell is chairman of this year's campaign in Virginia.

The Post's editorial did not stop with promoting the Negro colleges taking part in the drive. The Post, reaching into thin air, felt compelled to say that three-quarters of all college-age Negroes still live in the South, where the chance of getting a college education is slim. And what irked us especially was the next sentence: "Without these 33 colleges, which have a combined enrollment of 24,000, it would be practically nil."

Practically nil? How ignorant can you get? Without attempting any definitive survey, we turned up records yesterday of 27 public, tax-supported colleges and universities for Negroes in 14 Southern States, having a combined enrollment of more than 37,000.

Let us educate the Denver Post. There are in Virginia two outstanding institutions of higher learning for Negro students, Virginia State College in Petersburg (enrollment 1,600) and VSC's Norfolk branch (enrollment 2,000). It surely would be news to Negro high school graduates in North Carolina to learn that their opportunities, apart from the six private institutions in the Fund, are "practically nil." North Carolina lists such State-owned facilities as the North Carolina Agricultural and Technical College at Greensboro, 3,250; North Carolina College at Durham, 1,350; Fayetteville Teachers College, 560; Winston-Salem Teachers College, 830; and Elizabeth City Teachers College, 300.

Farther to the south, one finds at least 3 State-supported Negro colleges in Georgia, including a well-regarded university at Savannah; the large Florida A&M University, with an enrollment of nearly 3,000; in Mississippi, Alcorn A&M; in Alabama 2 substantial institutions; in South Carolina a State college of 1,500 students; in Tennessee a polytechnic university with an enrollment of 2,600, and in Texas, two outstanding institutions, one at Prairie View, the other at Houston, with a combined enrollment above 5,500. There is Langston in Oklahoma, and Bluefield in West Virginia, and the large Morgan State College in Maryland. One wonders have the Denver Post could have overlooked Southern University at Baton Rouge, with an enrollment of some 3,600 Negro students; Colorado itself has only two institutions that are larger.

The 27 State-supported institutions in our random compilation and the 33 private colleges in the United Fund are by no means all the institutions of higher learning for Negroes in the South. Others contribute to an aggregate enrollment that is estimated to exced 70,000 Negro college students this year. Nor does this total include the many Southern Negroes whose tuitions in Northern universities are paid at public expense; this year Virginia alone is sending 557 Negro students to such institutions as Columbia, New York University, Yale, and Harvard, at a cost of $130,000. There are now more Southern Negroes attending Negro colleges in the South alone than there are total students in all the universities and colleges of England.

We don't pretend to know all about the public power, reclamation, and irrigation problems of the West. It certainly would be helpful if the Denver Post didn't pretend to know all about Negro higher education in the South.

Why Idaho Needs Continued Federal Aid Under the Library Services Act

EXTENSION OF REMARKS

OF

HON. GRACIE PFOST

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1958

Mrs. PFOST. Mr. Speaker, through a printing error, a section of my statement supporting the appropriation of the full authorization for the Library Services Act for the fiscal year 1959 was omitted from the hearings of the Labor-Health, Education, and Welfare Subcommittee of the House Appropriations Committee. The section omitted reported the splendid progress made in the State of Idaho under the provisions of this act.

Because I am sure other Members of this body would be interested in the extent to which the Idaho Library program has been accelerated by the Library Services Act, under unanimous consent, I include my full subcommittee statement in the RECORD:

Mr. Chairman, I am here to ask the subcommittee to appropriate for the fiscal year 1959 the full $7,500,000 authorized by the Library Services Act, rather than the $3 million recommended by the President for this program. Only with the full authorization can we make any real progress toward the goal of the Library Services Act—to bring adequate library service to all of our people.

Few States would benefit more from the full authorization of funds than my State of Idaho. More than half of our population is without library service of any kind—about 70 percent of the people have mediocre local libraries.

In 1955, our State legislature recognized the need for more and better libraries by enacting enabling legislation to allow for larger library units and a more adequate tax basis. In 1957, the legislature appropriated money on a biennial basis, and its appropriations were based on the natural supposition that Idaho would received a Federal allotment each year of $72,729—the amount provided under a $7,500,000 appropriation. Not to give it to them is to break faith.

I wish you could see what giant strides have already been made in my State under the Library Services program to date. Rather than try to summarize the accomplishments, I would like to ask permission at this point to insert in the record a report prepared by Mr. Eugene D. Hart, the new State librarian. I am sure it will give you a lift in spirits to read it—as it did me:

"WHY IDAHO NEEDS CONTINUED FEDERAL AID UNDER THE LIBRARY SERVICES ACT

"The following facts show the current status of public library service in Idaho and graphically show the need for continued Federal aid under the Library Services Act, as a stimulus to further library development and to provide library service to Idaho citizens in the missile age.

"Background information

"More than half of the population of Idaho is without direct library service of any kind. About 70 percent of the population has inadequate library service.

"In 1955, the need for better library service in Idaho was recognized when the Idaho Library District Enabling Act was enacted to allow for larger library units with a more adequate tax basis.

"In 1956, of the 48 States, Idaho ranked 46th in terms of per capita expenditure for public library service. Idaho expenditure per person was less than one-fourth of its neighboring States—Oregon, Washington, and Wyoming. More than one-half of Idaho's population, as compared with an average of one-fifth of the United States as a whole, had no local library service.

"In 1957, an analysis of library statistics in Idaho revealed the following facts:

"The 10 largest public libraries of Idaho served 29 percent of the population, received 76 percent of the income, and loaned 72 percent of the books circulated.

"Of the existing 71 public libraries, 20 libraries reported an annual income of less

than $2,000; 20 libraries reported an annual income of less than $1,000; 7 of the smaller public libraries were open 3 hours or less per week.

"In 1957, the Idaho Legislature tripled the biennial appropriation for the Idaho State Library on the basis that Federal funds would be matched with the increased State funds to effect the following program:

"1. The State library would be staffed and administered by trained and experienced librarians.

"2. The State library would provide assistance, guidance, and advisory service to existing libraries.

"3. The State library would give the impetus and guidance necessary for expansion of direct library service in the State through the establishment of district, county, and multicounty library units.

"4. The State library would be a supplementary source of books and materials for other libraries in the State whose collections are relatively small; and would provide direct and mail library service to residents in the State having no other library facilities.

"5. The State library would administer Federal funds and make them available on a matching basis to Idaho libraries extending their services into the rural areas.

"6. The State library would be the focal point to which all Idaho libraries, library organizations, and interested citizens could turn for advice, assistance, and guidance.

"Accomplishments—1957 to date—as a result of Federal aid

"The following accomplishments may be reported to date:

"1. A State librarian and an extension librarian now head a staff of 8 full-time employees as compared with the previous staff of 4.

"2. More books have been purchased and processed in the past 6 months than in the entire previous biennium.

"3. A 2-day conference and workshop for the Idaho State Library Planning Committee was held in January 1958 with approximately 150 participants to plan for expansion and extension of library service throughout the State.

"4. An exhibition bookmobile stocked with 1,800 books has been purchased and is being used to demonstrate the possibilities of mobile library service in Idaho.

"5. A monthly publication, Library Gems, has been started. This is to provide a continuing medium of communication with respect to current library developments in Idaho.

"6. The State library has assumed responsibility for compilation of statistical information on Idaho libraries.

"7. The State library has joined the Pacific Northwest Bibliographical Center in order to provide more complete interlibrary loan service to the libraries and the citizens of Idaho.

"8. Federal matching funds have been allocated to three district libraries in Idaho at the rate of $1 Federal for each $1 district library funds to provide more adequate library service. Additional Federal funds are available to other newly formed district libraries as a further stimulus to the establishment of larger units of library service and for the promotion of rural library service.

"9. Eight educational films for the promotion of library service have been purchased and are available to public libraries, groups and organizations interested in promoting more adequate library service.

"10. A revision of the library laws of Idaho has been published.

"11. The State library is providing a substantially increased service to individuals, schools, communities, and small public libraries as a result of its increased funds and staff.

"12. The trained staff of the State library is providing technical assistance, advice, and guidance to local libraries and to groups working for more adequate library service or to establish library service where none presently exists.

"Future planning based on continued Federal aid to fiscal year 1961

"The following services are planned by the State library to expand and further promote public library development:

"1. Increased individual assistance and advice to small public libraries on book selection, cataloging, and weeding of collections. There are presently numerous such requests for help and advice which the State library has not yet been able to fulfill.

"2. Three 2-day regional workshops for nonprofessional librarians are to be held within the State to provide guidance in library procedures and techniques.

"3. The State library will provide greater assistance to library board of trustees in planning library buildings and developing more adequate service.

"4. The book and periodical resources of the State library will be increased materially as a source for supplementary materials from which local libraries, communities, and schools may borrow to supplement their own limited facilities. More educational films and audio-visual materials will be purchased for the use of local libraries and local citizens groups interested in promoting library service.

"5. The State library will continue to assist several counties now working actively to create library districts, and to provide Federal matching funds and other assistance as a stimulus for creating larger units of library service.

"6. Additional demonstrations of library service are planned to show the needs and benefits of adequate library service, and the gains accruing from cooperative efforts among smaller library units.

"Curtailing of Federal funds under the Library Services Act, would mean to Idaho—

"1. A decrease of the amount of Federal funds which could be used as matching funds to stimulate appropriation of local funds for the inauguration or increase of rural library service.

"2. A reduction of the staff of the State Library and consequently the service which could be extended to the residents of the State, to schools, and to local libraries.

"3. A limitation of State Library resources—books, periodicals, films, audio-visual materials and consultant service—to which local libraries now turn for special requests, reference materials, expensive and infrequently requested materials.

"Elimination of Federal funds under the Library Services Act, would mean to Idaho—

"1. An end to any type of financial assistance to local libraries, and to the stimulation for the establishment of additional libraries.

"2. Greatly curtail the assistance and guidance given to libraries and to citizens' groups by the State library.

"3. It would probably result in reduction of appropriations at the State and local levels for public library service and thus result in a setback to library development in Idaho, now just getting underway.

"4. The recent gains made in Idaho library development would largely be lost since some are still in the early formative state.

"5. It would be, in effect, a breaking of faith by the United States Congress with the State of Idaho which has anticipated the availability of Federal funds through 1961. The Idaho State Legislature in 1957 appropriated money on a biennial basis and its appropriations were based upon the anticipated revenues for a 2-year period. Withdrawal of Federal library funds at this time would negate the achievements and hopes of those who have worked so hard for library development in Idaho."

Since the report speaks for itself, I won't take up more of the time of you gentlemen here today. I will only say that not only for the welfare of the State of Idaho—but for the welfare of the entire country—I hope you can see your way clear to appropriate the full authorized amount of $7,500,000. We pride ourselves on being the most prosperous and progressive country in the world—the country which provides the most abundant living. Surely we can provide enough money to give all of our people access to a library at which they can borrow good books to read for enlightenment, for education, and for pleasure.

For Boating Safety

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1958

Mr. TOLLEFSON. Mr. Speaker, an editorial appearing in the Evening Star of May 1 calls attention to the need for some type of legislation to provide for greater boating safety than presently exists. It points out that public safety on the Nation's waterways calls for the type of legislation which has been approved by the House Committee on Merchant Marine and Fisheries, and is currently awaiting a rule by the Rules Committee.

Some 7 million small boats will carry over 25 million people on our waterways this year. Past experience indicates that at least 1,200 people will be killed and many more will be injured in small boat accidents unless Congress and the States act soon.

The pending bill is a step in the right direction and encourages the various State legislatures to act. It has the almost unanimous support of the Council of State Governments. I hope that a rule will soon be granted so that the House may have an opportunity to consider the legislation.

The Star editorial follows:

FOR BOATING SAFETY

The recent small-boat tragedy on the lower Potomac that cost the lives of four persons was typical of the accidents which have led to demands for legislation designed to make boating safer. The river accident involved a 14-foot plastic boat with a 50-horsepower outboard motor—a combination requiring unusual care and experience in boat handling. It was the owner's first tryout of newly purchased boat and motor. Under present laws no registration or inspection of the craft was required, since the Coast Guard has jurisdiction only over boats more than 16 feet long. The Bonner bill, pending before the House, however, would require registration of all small powered boats and would encourage adoption of safety measures by all boat operators.

The legislation is the result of lengthy hearings before the House Committee on Merchant Marine and Fisheries, of which Mr. BONNER is chairman. Under its provisions all motorboats would be assigned numbers by the Coast Guard, which, in the course of the registration process would make available to boat owners latest information on safe operation of outboard and inboard boats. Moreover, water accidents

would have to be reported to State authorities, and the Coast Guard would have enlarged power to impose civil penalties for reckless operation of boats.

With small boating growing phenomenally as a result of increased sale and use of outboard motors, the need for some sort of governmental control has become evident. As Representative BONNER told the House Rules Committee recently, this is "essentially safety legislation." The proposed program he said, would not be burdensome to the boating public. In fact, some witnesses before the Bonner committee wanted much stricter regulation of all power boats. "Our committee felt, however," Mr. BONNER said, "that it would be unwise to attempt any greater degree of regulation until experience with this legislation might indicate the need for it." Certainly public safety on the Nation's waterways calls for at least this first step toward curbing recklessness and ignorance of basic "rules of the road" by operators of small boats.

Los Angeles Board of Supervisors Unanimously Resolves in Favor of Corps of Engineers, United States Army, Continuation of Construction of Los Angeles County Drainage Area Project

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 26, 1958

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I present a certified copy of a resolution by the Board of Supervisors of Los Angeles County Flood Control District, unanimously approved April 29, 1958, indicating the strategic relationship of the flood control problems in Los Angeles County, Calif., and the necessity of emergency legislation necessary to allow uninterrupted continuation of the previously initiated and activated protection by the Corps of Engineers, United States Army, in the construction of the essential Los Angeles County drainage area project.

The text of the resolution being self-explanatory, I respectfully urge the continuation of this essential Federal and county drainage and flood control project.

COUNTY OF LOS ANGELES,
BOARD OF SUPERVISORS,
Los Angeles, April 29, 1958.

The Board of Supervisors of Los Angeles County Flood Control District met in regular session. Present: Supervisors Burton W. Chace, chairman, presiding, Kenneth Hahn; John Anson Ford and Warren M. Dorn; and Harold J. Ostly, clerk, by Gordon T. Nesvig, deputy clerk.

In re flood control: Resolution calling on all congressional representatives of Los Angeles County to take such action as may be required to effect enactment of necessary legislation needed to continue Federal flood-control work in the Los Angeles area, and related order.

On motion of Supervisor Ford, unanimously carried (Supervisor Hahn being temporarily absent), it is ordered that the following resolution be, and the same is, hereby adopted:

"Whereas the Congress of the United States after investigation and recommendation thereof by the Chief of Engineers, Department of the Army and by the Board of Rivers and Harbors, has approved and adopted a program for the construction of various flood-control projects which are of interest and benefit to the entire Nation; and

"Whereas Federal law required enactment of legislation authorizing the appropriation of funds for construction of portions or units of approved projects; and

"Whereas during the past 22 years Congress has authorized and appropriated funds for and the United States by and through the Corps of Engineers as a part of such program has undertaken and constructed various units of that certain project within the county of Los Angeles which is known as the Los Angeles County drainage area project; and

"Whereas all authorization for appropriation of funds on the Los Angeles County drainage area project has been or will prior to July 1, 1958, be exhausted; and

"Whereas funds heretofore appropriated in fiscal 1958 and budgeted for fiscal 1959 cannot be expended by the Corps of Engineers until said authorization is correspondingly increased; and

"Whereas this board has been advised that a similar situation exists as to construction of some other approved flood-control projects; and

"Whereas there has heretofore and now exists an extreme flood hazard within the area which will be protected by the Los Angeles County drainage area project; and

"Whereas the needs of the area being and to be protected by the Los Angeles County drainage area project are yet increasing due to the vast and continuing development of said area; and

"Whereas lacking appropriate legislative authorization virtually all flood-control construction by the Corps of Engineers United States Army on the Los Angeles County drainage area project will cease as of July 1, 1958; and

"Whereas such termination will not only allow continuation, but in some cases will increase the existing extreme flood hazard and will also have grave effects upon the economic situation in the southern California area, especially as relates to the employment of the many involved in the carrying out of the drainage area project during a period of recession: Now, therefore, be it

"Resolved by the Board of Supervisors of the County of Los Angeles and ex officio Board of Supervisors of the Los Angeles County Flood Control District, That and it is hereby recommended and requested that all Members of Congress immediately take such action as may be required to effect the enactment of such emergency legislation as may be necessary to allow the uninterrupted continuation by the Corps of Engineers United States Army of the construction of the Los Angeles County drainage area project; be it further

"Resolved, That and the clerk of this board is hereby directed and ordered to transmit fully executed copies of this resolution to the Senators representing the State of California, Members of the House of Representatives from the county of Los Angeles and to the Vice President of the United States. It is further directed and ordered that the chief engineer of the Los Angeles County Flood Control District transmit copies of this resolution to such persons as he may deem appropriate;

"It is further ordered that the Los Angeles County flood control district be and it is hereby authorized to submit copies of the above resolution to the cities concerned to encourage similar action by them."

How Hiring the Handicapped Helps You and Me

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 22, 1958

Mr. FULTON. Mr. Speaker, as Congressman for the 27th Congressional District of Pennsylvania, I am proud that Rosalie Dean Carson, of 324 Zara Street, Pittsburgh 10, Pa., a student at Carrick High School, is receiving an award by the President's Committee on Employment of the Physically Handicapped on May 8 for her essay in the 1958 national essay contest. Miss Carson's essay placed third in this contest and it is a real pleasure to insert her essay entitled "How Hiring the Handicapped Helps You and Me" in the CONGRESSIONAL RECORD, because I believe her essay is not only excellent, but also worthy of reproducing. In addition, I want to take this opportunity to compliment the Carrick High School, the principal and teachers, as well as Miss Carson herself, on this selection.

HOW HIRING THE HANDICAPPED HELPS YOU AND ME

(By Rosalie Dean Carson, Carrick High School, Pittsburgh, Pa.)

"Look at me. Look at me" chants a little girl's shrill, excited voice.

A 6-year-old girl has scrambled up the climbing bars to the high ceiling of the school gymnasium. What is so unusual about this?

This is a very special little girl at a very special school. For the little girl is blind, and her school, the Anne J. Kellog School for Handicapped Children. She represents a modern-day miracle; upon entering school in the autumn, she would not move nor take a single step without holding to someone. Completely dependent, she had to be guided everywhere she went. Someone else's hands had to feed her, clothe her.

Now, the following spring, she runs freely about the school with confidence.

Before visiting this school where my brother teaches I felt revulsion for the physically handicapped. Passing a cripple in the street, I would cringe; shiver when I saw a spastic; look away from a legless man.

After my brother took me on a tour of this unique school, the handicapped became personalities to me. I realized they are not freaks, but people with problems. Spastics, amputees, blind, or deaf children became Tommy, Susy, Bill, and Debby, the little girl with heavily braced legs who has found her place by accompanying the school orchestra, the epileptic children with helmets for protection, the lunch line formed of kids in wheelchairs and on crutches, just as noisy as any other hungry group, most of all, perhaps, the little blind girl on the climbing bars, the one who had been withdrawn. Now she is completely sure of herself, running outside alone to play on the playground, dressing and eating unaided. Observing her classroom, I saw her reading braille and typing at a mechanical braille writer. I discovered another startling fact; her attractive, immaculately groomed teacher was blind. Yet she had built a life for herself. This child, too, will be well prepared to face the future. The door is open.

Here, in this school, reconstruction of life begins. Not only here—in veteran hospitals,

polio foundations, State employment offices, and schools for the blind all over the country. Reconstruction for what? Where does it lead? To a blind alley? To frustration or dispair? Or to living a life of fulfillment?

The scriptural injunction, "Neglect not the gift that is in thee," could be expanded to, "Neglect not the gift that is in them."

The disabled are able. Disadvantages become advantages when the remaining physical abilities are coupled with competence. During the past decade America has tested the thesis that it is good business to hire the handicapped. Millions have proved conclusively that, on the job, they are not handicapped at all.

Ideally, the handicapped person does not present a special case. The ultimate goal is to place the right man or the right woman in the right job. The same methods should prevail in hiring a handicapped individual as in the case of an able-bodied person. Instead of magnifying his handicap, accentuate the positive, and underline his strengths and skills. We must open for him the door to self-respect and independence. In essence, the difference between people is only in degree of ability. The so-called handicapped worker is equal to—and in some cases better than—the average individual. His need, in society and in business, to be recognized and treated as such lies at the root of fuller acceptance and opportunity for the handicapped.

The handicapped may be hired with confidence. He has much to give. Being conscious of a disability, the handicapped person is inclined to strive harder, to have a more conscientious attitude toward his job, with a resulting improved production record. Nature allows him to develop compensating qualities to offset his disability.

The handicapped, the guys nobody wanted, have coupled courage and initiative to their disability and hitched their future to their chosen job, when provided with that all-important opportunity to prove to themselves and the world that they can get along.

Marie's hooked hand enables her to handle hot dishes at the steamtable in the cafeteria.

Harry's deafness makes it easier for him to concentrate in the noisy aircraft factory.

Standing on his artificial leg, Bob can splice live wires with no danger of electrocution.

But how does hiring the handicapped benefit you and me? It makes for greater national production, strengthens our national security, and lightens the taxpayer's load. The handicapped add to the efficiency of our fathers' work force for their absenteeism is less, and their accident rate lower. Impaired workers produce at slightly higher rates and have fewer disabling injuries. Surveys have proven that the handicapped employees adjust well to their jobs by observing company rules and having safe behavior. From helping our fathers, the next step is helping the community which they will enrich as contributing members. From here, the State and finally the Nation, which they can make stronger. The conservation of manpower and working skills is vital to our national strength. America has 2 million handicapped men and women who can be added to the Nation's work force. Let's train them, hire them, make them useful citizens.

The American conviction that every individual is entitled to an opportunity equal to his abilities has paved the way for increased employment opportunities for the physically handicapped. The desire of the individual to take his place in society as a productive and self-supporting citizen lies at the very root of our democratic society. Happy is the nation whose people are content. We must see to it that American democracy gives a square deal to those who, above all others, deserve it.

Let us hear the appeal of the disabled:

"Lord, we are able."

"These hands are willing."

"These hearts are brave."

"These spirits are strong."

Can we not answer this plea of the handicapped to look up and live as other men? Cannot the rehabilitated echo the refrain of one little blind girl, "Look at me. I'm happy. I'm serving mankind."

Can Convictions and Politics Mix?

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1958

Mr. MULTER. Mr. Speaker, I am pleased to direct to the attention of our colleagues the following article by Gov. Edmund S. Muskie of Maine. It beautifully enunciates the philosophy which I have followed during my 37 years of political life. It has paid dividends to me and I am sure it will to all others who adopt it and pursue it.

Governor Muskie's article appeared in the New York Times of May 4, 1958, and is based on a recent talk he gave as the annual Robert S. Stevens lecture at Cornell Law School:

CAN CONVICTIONS AND POLITICS MIX?

(By Edmund S. Muskie)

Most Americans are interested spectators of the political game—its tricks, its maneuvers, the fascinating mixture of cynicism and high ideals and the ways in which the two combine to achieve constructive purposes. And the reaction of spectators and potential participants in this game is most important. So long as that reaction is based on an underlying faith in the capacity of our political system and those who operate it to produce constructive action in the long-term best interests of our country, then the system and those who operate it will produce such action. Too often, however, that reaction is based on a cynical disbelief that politics can be anything but a dirty game played by men and women who, if they are ever well motivated, find it necessary to sacrifice integrity and honesty in order to stay in the game.

In this political year, therefore, it is well for all of us—those of us who contemplate seeking public office, and those who simply evaluate issues and candidates as voters—to consider the question: Do convictions and politics mix? The spectator too often and readily accepts 1 of 2 easy answers: First, that politicans never act on conviction, but only from considerations of expediency; second, that if I were in politics, I would always vote for what was right—it being implied, of course, that the right course would always be clear and obvious.

The answer to the question I have put will determine our national ability to meet and surmount the critical problems which confront us on the national and world stages. Unless convictions and politics do mix, not only can we not justify our form of government, but it cannot survive.

Collectively, our political leadership has met the test which is implicit in the question, and, God willing, will continue to do so. However, individually, the practicing politician holding public office almost daily faces a choice of alternatives with respect to some official decision or action which poses the question for him.

For example, there is the general problem, "Shall I meet a politically dangerous issue or avoid it?"

Or more specifically: "Should I alienate politically important Mr. X by refusing to appoint him to a public office for which he is not qualified—or for which he is qualified but for which there are better men available? Should I refuse to appoint Mr. Y to a public office for which he is well qualified—because he is not the choice of politically important groups or individuals, or because an influential newspaper has opposed his appointment, however unfairly? Should I support the decision of a subordinate in my administration, however sound—if it is an unpopular one, or if he is unpopular, particularly when I did not appoint him? Should I publicly resist the tide of public opinion to defend an individual or to support a proposition when my action cannot be decisive? How much responsibility should I accept for decisions and programs of department heads whom I did not appoint and who are of a different political party?"

Must the politician always and continually crusade for his convictions? Can he ever justify compromise? Can he ever justify expediency? These questions suggest that there ought to be some sound and justifiable rules of conduct for a politician in this area of decision. There are. Otherwise, the statesman would have little hope of consistently surviving elections. The rules depend for their validity upon certain basic assumptions.

The first assumption is that most of those who support the politician do not expect that his views will agree with theirs all of the time. Most Americans are essentially fair-minded. They will allow the candidate of their choice a considerable margin of disagreement and independence, provided his position is sincere and based on honest convictions.

A second assumption is that many of those who differ with him can be persuaded to accept the politician's point of view on a given question if it is based on a solid foundation of fact, if it bears the earmarks of careful and of deliberate thought, if it is effectively presented to them, and, most important, if they have confidence in him.

A third assumption is that the politician will not be inflexible. Hindsight may reveal him to be wrong.

The fourth assumption is a much less comfortable one. It is that, however astutely the politician conducts himself, there may come an issue which sharply separates him from a majority of his constituents and about which they feel so strongly that they can no longer support him if he persists in his point of view. These may be the issues which create the civil wars, the Little Rocks—those heroic occasions when martyrdom may have its own appeal. Or, they may be relatively small issues which are important only to a few people and his own conscience. These are the issues, of course, which try a politician's soul.

When he is faced with such an issue, the politician should remember that the privilege and responsibility of leadership require the taking of risks. He should consider the effect of a departure from conviction upon the future of the persons, the institutions and the principles involved. He should consider that a stand on conviction, though resulting in immediate defeat, may lead to ultimate vindication and subsequent political victory; that, conversely, yielding to expediency, though immediately popular, will undermine public respect and confidence in him and ultimately destroy him politically.

If these assumptions are not valid, then the politician is lost in a wild sea of alternatives, out of sight of land, and without guidance as to the direction he should take. If they are valid—and I believe them to be—it is still necessary to apply the techniques and tools of politics.

The first rule: Get the facts and all points of view. The fancy name for this process is "research," the more descriptive one "homework." The most effective impression a politician can make on an audience—any audience—is that he is a man who knows what he is talking about. In practical-minded, hard-headed America, the man who can establish a logical, factual base for his argument has a universal appeal.

The second rule: Seek advice and counsel. Having obtained the facts, the politician should surround himself with those whose experience and judgment will enable him to weigh them. This requires conscious and positive effort. For there is a tendency, after a man has been in a position of public responsibility for some time, making decisions in weighty and complex matters, to exaggerate his own ability to make the right decision. And it is not easy to break through the ring of "yes men" who will flock around a successful candidate. He can profit more from those who will disagree with him than he can from those who thoughtlessly approve whatever he may propose.

A third rule: Be decisive. Having assembled the facts, weighed them and consulted with trusted advisers, the political leader should make his decision, without observable hesitation, cleanly and firmly. As he deliberates within himself as to the position which he should take on an important issue, occasionally he will go through moments of agonizing indecision; but he should never expose them to public view. Once the decision is indicated, he should not retreat from it, nor fumble it. He should make it. Indecisiveness can destroy public confidence in a political leader and his proposals about as quickly as anything except sheer dishonesty.

The fourth rule: Learn to use effectively the various techniques and media of communicating with constituents. Most people are constantly and busily engaged in their personal and private affairs. Most of them do not have the time, or will not take the time, to study thoroughly every public issue and problem with which the politician may be concerned. Their awareness of a problem, their understanding of it and their acceptance of a solution to it will depend upon the ability of the politician to attract their attention and present his case by means of images or impressions.

Honesty, ability, knowledge ability, decisiveness—these are some of the impressions a politician ought to try to create. A quip, a phrase, a picture, a chart—these ear-catching, eye-catching devices may be more effective in making a point with more people than an entire speech. I am not referring to slick salesmanship, but rather to the honest imagery which has always been the mark of the great orator, the great artist, the great teacher.

And there are so many instruments the politician can use—the press, radio, television. Each of these calls for different talents and different techniques. The inflections of the voice when a speech is delivered on radio or television can give it a substantially different meaning than the same speech appearing on the printed page of a newspaper. A voice emanating from a face on the television screen can create an entirely different impression from the same voice over a radio loudspeaker. These differences are significant; they can be used to advantage.

The press conference is an interesting medium for communication. The way in which a question is answered may convey a more important message than the answer itself. A "No comment" may arouse more speculation and thus attract more attention than would a direct answer. The planted question, or even a spontaneous question, may draw out information which the politician might have been reluctant to give in a formal press release.

All this suggests that politics is a profession requiring special aptitudes, a period of training and apprenticeship, and the development of skills and judgment which come only with experience and practice. It suggests, also, that acceptance of the assumptions I have stated, and astute use of the rules and techniques I have described, given appropriate personal appeal, will enable the politician to retain his convictions, survive politically, and render constructive service.

Nevertheless, however well the politician plays the game, he should be prepared to face that issue which may come—when his career is on the line, when the alternative is conviction and political oblivion, versus expediency and loss of self-respect.

That is when conviction and politics must mix for our country's sake. That is when the politician must be prepared to spend his political bank account—the bank account built out of the support of the hundreds or thousands of people who voted for him; of thousands more who have been impressed by his performance in office, if that performance has merited such goodwill; of the resulting confidence of his constituents in his ability to think and act responsibly in the field of public affairs, and of the growth of his spiritual strength and mental sinews as a result of his having grappled with and mastered perplexing and complex political and public problems.

This bank account is his, not to hoard but to spend. He should spend it prudently and wisely, conserving it so that, when he is faced with the crucial issues, he may have a substantial reserve. Then, if necessary, he should use it unstintingly.

How does a man bring himself to do a thing like that? I don't really know from personal experience because I have not yet faced such a choice. It is a favorite theory of mine, however, that life for us as individuals does not realize its full meaning, in the richest and most abundant sense, unless we are willing to test our capacity for growth beyond the limits of what we may, at any given time, believe possible. I can think of no more satisfying way to test one's capacity for growth than to try to meet the kind of challenge I have described in the public service.

Do convictions and politics mix?

Yes, if the politician has convictions.

The Case of Ezra Pound

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 6, 1958
